Dr. Michael Strauss is a practicing particle physics employed as a professor at University of Oklahoma. He does research in particle physics at CERN, a large hadron collider. It's safe to assume that he knows something about experimental physics.

Here's what he writes about Christians and the Big Bang at his new blog:

> When my children were young, I would often drive to the home of the person babysitting my kids, usually a young teenage girl, pick her up, then drive her back to my house. In the car I would ask questions about her interests or her school. In addition, I would sometimes ask a question that intrigued me since I am a scientist and a Christian, "Do you think the Big Bang is a theistic theory or an atheistic theory?" Now that question is not on most people's list of babysitter interview questions, but I was interested to know their answer even though it would not affect their monetary tip. Every time I asked this question I always got the same answer, that the Big Bang is an atheistic theory. This is just one example of the fact that many kids growing up in an evangelical church environment have the perception that the Big Bang is an idea which removes God as the creator. It seems that many Christians may disdain the Big Bang.
>
> Subsequent conversations with people of all ages have shown me that many individuals (1) don't really understand what the Big Bang is, (2) don't know the scientific evidence for the Big Bang, and (3) don't comprehend the theistic significance of the Big Bang. So let's explore these ideas a little bit.

Here is his overview of the scientific evidence for the Big Bang:

> There are three primary observations that are best explained by the Big Bang. First, the universe is expanding so that it must have had a beginning of expansion in the past. Second, because the universe was once very hot, we can still see the remnants of that heat in the Cosmic Microwave Background (CMB) radiation. The latest measurements of the CMB spectrum made by the Planck satellite (shown above) agrees almost perfectly with theoretical calculations using the standard Big Bang cosmological model (see the plot at the end of this post). Third, the theory predicts the amount of primordial light elements that should have been created in the first few minutes of the Big Bang, like hydrogen and helium. Again the observations and the theoretical calculations align almost exactly. A few other observations are supported by Big Bang predictions, like the distribution of galaxies and primordial gas. The agreement between what we measure and what is expected from a Big Bang is so remarkable that just about all scientists accept the Big Bang as the origin of our universe, despite its

> implication that the universe had a beginning.
>
> Does this scientific evidence support theism, or atheism?
>
> Because we don't have any observations that tell us exactly what happened "in the beginning" of our universe, we can only speculate. But let me point out the obvious. All of the observations we do have, and all the theoretical calculations, and even some projective calculations like the Borde-Guth-Vilenkin theorem… give credence to the conclusion that all of the space, time, matter, and energy of this universe had a beginning. **The Big Bang is a misnomer for it is not some kind of explosion since there was nothing that existed to explode. It is the origin of the universe. So if this universe had a beginning, then the cause of the universe can not be a part of the universe. The cause must be transcendent, like the Christian idea of God.** Is the fact that all the evidence points to our universe having a transcendent cause proof for God? No, but it is extremely powerful evidence. If one hundred years ago you had predicted that scientists would obtain unambiguous evidence about the history of the universe for 13.8 billion years, all of its lifetime except the first fraction of a second, and that all of the evidence would point to an actual beginning consistent with a transcendent cause, I don't think anyone would have taken you seriously. But that is exactly what has happened. **Theists could not have outlined a better scenario to support theism. The scientific facts are completely consistent with the statement, "In the beginning God created the heavens and the earth."**

I know how I account for this scientific discovery in my worldview: a non-physical mind that existed eternally created the physical universe at time t=0. But how do atheists, who can only explain the world by appealing to matter, explain the origin of matter itself?

Here's Oxford University professor of physical chemistry (and atheist) Peter Atkins explaining how he grounds the Big Bang cosmology:

Easy! Nothing actually exists, according to Peter Atkins.

What about a theoretical physicist, like Lawrence Krauss? Well, he just redefines the nothing that causally preceded the origin of the universe so that it is actually something. Pure speculation, and it goes against the experimental scientific evidence we have. Exactly what you'd expect from a man who wrote a book about "the physics of Star Trek".

Each of us has to come to terms with this scientific evidence. What could have caused the beginning of the universe? It can't be matter, because this was the beginning of all the matter in the universe. It has to be a *mind.*

Although most theists have no problem with this scientific evidence, atheists really hate it. When I tell them about this evidence, they tell me that in a few years or decades, all the evidence for a beginning we have now will have gone away. "How do you know that?" I ask. We have faith" they reply. I don't think anyone should deny the objective reality we all share just because it's what they want to believe.

Women want to complain to Human Resources because man is reserved at work

February 20, 2023 | by Wintery Knight | Link | Original Link

I have spent over 23 years in information technology, and most of the companies were large IT companies. Large IT companies tend to emphasize diversity, equity, and inclusion more than smaller companies, which have to perform in order to stay afloat. And that means making sure there is an equal balance of genders, ethnicities, etc. in every different area.

Here is a very interesting post on the relationship advice forum of Reddit:

> Hi all I'm posting this on an alt because I know a few of my friends are following me on here and I don't want this spilling out until I have some clear thoughts on what I want to do.

The author – who uses Commonwealth spelling – has a short summary of her post at the top:

> A colleague (27M) joined our firm last year and since then he has had zero issues socialising with the guys we work with but always finds an excuse or says no to hanging out with the girls after work, even if we go out together as a whole he rarely talks to us and its making some of my friends uncomfortable.

And then here is the long version:

> So early last year our firm hired Dan (27M). In the first few weeks he was really quiet and didn't talk much and that's just how we thought he was. Every conversation with him was short and to the point and never deviated from work, asides from pleasantries (Have a nice weekend etc). About 2 months in he started becoming a bit more friendly with the guys in our office and they would hang out every so often and have normal conversations. However, whenever any of the girls in the office tried to do so he would quickly change the conversation back to work or just not reply. Even now after a year of Dan working with us he straight up refuses to socialise with the girls in the office and it is making them feel uncomfortable. He avoids any discussion of himself outside of work related events and future plans and doesn't ask any of the girls either. Where as he is, what I can only assume, pretty good friends with the guys in the office.
>
> Even on work meals out to celebrate events he is only doing the bare minimum when it comes to conversation with the girls where again with the guys he talks to them like there is no problem whatsoever. I don't know if I'm overreacting but one of the girls is considering go to HR about this because she is saying its creating a hostile work environment. Dan treats us like he treats clients we work with; cordial and strictly about business and its wearing thin now.

> Any advice is appreciated.

Many young people today don't see the workplace as being about work. They see it as a time of socializing. And they get angry when people don't socialize with them. They want to be allowed into a man's personal space, even though they are the kind of people who go straight to HR whenever anyone disagrees with them, or refuses to make them happy. Many of these women are single mothers who divorced the father of their kids.

I actually left my last job and took a lower salary job, because I was being harassed by a woman who had *no college degree*. Her official title was "Software Engineer", but she didn't write code. She just supervised deployments to production. She was very attractive, and had had cosmetic surgery done – her chest was super-sized. (I heard her explaining why she did it to one of the Indian workers one day). She was also about 6-8 years older than me. She started to get very angry with me for not giving her attention at work. She would come to my desk and talk about how politically conservative she was (she must have heard that I was conservative). But I didn't want to have anything to do with her.

I blogged previously about a woman who accused a man of grooming her because he didn't want to get more serious with her. Men are getting tired of this. If you know any young women who are wondering why men don't talk to them, maybe it's because many young women are not pleasant or safe to talk to. Even if a particular young unmarried woman is safe to talk to, men will judge her based on the majority of single, unmarried women. It's just not safe for men to have non-business conversations in the workplace with young, unmarried women.

The juice isn't worth the squeeze.

Canada intelligence agency: China helped elect Trudeau's Liberals in 2021 election

February 21, 2023 | by Wintery Knight | Link | Original Link

Once in a while, I have to put up a post about Canada. It's important because we have to know what the left is doing in countries where they have more power. We recently saw the Canadian socialist party deploy the military to crush peaceful demonstrations. They also froze the bank accounts of those peaceful demonstrators. It turns out that their elections are being manipulated by China.

This article is from the Globe and Mail, the more leftist of Canada's two national newspapers:

> China employed a sophisticated strategy to disrupt Canada's democracy in the 2021 federal election campaign as Chinese diplomats and their proxies backed the re-election of Justin Trudeau's Liberals – but only to another minority government – and worked to defeat Conservative politicians considered to be unfriendly to Beijing.
>
> The full extent of the Chinese interference operation is laid bare in both secret and top-secret Canadian Security Intelligence Service documents viewed by The Globe and Mail that cover the period before and after the September, 2021, election that returned the Liberals to office.

I need to explain what an MP is. An MP is a "Member of Parliament", similar to our House representatives in Congress.

More:

> Drawn from a series of CSIS intelligence-gathering operations, the documents illustrate how an orchestrated machine was operating in Canada with two primary aims: to ensure that a minority Liberal government was returned in 2021, and that certain Conservative candidates identified by China were defeated.
>
> The documents say the Chinese Communist Party leadership in Beijing was "pressuring its consulates to create strategies to leverage politically [active] Chinese community members and associations within Canadian society." Beijing uses Canadian organizations to advocate on their behalf "while obfuscating links to the People's Republic of China."
>
> The classified reports viewed by The Globe reveal that China's former consul-general in Vancouver, Tong Xiaoling, boasted in 2021 about how she helped defeat two Conservative MPs.
>
> Would you like to live in a country that allowed its elections to be influenced by a communist Superpower? I would not.

So, a lot of the voters in Canada were being influenced by Chinese propaganda, and they were not in a position to be able to correct the lies. They voted on the basis of disinformation from a foreign power. And of course Trudeau did nothing to stop it, because he wanted the help from his fellow communists. I'm surprised that this is all even coming out now.

Here's a post from True North, a centrist blog:

> Legacy media outlets amplified disinformation about Freedom Convoy protesters last year, according to Public Order Emergency Commissioner (POEC) Paul Rouleau's report assessing the federal government's use of the Emergencies Act.
>
> Rouleau's report found that the news media's portrayal of the demonstrations was an attempt to discredit the movement.
>
> "I am also satisfied that there was misinformation about the Freedom Convoy, which was used as a basis to unfairly discredit all protesters. In one example, protesters were blamed for an act of arson in an apartment building, which the police later confirmed had no links to the protests," wrote Rouleau.
>
> "Where there was misinformation and disinformation about the protests, it was prone to amplification in news media. OPP Superintendent Pat Morris testified that, as the officer leading the collection of intelligence for the OPP, what he was seeing in the media did not always reflect what the intelligence was showing."
>
> The arson hoax was spread by legacy media outlets reporting on the incident and federal politicians including NDP leader Jagmeet Singh and a number of Liberal and NDP MPs.
>
> Other false claims spread by media outlets about the Freedom Convoy included a fake poster shared by the far-left Anti-Hate Network. At the height of the protests, the organization's chair Bernie Farber posted a tweet including a picture of an antisemitic poster that was later found to have originated in Miami, Florida and not Ottawa.

Talk about 1984. Almost everything that Canadians hear about in the culture is just designed to mislead them and confuse them. They are living in a dream world. When I talk to Canadians, they think that our suburbs are filled with gun violence. They don't know about free health care for the poor (Medicaid) and the elderly (Medicare). They have no idea. It seems like they just don't have access to reliable information. So even as their housing prices are going through the roof, and they are running up consumer debts, they still keep voting for the policies that take aware their liberty and prosperity.

New study: 50% of biological males in women's prisons convicted of sex crimes

February 22, 2023 | by Wintery Knight | Link | Original Link

So, at the first level of "bad" I think it would be putting biological males into women's sports. Maybe next would be putting biological males into women's bathrooms and showers. Then maybe putting biological males into women's shelters. But the worst – the absolute worst – has to be putting biological males convicted of sex crimes into women's prisons. But that's just secular left morality.

Here's the story from Daily Wire:

> A new Canadian study found that 9 in 10 male inmates who identify as transgender were incarcerated for violent offenses and nearly half were sexual offenders.
>
> A recent study conducted by the Correctional Service of Canada (CSC), an "Examination of Gender Diverse Offenders," which surveyed 99 "gender diverse" inmates between 2017 and 2020, found that of the 61 male inmates in the study who identified as transgender or something other than male, 46% had committed sexual offenses and 92% were incarcerated for violent crimes.
>
> The report found that 91.7% of male inmates who identified as transgender women surveyed were incarcerated for a violent offense, including 41.6% for homicide. By contrast, according to the Correctional Service of Canada's 2021 annual report, 25.8% of male inmates (who identify as male) were serving sentences for a violent offense, which includes homicide/manslaughter, attempted murder, aggravated assault, and other violent offenses.
>
> Additionally, the researchers determined that 62.7% of male inmates who identified as transgender women had a low reintegration potential, 39.3% required maximum security, and 74.6% had "high static risk," which refers to a high level of risk that an individual will reoffend based on factors that are relatively unchangeable or "static."

Meanwhile, in Scotland:

> PRISON authorities have been criticised after it emerged four of the five transgender inmates held in the female prison system are murderers.
>
> The Scottish Prison Service (SPS) have been accused of endangering vulnerable women in the latest revelation in the controversy surrounding trans prisoners.

We already know that biological males who identify as females are attacking and raping women in women's only spaces. But the response from the secular left has been to try to cover these abuses up, and prosecute concerned parents for "domestic terrorism".

Here's the New York Post talking about a rape that occurred in a woman's prison,

committed by a biological male:

> A transgender Rikers inmate raped a female prisoner while in the women's section of the jail and has been sentenced to seven years, officials said Monday.
>
> Ramel Blount, 33, who goes by Diamond Blount, pleaded guilty to attempted rape April 7 in an apparent plea deal.
>
> Investigators said Blount — who was housed in the female section of the facility — approached a 33-year-old female inmate in the bathroom at the Rose M. Singer center Feb. 8, 2021, after the victim had just finished showering.
>
> Blount held the victim down by the back of her neck and raped her, investigators said. The victim reported the incident to jail officials, and a rape kit was administered, which matched Blount's DNA in the New York State Registry.

That's New York for you – the home of secular leftist morality. What sort of human rights can you rationally ground in an accidental universe? It's survival of the fittest. The only things that are "wrong" are the things you get caught for. The things that make you lose face with your peers.

What is Joe Biden's view of putting biological males convicted of sex crimes into women's prisons?

Daily Wire had an interesting article about that.

It says:

> "Transgender equality is the civil rights issue of our time," Biden said on social media Saturday night. "There is no room for compromise when it comes to basic human rights."
>
> […]The statement isn't necessarily a departure for Biden who, back in April, mentioned that he would support the "Equality Act," a Democrat-authored House bill that would amend the 1964 Civil Rights act to outlaw discrimination based on "sexual orientation and gender identity." That bill is controversial, as it includes language designed to compel public schools to allow transgender individuals who identify as female (but who are biologically male) to compete against female athletes on female-only sports teams.
>
> Rep. Jerry Nadler (D-NY) one of the bill's more prominent sponsors, made it clear that expanding "access" to transgender athletes is a key element of the bill, denying biological reality: "Many states have sexual orientation and gender identity nondiscrimination laws, and all of them still have women's sports. Arguments about transgender athletes participating in sports in accordance with their gender identity having competitive advantages have not been borne out."
>
> Asked about the bill back in June, Biden said that passing it would "be the first thing I ask to be done" as president. The bill, he added, "is long overdue, and will ensure LGBTQ Americans are treated with the dignity and respect they deserve."

When you see secular leftists who support the Democrat party, you have to understand

that this is what they are voting for. They want to put biological males who have been convicted of rape into women's prisons. "Who cares about women in jail anyway?" the secular leftist will say. They don't care about women, they care about virtue signaling to their social circles.

Woman who regrets her sex-change surgery sues everyone involved in transing her

February 23, 2023 | by Wintery Knight | Link | Original Link

What animates people on the secular left? Why are they so weak in the face of evil that harms children? Part of the answer is that harming children is necessary for selfish adults to pursue their pleasure without boundaries. But part of it is that people on the secular left don't want to be judged, and so they attack people who judge *any kind of evil.*

So what happens when the people who set moral boundaries and make moral judgements get silenced? Answer: the weak suffer.

Here is an article from The Post Millennial, that I think really shows what is at stake when we who set moral boundaries and make moral judgements capitulate to those who don't want to be judged, and who want to be "nice" and "tolerant".

It says:

> A detransitioned Ontario woman who was prescribed testosterone and underwent both a bilateral mastectomy and a hysterectomy during a mental health crisis in which she believed herself to be a man is suing the healthcare providers who allegedly facilitated her medical transition.
>
> Michelle Zacchigna, 34, of Orillia has filed legal action against a total of eight doctors and mental health professionals who treated her during the years that she identified as transgender. Zacchigna alleges that each failed to address her complex mental health needs and instead allowed her to self-diagnose as transgender and undergo irreversible procedures that she now deeply regrets.
>
> "I will live the rest of my life without breasts, with a deepened voice and male-pattern balding, and without the ability to get pregnant. Removing my completely healthy uterus is my greatest regret," wrote Zacchigna.

The rest of the article names all the people involved in transing this kid, and what they specifically did. The general idea is that they did almost no investigation. They certainly made no moral judgements. They certainly didn't consult the Bible. These are people who care about making money for themselves. They have no rational foundation for morality. They don't believe that truth bounds reasoning. They don't believe that moral boundaries are objective. They think the universe is an accident. They don't believe in consciousness or free will. They don't think they're going to Hell when they die. They're atheists, and they do what's best for themselves, no matter what happens to anyone else.

This 11-minute video of Matt Walsh has been making the rounds. I think it's worth watching. I definitely stand with Matt on not capitulating to people who want to harm children.

I was watching a video of a panel of men and women discussing dating on Wednesday

night. The host asked the man if he would be willing to go to bed with a transgender woman (biological man). And the man explained that he was a Christian, and he would not do that. Then two of the women on the other side of the table – scantily dressed, and covered in tattoos – called him a bigot, and walked off the set. It's getting to the point now where men of character have to choose between their principles, and having relationships with the compassion crowd. The don't judge crowd.

I actually had to make that choice all through high school and college, when church girls complained about my belief in an inerrant Bible, and a literal Hell, and the wrongness of no-fault divorce, etc. I've been making that choice for character, and against "tolerance" and "compassion", my entire life. It's sad when you have to see your plans of marriage and children slip away, because so many young, unmarried women – even the ones raised in the church – have been brainwashed to value moral relativism above spiritual truths and moral truths.

When people are doing things that harm themselves and harm children, the right move is not to do what is nice to them so they will like you and then you can be popular. That's emotional garbage. The right move is to stand up and disagree, with evidence. And if people don't like your disagreement, then too bad. And if I had kids like Matt Walsh, I would never let those kids near the "compassionate" moral relativists who run the public schools.

How the discovery of the cosmic microwave background radiation falsified atheism

February 24, 2023 | by Wintery Knight | Link | Original Link

Prior to certain scientific discoveries, most people thought that the universe had always been here, and no need to ask who or what may have caused it. But today, that's all changed. Today, the standard model of the origin of the universe is that all the matter and energy in the universe came into being in an event scientists call "The Big Bang". At the creation event, space and time themselves began to exist, and there is no material reality that preceded them.

So a couple of quotes to show that.

> An initial cosmological singularity… forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity… On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.

Source: P. C. W. Davies, "Spacetime Singularities in Cosmology," in The Study of Time III, ed. J. T. Fraser (Berlin: Springer Verlag).

And another quote:

> [A]lmost everyone now believes that the universe, and time itself, had a beginning at the big bang.

Source: Stephen Hawking and Roger Penrose, The Nature of Space and Time, The Isaac Newton Institute Series of Lectures (Princeton, N. J.: Princeton University Press, 1996), p. 20.

So, there are several scientific discoveries that led scientists to accept the creation event, and one of the most interesting and famous is the discovery of the cosmic microwave background radiation.

Here's the history of how that discovery happened, from the American Physical Society web site:

> Bell Labs radio astronomers Arno Penzias and Robert Wilson were using a large horn antenna in 1964 and 1965 to map signals from the Milky Way, when they serendipitously discovered the CMB. As written in the citation, "This unexpected discovery, offering strong evidence that the universe began with the Big Bang, ushered in experimental cosmology." Penzias and Wilson shared the Nobel Prize in Physics in 1978 in honor of their findings.
>
> The CMB is "noise" leftover from the creation of the Universe. The microwave radiation is only 3 degrees above Absolute Zero or -270 degrees C,1 and is uniformly perceptible from all directions. Its presence demonstrates that that our

> universe began in an extremely hot and violent explosion, called the Big Bang, 13.7 billion years ago.
>
> In 1960, Bell Labs built a 20-foot horn-shaped antenna in Holmdel, NJ to be used with an early satellite system called Echo. The intention was to collect and amplify radio signals to send them across long distances, but within a few years, another satellite was launched and Echo became obsolete.2
>
> With the antenna no longer tied to commercial applications, it was now free for research. Penzias and Wilson jumped at the chance to use it to analyze radio signals from the spaces between galaxies.3 But when they began to employ it, they encountered a persistent "noise" of microwaves that came from every direction. If they were to conduct experiments with the antenna, they would have to find a way to remove the static.
>
> Penzias and Wilson tested everything they could think of to rule out the source of the radiation racket. They knew it wasn't radiation from the Milky Way or extraterrestrial radio sources. They pointed the antenna towards New York City to rule out "urban interference", and did analysis to dismiss possible military testing from their list.4
>
> Then they found droppings of pigeons nesting in the antenna. They cleaned out the mess and tried removing the birds and discouraging them from roosting, but they kept flying back. "To get rid of them, we finally found the most humane thing was to get a shot gun…and at very close range [we] just killed them instantly. It's not something I'm happy about, but that seemed like the only way out of our dilemma," said Penzias.5 "And so the pigeons left with a smaller bang, but the noise remained, coming from every direction."6
>
> At the same time, the two astronomers learned that Princeton University physicist Robert Dicke had predicted that if the Big Bang had occurred, there would be low level radiation found throughout the universe. Dicke was about to design an experiment to test this hypothesis when he was contacted by Penzias. Upon hearing of Penzias' and Wilson's discovery, Dicke turned to his laboratory colleagues and said "well boys, we've been scooped."7
>
> Although both groups published their results in Astrophysical Journal Letters, only Penzias and Wilson received the Nobel Prize for the discovery of the CMB.
>
> The horn antenna was designated a National Historic Landmark in 1990. Its significance in fostering a new appreciation for the field of cosmology and a better understanding of our origins can be summed up by the following: **"Scientists have labeled the discovery [of the CMB] the greatest scientific discovery of the 20th century."**8

It's the greatest scientific discovery of the 20th century.

In the New York Times, Arno Penzias commented on his discovery – the greatest discovery of the 20th century – so:

> The best data we have [concerning the Big Bang] are exactly what I would have predicted, had I nothing to go on but the five books of Moses, the Psalms, the bible as a whole.

Just one problem with the greatest scientific discovery of the 20th century: atheists don't accept it. Why not?

Here's a statement from the Secular Humanist Manifesto, which explains what atheists believe about the universe:

> Religious humanists regard the universe as self-existing and not created.

For a couple of examples of how atheistic scientists respond to the evidence for a cosmic beginning, you can check out this post, where we get responses from cosmologist Lawrence Krauss, and physical chemist Peter Atkins.

You cannot have the creation of the universe be true AND a self-existing, eternal universe ALSO be true. Someone has to be wrong. Either the science is wrong, or the atheist manifesto is wrong. I know where I stand.

Positive arguments for Christian theism

How the WMAP satellite confirmed nucleosynthesis predictions and falsified atheism

February 25, 2023 | by Wintery Knight | Link | Original Link

Prior to certain scientific discoveries, most people thought that the universe had always been here, and no need to ask who or what may have caused it. But today, that's all changed. Today, the standard model of the origin of the universe is that all the matter and energy in the universe came into being in an event scientists call "The Big Bang". At the creation event, space and time themselves began to exist, and there is no material reality that preceded them.

So a couple of quotes to show that.

> An initial cosmological singularity… forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity… On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.

Source: P. C. W. Davies, "Spacetime Singularities in Cosmology," in The Study of Time III, ed. J. T. Fraser (Berlin: Springer Verlag).

And another quote:

> [A]lmost everyone now believes that the universe, and time itself, had a beginning at the big bang.

Source: Stephen Hawking and Roger Penrose, The Nature of Space and Time, The Isaac Newton Institute Series of Lectures (Princeton, N. J.: Princeton University Press, 1996), p. 20.

So, there are several scientific discoveries that led scientists to accept the creation event, and one of the most interesting and famous is the discovery of how elements heavier than hydrogen were formed.

Nucleosynthesis: forming heavier elements by fusion

Here's the history of how that discovery happened, from the National Aeronautics and Space Administration (NASA) web site:

> The term nucleosynthesis refers to the formation of heavier elements, atomic nuclei with many protons and neutrons, from the fusion of lighter elements. The Big Bang theory predicts that the early universe was a very hot place. One second after the Big Bang, the temperature of the universe was roughly 10 billion degrees and was filled with a sea of neutrons, protons, electrons, anti-electrons (positrons), photons and neutrinos. As the universe cooled, the neutrons either decayed into protons and electrons or combined with protons to make deuterium (an isotope of hydrogen). During the first three minutes of the universe, most of the deuterium combined to make helium. Trace amounts of lithium were also produced at this time. This process of light element formation in the early universe is called "Big Bang nucleosynthesis" (BBN).

The creation hypothesis predicts that there will be specific amounts of these light elements formed as the universe cools down. Do the predictions match with observations?

Yes they do:

> The predicted abundance of deuterium, helium and lithium depends on the density of ordinary matter in the early universe, as shown in the figure at left. These results indicate that the yield of helium is relatively insensitive to the abundance of ordinary matter, above a certain threshold. We generically expect about 24% of the ordinary matter in the universe to be helium produced in the Big Bang. This is in very good agreement with observations and is another major triumph for the Big Bang theory.

Moreover, WMAP satellite measurements of mass density agree with our observations of these light element abundances.

Here are the observations from the WMAP satellite:

Scientific observations match predictions

And here is how those WMAP measurements confirm the Big Bang creation event:

> However, the Big Bang model can be tested further. **Given a precise measurement of the abundance of ordinary matter, the predicted abundances of the other light elements becomes highly constrained. The WMAP satellite is able to directly measure the ordinary matter density and finds a value of 4.6% (±0.2%), indicated by the vertical red line in the graph. This leads to predicted abundances shown by the circles in the graph, which are in good agreement with observed abundances. This is an important and detailed test of nucleosynthesis and is further evidence in support of the Big Bang theory.**

"An important and detailed test".

For completeness, we should learn how elements heavier than these light elements are formed:

> Elements heavier than lithium are all synthesized in stars. During the late stages of stellar evolution, massive stars burn helium to carbon, oxygen, silicon, sulfur, and iron. Elements heavier than iron are produced in two ways: in the outer envelopes of super-giant stars and in the explosion of a supernovae. All carbon-based life on Earth is literally composed of stardust.

That's a wonderful thing to tell a young lady when you are on a date: "your body is made of stardust". In fact, as I have argued before, this star formation, which creates the

elements necessary for intelligent life, can only be built if the fundamental constants and quantities in the universe are finely-tuned.

Now, you would think that atheists would be happy to find observations that confirm the origin of the universe out of nothing, but they are not. Actually, they are in denial.

Here's a statement from the Secular Humanist Manifesto, which explains what atheists believe about the universe:

> Religious humanists regard the universe as self-existing and not created.

For a couple of examples of how atheistic scientists respond to the evidence for a cosmic beginning, you can check out this post, where we get responses from cosmologist Lawrence Krauss, and physical chemist Peter Atkins.

You cannot have the creation of the universe be true AND a self-existing, eternal universe ALSO be true. Someone has to be wrong. Either the science is wrong, or the atheist manifesto is wrong. I know where I stand.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

Peter J. Williams debates Bart Ehrman on his book "Misquoting Jesus"

February 26, 2023 | by Wintery Knight | Link | Original Link

Dr. Peter J. Williams, an expert on New Testament reliability

I have to re-post this debate between Bart Ehrman and Peter J. Williams, because Dr. Williams just followed me on Twitter. I noticed that he had re-tweeted one of the two senators I follow on Twitter, so I re-tweeted him. I like Tom Cotton and Josh Hawley, and he re-tweeted Senator Hawley talking about free speech.

Bart Ehrman posted the debate audio on YouTube:

Details:

> Bart Ehrman is the US author of the bestselling book "Misquoting Jesus" (In the UK "Whose word is it?"). He calls into question the authority of the New Testament as scribal changes over time have changed the documents.
>
> So can we trust the scripture? Bible scholar Peter Williams believes in the reliability of the New Testament and that Bart's prognosis is far too pessimistic.

This post is a re-post from 2011. I have been listening to this lecture by Peter J. Williams on "Misquoting Jesus" this week, and it reminded me to re-post this debate. (I checked to make sure the MP3 link is still good, and it is)

Summary of the Williams-Ehrman debate:

Note: this summary is *snarky*. If you want an accurate view of the debate, then listen to it. My summary is meant to be humorous.

Ehrman:

- I had a mystical experience in childhood and became an evangelical Christian
- I went to Moody Bible Institute, and they told me that the Bible was inerrant
- For a while, I was committed to the view that there are no mistakes in the Bible
- At Princeton, I was taught *and graded* by professors who did not accept inerrancy
- By a strange coincidence, I began to see that the Bible did have errors after all!
- We don't have the original documents written by the original authors, we only have thousands of copies
- if the words of the Bible are not completely inerrant, then none of it is historical
- if all of the words in all the copies of the Bible are not identical, then none of it is historical

Williams:

- I would say the New and Old testaments are the Word of God
- We don't need to have the original Greek writings in order to believe in the authority of the Bible
- I believe in inerrancy, but doesn't mean there are no problems
- the doctrine of inerrancy has always referred to the original Greek copies, not the translations

Moderator:

- what are the main points of Misquoting Jesus?

Ehrman:

- we don't have the originals of any of the books of the New Testament
- we have copies that are much later, sometimes even centuries later!!1!
- the copies we have all differ from one another – they were changed by scribes!!1!
- we have 5000 manuscripts in the original Greek language
- there are hundreds of thousands of differences!!1!
- most of the differences don't matter
- some differences are significant for meaning or doctrine
- errors are propagated because the next scribe inherits the mistake of their source copy
- a large gap between the time of writing and the first extant copy means more errors have crept in

Williams:

- the reason we have so many variants is because the number of manuscripts is large

Angry Jesus or compassionate Jesus in Mark

Ehrman:

- most manuscripts say that Jesus was compassionate when healing a leper, but one says he was angry
- it makes a huge huge huge really really big difference if Jesus is compassionate or angry
- the whole Bible needs to be thrown out because of this one word between different in one manuscript

Williams:

- this variant is important for understanding the passage, but it has no great meaning
- the change is probably just an accident – the two words are very similar visually in Greek
- it's just an accident – it emerged in one manuscript, and it impacted a few more
- the tiny number of manuscripts that have the error are geographically isolated
- I'm pretty sure that WK prefers the angry Jesus anyway – so who cares?

Ehrman:

- no! someone changed it deliberately! it's a conspiracy! you should buy my book! it's a *big deal*!!!!!1!!1!one!!eleventy-one!

The woman caught in adultery in John

Ehrman:

- it is isn't in any of the earliest manuscripts
- this is an apocryphical story that some scribe deliberately inserted into the text
- most people don't even know about this! it's a cover-up! you need to buy my scandalous book!

Williams:

- that's right, it's a late addition by some overzealous scribe
- and it's clearly marked as such in every modern Bible translation
- the only people who don't know about this are people who don't read footnotes in their Bible
- and in any case, this isn't a loss of the original words of the New Testament – it's an addition

Grace of God or apart from God in Hebrews

Ehrman:

- well this is just a one word difference, but it makes a huge huge really really big difference!
- the words are very similar, so it's could be an accident I guess
- but it wasn't! this was a deliberate change! it's a conspiracy! it's a cover-up!

scandal!
- buy my book! It’s almost as good as Dan Brown!

Moderator:

- hmmmn…. I kind of like “apart from God” – why is this such a big scandal again?

Ehrman:

- you don’t care? how can you not care? it has to be inerrant! or the whole thing is false!
- Moody Bible Institute says!

Williams:

- yeah Bart is always saying that every change is deliberate but it’s just an accident
- the words are very similar, just a few letters are different, this is clearly an accident
- I have no problem with apart from God, or by the Grace of God
- please move on and stop screaming and running around and knocking things over

Moderator:

- but what if pastors try to use this passage in a sermon?

Williams:

- well, one word doesn’t make a big different, the meaning that appears is fine for preaching
- it’s only a problem for people who treat the Bible as a magic book with magical incantations
- they get mad because if one word is out of place then the whole thing doesn’t work for their spell
- then they try to cast happiness spells but the spells don’t work and they experience suffering
- the suffering surprises them since they think that fundamentalism should guarantee them happiness
- then they become apostates and get on TV where they look wide-eyed and talk crazy

Ehrman:

- hey! are you talking about me? a lot of people buy my books! i am a big success!
- it is very important that people don’t feel bad about their sinning you know!

Is Misquoting Jesus an attack?

Williams:

- it’s rhetorically imbalanced and misleading
- it tries to highlight change and instability and ignore the majority of the text that is stable
- he makes a big deal out of 5 or so verses that are different from the mainstream text
- he says that scribes deliberately changed the scriptures, but he doesn’t prove that
- it’s just as likely that the differences are just scribal errors made by accident

Ehrman:

- well, maybe the variants aren’t a big deal, but what about one angel vs. two angels?
- that’s a significant issue! significant enough for me to become an apostate – a *rich* apostate
- if one word is different because of an accident, then the whole Bible cannot be trusted
- it has to be completely inerrant, so a one word difference means the whole thing is unreliable
- we don’t even know if Jesus was even named Jesus, because of one angel vs two angels!!!1!
- buy my book! you don’t have to read it, just put it on your shelf, then you’ll feel better about not having a relationships with God – because who’s to say what God really wants from you? Not the Bible!

Energy Department agrees with FBI: Wuhan lab leak theory “most likely” COVID origin

February 27, 2023 | by Wintery Knight | Link | Original Link

I’m not so young that I don’t remember when all of the talking heads in the White House, the corporate media and Big Tech, were labeling the lab leak theory of COVID origins as “false news” or a “conspiracy theory”. Facebook, Twitter, Instagram, etc. were all handing out bans and suspensions to anyone who talked about it. The journalists in the corporate news media labeled the theory a “conspiracy”.

So what’s true? Let’s take a look in the Wall Street Journal and see.

Excerpt:

> WASHINGTON—The U.S. Energy Department has concluded that the Covid pandemic most likely arose from a laboratory leak, according to a classified intelligence report recently provided to the White House and key members of Congress.
>
> The shift by the Energy Department, which previously was undecided on how the virus emerged, is noted in an update to a 2021 document by Director of National Intelligence Avril Haines’s office.
>
> The new report highlights how different parts of the intelligence community have arrived at disparate judgments about the pandemic’s origin. The Energy Department now joins the Federal Bureau of Investigation in saying the virus likely spread via a mishap at a Chinese laboratory.
>
> […]The Energy Department’s conclusion is the result of new intelligence and is significant because the agency has considerable scientific expertise and oversees a network of U.S. national laboratories, some of which conduct advanced biological research.
>
> […]The FBI employs a cadre of microbiologists, immunologists and other scientists and is supported by the National Bioforensic Analysis Center, which was established at Fort Detrick, Md., in 2004 to analyze anthrax and other possible biological threats.

So, what were the corporate news media saying about this theory, before the FBI and Energy Department labeled it as the “most likely” explanation?

- The New York Times: Senator Tom Cotton Repeats Fringe Theory of Coronavirus Origins
- Washington Post: Tom Cotton keeps repeating a coronavirus conspiracy theory that was already debunked
- CNN: Tom Cotton is playing a dangerous game with his coronavirus speculation
- MSNBC: Cotton repeats coronavirus conspiracy theory, despite evidence

- The Hill: Sen. Cotton repeats coronavirus origins conspiracy theory
- Business Insider: A GOP senator keeps pushing a thoroughly debunked theory that the Wuhan coronavirus is a leaked Chinese biological weapon gone wrong
- Huffington Post: Sen. Tom Cotton Still Pitching Debunked Theory About Coronavirus
- The Atlantic: The Pro-Trump Culture War on American Scientists
- Scientific American: Eight Persistent COVID-19 Myths and Why People Believe Them: (Myth #1: THE VIRUS WAS ENGINEERED IN A LABORATORY IN CHINA)
- Science: (peer-reviewed journal): Scientists 'strongly condemn' rumors and conspiracy theories about origin of coronavirus outbreak

Why are people in the corporate media (and mainstream science publications) spreading lies about this story?

Well, I think it's because many of these journalists either don't have STEM degrees, or they don't have any experience using their STEM degrees in private sector STEM careers.

There is something that happens in American schools, where the laziest students realize that they can get high grades with low effort, simply by agreeing with the teachers. According to voting records and political contribution records, the teachers are almost entire far-left progressives, so these students just adopt far-left views. The goal of these students is not really to understand how to do anything in the real world. They don't want to write code or fix cars or wire up a house for electricity. They don't read books by Thomas Sowell, just what the teacher says will be on the true/false or multiple choice tests. They just want to get back to drinking, drugging, hooking up and partying. And that's really what's going on in these places. The people who get to the top either dropped math in grade 9, or they never used math in a real competitive private sector environment. They just repeat whatever gets them public approval.

Look at this article from the New York Post, talking about the biased writers at the New York Times:

> Academics joined this chorus in marginalizing anyone raising the theory. One study cited the theory as an example of "anti-Chinese racism" and "toxic white masculinity."
>
> As late as May 2021, the New York Times' Science and Health reporter Apoorva Mandavilli was calling any mention of the lab theory "racist."
>
> She embodies the model of the new "advocacy journalism" at the Times. Reporters who remained wedded to the dated view of objective journalism were purged from the ranks of the Times long ago.
>
> Mandavilli and others made clear that reporters covering the theory were COVID's little Bull Connors. She tweeted wistfully "someday we will stop talking about the lab leak theory and maybe even admit its racist roots. But alas, that day is not yet here."

Something to think about. Be careful where you get your news. A lot of people who work in the corporate news media are just there because they are angry at Christians and

conservatives for making them feel bad about their heavy drinking, their drug addictions, their divorces, their abortions, their pedophilia, their use of prostitutes, their infertility, their childlessness and singleness at age 40, etc. They are neither willing nor capable of determining truth about STEM issues like viruses. They just write what makes them look good and feel good about the terrible choices they've made with their own crappy lives.

A lot of these people on the secular left think that the universe has always existed. That cosmic fine-tuning for complex life in the universe isn't real. That the origin of life was caused by unobservable aliens. They think that men can become women, and women can become men. They think that two men or two women will be as good for raising a child as two married biological parents who attend church every week. They think that embryos are just clumps of cells. They think that raising minimum wage does not cause unemployment to rise for young, unskilled workers. Just ignorance to the point where they respond like insane people. Why trust mentally ill people about anything?

New study: pre-Kindergarten ("pre-K") programs harm children in the long run

February 28, 2023 | by Wintery Knight | Link | Original Link

I worked with a guy who had grown up in the church, in a married Christian home, and dumped his Christianity in college. We were talking about education, and I showed him studies about what young children need in order to thrive. He insisted that his wife needed to work for true equality of the sexes, and that children did better in "school" anyway. That's what he called the pre-K program.

Well, here's the latest large-scale study on pre-K's effects on children, reported by Independent Women's Forum:

> A new study of state-run pre-K… found that it has long-term *negative* effects on children's achievement and behavior.
>
> The study is the most rigorous look at state-run pre-K to date. The authors followed through sixth grade over 2,900 children from low-income families who applied to Tennessee's pre-K program, and compared the students who were randomly admitted to the program with students who were not (the "control children"). It is one of the few randomized studies of pre-K, and it has a longer follow-up period than other studies. Based on parent interviews of a portion of the control children, the authors found that most of them (63%) received home-based, familial care, instead of attending pre-K.

Measuring the effects of pre-K from kindergarten to third grade:

> In 2016, the authors initially reported "significant positive immediate effects" of pre-K, based on achievement measures conducted at the end of the pre-K program. By the end of kindergarten, however, most of those positive effects were no longer statistically significant, and by the end of third grade, certain measures had turned slightly negative.

What about the next phase – fourth grade to sixth grade?

> The new study reports on the next phase of the study, which measured the effects of pre-K through sixth grade. As to achievement outcomes, the authors found that the "control children continued to outperform" the pre-K children "in reading, mathematics, and science with statistically significant differences larger than those observed in third grade," and that the control children were significantly less likely to require special education services. As to behavioral outcomes, the authors found that the control children had higher attendance rates and fewer disciplinary infractions than pre-K children, with the differences again being statistically significant.

Were these negative outcomes due to the quality of the pre-K program being studied?

> The authors considered, and rejected, the possibility that these negative effects might be attributable to the quality of Tennessee's pre-K program, explaining that "[a]mong state-funded pre-K programs, the TN program is above average and arguably in the top tier on characteristics many believe mark high quality." They additionally note that their results are consistent with other studies of pre-K programs and Head Start, which tend to show initial positive effects that fade over time, and with studies indicating "long-term negative outcomes on behavior for children in group care."

When it comes to children, the attitude of people on the secular left seems to be "children will do well and be happiest if I do what I want to do, and they just adjust to my selfishness". Secular leftists aren't out here bounding their decision-making with studies about what does and does not work for children. They're going to do what makes them feel good, what makes them look good to their co-workers, or other selfish adults.

What people want to hear today is that your wife is working, and she is earning a lot of money. And you want to tell them that. You want to tell them how on board you are with "equality", and how opposed you are to "sexism". So you put your wife into an office, and put your kids into daycare and pre-K. But according to the studies, that doesn't work for your kids. But what do you care? It works for you. Your co-workers like you. You feel smart. You sound smart to the people you want to impress. You'll rise high in your profession. You can afford to buy a boat AND a vacation home.

Ryan T. Anderson lectures on marriage and why it matters

March 1, 2023 | by Wintery Knight | Link | Original Link

Here's the lecture:

About the speaker:

> Ryan T. Anderson researches and writes about marriage and religious liberty as the William E. Simon Fellow at The Heritage Foundation. He also focuses on justice and moral principles in economic thought, health care and education, and has expertise in bioethics and natural law theory.
>
> Anderson, who joined the leading Washington think tank's DeVos Center for Religion and Civil Society in 2012, also is the editor of *Public Discourse*, the online journal of the Witherspoon Institute of Princeton, N.J.
>
> Anderson's recent work at Heritage focuses on the constitutional questions surrounding same-sex "marriage." He is the co-author with Princeton's Robert P. George and Sherif Girgis of the acclaimed book "What Is Marriage? Man and Woman: A Defense" (Encounter Books, December 2012).

The lecture starts at 7:20 in. The lecture ends at 49:35. There are 32 minutes of Q&A.

Introduction:

- When talking about marriage in public, we should talk about philosophy, sociology and public policy
- Gay marriage proponents need to be pressed to define what marriage is, on their view
- Every definition of marriage is going to include some relationships, and exclude others
- It's meaningless to portray one side as nice and the other mean
- Typically, marriage redefiners view marriage as a more intense emotional relationship
- Marriage redefiners should be challenged in three ways:
- 1) Does the redefined version of marriage have a public policy reason to prefer only two people?
- 2) Does the redefined version of marriage have a reason to prefer permanence?
- 3) Does the redefined version of marriage have a reason to prefer sexual exclusivity?
- Also, if marriage is just about romance, then why is the state getting involved in recognizing it?
- The talk: 1) What marriage is, 2) Why marriage matters, 3) What are the consequences of redefining marriage?

What marriage is:

- Marriage unites spouses – hearts, minds and bodies
- Marriage unites spouses to perform a good: creating a human being and raising that human being
- Marriage is a commitment: permanent and exclusive
- Male and female natures are distinct and complementary

The public purpose of marriage:

- to attach men and women to each other
- to attach mothers and fathers to their children
- there is no such thing as parenting, there is only mothering and fathering
- the evidence shows that children benefit from mothering and fathering
- boys who grow up without fathers are more likely to commit crimes
- girls who grow up without fathers are more likely to have sex earlier
- Children benefit from having a mother and a father
- can't say that fathers are essential for children if we support gay marriage, which makes fathers optional
- without marriage: child poverty increases, crime increases, social mobility decreases, welfare spending increases
- when government encourages marriage, then government has less do to – stays smaller, spends less
- if we promote marriage as an idea, we are not excluding gay relationships or even partner benefits
- finally, gay marriage has shown itself to be hostile to religious liberty

Consequences redefining marriage:

- it undermines the norm in public like that kids deserve a mom and a dad – moms and dads are interchangeable
- it changes the institution of marriage away from the needs of children, and towards the needs of adults
- it undermines the norm of permanence
- we learned what happens when marriage is redefined before: with no-fault divorce
- no-fault divorce: after this became law, divorce rates doubled – the law changed society
- gay marriage would teach society that mothers and fathers are optional when raising children
- if marriage is what people with intense feelings do, then how can you rationally limit marriage to only two people?
- if marriage is what people with intense feelings do, then if other people cause intense feelings, there's no fidelity
- if marriage is what people with intense feelings do, then if the feelings go away,

there is no permanence
- the public policy consequences to undermining the norms of exclusivity and permanence = fatherless children and fragmented families
- a final consequences is the decline and elimination of religious liberty – e.g. – adoption agencies closing, businesses being sued

We're doing very well on abortion, but we need to get better at knowing how to discuss marriage. If you're looking for something short to read, click here. If you want to read a long paper that his book is based on.

Mississippi governor signs legislation to ban sex-change surgery for minors

March 2, 2023 | by Wintery Knight | Link | Original Link

I was hoping that Tennessee would be first, since the Tennessee legislature has already passed a similar ban in their House and Senate, but the moderate governor Bill Lee hasn't signed it yet. But in Mississippi, they move a little faster. Social conservative firebrand Matt Walsh was on hand to speak at the signing ceremony. Score one for "not nice" social conservatives like Matt Walsh.

Daily Wire reports:

> Gov. Tate Reeves (R-MS) signed a bill Tuesday outlawing sex-change procedures for minors and punishing doctors who push cross-sex drugs and procedures on those under 18.
>
> House Bill 1125, known as the "Regulate Experimental Adolescent Procedures (REAP) Act," overwhelmingly passed Mississippi's Republican-led Senate 33-15 last week after passing the state House 78-30 in January. Now, after Reeves' signature, Mississippi state law bars health care providers from performing gender reassignment surgeries, prescribing and administrating puberty-blocking drugs, and giving cross-sex hormones to trans-identifying children.
>
> "There is a dangerous movement spreading across America today being pushed onto our children through radical activists, social media, and online influencers," Reeves said at the bill's signing, adding that radical gender ideology "threatens our children's innocence and threatens their health."
>
> Under the new Mississippi law, doctors and healthcare professionals who "knowingly provide gender transition procedures to any person under 18 years of age" will have their medical license revoked by the state. The law also prohibits public funds from being used for gender transitions on minors.
>
> Daily Wire host Matt Walsh, who has been on a crusade in his home state of Tennessee to protect children from the dangers of transgender treatments, joined Reeves in Jackson, Mississippi, for the bill's signing.
>
> "These kids are put on so-called puberty blockers to chemically castrate them, and before the age of 18, many will undergo surgery," Walsh said. "They cannot consent to it and they cannot understand the long-term effects of it."
>
> "They need love and clarity, not hormone supplements and scalpels," he added. "Our kids cannot protect themselves. We need to do it. That's our job as adults."

Other states have similar initiatives:

> Other Republican-led states such as Alabama, Arkansas, Florida, South Dakota, and Utah have also restricted or banned sex-change procedures for minors. The

> bill Alabama passed last year made it a felony to prescribe puberty blockers and hormone treatment to trans-identifying minors, but the law was temporarily blocked by a federal judge.

The Tennessee legislation was passed by an even wider margin in the TN House and Senate than the Mississippi legislation.

Breitbart reports:

> The Tennessee State Legislature passed a bill that would ban the use of puberty blockers, hormone therapy, and surgical operations on children in order to "change" their gender. The legislation now awaits Gov. Bill Lee's signature.
>
> Lawmakers in the State House passed the legislation 77 to 16, with three Democrats voting with the Republicans.
>
> After allowing for a grace period for those who have already begun to attempt a transition, the bill would authorize the attorney general to investigate healthcare providers who violate the ban, who could be fined up to $25,000.
>
> House Majority Leader William Lamberth remarked that "These children do not need these medical procedures to be able to flourish as adults."
>
> "They need mental health treatment. They need love and support, and many of them need to be able to grow up to become the individuals that they were intended to be," Lamberth went on to say.
>
> Similar bills have gained traction in various other Republican-led states, including Nebraska, Mississippi, Oklahoma, South Dakota, and South Carolina.

Makes you wonder what's holding Bill Lee up. That's a pretty wide margin. The Tennessee legislature has also passed legislation to prevent children from being exposed to highly-sexualized drag shows.

Breitbart reports:

> Tennessee lawmakers passed a bill that would prevent drag shows from taking place on public property or in front of children.
>
> The bill classifies "male and female impersonators" as adult cabaret performers, while also banning "adult-oriented performances that are harmful to minors." The legislation, SB3, now makes its way to Republican Gov. Bill Lee's office.
>
> State Rep. Chris Todd, R-Madison County, filed the bill, saying "this is a common sense child-safety bill." The bill, which passed by a vote of 79 to 19, makes it illegal to host an "adult cabaret performance" in a location where children are present. The legislation, which was proposed by Senate Majority Leader Jack Johnson also bans adult cabaret performances on public property.

Lee hasn't signed that legislation yet, either.

If you live in a state that allows sex-destructive surgery, why are you still there? I wouldn't pay taxes in a state that harms children. I'd move to a state that protects

children.

Pastor is assaulted and arrested for opposing drag shows where children are present

March 3, 2023 | by Wintery Knight | Link | Original Link

My friend McKenzie sent me a video clip from the Tucker Carlson show, where he first showed what happened to the pastor, and then asked all the leftist "Christian" leaders of our time: Beth Moore, David French, Tim Keller, etc. why they have nothing to say about free speech and religious liberty. I have the video of the Tucker segment in this post, and link to a couple of news articles.

Here's the video to start:

It's SO IMPORTANT that American Christians understand what the secular left does to Christians who take the Bible seriously. How are we supposed to behave as Christians, if we don't have the same rights to free speech as everyone else does? Can you imagine the Canadian government and police arresting a Muslim like that? They would never do it. But they do it to Christians without hesitation.

And here's the story from The Post Millennial:

> On Thursday, Derek Reimer, the pastor at Mission 7 Ministries in Calgary was charged and arrested for mischief and causing a disturbance for his protest during a Drag Queen Story Hour event at Seton Library on Saturday.
>
> According to Rebel News, Reimer was "forcibly removed by proponents of a Drag Queen Story Hour event" that was held at the Canadian library over the weekend. Video from the event shows several men pushing Reimer out of the room and shoving him to the ground.
>
> After he gets up Reimer says, "It's very abusive in there. For love is love, that looks like very hateful, very abusive."
>
> CTV reports that Mayor Jyoti Gondek has said she will unpack the "reasons" Canadian law enforcement could not use existing street harassment laws to crack down on protestors of drag queen story hour events.
>
> According to Rebel News, Gondek "promised to weaponize Calgary's anti-street harassment bylaws to prevent anti-drag show protests."
>
> Calgary police arrived at Reimer's home on Wednesday and told him he was going to be arrested but did not complete the arrest at that time.
>
> […]Reimer was arrested previously for protesting at a different "all-ages" drag queen show.
>
> "Reimer was the second client of the registered Canadian charity, The Democracy Fund's (TDF) Fight The Fines program, after receiving Covid tickets for feeding the homeless, an act the City of Calgary called 'illegal gatherings,'" reports Rebel News.

Interesting about the mayor of Calgary. Calgary used to be considered the most conservative of Canada's major cities. But that was before they started electing a string of radical leftists, and not just at the municipal level, but at the provincial level as well.

Daily Wire had more, specifically about the Tucker Carlson clip:

> Carlson noted that the administration of Canadian Prime Minister Justin Trudeau has actively opposed Christian and conservative movements in recent years. "On some level, all governments hate religious people, because it's competition. And revolutionary governments, totalitarian governments, go after religious people first," he observed. "That is the measure of a free country in the end: are you allowed to believe that there's an authority higher than the people in charge of your government?"
>
> […]"Canada has now become an atheist totalitarian state with amazing speed," Carlson remarked. "In Canada, it's now a crime to object to sexualized drag shows for children."
>
> Several Canadian ministers were likewise arrested for opening their churches despite government lockdown mandates. Pastor Tim Stephens of Fairview Baptist Church in Alberta garnered international attention as videos of police officers detaining him in front of his sobbing children and using helicopters to discover where his church had been secretly meeting circulated online. Stephens spent three weeks in jail and was served six provincial tickets for his alleged breach of public health orders, all of which were eventually dropped or cleared.

This was my favorite part – Tucker Carlson went after the big name leftist "Christian" leaders, who always seem to take the side of secular leftist Democrats who trample over the rights of Christians:

> Carlson also referenced "professional Christians" who have frequently remained silent on governmental overreach and widespread disregard for biblical sexual ethics. "Where is David French, Beth Moore, Tim Keller, and all these people who are defending Christianity as actual Christians are being arrested for being Christians? Not a word."
>
> Daily Wire journalist Megan Basham has reported over the past several months about professed theological conservatives, including French and Keller, cooperating with efforts from the Biden administration to encourage mask-wearing and receiving the COVID vaccine. Keller and French also lauded former National Institutes of Health Director Francis Collins, who has declared himself an "ally" of the LGBTQ movement and supported fetal human tissue research during his tenure, as a faithful Christian.

It's too bad that these Evangelicals for Biden clowns are still respected by some ill-informed people in the church. Anyone can see what the secular left is doing, and their policies and laws are opposed to Christian values, and Christian freedoms. We need to be

more serious about picking role models. I prefer people who fight against the secular left.

New study: there is no gay gene that causes homosexuality

March 4, 2023 | by Wintery Knight | Link | Original Link

I heard one of the authors of this new study commenting on how he was a gay man, and the purpose of his research was to show a genetic basis for homosexuality, in order to make it equal to race. His goal was to make it impossible to disagree with homosexual behavior, because homosexual behavior would be seen as natural and normal. Let's see if his new study helps him out.

The blog of the peer-reviewed journal PLOS One reported on the new study, which was published in the prestigious journal Science.

Excerpt:

> The once-prevailing concept of a "gay gene" dictating sexual orientation has been put to rest in a powerhouse study published today in *Science*. The work brilliantly illustrates the very nature of science: evolving with the input of new data, especially the large-scale contributions of bioinformatics and crowd-sourcing.
>
> "We formed a large international consortium and collected data for more than 500,000 people, comparing DNA and self-reported sexual behavior. This is approximately 100 times bigger than any previous study on this topic," said lead author Andrea Ganna, of the Institute of Molecular Medicine in Finland and an instructor at Massachusetts General Hospital and Harvard Medical School, opening a news conference earlier this week.
>
> […]The investigation estimates a genetic contribution to same-sex sexual behavior as under 1 percent, thanks to analysis of a trove of data from the UK Biobank and the consumer genetic testing company 23andme.

So, there you have it, there is no gay gene. But this is of course something we've known for decades, as all the previous studies had found the same thing.

The normal way that people do these studies is to analyze identical twins, and see how often both identical twins are gay.

> Eight major studies of identical twins in Australia, the U.S., and Scandinavia during the last two decades all arrive at the same conclusion: gays were not born that way.
>
> "At best genetics is a minor factor," says Dr. Neil Whitehead, PhD. Whitehead worked for the New Zealand government as a scientific researcher for 24 years, then spent four years working for the United Nations and International Atomic Energy Agency. Most recently, he serves as a consultant to Japanese universities about the effects of radiation exposure. His PhD is in biochemistry and statistics.

> Identical twins have the same genes or DNA. They are nurtured in equal prenatal conditions. If homosexuality is caused by genetics or prenatal conditions and one twin is gay, the co-twin should also be gay.
>
> "Because they have identical DNA, it ought to be 100%," Dr. Whitehead notes. But the studies reveal something else. "If an identical twin has same-sex attraction the chances the co-twin has it are only about 11% for men and 14% for women."
>
> Because identical twins are always genetically identical, homosexuality cannot be genetically dictated. "No-one is born gay," he notes. "The predominant things that create homosexuality in one identical twin and not in the other have to be post-birth factors."
>
> Dr. Whitehead believes same-sex attraction (SSA) is caused by "non-shared factors," things happening to one twin but not the other, or a personal response to an event by one of the twins and not the other.

By the way, a previous study also found that transgender behavior was not genetic, but was clearly linked to environmental factors such as peer approval and social media.

Here is the report from Science Daily:

> This month, a Brown University researcher published the first study to empirically describe teens and young adults who did not have symptoms of gender dysphoria during childhood but who were observed by their parents to rapidly develop gender dysphoria symptoms over days, weeks or months during or after puberty.
>
> […]The study was published on Aug. 16 in *PLOS ONE*.
>
> Littman surveyed more than 250 parents of children who suddenly developed gender dysphoria symptoms during or after puberty.
>
> […]"Of the parents who provided information about their child's friendship group, about a third responded that more than half of the kids in the friendship group became transgender-identified," Littman said. "A group with 50 percent of its members becoming transgender-identified represents a rate that is more 70 times the expected prevalence for young adults."

A previous study also found that children are more likely to be gay if they are raised by gay adults. It was reported in AOL News.

Excerpt:

> Walter Schumm knows what he's about to do is unpopular: publish a study arguing that gay parents are more likely to raise gay children than straight parents. But the Kansas State University family studies professor has a detailed analysis that past almost aggressively ideological researchers never had.
>
> […]His study on sexual orientation, out next month, says that gay and lesbian parents are far more likely to have children who become gay. "I'm trying to prove

> that it’s not 100 percent genetic,” Schumm tells AOL News.
>
> His study is a meta-analysis of existing work. First, Schumm extrapolated data from 10 books on gay parenting… [and] skewed his data so that only self-identified gay and lesbian children would be labeled as such.
>
> […]Schumm concluded that children of lesbian parents identified themselves as gay 31 percent of the time; children of gay men had gay children 19 percent of the time, and children of a lesbian mother and gay father had at least one gay child 25 percent of the time.
>
> […]Finally, Schumm looked at the existing academic studies… In all there are 26 such studies. Schumm ran the numbers from them and concluded that, surprisingly, 20 percent of the kids of gay parents were gay themselves. When children only 17 or older were included in the analysis, 28 percent were gay.

It’s very important for people to understand that there is a trend in society to make every behavior traditionally seen as sinful into something caused by genetics. The twin goals of this effort are to insulate the behaviors from criticism, and to minimize evaluation of the effects of these behaviors on society as a whole. The genetic argument was used extensively to normalize same-sex marriage and transgenderism. I have seen the genetic argument used to defend other behaviors like pedophilia and incest. But the scientific research does nothing to support any of these arguments. What’s amazing is how a majority of people in the United States have such false beliefs about the scientific research. They vastly overestimate the number of gay people, and also the influence of genetics.

Bible study: the importance of truth in religion

March 5, 2023 | by Wintery Knight | Link | Original Link

Here's an interesting passage of the Bible. What do you all think the practical value of this passage is?

[1] In the second year of his reign, Nebuchadnezzar had dreams; his mind was troubled and he could not sleep.

[2] So the king summoned the magicians, enchanters, sorcerers and astrologers to tell him what he had dreamed. When they came in and stood before the king,

[3] he said to them, "I have had a dream that troubles me and I want to know what it means."

[4] Then the astrologers answered the king, "May the king live forever! Tell your servants the dream, and we will interpret it."

[5] The king replied to the astrologers, "This is what I have firmly decided: If you do not tell me what my dream was and interpret it, I will have you cut into pieces and your houses turned into piles of rubble.

[6] But if you tell me the dream and explain it, you will receive from me gifts and rewards and great honor. So tell me the dream and interpret it for me."

[7] Once more they replied, "Let the king tell his servants the dream, and we will interpret it."

[8] Then the king answered, "I am certain that you are trying to gain time, because you realize that this is what I have firmly decided:

[9] If you do not tell me the dream, there is only one penalty for you. You have conspired to tell me misleading and wicked things, hoping the situation will change. So then, tell me the dream, and I will know that you can interpret it for me."

[10] The astrologers answered the king, "There is no one on earth who can do what the king asks! No king, however great and mighty, has ever asked such a thing of any magician or enchanter or astrologer.

[11] What the king asks is too difficult. No one can reveal it to the king except the gods, and they do not live among humans."

[12] This made the king so angry and furious that he ordered the execution of all the wise men of Babylon.

[13] So the decree was issued to put the wise men to death, and men were sent to look for Daniel and his friends to put them to death.

[14] When Arioch, the commander of the king's guard, had gone out to put to death the wise men of Babylon, Daniel spoke to him with wisdom and tact.

[15] He asked the king's officer, "Why did the king issue such a harsh decree?" Arioch then explained the matter to Daniel.

[16] At this, Daniel went in to the king and asked for time, so that he might interpret the dream for him.

[17] Then Daniel returned to his house and explained the matter to his friends Hananiah, Mishael and Azariah.

[18] He urged them to plead for mercy from the God of heaven concerning this mystery, so that he and his friends might not be executed with the rest of the wise men of Babylon.

[19] During the night the mystery was revealed to Daniel in a vision. Then Daniel praised the God of heaven

[20] and said:

"Praise be to the name of God for ever and ever;
wisdom and power are his.

[21] He changes times and seasons;
he deposes kings and raises up others.
He gives wisdom to the wise
and knowledge to the discerning.

[22] He reveals deep and hidden things;
he knows what lies in darkness,
and light dwells with him.

[23] I thank and praise you, God of my ancestors:
You have given me wisdom and power,
you have made known to me what we asked of you,
you have made known to us the dream of the king."

[24]Then Daniel went to Arioch, whom the king had appointed to execute the wise men of Babylon, and said to him, "Do not execute the wise men of Babylon. Take me to the king, and I will interpret his dream for him."

[25] Arioch took Daniel to the king at once and said, "I have found a man among the exiles from Judah who can tell the king what his dream means."

[26] The king asked Daniel (also called Belteshazzar), "Are you able to tell me what I saw in my dream and interpret it?"

[27] Daniel replied, "No wise man, enchanter, magician or diviner can explain to the king the mystery he has asked about,

[28] but there is a God in heaven who reveals mysteries. He has shown King Nebuchadnezzar what will happen in days to come. Your dream and the visions that passed through your mind as you were lying in bed are these:

[29] "As Your Majesty was lying there, your mind turned to things to come, and the revealer of mysteries showed you what is going to happen.

[30] As for me, this mystery has been revealed to me, not because I have greater wisdom than anyone else alive, but so that Your Majesty may know the interpretation and that you may understand what went through your mind.

This passage is interesting to me because it shows the kind of attitude that God answers. The King in this passage was tired of hearing man-made stories from his servants – stories that were undoubtedly influenced by the servants desire to survive the King's wrath. The servants would only have told the King things that were vague and happy, so that they could never be proved wrong or found to be judgmental or offensive. But the King was tired of that. He wanted someone with authority to tell him the truth about the way the world was.

In the rest of the chapter, Daniel interprets the dream, and concludes by saying this: "The great God has shown the king what will take place in the future. The dream is true and its interpretation is trustworthy.". The King replies: "Surely your God is the God of gods and the Lord of kings and a revealer of mysteries, for you were able to reveal this mystery."

I think it is is going to be difficult for Christians living today to be able to tell people their dreams like that. But what we can do is talk about God's miracles as revealed by science and history. We can study astrophysics, biochemistry and history and we can explain what God did in creating and fine-tuning the universe for life, in sequencing amino acids into functioning proteins, in creating brand new body plans in the Cambrian explosion, in raising Jesus from the dead as a matter of historical record, and so on. We have to show how great God is to people who do not even think he exists, and without assuming that they believe in the Bible. And we have to do it by focusing on *what is true.*

Early last week, I got a message from a friend who was interested in a girl that he met on an online dating service. She claimed to be a Christian. My friend explained why he was so interested in some of the evidences I outlined above. She was not impressed. She said "I prefer to show people Christianity is true by not judging them, by being compassionate, by introducing them to a fun and affirming community". There was no emphasis on truth in her approach. In fact, any religious group could do those things and "establish" their religion as true, by appealing to feelings. But this is clearly not what the God of the Bible intends for people who seek him. He is a God of truth, and truth is established by logical reasoning and supporting evidence.

There are still people out there like the King who are looking for someone who can speak to them with authority. All it takes from us is a little studying, and we can be like Daniel, too. But we have to know what God has done from science and history, and speak with authority about how we can know that God has acted *supernaturally*. Authority to speak comes from having knowledge about what we are talking about, and knowledge comes from studying and debating with people we disagree with. Nebuchadnezzar was not a believer in the God of Israel, but he was still interested in truth. That won't always be the case, but it is the case for some people.

Gay activist mayor of College Park, Maryland resigns after criminal charges

March 6, 2023 | by Wintery Knight | Link | Original Link

I know that the dominant view of morality among the secular left is just "well, you can take out the God, and everything will just proceed like before". But if you look at bit more closely at the champions of goodness without God – the ones who built their lives on tearing down Christian morality – they aren't "good as you".. Let's take a look at the gay activist mayor of a blue city in a blue state.

Daily Wire reports:

> The Democrat mayor of College Park, Maryland, who had served as mayor for eight years, resigned after being charged with 56 counts of possession and distribution of child pornography.
>
> Patrick Wojahn, the openly gay mayor who has lived in College Park for over 17 years with his husband, Dave Kolesar, served as a city councilmember for eight years before serving as mayor.
>
> "On February 17, 2023, the National Center for Missing and Exploited Children notified the PGPD that a social media account operating in the county possessed and distributed suspected child pornography," the Prince George's County Police Department acknowledged on Thursday. "The image and videos had been uploaded to the social media account in January of 2023. Through various investigative techniques, PGPD investigators discovered the social media account belonged to Wojahn."
>
> "On February 28, 2023, PGPD detectives served a search warrant at Wojahn's College Park home," PGPD continued. "Investigators recovered multiple cell phones, a storage device, a tablet and a computer. Following additional investigation, PGPD obtained criminal charges against Wojahn and investigators took him into custody early this morning."
>
> **"Wojahn is charged with 40 counts of possession of child exploitative material and 16 counts of distribution of child exploitative material," PGPD concluded. "He is in the custody of the Department of Corrections."**

This isn't first time that a "goodness without God" activist has been caught in risky situations with the law.

If I had to pick one city that is the "Atheist Capital of America" I would pick Seattle, Washington. There, everyone is either involved in sex with underage boys, or they're voting to prevent Christians from judging it. They agree with it, they celebrate it. This is "atheist morality".

The far-left New York Times reports:

> The mayor of Seattle, Ed Murray, said on Tuesday that he would resign after announcing in May that he would not seek a second term. Several men have comeforward to accuse Mr. Murray of sexually abusing them decades ago, when they were underage.
>
> The announcement came just hours after The Seattle Times published a story with an account by a fifth man, Mr. Murray's cousin, who said Mr. Murray had abused him in the 1970s.
>
> [..]Mr. Murray, 62, a Democrat, is the city's first openly gay mayor, and had served in the State Legislature for many years before being elected in 2013.
>
> […]**The liberal Mr. Murray is generally considered a father of Washington's same-sex marriage law, which he pressed in the State Legislature for years.**

The radically-leftist New York Times isn't about to tell you what this Democrat gay-marriage activist actually did – that's not news that's fit to print. For that you have to go to Life Site News.

Christian apologists like to make an argument that God exists because he is the best explanation for the objective moral law. We used to take it for granted that atheists would agree that objective moral law is real. Some atheists like to claim that atheism rationally grounds the objective moral law. But as long as atheists keep voting overwhelmingly in favor of adult selfishness, and against the rights of children – right to live, and right to a mother and a father – then we really know that the whole "good without God" pose is just a lie.

Southern Poverty Law Center hate group is again linked to domestic terrorism

March 7, 2023 | by Wintery Knight | Link | Original Link

Everyone remembers how the Southern Poverty Law Center's "hate map" web site was used by gay activist Floyd Lee Corkins to plan and attempt a violent mass shooting hate crime at the headquarters of the Family Research Council, a conservative pro-marriage, pro-family think tank in Washington, D.C. And now the SPLC has been linked to domestic terrorism a second time.

Here's the story from Daily Wire:

> An attorney with the far-left nonprofit Southern Poverty Law Center (SPLC) was arrested Sunday for allegedly committing domestic terrorism to stop a police facility from being built.
>
> The Atlanta police department said Sunday night that Thomas Webb Jurgens was among the 23 people charged after a "group of violent agitators used the cover of a peaceful protest of the proposed Atlanta Public Safety Training Center to conduct a coordinated attack on construction equipment and police officers. They changed into black clothing and entered the construction area and began to throw large rocks, bricks, Molotov cocktails, and fireworks at police officers."
>
> According to the State Bar of Georgia, Thomas Webb Jurgens is an attorney for the SPLC who was admitted to the bar in 2021.

The FBI is a long-time partner of the SPLC, and so it's no surprise that they label religious people "domestic terrorists":

> Last month, an FBI whistleblower leaked a document showing that the FBI was investigating those practicing "radical-traditionalist Catholic ideology" as potential domestic extremists, in part by citing that the SPLC listed the faction among its "hate groups."
>
> The FBI previously called the SPLC "a well-known, established and credible" organization, and it has briefed the FBI on purported domestic terror, Fox News reported.

The FBI has links to left-wing hate groups, which is why they turn a blind eye to the crimes of other left-wing domestic terrorists, and prosecute peaceful pro-lifers and concerned parents instead. FBI leaders really have hate in their hearts for religious people, and it affects the way they do their jobs. These are not professional people. They lack integrity. These are immoral people who collect money from the law-abiding people, then they persecute those law-abiding people. They ignore real threats to America's security and peace.

Let's walk down memory lane and remember what happens when "non-religious" people

who don't like "organized religion" get hold of guns and decide to act on their non-religious convictions. In this case, the shooter was a gay activist who was a great admirer of Friedrich Nietzche, the atheist philosopher who proclaimed the death of God.

The Daily Caller reports.

Excerpt:

> The man accused of opening fire and shooting a security guard at the conservative Family Research Council headquarters last August plead guilty to three charges in a D.C. federal court Wednesday.
>
> Floyd Lee Corkins, II of Herndon, Virginia entered guilty pleas to a federal weapons charge as well as a local terrorism charge and a charge of assault with intent to kill, according to news reports.
>
> The Washington Post reports that, according to the plea agreement Corkins signed, he… "intended to kill as many people as possible" and planned to "smother Chick-fil-A sandwiches in their faces."
>
> Investigators found additional magazines and 15 Chick-fil-A sandwiches in his backpack on the day of the shooting.
>
> Following the guilty plea the FRC issued a statement placing a large portion of the blame for the shooting at the feet of the liberal Southern Poverty Law Center, which had listed FRC as a hate group. FRC noted that prosecutors discovered Corkins identified his targets on the SPLC's website.
>
> "The day after Floyd Corkins came into the FRC headquarter and opened fire wounding one of our team members, I stated that while Corkins was responsible for the shooting, he had been given a license to perpetrate this act of violence by groups like the Southern Poverty Law Center which has systematically and recklessly labeled every organization with which they disagree as a 'hate group,'" FRC president Tony Perkins said in a statement, which went on to demand that SPLC stop attacking organizations that have a different opinion on gay rights.
>
> The shooting happened shortly after Chick-fil-A made headlines over the company president's disagreement with gay marriage.

Why does anyone think that people on the secular left are tolerant? They keep talking about "atheist objective morality" and "secular humanism", but all I see from the secular left is domestic terrorism.

How Democrats and the corporate media lied about January 6th

March 8, 2023 | by Wintery Knight | Link | Original Link

This post is just a quick link-around to three stories that cover the three biggest revelations from the Capitol video on January 6th, 2021. The secular left told us that there was an insurrection, that there were weapons, and violence and an attempt to seize control of the Capitol by armed militias who attacked and killed police officers. But what really happened?

New York Post:

> Newly revealed surveillance footage from Jan. 6, 2021, shows two Capitol Police officers escorting Jacob Chansley, the behorned so-called "QAnon Shaman" who has come to symbolize the riot, through the halls of the Capitol and to the very door of the US Senate.
>
> The footage aired on Tucker Carlson's Fox News show Monday night shows the officers closely following Chansley as he wanders the corridors of the Capitol, bare-chested and wearing face paint and a luxuriant fur hat with Viking horns.
>
> "Virtually every moment of his time inside the Capitol was caught on tape," says Carlson, who was granted exclusive access by House Speaker Kevin McCarthy to 40,000 hours of surveillance footage from that day inside and around the Capitol, which has never been seen before by the public.
>
> "The tapes show the Capitol Police never stopped Jacob Chansley. They helped him. They acted as his tour guides."
>
> In a statement, the Capitol Police suggest that one of the officers with Chansley was trying to "de-escalate" the situation because he was outnumbered.
>
> But that does not explain why Chansley, who was unarmed, was able to walk past seven more officers without being apprehended.
>
> "Not one of them even tried to slow him down," says Carlson.
>
> He "understood that the Capitol Police were his allies. … If he was in the act of committing such a grave crime, why didn't the officers standing right next to him place him under arrest?"
>
> And yet in the narrative formed that day by Democrats and much of the media, "Jacob Chansley became the face of January 6, a dangerous conspiracy theorist dressed in an outlandish costume who led the violent insurrection to overthrow America's democracy," says Carlson.

The Democrats in the legislature are furious with Republicans for releasing the video, since it falsifies their "insurrection" narrative.

More from New York Post:

> Capitol Police Officer Brian Sicknick still is described as a victim of January 6, murdered by President Donald Trump supporters rioting at the Capitol, despite an autopsy report which shows he died of a stroke the following day.
>
> The New York Times initially reported that Sicknick had been beaten to death with a fire extinguisher, before retracting the claim more than a month later.
>
> To this day, media accounts claim Sicknick was "slain" on Jan. 6, and powerful Democrats, including Joe Biden, Kamala Harris and Nancy Pelosi, have continued to cite his death as evidence of a "deadly insurrection" at the Capitol that day.
>
> But hitherto unseen surveillance footage from inside the Capitol, aired by Fox News host Tucker Carlson on Monday night, contradicts that claim.
>
> It shows Sicknick walking through the building "after he was supposedly murdered by the mob outside."
>
> Sicknick appears to be healthy and walking normally in the footage.
>
> He gesticulates to protesters to move out of the building, and bends down to move a placard behind a statue.
>
> He also is wearing a helmet, so, as Carlson points out, "it's hard to imagine he was killed by a head injury."

You can read about how the New York Times printed false news about this story, and then was forced to retract it months later.

And finally Breitbart:

> Mysterious January 6 figure Ray Epps lied to the January 6 Committee about when he left the Capitol grounds on the day of the riot, Fox News's Tucker Carlson argued Monday.
>
> Carlson, releasing never seen video footage from January 6, 2021, alleged that Epps misled the January 6 Committee in a sworn testimony. Carlson claimed to have Epps's text messages that he sent to a relative about leaving the Capitol grounds later than he disclosed to the committee.
>
> "Under public pressure, the January 6 Committee finally interviewed Ray Epps. He told the committee he never entered the Capitol and therefore never committed a crime," Carlson explained. "In text messages showed that at 2:12:00 PM, he boasted to his nephew that he had 'orchestrated' the protest at the Capitol."
>
> "He admitted he helped get people there," Carlson said. "Tonight, we can tell you that at the very least Ray Epps lied in his sworn testimony to the January 6th Committee. Epps testified that when he sent the text messages to his nephew, he had already left the Capitol grounds to return to his hotel room. That is not true."
>
> "The surveillance footage we found that shows in fact Ray Epps remained at the

> Capitol for at least another half an hour," Carlson said, allegedly displaying the video proof. "What was Epps doing? We cannot say, but we do know that he lied to investigators. The January 6 Committee likely knew this too. Democrats had access to the same tape, yet they defended Ray Epps."
>
> Tucker noted his video shows Epps encouraging protestors outside the Capitol Building to enter.
>
> "We do know from the contemporaneous video that a mysterious figure called Ray Epps encouraged the crowd to go into the Capitol. For some reason Epps has never been indicted for that," Carlson said. "There is no question he did it."

When Ted Cruz asked federal law enforcement officials about their involvement in organizing and leading the "insurrection", there was no outright denial. The woman being questioned just refused to answer.

Meanwhile, there's been no charges about insurrection for Black Lives Matter or Antifa, because they are the allies of the secular left, and their real violence is just ignored by the secular left.

Why are Christians allowed to eat shellfish but not allowed to have sex before marriage?

March 9, 2023 | by Wintery Knight | Link | Original Link

Here's a wonderful article from Peter Saunders.

The challenge:

> An argument frequently advanced by those attempting to defend homosexual practice is that Christians 'cherry pick' the commands in the Bible – that is, they chose to emphasise some commands while ignoring others.
>
> The Old Testament may forbid homosexual acts (Leviticus 18:2; 20:13) but it also forbids eating seafood without fins and scales (Leviticus 11:9-12; Deuteronomy 14:9, 10).
>
> So how can Christians then justify upholding laws on sexual morality whilst at the same time ignoring the food laws from the very same books of the Bible? Why may they eat shellfish but not be allowed to have sex outside marriage? Isn't this inconsistent and hypocritical?

The solution is that God enters into "covenants" with his people, and the terms of those covenants change.

Especially dietary laws:

> The answer to this question lies in an understanding of biblical covenants.
>
> A covenant is a binding solemn agreement made between two parties. It generally leaves each with obligations. But it holds only between the parties involved.
>
> There are a number of biblical covenants: Noahic, Abrahamic, Sinaitic (Old), Davidic and New.
>
> Under the Noahic covenant, which God made with all living human beings (Genesis 9:8-17), people were able to eat anything:
>
> *'Everything that lives and moves about will be food for you. Just as I gave you the green plants, I now give you everything' (Genesis 9:3).*
>
> But under the Sinaitic (Old) Covenant, which God made with the nation of Israel, people were able to eat certain foods, but not others.

Jesus clearly created a new covenant with his followers, where the dietary laws are lifted:

> Jesus said that he had come to fulfil the 'Law and the Prophets' (Matthew 5:17; Luke 24:44). He would establish this new covenant with new laws, with himself as high priest based on his own sacrificial death on the cross.
>
> This new covenant would completely deal with sin (Hebrews 10:1-18) and protect

> all those who put their faith in him from God's wrath and judgement…
>
> *[…]'In the same way, after the supper (Jesus) took the cup, saying, "This cup is the **new covenant** in my blood, which is poured out for you"' (Luke 22:20). '…we have been made holy through the sacrifice of the body of Jesus Christ once for all' (Hebrews 10:10)*
>
> People would come under the protection of this new covenant, not by virtue of belonging to the nation of Israel, but through faith in Christ. In fact the function of the Old Testament Law (Sinaitic covenant) was to point to Christ as its fulfilment.
>
> […]So what then did Christ say about foods? He pronounced all foods clean for his followers to eat:
>
> *' "Don't you see that nothing that enters a person from the outside can defile them? For it doesn't go into their heart but into their stomach, and then out of the body." (In saying this, Jesus declared all foods clean.) He went on: "What comes out of a person is what defiles them. For it is from within, out of a person's heart, that evil thoughts come—sexual immorality, theft, murder, adultery, greed, malice, deceit, lewdness, envy, slander, arrogance and folly. All these evils come from inside and defile a person." (Mark 7:18-23)*
>
> Jesus was making that point that under the new covenant God required purity of the heart. Internal thoughts and attitudes were as important as external actions.

Food is OK for Christians, but sexual immorality – which includes premarital sex and adultery – are NOT OK for Christians.

I think sometimes when you are talking to people whose motivation is just to get rid of any objective moral law entirely, they tend to ask questions without really wanting a good answer. This is especially true when it comes to the morality of sex. They ask the question not to get an answer, but to justify getting rid of the moral rules governing sexuality. The answers are there for people who are willing to respect God in their decision-making to find. The answers are not found only by people who have a reason to not want to find them.

In case you're wondering, I am one of those Christian men who takes chastity seriously. Marriage is about having a close connection with your spouse. Sure, I could break the rules and have a lot of fun now. A lot of Christians have a hard time turning down fun. But when I look at Jesus, I don't see a man who is pursuing fun and thrills. I see a man who sees a need and then sacrifices his own interests to rescue others from peril.

Is the “RNA world” hypothesis a good naturalistic explanation for the origin of life?

March 10, 2023 | by Wintery Knight | Link | Original Link

If you look closely at this blog, you’ll see that I am currently reading a book called “The Comprehensive Guide to Science and Faith: Exploring the Ultimate Questions About Life and the Cosmos“. Well, there’s an ongoing series of posts about the book at Evolution News, and one of them caught my eye. They are talking about the origin of life, and what’s needed to create life from non-life.

Here is the post from Evolution News.

The article starts by explaining the what is required to show how non-living components could be organized into a living system:

- plausible biochemical paths from individual bio-building blocks like amino acids or nucleic acids to functional polymers such as proteins and DNA.
- ways to speed up chemical reactions that are naturally slow.
- the ordering of amino acids in proteins and nucleotide bases in RNA and DNA that allows them to function properly.

The leading naturalistic explanation to solve these problems is called the “RNA world” hypothesis:

> The most popular proposal for the first self-replicating molecule is RNA — where life was first based upon RNA carrying both genetic information (akin to modern DNA) and performing catalytic functions (akin to modern enyzmes), in what is termed the *RNA world*.

The article lists several problems with the RNA world hypothesis. Dr. Walter Bradley lists two of those problems.

First, the assembly of RNA requires intelligent design:

> First, RNA has not been shown to assemble in a laboratory without the help of a skilled chemist intelligently guiding the process. Origin-of-life theorist Steven Benner explained that a major obstacle to the natural production of RNA is that “RNA requires water to function, but RNA cannot emerge in water, and does not persist in water without repair” due to water’s “rapid and irreversible” corrosive effects upon RNA.[3] In this “water paradox,” Benner explains that “life seems to need a substance (water) that is inherently toxic to polymers (e.g., RNA) necessary for life.”[4]
>
> To overcome such difficulties, Benner and other chemists carefully designed experimental conditions that are favorable to the production of RNA. But Robert Shapiro explains that these experiments do not simulate natural conditions: “The

> flaw is in the logic — that this experimental control by researchers in a modern laboratory could have been available on the early Earth."[5] Reviewing attempts to construct RNA in the lab, James Tour likewise found that "[t]he conditions they used were cleverly selected," but in the natural world, "the controlled conditions required to generate" RNA are "painfully improbable."[6] Origin-of-life theorists Michael Robertson and Gerald Joyce even called the natural origin of RNA a "Prebiotic Chemist's Nightmare" because of "the intractable mixtures that are obtained in experiments designed to simulate the chemistry of the primitive Earth."[7] In the end, these experiments demonstrate one thing: RNA can only form by intelligent design.

The second problem is that the RNA world hypothesis is that it requires the existence of a self-replicating RNA molecule in order to get started. But this self-replicator contains a lot of biological information that is beyond the reach of chance to produce:

> The most fundamental problem with the RNA world hypothesis is its inability to explain the origin of information in the first self-replicating RNA molecule — which experts suggest would have had to be at least 100 nucleotides long, if not between 200 and 300 nucleotides in length.[10] How did the nucleotide bases in RNA become properly ordered to produce life? There are no known chemical or physical laws that can do this. To explain the ordering of nucleotides in the first self-replicating RNA molecule, origin-of-life theorists have no explanation other than blind chance. As noted, ID theorists call this obstacle the information sequence problem, but multiple mainstream theorists have also observed the great unlikelihood of naturally producing a precise RNA sequence required for replication.

Whenever I sit down to write some code or to write a blog post, I can start with one letter, then add another, then add another, until I have a functioning program, or a legible blog post. It might be possible for random chance to make a meaningful word out of 3 letters, like "the" or "hat". But it's not possible to make a self-replicating RNA molecule that way. The required sequence is just too long, and every letter has to be just right in order for it to function as a self-replicating system. The simplest self-replicating molecule is extremely complicated.

Anyway, check out the article, and if you want to read all about Walter Bradley (my role model), there is a new book out about him called "For a Greater Purpose: The Life and Legacy of Walter Bradley" which I finished, and it was great.

Why do people tell you not to discuss religion or politics at work?

March 11, 2023 | by Wintery Knight | Link | Original Link

Whenever I bring debate DVDs to work and leave them on my desk, men who like sports more than apologetics ask me: “Was there a winner?” People don’t want to talk about opinions, they only want to talk about things that we know. A while back, there was a formal debate featuring William Lane Craig and Christopher Hitchens. And yes, there was a winner. One of the speakers admitted defeat.

Here is a video clip of an exchange they had in their debate at the massive Biola University showdown:

Isn’t that interesting?

Do you know how to have a conversation with an atheist? You just have to talk to them about the things we really know to be true. For example, that the universe had a beginning, just like scientists said that it did. That the universe is fine-tuned for allowing complex, embodied life. That our galaxy, star and planet are fine-tuned to provide us with a habitable place to live. The the origin of life required an intelligent designer to do the coding. These are not “faith” topics that we “share”. These are facts. And when we tell an atheist these facts, we are not sharing. We are informing about what is true. In some cases, we are correcting false beliefs.

Here’s a quote from famous atheist philosopher Thomas Nagel of New York University:

> “In speaking of the fear of religion, I don’t mean to refer to the entirely reasonable hostility toward certain established religions and religious institutions, in virtue of their objectionable moral doctrines, social policies, and political influence. Nor am I referring to the association of many religious beliefs with superstition and the acceptance of evident empirical falsehoods. I am talking about something much deeper–namely, the fear of religion itself. I speak from experience, being strongly subject to this fear myself: I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers.
>
> I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers. It isn’t just that I don’t believe in God and, naturally, hope that I’m right in my belief. It’s that I hope there is no God! I don’t want there to be a God; I don’t want the universe to be like that.”
>
> (”The Last Word” by Thomas Nagel, Oxford University Press: 1997)

It really makes me think that Christian churches should be more interested in showing these debates, and in learning how to debate like William Lane Craig. Sadly, most churches do not focus on the things that work. Most churches to not want to win. They

want to lose. That's why we put charismatic leftists in charge, who don't know anything – like Russell Moore and Beth Moore. Because we don't want to have answers. We just want to lose. Lost the culture. Lose congregants. Lose our children to the secular left.

America today is in religious decline. But it's not because we don't have the arguments and the evidence. It's because most churches have decided to focus on "compassion" and "kindness" and "hearing the voice of God" about their own desires and needs.

If you haven't seen this debate between William Lane Craig and Christopher Hitchens, then you should watch it. Yes there is a winner. Yes something was decided. It was not just two people sharing their opinions. There was a final score.

Alistair Begg preaches on practicality and initiative in the story of Ruth

March 12, 2023 | by Wintery Knight | Link | Original Link

I finished listening to Alistair Begg's series on Esther, and I'm now on to his series on Ruth. Sermon #3 stood out to me, because it touches on the important issues of free will vs determinism as well as the two methods of seeking God's will: mysticism vs wisdom.

The discussion centers around Ruth's decision to go to the barley fields to work, in order to get something to eat.

The MP3 file is here.

Here is the description:

> When we're facing a future devoid of prospects or possibilities, it's easy to become overwhelmed and discouraged. Ruth could relate. She was a penniless widow in a foreign land seeking a way to provide for herself and her widowed mother-in-law. Her future was totally dependent upon someone showing her unmerited grace and favor. Instead of giving up, she gives us an example of humility, initiative and faith as she seeks work and sustenance.

As things in the world spin out of control, it's important to remember that you must always have a plan and be working on that plan. Even when things look very bleak, you have to do something reasonable and practical, and then pray to God for "favor". That God will do something unexpected that will make your reasonable action bear unexpected fruit.

If you want to listen to sermons #1 and sermon #2 in the series on Ruth, you can find the whole series here. So far, I have listened to 5. The first two were also very good, so if you listen to the first 3, you will definitely benefit. Each one is 35 to 40 minutes.

Did Silicon Valley Bank DIE from diversity, inclusion and equity virtue signaling?

March 13, 2023 | by Wintery Knight | Link | Original Link

In a free market, private sector companies should serve customers. For banks, that means not losing the money that customers have deposited with the bank. And especially not going bankrupt so that you need a bailout from taxpayers. That bailout also hits taxpayers who have not yet even been born, but who have to pay the national debt. But some companies would rather virtue signal.

Silicon Valley Bank had a choice to make between serving depositors and taxpayers, and virtue signaling to the secular left elites.

New York Post reports:

> Fears of a broad financial contagion spread on Friday after tech lender Silicon Valley Bank set off alarm bells over liquidity concerns — sparking share losses across the banking sector worth some $52 billion on Thursday.
>
> On Friday, the Federal Deposit Insurance Corp. said regulators have shut the bank down to protect insured deposits.
>
> […]SVB shares — which plunged 60% yesterday after the company's CEO begged investors to "stay calm" and not "panic" over liquidity concerns — remained halted as of midday Friday after plunging 47% in premarket trading early Friday.

How could this happen? New York Post has some interesting news about who was running the company:

> A head of risk management at Silicon Valley Bank spent considerable time spearheading multiple "woke" LGBTQ+ programs, including a "safe space" for coming out stories, as the firm catapulted toward collapse.
>
> Jay Ersapah, the boss of Financial Risk Management at SVB's UK branch, launched initiatives such as the company's first month-long Pride campaign and a new blog emphasizing mental health awareness for LGBTQ+ youth.
>
> "The phrase 'you can't be what you can't see' resonates with me,'" Ersapah was quoted as saying on the company website.
>
> "As a queer person of color and a first-generation immigrant from a working-class background, there were not many role models for me to 'see' growing up."
>
> Her efforts as the company's European LGBTQIA+ Employee Resource Group co-chair earned her a spot on SVB's "outstanding LGBT+ Role Model Lists 2022," a list shared in a company post just four months before the bank was shut down by federal authorities over liquidity fears.
>
> In addition to instituting SVB's first "safe space catch-up" — which encouraged employees to share their coming out stories — and serving on LGBTQ+ panels

> around the world, Ersapah also spent time over the last year serving as a director for Diversity Role Models and volunteering as a mentor for Migrant Leaders.
>
> "I feel privileged to co-chair the LGBTQ+ ERG and help spread awareness of lived queer experiences, partner with charitable organizations, and above all, create a sense of community for our LGBTQ+ employees and allies."

I thought this was funny:

> On Saturday, Home Depot co-founder Bernie Marcus insinuated that "woke" policies like the ones launched by Ersapah could have led to the SVB's dramatic failure.

It's not just one person at the top, though. The whole company was basically one enormous gay / feminist activism organization, and being profitable for customers was apparently the least of their concerns.

> We are intentionally and strategically working for a world where every client and employee has the opportunity to bring their bold ideas to life. We also know that diverse perspectives and inclusive environments ignite new ideas to power innovation. That is why we're building a culture of belonging with a global workforce that celebrates greater dimensions of diversity and reflects the markets we strive to serve.

And:

> SVB, the financial partner of the innovation economy, today announced that it has been named a member of the Bloomberg Gender-Equality Index (GEI) for a fifth year running. The Bloomberg GEI is a modified market capitalization-weighted index developed to gauge the performance of public companies dedicated to transparency in gender-data reporting. This reference index measures gender equality across five pillars: female leadership & talent pipeline, equal pay & gender pay parity, inclusive culture, anti-sexual harassment policies, and external brand.

And:

> SVB, the financial partner of the innovation economy and parent of Silicon Valley Bank, has joined CEO Action for Diversity & Inclusion™, a growing coalition pledging to advance diversity and inclusion in the workplace. SVB President and CEO Greg Becker joins more than 2,000 CEOs in committing to promote open internal dialogue on DEI strategies and share examples of action with the CEO Action community.

Be careful where you put your money. It's fun to virtue signal about how woke you are, but eventually, you're going to need money in order to retire.

Should you marry a woman who calls male leadership in religion and morality “patriarchy”?

March 14, 2023 | by Wintery Knight | Link | Original Link

In today’s “don’t judge” culture, it’s common for people to proclaim their virtue by telling everyone how they don’t judge. I’m not sure how this became the great morality of our age, but it’s everywhere. Even in the church. Recently, I saw a clip from the Whatever podcast where a whole bunch of women storm off the set because a man says he wouldn’t have sex with a transgender women.

Elsewhere in the podcast, the man explained that he is a Christian and wanted to get married and have children. So the women in the video are already furious with him for wanting a good woman, and just waiting for an opportunity to have a tantrum. Like the “Christian” woman Hannah, who kicked the Christian man off “The Bachelorette” when he questioned her having sex with hot guys she had just met on the show.

So in this post, I wanted to talk about some reasons why good, marriage-minded men should avoid women who hate men who lead in spiritual areas, and make moral judgments.

First of all, women initiate 70% of divorces. If you meet a woman who divorced her husband, she either had a defect in her ability to evaluate and choose a man, or she had a defect in her ability to maintain a commitment to the man she chose. Either way, a woman who divorced her previous husband has red flags. There are two possibilities. She either chose a good man or she chose a bad man. If she chose a bad man, then it shows that she didn’t choose a man with good moral character and spiritual leadership. That means that those things were low priorities for her when deciding who to get naked with. Alternatively, she married a good man, and failed to maintain the commitment. Then she has different problems: problems with male leadership, problems with responsibilities, problems with commitment, problems with contentment, etc. You need to ask questions to get to the bottom of what happened, and more importantly, what she has studied and done to change her worldview. Don’t take her words for it, look at her actions.

Second, the number of premarital sex partners a woman has makes her a higher risk of divorce. The more sex partners, the more risk. The problem with women who engage in sex with men who don’t commit to them is that they *necessarily* don’t see a man’s willingness and ability to commit as valuable when choosing a man. Women who have premarital sex with good-looking, high-status no-commitment men don’t see commitment as valuable. They are rewarding the man for his height, his muscles, his tattoos, his piercings, his entertainment of her, etc. A good man should be very wary when a woman who gave her best youth, beauty and sexual interest to men like that now want to “settle” for a boring, unattractive provider who they see as having lower value than the men they gave sex to without requiring a commitment. What they really wanted was bad boys, and they threw sex at those bad boys without asking for commitment. Even if a

good man marries a woman like this, she will not respect him. She respects looks and status. She is only willing to “settle” for a boring provider in her 30s because she can no longer attract the “best” men (criminal thugs who are tall and have tattoos) who give her all the butterflies in her stomach.

The culture opposes male leadership

Men should only marry if they are going to get authority to lead a home in moral and spiritual areas. But today, people don’t want men to make moral judgements. They are only concerned that women get what they want, regardless of their past actions. In their opinion, men exists solely to serve the needs of women. Women don’t have to be good enough for marriage, men just have to give women what they want, regardless of their suitability for wife and mother roles. The role of men in any relationship is not to lead and achieve goals for God. Their role is to let women rule over them, disposing of their earnings as they see fit, for the benefit of the woman.

This is what women are told about the role of men in every area of society. This society, including the Christian parents, Christian pastors, Christian culture, etc. do not produce women who prefer early marriage to men who are good at moral leadership and spiritual leadership. Therefore, men who are chaste, sober, have good educations, good private sector jobs, good savings, etc. need to be extremely careful. Look at the video clip. We are producing a generation of “don’t judge” young women who hate good men, and throw themselves into sex with hot bad boys. This is not safe for men to commit to. Better to be alone.

What if she converts to Christianity later on in life?

Becoming a new Christian doesn’t eliminate the risk any more than becoming a new Christian fixes student loans accumulated for a useless non-STEM degree. First, a bare statement “I’m a Christian” isn’t evidence that a woman has persuaded herself to change her view of which men are the most attractive. That would be like a 35-year-old man claiming to be a software engineer on his resume, after 15years of looking of teaching English in a public school. A recent convert who has never read any Christian books or engaged in any Christian tasks could just be saying “don’t judge me, just marry me” with some Christian-talk sprinkled on top.

Most people today don’t want to hold women accountable for choosing bad men. So you should assume that young women don’t take responsibility for their own past choices. And that means that she will have taken no steps to repent her mistake, and change her character so that she doesn’t make the same mistake again. It’s up to you to look at what she has been reading, listening to, watching, etc. and to check her actions in order to find out what she really thinks about what the Bible says. You can’t marry a woman who responds to any mention of the moral law and moral obligations with denial of responsibility and insults. If she hasn’t become an active crusader against women who choose bad men, and women who choose premarital sex, and women who choose divorce, then you can’t really believe that there’s been any real repentance. The risks to you are too high to take a chance on someone who is not certain.

Your marriage is your enterprise for serving God

So let’s think more about the screechy tattoo’d woman in the video clip. Imagine that you are trying to get this women to do something in a marriage that is part of your plan to make the marriage serve God. You’re trying to get her to watch a William Lane Craig debate. You’re trying to get her to stop spending money on 50 Shades of Grey and Harry Potter. You’re trying to get her to stop smoking and drinking. You’re trying to get her to talk about the sermon instead of essential oils. You’re trying to get her to read a Thomas Sowell book. You’re trying to get her to not put the kids in day care or public schools.

You need to assume that her response to male leadership like this will be the exact same as the woman in the video clip. Keep your distance, and ask her questions to find out what her real views are, and whether she is interested in growing into the kind of person who is safe for you to marry. Don’t forget that chastity and sobriety are important during the evaluation process, so that you aren’t influenced away from your leadership role. Don’t listen to her words, look at her actions.

Video, audio and summary of William Lane Craig vs Peter Millican debate #ApologeticsDay

March 15, 2023 | by Wintery Knight | Link | Original Link

Here's a debate with a well-qualified atheist and Dr. William Lane Craig, the most effective defender of Christianity operating today.

Video:

Audio:

Description from the Youtube upload:

> This debate on "Does God Exist?" took place in front of a capacity audience at the Great Hall, University of Birmingham. It was recorded on Friday 21st October 2011 as part of the UK Reasonable Faith Tour with William Lane Craig.
>
> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology, La Mirada, California and a leading philosopher of religion. Peter Millican is Gilbert Ryle Professor of Philosophy at Hertford College, University of Oxford and a noted scholar in studies of Hume.
>
> The debate was hosted by the University of Birmingham Student Philosophy Society, and the debate was moderated by Professor Carl Chinn.

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any errors. There is about 30 minutes of Q&A time at the end.

Dr. Craig's opening speech:

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It’s not just that the settings are unlikely, it’s that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a “herd morality” that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this

evolved “herd morality”. However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God’s existence by pointing to the “evil” in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God’s existence.

Dr. Millican’s opening speech:

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it

leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans

believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

Dr. Craig's first rebuttal:

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

Dr. Millican's first rebuttal:

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just

happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have "algorithmic properties" as well as physical properties, it doesn't mean that computers have minds.

Dr. Craig's second rebuttal:

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that's not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God's goal is not just to convince people that he exists. God's goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can't translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

Dr. Millican's second rebuttal:

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

Dr. Craig's final rebuttal:

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties

that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

Dr. Millican's final rebuttal:

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3 minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

The seven fatal flaws of moral relativism

March 16, 2023 | by Wintery Knight | Link | Original Link

Moral relativism is the view that moral values and moral duties do not exist in reality, but only exist as opinions in people's minds. When you ask a moral relativist where the belief that stealing is wrong comes from, he may tell you that it is his opinion, or that it is the opinion of most people in his society. But he cannot tell you that stealing is wrong independent of what people think, because morality (on moral relativism) is just personal preference.

So what's wrong with it?

I found this list of the seven flaws of moral relativism at the Salvo magazine web site.

Here's the summary:

1. *Moral relativists can't accuse others of wrongdoing.*
2. *Relativists can't complain about the problem of evil.*
3. *Relativists can't place blame or accept praise.*
4. *Relativists can't make charges of unfairness or injustice.*
5. *Relativists can't improve their morality.*
6. *Relativists can't hold meaningful moral discussions.*
7. *Relativists can't promote the obligation of tolerance.*

Here's my favorite flaw of relativism (#6):

> *Relativists can't hold meaningful moral discussions.* What's there to talk about? If morals are entirely relative and all views are equal, then no way of thinking is better than another. No moral position can be judged as adequate or deficient, unreasonable, acceptable, or even barbaric. If ethical disputes make sense only when morals are objective, then relativism can only be consistently lived out in silence. For this reason, it is rare to meet a rational and consistent relativist, as most are quick to impose their own moral rules like "It's wrong to push your own morality on others". This puts relativists in an untenable position – if they speak up about moral issues, they surrender their relativism; if they do not speak up, they surrender their humanity. If the notion of moral discourse makes sense intuitively, then moral relativism is false.

I sometimes get a lot of flack from atheists who complain that I don't let them make any moral statements without asking them first to ground morality on their worldview. And that's because on atheism morality IS NOT rationally grounded, so they can't answer. In an accidental universe, you can only describe people's personal preferences or social customs, that vary by time and place. It's all arbitrary – like having discussions about what food is best or what clothing is best. The answer is always going to be "it depends". It depends on the person who is speaking because it's a subjective claim, not an objective

claim. There is no objective way we ought to behave.

So, practically speaking, everyone has to decide whether right and wrong are real – objectively real. If they are objectively real, that means that there is a right way for human beings to behave, and a wrong way for human beings to behave. It means that things that are really objectively wrong like rape are wrong for all times and all places, regardless of what individuals and societies might think of it. In order to rationally ground that kind of morality, you have to have a foundation for it – a cosmic Designer who decides for all times and places what the conduct of his creatures ought to be. And then our moral duties are duties that are owed to this Designer. It is like playing football or playing a boardgame – the person who invents the game decides the rules. But if there is no designer of the game, then there are no rules.

Without a designer of the universe, the question of how we ought to act is decided by people in different times and different places. It's arbitrary and variable, and therefore it doesn't do the job of prescribing behavior authoritatively. It's very important not to get involved in any serious endeavor with another person or persons if they don't have a sense of right and wrong being absolute and fixed. A belief in objective moral values is a necessary pre-requisite for integrity.

How do you respond to the conquests and wars in the Old Testament?

March 17, 2023 | by Wintery Knight | Link | Original Link

John Berea has an article about it on his web site.

Here's his overview:

> In the Old Testament are the military campaigns of Israel inconsistent with being led by a just and loving God, and inconsistent with his own commands? Here, I would like to make the case for consistency and justness.
>
> 1. **The nations of Canaan were evil, harming others, and needed to be stopped.** They had carried out incest with children/grandchildren and performed child sacrifice by fire. (Lev 18:6-30, Deut 12:31, Deut 18:9-10, Psalm 106:35, 37-38) They launched unprovoked attacks on Israel (Ex 17:8-9, Num 21:1, Num 21:2-23, 33) and even guerrilla attacks against Israel's "stragglers in the rear of the march when you were exhausted and tired." (Deut 25:18)
>
> **2. Warfare language was likely rhetorical.** There are five reasons to support the rhetorical nature of language such as "completely destroy" (Hebrew תחרימו, literally "ban") in Deut 20:17. It likely meant a destruction of armed soldiers, buildings, and religious icons.
>
> 1. Semitic language professor and NIV, NAB, and ESV bible translator Richard Hess argues that Hebrew "ban" is "stereotypical for describing all the inhabitants of a town or region, without predisposing the reader to assume anything further about their ages or even their genders" and "need not require that there really were children, senior citizens, or women there who were put to death" even when followed by the terms "men and women" (Joshua 8:25) or "young and old" (Joshua 8:25).
> 2. In Israel's destruction of enemies we see phrases like "left no survivor" and "utterly destroyed all who breathed" (Joshua 10:40, Judges 1:8). But in Joshua 21:12-13 the author has no problem telling us these people were still there afterward: "if you ever turn away and make alliances with these nations that remain near you… God will no longer drive out these nations". In 1 Sam 15:3-4 Israel was to "strike down the Amalekites. Destroy everything that they have. Don't spare them. Put them to death–man, woman, child, infant, ox, sheep, camel, and donkey alike." In 15:8 Saul "executed all Agag's people" and Agag himself was killed in 15:33. But later in 1 Sam 27:8 we're told they're still there and " had been living in that land for a long time". Hundreds of years later in Esther 3:1 we're even told Haman was an Agagite, a descendant of the Amalekite king Agag.
> 3. Most verses on the subject speak of "driving out" and "dispossessing" the

> land rather than language suggestive of genocide. E.g. Num 33:51-53, in "the land of Canaan, you must drive out all the inhabitants of the land before you. Destroy all their carved images, all their molten images, and demolish their high places. You must dispossess the inhabitants of the land and live in it, for I have given you the land to possess it." It's the same story in Lev 18:25, Num 23:31-32, Deut 6:19, 9:4, 18:12, Joshua 3:10, and 23:9.
>
> 4. Jer 4:20 suggests inhabitants fled before armies arrived: "At the sound of the horseman and bowman every city flees; They go into the thickets and climb among the rocks"
> 5. Deut 7:22 specifically says that Israel was forbidden to "destroy them all at once" and instead they would be expelled "little by little".
>
> So either all of these verses contradict one another, or the conquest language was rhetorical.
>
> **3. Many of the "cities" were probably military outposts.** For example with Jericho and Ai, Richard Hess argues there are no references to noncombatants (apart from Rahab), no archaeological evidence of non-military use, the term melek (Hebrew מלכי) for "king" of the cities often meant mean a military leader in Canaan (e.g. in Joshua 2:2), they were located at defensive positions, and Jericho and Ai weren't described as a large city as Gibeon and Hazor explicitly were.
>
> **4. A just God requires wrath.** It's not possible to have a God who is just but not wrathful–otherwise wrongdoers continue unabated. Paranormal investigator James Randi wrote in Skeptic Magazine, "I accuse the Christian god of murder by allowing the Holocaust to take place" yet Dawkins and Hitchens condemn God for judgment against the Canaanites. Which is it? Ultimately the the problem is we view death as the ultimate judgment, when in the theological context of the bible it's only a graduation to what's next with accountability for what we've done with what we were given.

The four points are developed with links for support. If you get this question a lot, it's a good resource to bookmark.

Also, if you're looking for a short video to share, here is a 6-minute one featuring Frank Turek:

That's from commenter WorldGoneCrazy. It's really good.

What are the historical arguments for the post-mortem appearances of Jesus?

March 18, 2023 | by Wintery Knight | Link | Original Link

Eric Chabot of Ratio Christi Ohio State University has a *great* post up about the post-mortem appearances of Jesus.

The post contains:

- a list of the post-mortem resurrection appearances
- quotations by skeptical historians about those appearances
- alternative naturalistic explanations of the appearances
- responses to those naturalistic explanations

Although there is a lot of research that went into the post, it's not very long to read. The majority of scholars accept the appearances, because they appear in *so many different sources* and because some of those sources are very early, especially Paul's statement of the early Christian creed in 1 Corinthians 15:3-7, which is from about 1-3 years after Jesus was executed by the Romans. Eric's post lists out some of the skeptical scholars who the appearances, and you can see how they allude to the historical criteria that they are using. (If you want to sort of double-check the details, I blogged about how historians investigate ancient sources before)

Let's take a look at some of the names you might recognize:

> **E.P. Sanders:**
>
> That Jesus' followers (and later Paul) had resurrection experiences is, in my judgment, a fact. What the reality was that gave rise to the experiences I do not know. "I do not regard deliberate fraud as a worthwhile explanation. Many of the people in these lists were to spend the rest of their lives proclaiming that they had seen the risen Lord, and several of them would die for their cause. Moreover, a calculated deception should have produced great unanimity. Instead, there seem to have been competitors: 'I saw him first!' 'No! I did.' Paul's tradition that 500 people saw Jesus at the same time has led some people to suggest that Jesus' followers suffered mass hysteria. But mass hysteria does not explain the other traditions." "Finally we know that after his death his followers experienced what they described as the 'resurrection': the appearance of a living but transformed person who had actually died. They believed this, they lived it, and they died for it."[1]
>
> **Bart Ehrman:**
>
> It is a historical fact that some of Jesus' followers came to believe that he had been raised from the dead soon after his execution. We know some of these believers by name; one of them, the apostle Paul, claims quite plainly to have

> seen Jesus alive after his death. Thus, for the historian, Christianity begins after the death of Jesus, not with the resurrection itself, but with the belief in the resurrection.[2]
>
> **Ehrman also says:**
>
> We can say with complete certainty that some of his disciples at some later time insisted that . . . he soon appeared to them, convincing them that he had been raised from the dead.[3]
>
> **Ehrman also goes onto say:**
>
> Historians, of course, have no difficulty whatsoever speaking about the belief in Jesus' resurrection, since this is a matter of public record.[4]
>
> Why, then, did some of the disciples claim to see Jesus alive after his crucifixion? I don't doubt at all that some disciples claimed this. We don't have any of their written testimony, but Paul, writing about twenty-five years later, indicates that this is what they claimed, and I don't think he is making it up. And he knew are least a couple of them, whom he met just three years after the event (Galatians 1:18-19).[5]
>
> **Marcus Borg**
>
> The historical ground of Easter is very simple: the followers of Jesus, both then and now, continued to experience Jesus as a living reality after his death. In the early Christian community, these experiences included visions or apparitions of Jesus. [8]

The references to Paul are because of the early creed he records in 1 Corinthians 15:3-7, and his conversations with the other eyewitnesses in Galatians. Eric has another post where he goes over that early creed, and it is something that every Christian should know about. It's really kind of surprising that you never hear a sermon on that early creed in church, where they generally sort of assume that you believe everything in the Bible on faith. But skeptical historians don't believe in the post-mortem appearances by faith – they believe it (in part) because of 1 Corinthians 15:3-7.

If you want to see a Christian scholar make the case for the resurrection appearances in a debate, then here is a post I wrote with the video, audio and summary of the William Lane Craig vs James Crossley debate on the resurrection.

Michael Behe and Keith Fox debate theistic evolution vs intelligent design

March 19, 2023 | by Wintery Knight | Link | Original Link

Michael Behe and Keith Fox debate evolution and intelligent design. (See below for link to video)

Details:

> Michael Behe is professor of biochemistry at Lehigh University, Pennsylvania and the founder of the modern Intelligent Design movement. His book "Darwin's Black Box" ignited the controversy 14 years ago when it claimed that certain molecular machines and biological processes are "irreducibly complex" and cannot be explained by Darwinian evolution.
>
> Keith Fox is Professor of biochemistry at the University of Southampton and chairman of Christians in Science. As a theistic evolutionist he believes that Evolution is the best explanation going for the complexity we see and that ID is a blind scientific alley and theologically unappealing to boot.
>
> They debate whether micromachines in the cell such as the "bacterial flagellum" could have evolved by a Darwinian process of evolution. When inference to design is and isn't acceptable in science. Whether random mutation can mathematically stack up to complex life, and whether God is reduced to a divine "tinkerer" by ID.

Here's the debate:

Summary

Note: the following debate summary is rated "S" for Snarky. Reader discretion is advised.

Michael Behe:

- ID is not Biblical creationism
- ID is not religion
- ID is a scientific research program
- People refuse to discuss ID because of personal philosophical assumptions
- ID is like the Big Bang – it is based on evidence, but it has broad religious implications

Keith Fox:

- ID is not Biblical creationism, but it isn't science

Michael Behe:

- ID is compatible with common descent

- ID is only opposed to unplanned, unguided evolution (Darwinism)
- ID is not necessarily opposed to long periods of time

Behe's first book – the bacterial flagellum

Keith Fox:

- Here are a couple of papers that show how parts of the flagellum evolved
- They are possible pathways

Michael Behe

- No, those are studies that show that there are similarities between bacterial flagella in multiple organisms
- Similarities of proteins between different organisms do not necessarily imply a developmental pathway
- The problem of having the instructions to BUILD the flagellum still remains

Keith Fox:

- Maybe parts of the flagellum had other functions before they were used in the flagellum
- Maybe you can use the parts of the flagellum for other purposes
- Maybe, one can imagine, it's possible that!

Michael Behe:

- No, parts have to be modified and re-purposed in order to be used for other functions

Keith Fox:

- But maybe the proteins can be used in other systems for other things
- I re-purpose parts from of designed things to other purposes in my house when I do maintenance

Michael Behe

- Uh, yeah – but aren't you an intelligent designer? What does your home maintenance have to do with Darwinian evolution?

Is ID another God-of-the-gaps argument?

Michael Behe:

- Well consider the Big Bang… there was a build-up of scientific evidence for that theory
- Just because a theory has religious implications, doesn't mean that it isn't true

- You really have to look at the specific evidence for a theory, and not decide in advance

Keith Fox: (I'm paraphrasing/inventing/mocking from now on)

- But the Big Bang is based on discoveries, and intelligent design is based on gaps in our scientific knowledge
- What if I did have evidence of a step by step pathway (which I don't right now)? Then I would win the argument – what would you do then?

Michael Behe:

- Well, if tomorrow you do manage to find expiremental evidence of a pathway, which you don't have today, then I would be wrong
- ID is falsifiable by experimental evidence
- But what about your your view? Is that falsifiable by experimental evidence?
- What if someone goes into a lab (someone like Scott Minnich?) and performs gene knockout experiments, and publishes the results
- You knock out a gene from the bacterial flagellum, you wait for a large number of generations, and it never develops the missing gene
- You repeat this with every one of the 50 genes in the bacterial flagellum and it never recovers for any of the 50 genes
- There is no pathway to build up even one of the 50 genes – according to actual experiments
- What do Darwinists do with experimental evidence that falsifies Darwinism?

Keith Fox:

- No, I would not accept that experimental evidence could falsify Darwinism
- Just because known published experimental evidence that we have today falsifies Darwinism, it doesn't mean Darwinism is false because it's not falsifiable
- We don't know how Darwinism even works – it happened so long ago, and it's not repeatable or testable, so how could lab ,experiments falsify it?
- Darwinism is science and intelligent design is faith, though

Which side has the experimental evidence?

Michael Behe:

- Consider the largest longest-running lab experiment of evolution, Richard Lenski's experiments on e. coli
- Lenski has presided over 50,000 generations, (millions of years of evolution)
- The bacterium *did evolve* and they *did get better* but not by *evolving* features, but by *disabling* features

Keith Fox:

- But those are just LAB EXPERIMENTS! What do lab experiments prove?
- What if? What if? What if? You don't know, it happened so long ago, and you weren't there! You weren't there!
- (clutches Flying Spaghetti Monster idol tighter and sobs pitifully)

Michael Behe:

- See, the thing is that I have actual experiements, and here's some more evidence that just got published last week
- So I've got evidence and then some more evidence and them some other evidence – experimental evidence
- And all the evidence shows that adaptation is done *losing traits* not by *gaining traits*
- And the published observations are what we see in nature as well

Keith Fox:

- But doesn't Darwinism explain some things that we observe?

Michael Behe:

- Well, I am not saying that micro-evolution doesn't explain *some things* – it explains bacterial resistance, and other micro-evolution
- it just doesn't explain macro-evolution, and that's what the experiments show

Keith Fox:

- But ID is a science stopper! It stops science! You can't produce *experimental evidence* to falsify Darwinism – that would stop science!

Michael Behe:

- Well, you have to understand that the Big Bang postulated a non-material cause to the entire physical universe and yet the experimental evidence was allowed to stand because it was testable and verifiable evidence, even if the theory does have religious implications
- All explanations in science are design to settle a question and it stops rival explanations that are not as good at explaining the observations
- Finding the best explanation stops further study because it is better than rival explanations

Keith Fox:

- Well you have to come up with a materialist explanation because that's the only kind that a functional atheist like me will allow

Michael Behe:

- Well, what if the best explanation for an observed effect in nature is non-material, as with the Big Bang?

Keith Fox:

- But I have to have a material explanation because I am a functional atheist! (i.e. – a theistic evolutionist = functional atheist)

Michael Behe:

- Well what about the cosmic fine-tuning argument? Do you accept that?
- That's an inference to design based on the latest scientific discoveries

Keith Fox:

- Well I do accept that argument, but I don't accept design in biology
- When you apply it to biology, somehow it's bad and you can't do that or you losing research money and get fired
- Anyway, your argument is based on a gap in our current knowledge

Michael Behe:

- No, back in Darwin's time we had a gap in our knowledge – we didn't know what the cell was – we thought it was jello
- Now, we know what the cell is *really* like, it's irreducibly complex, and you can't build up those molecular machines in a step-wise manner
- The inference to design is based on the progress of science revealing the increasing levels of complexity
- In experiments, Darwinian mechanisms cannot build anything useful, instead genes are disabled or dropped
- You guys don't have the evidence to prove your view that naturalistic mechanisms can do the creating
- You keep issuing promissory notes

Keith Fox:

- Well, you're just seeing design subjectively, because you are a non-scientist
- I'm being objective when I tell you that we will discover a materialist explanation later on – really really soon now, maybe even tomorrow, yeah
- You won't accept my speculations and you insist on these published experiments
- You're subjective and I'm objective
- Just give me more research money so I can hide the decline better

Michael Behe:

- Uh, you're the one who is subjective – I cited evidence, and you are the one who is

speculating
- You have arguments from credulity, and I've got the lab experiments
- You refuse to be skeptical, I am the one who is being skeptical

Keith Fox:

- Maybe, maybe, maybe! Maybe tomorrow! Maybe in a parallel universe! Maybe aliens from Planet 9 from Outer Space!
- Who knows! I certainly don't know! And that somehow means you don't know either! See?

Michael Behe:

- Well, to prove me wrong, go into the lab, and run experiments and evolve some new genes (using Darwinian mechanisms) that have new useful functionality

Are there limits to what evolution can do?

Michael Behe:

- You need multiple changes in the genome to get a new helpful feature (let's say two specific mutations)
- One specific change is possible
- the odds are against getting multiple beneficial changes are really really small – you need two SPECIFIC changes to occur in order

Keith Fox:

- Well, lots of things are really unlikely – any permutation of dice rolls is as unlikely as any other

Michael Behe:

- Well, we are talking about TWO SPECIFIC mutations that are needed to get a beneficial function – lots of other mutations are possible, but we are looking for a specific outcome that requires two SPECIFIC mutations out of the whole genome
- You aren't going to get useful outcomes unless you direct the mutations

Keith Fox:

- *But then why does God allow evil!!!!1!1!!one!!!*

The Biden administration's plan to make "offensive" speech into a human rights violation

March 20, 2023 | by Wintery Knight | Link | Original Link

Last week, there were some interesting stories posted in the New York Post about how the Biden family was receiving donations from communist China. I'll link to that story here, but I really wanted to write about another Biden story that I found in The Federalist. When you see this story, you'll really have to wonder why so many "evangelicals" supported Joe Biden for president.

The Federalist story says:

> President Joe Biden's Department of Education plans to enact new rule changes to civil rights law this May that would end free speech as Americans have known it.
>
> The changes would inject gender ideology straight into the heart of Title IX of the Civil Rights Act by erasing the Supreme Court's long-standing distinction between protected speech and punishable conduct.
>
> In its 1999 ruling in *Davis v. Monroe County Board of Education*, the Supreme Court held that expressive activity such as speech can only constitute harassment when it is "so severe, pervasive, and objectively offensive" that it can no longer be considered pure speech and is more properly viewed as actionable conduct. In the process, the court emphasized that single instances of speech — no matter how offensive to the listener — do not rise to the level of harassment.
>
> The Biden administration is purposefully muddying the waters between mere speech and harassing conduct specifically to force the use of pronouns and gender-affirming language. Under the proposed rule, students and faculty can violate Title IX simply for refusing to use someone else's "preferred" pronouns.

The subtitle of the article is "Biden's America is going the way of Canada, and it's horrible news for anyone who cares about free speech."

The article notes:

> The administration, spurred on by power-hungry college administrators, seeks the destruction of freedom of speech by other means. It wishes for us to become Canada. In the Great White North, the alleged misuse of pronouns is not just illegal, it is a "human rights violation."
>
> Following a drawn-out court battle in the Canadian justice system, the court told a Canadian father that he had to stop referring to his own daughter as a girl because his daughter identified as a boy. The father rightfully refused to comply with the court order, and in May 2021, a warrant was issued for his arrest.

> He had originally sought mental health help for his daughter, but by the time of the litigation, she had already been “transitioning” for two years. The father was jailed as a criminal.

And that’s why I focus so much about what’s going on in Canada. They are ten years ahead of us on ending Christianity in the public square, and the Democrats want to keep up with them.

I would really like to see more recognized Christian leaders think about what rank-and-file Christians need in order to advocate for Christian values, and then protect those needs. But often, the people who are seen as leaders drop the ball.

Take a look at this quote from an article about David French from Not the Bee:

> In case there was any question, French implies that preventing parents from injecting their kids with chemical castration drugs or removing their daughter’s breasts would be an infraction of “civil liberties,” and that we need to be careful that we don’t infringe on rights.
>
> In a nation as diverse as the United States, conflicts over values are inevitable, but our most basic civil liberties must remain inviolate. To govern otherwise both inflicts a grave injury on dissenting citizens and violates the letter and spirit of the Constitution itself. Our right to speak, much less to parent, should not be contingent on our ability to gain political control.
>
> I haven’t heard David French speak up against, say, masking kids for two years and requiring vax mandates in order to keep your job. I haven’t heard him make a case for why many civil liberties would be infringed if common weapons like AR-15s were removed from the public. I haven’t heard him speak about the rampant crime in leftist cities. Heck, I haven’t even heard much about abortion lately from him!

He has spoken out on abortion, but indirectly. By opposing Trump, he opposed Trump’s 3 Supreme Court picks. The same 3 Supreme Court picks who ended Roe v. Wade. What is his position on Roe v. Wade? He wanted a pro-abortion president to have those 3 picks, and to leave Roe v. Wade in place. That’s his view. And it’s the view of many “elite” “Christian” leaders.

I’m glad Cherise Trump (author of The Federalist article) is connecting the dots and warning us about what lies again if we don’t act. I just wish other Christians weren’t so scared about the secular left on these issues. We don’t need to make friends with people who are trying to destroy our freedoms. It’s ok to disagree with them.

Does the “legacy of slavery” explain black women’s 72% out-of-wedlock birth rate?

March 21, 2023 | by Wintery Knight | Link | Original Link

James White asks: does the Bible apply to black women?

I don’t like Calvinist theologian James White very much, but at least he’s willing to defend the moral teachings of the Bible against the woke identity politics that is taking over Christian churches. A few months ago he tweeted something very controversial (see above), and got into a lot of hot water with fake Christians. In this post, I’ll explain why he is right.

So, as you can see above, James is concerned that black women are having so many abortions, and he thinks that the solution to this is to encourage black women to take the Bible’s advice on sexual morality. Shocking, I know.

If you read the replies to his tweet on Twitter, you’ll see millions and millions of comments calling him a racist, and telling him that slavery is to blame for EVERYTHING that black women do wrong. Basically, the James haters say that black women can do anything they want, and should never be told that it’s wrong according to the Bible, because their bad choices are all the fault of slavery. So the Bible doesn’t even apply to them, or something.

Here is an example from a radical feminist progressive named Karen Swallow Prior:

Karen Swallow Prior says that unlike whites, blacks have no moral agency

According to the fake Christians, it's not that black women make poor choices with sex, it's that the ghosts of white slavers who raped their great-great-great grandmothers reach through time with magic and force them to have sex with hunky bad boys who won't commit to them before sex. It's not rap music calling black women hoes! It's the ghosts of slavery past. And even if this ghost theory isn't true, we shouldn't tell black women not to sin, because… it would hurt their feelings. After all, the Bible isn't a book that's designed to set boundaries to prevent self-destructive behaviors. It encourages us to listen to our hearts, be reckless, and sin as much as we can.

So when did black community problems with sex and abortion start? Did it start with slavery times? Actually, blacks were doing GREAT at marriage and sexual matters just 50 years ago.

This reply to James White explained:

Blacks married at rates comparable to whites before welfare
That's true. Black children weren't fatherless, so they weren't having early sex outside of marriage, and so they weren't getting abortions.

As the header graphic shows, black women were just as likely to be married as white women in the 1960s, FAR AFTER the days of slavery.

The reason that the graph is going upward is because daughters raised in fatherless homes tend to engage in sexual activity at younger ages, because they are seeking approval from a man which their (single) mother cannot give them. It's a tragic downwards spiral, and it affects all races. The only way to stop it is to tell women to choose marriage-minded men (not hot bad boys) and marry before having sex, like the Bible says. But woke fake Christians think the Bible is too mean, and better to allow sin by saying that sin is inevitable because slavery ghosts or something.

What's neat is that black men who take Christianity seriously are totally on board with the facts:

Black man here. Can confirm that the Bible applies to black women.
On this blog, I don't talk about my ethnicity myself, for confidentiality reasons, but I have said that my skin is darker than Barack Obama. I'm not white or Asian. And the reason that I don't fall into this trap of causing babies to be born out of wedlock is because I think that when the Bible says that sex outside of marriage is a sin, that this is true. I

don’t make excuses or shift blame. It’s incumbent on me to obey, since I claim to be a follower of Jesus.I’m not interested in identity politics. I’m not interested in racial divisions. I’m not interested in blame-shifting. The rules are the rules. And my following of the rules caused me to not cause abortions, according to Christian specifications. Period.

When it comes to sex outside of marriage, the answer of every Bible believing Christian is simple: I’m against it. That is the correct answer, and anything more or less than this answer is demonic. If you are a Christian, sex outside of marriage is always morally wrong. And if you try to justify it, or blame someone else, in order to excuse it, then you’re not a Christian at all. If you try to make excuses for why someone did it, you’re not a Christian. Whether you have had it and been forgiven, or never had it, the answer is always the same: it’s morally wrong. Don’t do it. Never do it.

What I am seeing from people who are critical of James White’s tweet is that they are basically trying to attack those who make moral judgments based on what the Bible says. They want to make room for sinners to sin. The root of abortion sin is sexual sin. Real Christians discourage sexual sin, and therefore protect unborn children. Fake Christians want to be liked by appearing compassionate, so they make excuses for sexual sin. If you take the Bible seriously on morality, you won’t be liked. Those who try to excuse sin do so because their need to be liked is more important than their need to promote what the Bible teaches.

Some fake Christians will say “oh, but I do think the Bible is right about sex and marriage, but we have to care about slavery reparations and global warming and refugees and illegal immigrants and trasnsgender rights, too”. Baloney. An authentic Christian is concerned about the things that the Bible teaches are “major” things. Drunkenness is a major thing. Sexual immorality is a major thing. Divorce is a major thing. Homosexuality is a major thing. If you meet a Christian who treats those issues as minor issues, and instead majors in what the secular left tells them are major issues, then you’re talking to a fake Christian.

Christianity isn’t a brain-dead faith. You get your priorities from the Bible, and you argue those priorities using facts. The facts about marriage rates are clear and they show that the problems in the black community aren’t caused by slavery. They’re caused by single mother welfare programs. Those welfare programs taught women of all races that they didn’t have to listen to their fathers when choosing men. Those welfare programs taught women that feelings were a better guide in relationships than the Bible. Those welfare programs taught women that their eyes were a better judge of character than performance of traditional marriage roles. Those welfare programs taught women that recreational sex was a way to get a man to commit and stop being a bad boy. We need to go back to the root cause of the problem. The root cause of the problem was making excuses for disobedience to the Bible, and transferring money from married homes to out-of-control women. Of all races.

Young people are more likely than older people to think that women power has gone too far

March 22, 2023 | by Wintery Knight | Link | Original Link

If I asked you whether young people or old people are more in favor of feminism, I'll bet that the majority of you would answer "young people". Because you would say that old people are more traditional than young people. But that's not what a recent survey found. There's an article about it in the New York Post, although the original article comes from an Australian news web site.

Excerpt:

> A surprising number of people in younger generations believe that women's rights have gone too far, with a new survey revealing gender equality progress could be at risk of stalling.
>
> New research conducted by Ipsos UK and the Global Institute for Women's Leadership at King's College London found that over half of people in younger generations believe the push for equality is now negatively impacting men and that they are being expected to do "too much" to support progress.
>
> The survey collated the responses from more than 22,500 people aged 16-74 across 32 countries, including approximately 1000 people from Australia.
>
> According to the results, 52 percent of Gen Z and 53 percent of Millennials agree that "we have gone so far in promoting women's equality that we are discriminating against men".
>
> This is compared to 46 percent of Gen X and 40 percent of Baby Boomers.

The article is in favor of the women power movement, and it expresses shock and horror that anyone could ever have a reason to disagree with it.

What does this mean? Well, I think older people have an out-of-date view of just how much society (government and other institutions) has done to give preferential treatment to women at the expense of men.

To take just one example, about 60% of undergraduate degrees are being given to women, with men getting only 40%.

The American Enterprise Institute reports:

- For every **100 women** who earn bachelor's degrees from US colleges and universities, there are **73 men.**
- For every **100 women** who earn master's degrees from US colleges and universities, there are **65 men**.
- For every **100 women** who earn doctor's degrees from US universities,

> there are **85 men.**

- For every **100 women** who are recent college graduates but not in the labor force, there are **108 men.**
- For every **100 women** with an advanced degree but not in the labor force there are **114 men.**

When I looked into what was causing this, I found out that men underperform women on classroom tests, but men outperform women on standardized tests. Studies have shown that teachers (85% women) discriminate against boys in the classroom, and that's why boys underperform girls on classroom-administered tests. But on standardized tests, boys do better, because there is no discriminator present and the grading is more fair.

Hypergamy

The problem with this discrimination against men is that women typically like to "marry up". They are looking for men who have more education and better careers and higher salaries than they have. When the number of desirable men shrinks, it becomes harder and harder for women to lock one down. That's the law of supply and demand. When the supply of marriage-ready men (good education, good job, good savings) shrinks, the price of a marriage-ready man goes up. The price of goods always goes up when there is a shortage. And right now there is definitely a shortage of educated men with good careers and lots of savings. Discrimination against men by feminists, feminist laws and feminist policies caused this shortage.

It's the younger generations who are seeing firsthand how discrimination against men makes relationships, much less marriage, harder to achieve. Sadly, the older generations aren't paying attention. If men aren't doing well, then women aren't going to be able to find men to marry and start families with. What satisfies women in the long run is family. Marriage and family are dying in the west, and young people understand that feminism was the murder weapon. Young people understand this, because they see relationships and marriage drying up.

It's not just the left-wing feminists who want the discrimination against men to remain. Pro-marriage feminists, including many "chivalrous" Christians (men and women) also want feminist discrimination against men to remain. They blame the retreat from relationship and the decline of marriage on MEN, not on feminism. Until this changes, don't expect relationships and marriage to return.

Is the federal government interested in monitoring speech?

March 23, 2023 | by Wintery Knight | Link | Original Link

My first read every day is The Federalist, and there I found a very interesting article by Margot Cleveland. In it, she reveals some research that The Federalist has been doing about the federal government's plans to monitor speech. Not just the speech of journalists and politicians, but also churches, and even individuals. What would they do with this information?

Excerpt:

> Our government is preparing to monitor every word Americans say on the internet—the speech of journalists, politicians, religious organizations, advocacy groups, and even private citizens. Should those conversations conflict with the government's viewpoint about what is in the best interests of our country and her citizens, that speech will be silenced.
>
> […]Research by The Federalist reveals our tax dollars are funding the development of artificial intelligence (AI) and machine-learning (ML) technology that will allow the government to easily discover "problematic" speech and track Americans reading or partaking in such conversations.
>
> Then, in partnership with Big Tech, Big Business, and media outlets, the government will ensure the speech is censored, under the guise of combatting "misinformation" and "disinformation."

Here's how they found out what the government is doing:

> The federal government has awarded more than 500-plus contracts or grants related to "misinformation" or "disinformation" since 2020. One predominant area of research pushed by the Department of Defense involves the use of AI and ML technology to monitor or listen to internet "conversations."
>
> Originally used as a marketing tool for businesses to track discussions about their brands and products and to track competitors, the DOD and other federal agencies are now paying for-profit public relations and communications firms to convert their technology into tools for the government to monitor speech on the internet.

What's troubling about this for me is the not only that truth-tellers would be censored, or labeled "domestic terrorists" and harassed by law enforcement. That's already happening in the United States. Just look at the Twitter Files revelations. My concern is the freezing of bank accounts as coercion. That's already happening in Canada. And it would be even easier to do if we converted to a digital currency, that was used by all of our banks.

Here's a Wall Street Journal article:

> “Central-bank digital currency” doesn’t exactly roll off the tongue. But you might want to get used to saying it. These so-called CBDCs, or digital versions of dollars, yuan, euros, yen or any other currency, are coming, say those who study them. And depending on how they are designed and rolled out, their impact on the banking system could be profound.
>
> […]The U.S. is studying the issue and has run trials of various technologies to enable a digital currency, although Fed chair Jerome Powell has indicated the U.S. central bank has no plans to create one, and won’t do so without direction from Congress.
>
> […]First, there is the obvious issue of privacy. A digital currency could allow governments to track every transaction a person makes, no matter how minute. This level of transparency would be a powerful disincentive to using these currencies for crime or fraud, but it could also open the door to new kinds of social control, especially in countries with already-scant protections for human rights.
>
> For example, says Dr. Prasad, a government could make it impossible to spend the digital currency on things the ruling party deems problematic… The government also could make transacting with certain people difficult or impossible—China already has a social credit system that ranks citizens algorithmically, and punishes them in various ways.

Here’s Joe Biden’s position on digital currency, reported by NBC News:

> The Biden administration is putting its support behind the research and development of a “U.S. Central Bank Digital Currency,” or CBDC.
>
> The move is part of a sweeping executive order President Joe Biden signed Wednesday instructing the federal government to explore possible uses of and regulations for digital assets like cryptocurrencies.

And here’s Ron DeSantis’ position on digital currency, reported by Townhall:

> Florida Gov. Ron DeSantis on Monday moved to protect The Sunshine State from the Biden administration’s potential “weaponization of the financial sector” through a Central Bank Digital Currency.
>
> The legislative proposal would amend the state’s Uniform Commercial Code to prohibit the use of federal or foreign CBDC and calls on other states to join in the fight by instituting similar prohibitions.

There are very clear differences between Democrats and Republicans on the issues of surveillance, censorship, coercion and totalitarianism. Something to think about, as we approach the 2024 elections. Choose wisely.

What do scientific studies show about the long-term effects of gender-affirming care?

March 24, 2023 | by Wintery Knight | Link | Original Link

I like to write posts to record evidence that I can use when having debates about controversial topics. Thursday night, I was reading The Federalist, as usual, and found an interesting post by Eddie Scarry. He reported that the far-left Washington Post was claiming that people who get "gender-affirming" care are very happy in the short term. But what about in the long-term?

Excerpt:

> On Thursday the paper published what it called "one of the largest randomized samples of U.S. transgender adults to date about their childhoods, feelings and lives." The survey took place last year from Nov. 10 to Dec. 1, among 515 U.S. adults who identify as trans and another 823 U.S. adults who did not.
>
> There were a lot of depressing statistics about respondents who are less likely than regular people to say their childhoods were happy and who are more likely to say they often feel anxious. But the ultimate takeaway was that the vast majority of those who said they had "transitioned" away from their natural sex, 78 percent, were "more satisfied" with their lives than before the transition process.

That survey is just from "last year". I would imagine that people who take out student loans to study English also feel great during their years at college… but they don't feel the same when they graduate and have to find a job to pay those loans back. And that's the real question… what is the effect of chopping off body parts in the long-term? Fortunately, we have a study for that.

More:

> A person who decides to live in ways that make him feel more like the opposite sex isn't a one-and-done. That's something that has to be examined over an extended period of years. As far as actual genital surgery goes — in theory, the most fulfilling type of "transition" — only one study has done that to date.
>
> Over the course of 30 years, six Swedish doctors and scientists tracked the outcomes of 324 transgender people who had received sex surgeries — 191 male subjects and 133 female subjects. Each subject was cross-referenced with 10 random control subjects of the sex that the trans subject was impersonating. For example, a woman would be a control subject for a man who had had surgery to make himself look more like a woman.
>
> The results were devastating.
>
> Subjects who underwent surgery were more likely than the control subjects to

> receive inpatient care for a psychiatric disorder, to be convicted of a crime, and to develop cardiovascular disease. The mortality rate by suicide was most striking: Transgender subjects were roughly 20 times more likely to have committed suicide within 10 years of their operations.
>
> "This study found substantially higher rates of overall mortality, death from cardiovascular disease and suicide, suicide attempts, and psychiatric hospitalisations in sex-reassigned transsexual individuals compared to a healthy control population," the authors concluded. "This highlights that post surgical transsexuals are a risk group that need long-term psychiatric and somatic follow-up." They noted that surgery and experimental cross-sex hormones may provide some relief for transgender people, but that such treatment is "apparently not sufficient to remedy the high rates of morbidity."

They have the link to the study right in the quotation above. So next time you get asked about this issue, refer to the long-term study.

Sometimes people prefer to read individual stories about individual people to get an idea of what's behind the statistics. If you like that, consider this recent story from the New York Post, about an individual who received "gender-affirming care" of the sort that the Washington Post would approve of.

Excerpt:

> Transgender flight attendant Kayleigh Scott — who gained fame after appearing in a United Airlines commercial — was found dead Monday in her Colorado home. She was 25.
>
> Scott, who shared her transition story for a 2020 Trans Day of Visibility video produced by United, declared in a 2:30 a.m. Instagram post that she was planning to end her life.
>
> […]Scott made headlines in 2020 when United featured her as a part of its diversity campaign.
>
> Scott said she credited United for helping her transition.
>
> "My life changed for the better when I came to United as a flight attendant. With the support from the company, our business resource group for LGBTQ+ employees, and all of my loving co-workers," Scott said at the time. "I was able to break free from the chains that helped me and to this day, I'm living confidently. It's my true self."

Everything was wonderful in the short-term. Celebrate diversity. Celebrate pride. Be affirming and non-judgmental and tolerant. That's what people wanted in the short-term.

Here's the long-term:

> "2022 has been a year packed with upset and difficulty," wrote Scott in a New Year's Eve Facebook post. "I saw too much death & loss in my life, I came to realize I work a meaningless job for a company that doesn't value me as an

> employee.”

United Airlines didn’t make a virtue-signaling publicity video about that post. The Human Rights Campaign didn’t turn that quote into a publicity stunt. Naturally. The people who affirm recklessness turn their backs on you when the consequences of your choices appear. People who like to party and be happy in the moment don’t want to deal with the fallout of the bad decisions that they told you to make.

Christians tell young people to keep to the moral boundaries, because we want them to be happy in the long-term. In the short-term, we look like the mean, judgmental bad guys. But in the long-term, we are vindicated. Gay activists and gay activism organizations affirm the reckless decisions of young people because they want to be liked and to feel good. But they don’t really love the people they affirm. They don’t want what’s best for other people in the long-term.

Well, that’s the example of long-term consequences for one person. I’m a studies man, myself. I like to argue from studies. If you’re like me, then my previous post about self-ending rates of people who received “gender-affirming care” might also be useful to you.

Knight and Rose Show – Episode 30: Was Jesus a Socialist, Part 1

March 25, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 30 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss what the Bible says about Christianity and economics. This episode looks at Bible verses that support the idea that Jesus taught socialism. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 30:

Episode Summary:

Wintery Knight and Desert Rose define socialism, and contrast socialist policies with free market policies. We discuss why a growing number of people find it attractive. The rest of the episode is spent discussing Bible verses cited by socialists that argue for the view that Jesus was a socialist or that Jesus taught socialism.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

What got me started on apologetics? William Lane Craig debate transcripts

March 26, 2023 | by Wintery Knight | Link | Original Link

Yes, William Lane Craig debate transcripts. In fact, I still read them from time to time to keep up my skills.

Here's one of my favorites, the Craig-Nielsen debate on grounding morality without God

Summary:

> THE CRAIG-NIELSEN DEBATE: GOD, MORALITY, AND EVIL
> William Lane Craig and Kai Nielsen
> with annotations by William Lane Craig
> February 1991, University of Western Ontario

Best part:

> Finally, he raises the issue of immortality and says, "Death doesn't undermine moral values. In fact, things that we value become all the more precious." Well, in one sense he's right. It's the *absence of God* that undermines the objectivity of moral values, not *death*. But let's suppose that there are objective moral values. What would be undermined by the lack of immortality? I think two things.
>
> First, I think there would be no reason to adopt the moral point of view. Since you're going to die, everyone ends up the same. It doesn't make any difference whether you live as a Hitler or a Mother Teresa. There is no relationship between your moral living and your ultimate fate. And so in that sense, death undermines the reason for adopting the moral point of view rather that just being an egoist and living for self.
>
> Second, there's no basis for self-sacrifice on this point of view. Why should an atheist, who knows everything is going to end in death, do things that are morally right that go against self-interest? For example, a few years ago there was a terrible mid-winter air disaster in Washington, DC, as a plane crashed into a bridge spanning the Potomac River, spilling its passengers into the icy waters. And as the helicopters came to rescue these people, attention focused on one man who again and again passed by the rope ladder rather than be pulled to safety himself. Seven times he did this, and when they came again, he was gone. The whole nation turned its eyes to this man in respect and admiration for the noble act of self-sacrifice that he did. And yet on the atheistic view, that man wasn't noble. He did the *stupidest* thing possible. He should have gone for the rope ladder first, pushed others away, if necessary, in order to survive! But to give up all the brief existence he will ever have for others he didn't even know? Why? It seems to me, then, that it's not simply the absence of God that undermines objective moral values, but ethical living is also undermined by the

> atheistic point of view because you then have no reason to adopt the moral point of view and you have no basis for acts of self-sacrifice.
>
> By contrast, on the Christian view, where you have both God and immortality, you have the necessary presuppositions for the affirmation of objective moral values and for consistent living of the ethical life.

And another of my favorites, the Craig-Taylor debate on the ontological grounding of morality.

Summary:

> Is The Basis Of Morality Natural Or Supernatural?
> Richard Taylor and William Lane Craig
> October 1993, Union College, Schenectady, New York

Sample Craig:

> (2) I argued that moral accountability also exists under the supernaturalist view, and Professor Taylor didn't deny the point.
>
> (II) What about my critique, then, of naturalism? I said that naturalism doesn't provide a sound foundation for morality, and here I made two points:
>
> (1) On the naturalist view, objective right and wrong do not exist. Again, Professor Taylor doesn't deny this point; he just says, "Well, to say that they're conventional doesn't mean they're contemptible." Well, granted; but it *does* mean they're arbitrary, they're non–objective. There's no more difference between moral right and wrong than driving on the right–hand side of the road versus the left–hand side of the road. It's simply a societal convention. And the modern evolutionist thinks these conventions are just based in socio–biological evolution. According to Michael Ruse, a professor of the philosophy of science,

> The position of the modern evolutionist…is that humans have an awareness of morality…because such an awareness is of biological worth. Morality is a biological adaptation, no less than are hands and feet and teeth…. Considered as a rationally justifiable set of claims about an objective something, [ethics] is illusory. I appreciate that when somebody says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves…. Nevertheless...such reference is truly without foundation. Morality is just an aid to survival and reproduction and…any deeper meaning is illusory….{26}

> This is essentially the same view as Professor Taylor's. Moral values are simply rooted in socio–biological evolution, that have passed down as certain taboos and certain commands, but they have no objective validity in terms of their moral rightness or wrongness. Professor Taylor says, "But I have a high regard for people who are truly moral and decent." I don't deny that. Of course he does! But the point is that in his ethics, in his philosophy, he has no *basis* for that affirmation. What I bring is not a new set of values—I think we pretty much hold

> those in common—but I'm offering a secure *foundation* for those values that we all want to hold dear.
>
> You see, on Professor Taylor's view, there really isn't any objective morality. I think every one of us here tonight would agree that it's wrong to kill babies and that the holocaust was morally wrong. But in his book Professor Taylor says, "The infanticide practiced by the Greeks of antiquity did not violate their customs. If we say it was nevertheless wrong, we are only saying that it is forbidden by *our* ethical and legal rules. And the abominations practiced by the Nazis…are forbidden by our rules, and not, obviously, by theirs."{27} I submit that that is simply a patently false view of moral values and that naturalism, therefore, can't provide any objective basis for right and wrong.

And another of my favorites, the Craig-Tooley debate on the problem of evil.

Summary:

> A Classic Debate on the Existence of God
> Dr. William Lane Craig & Dr. Michael Tooley
> November 1994, University of Colorado at Boulder

Sample Craig:

> (2) Christian doctrines increase the probability of the coexistence of God and the evils in the world. Let me just mention a couple of these.
>
> (i) On the Christian view, the purpose of life is not happiness as such in this life. Rather it is the knowledge of God—which will ultimately produce true and everlasting happiness. What that means is that many evils occur in this life which might be utterly pointless with respect to producing human happiness. But they might not be pointless with respect to producing the knowledge of God. Dr. Tooley assumes when he talks about changes that would make this world a better place, that the purpose of life is basically to be happy in this life. And I certainly admit that you could make changes that might appear to make this life a better place, make it happier. But that's not God's purpose. So if you understand that the purpose of life is not happiness as such, I think that you can see that the existence of evil doesn't necessarily cast any improbability upon God's existence.
>
> (ii) It's also the Christian view that God's purpose spills over into eternal life. In the afterlife God will bestow a glory and happiness upon us that is incomparable to what we've suffered here on earth. And the longer we spend in eternity with Him, the more the sufferings in this life shrink by comparison to an infinitesimal instant. Dr. Tooley admits in his article that it is possible that immortality could justify such evils. But, he says, it's "very unlikely" that there is life after death. Well, I have two comments. First, I'd like him to prove that it's unlikely that there is life after death.{26} Second, I suggest that the resurrection of Jesus gives us grounds for hoping in life after death, and I've attempted to justify that

> historically. So given these Christian doctrines, I think you can see that the existence of God and evil is not so improbable after all.
>
> […]
>
> (4) Finally, I think that there is actually an argument for God from evil. It would go like this:
>
> (i) If God does not exist, objective moral values do not exist. If there is no God, moral values are either socio-biological by-products or just expressions of personal preference.
>
> (ii) Evil exists. That's the premise of the atheist. There is real evil in the world.
>
> (iii) Therefore, objective values do exist. Some things are really wrong.
>
> (iv) Therefore, God exists.
>
> Thus the presence of evil in the world actually demonstrates God's existence because in the absence of God, there wouldn't be any distinction objectively between good and evil, between right and wrong. So although evil in one sense calls into question God's existence, in a much deeper sense, I think, it actually requires God's existence.
>
> So in the light of these four responses, I think that the argument from evil, as difficult and emotionally pressing as it might be, in the end doesn't constitute a good argument against the existence of God. So I think the four arguments given against the existence of God by Dr. Tooley are inconclusive. You've still got my six arguments for God's existence, and therefore I still think that on balance the evidence favors theism as the more rational worldview.

There are more debate transcripts on Craig's Reasonable Faith web site.

Evangelical Christian college fires professor for taking Biblical position on homosexuality

March 27, 2023 | by Wintery Knight | Link | Original Link

When I was a pretty new Christian in college, I joined Intervarsity Christian Fellowship. While getting to know the other young Christian students, and the progressive feminist IVCF student leader, I suddenly realized that not everyone who called themselves a Christian really believed the Bible. In my case, problems arose over the doctrine of Hell, sexual morality and evidential apologetics.

This was my first exposure to a Christian organization that was not rigorous about the Bible. I would try to get them to bring in apologetics professors to talk about science and history, but they kept insisting on prayer walks and testimonies. This was one of the experiences that let me to do my Christian work using an alias. I began to think "what if these progressive Christians get into power, and they get offended by my conservative views?"

And that's what happened to this professor, who tweeted out Biblical views under his own name. He must have thought he was safe working for an evangelical Christian college. But he was not.

Premier Christianity UK reports:

> I was recently dismissed for misconduct by Cliff College, an evangelical Methodist Bible college where I had worked as a lecturer and programme lead for seven years. The misconduct referred to my now-infamous tweet…
>
> […]A Twitterstorm quickly ensued. Aggressively pro-LGBT advocates attacked me as homophobic and hateful, pressurising the college to sack me. The college swiftly and publically denounced my tweet as "inappropriate" and "unacceptable". They later asked me to remove it. When I said I couldn't do that in good conscience, I was suspended and later dismissed for "bringing the college into disrepute".

He wrote this, which I found very interesting:

> One woman, a Soviet-born émigré now teaching at a US university, said: "You have no idea what completely normal things you do today, or say today, will be used against you to destroy you. This is what people in the Soviet Union saw. We know how this works."

I came from another country to the United States, and I saw Christians being persecuted by the secular left government for the things they had said and done. That's why I left.

Cliff College describes their organization this way:

> Cliff College provides theological education and training with a particular focus on

> mission and evangelism.
>
> Cliff College has a long and rich heritage of providing Bible training to people from diverse backgrounds, for mission and evangelism.
>
> Since the beginning, we have sought to provide biblical, evangelical training that is both relevant and forward-thinking, with an emphasis on scriptural holiness.

"Scriptural holiness". It makes you laugh to read it.

And:

> Cliff College is an evangelical learning community which is rooted in God's Word and Spirit, for the purpose of equipping God's people for practical ministry and cutting-edge missional engagement.
>
> The education we offer at Cliff is theology for the real world – rooted in practice, forged in community, grounded in the authority of Scripture and consistently prompting us to face outwards. We proclaim the Gospel and invite everyone to experience the life-changing transformation of a relationship with Jesus Christ.

When the authority of Scripture comes up against the secular left culture, Cliff College sides with the culture.

Calvin Robinson

There was another story out of the UK that you might now have heard about – the story of Calvin Robinson.

Here's the story from Church Times UK:

> A CONSERVATIVE media commentator, Calvin Robinson, has said that his ordination in the Church of England was blocked, owing to his political views.
>
> Mr Robinson was due to be ordained deacon in the autumn. Without a title post, ordination cannot take place, and, in an article for the Mail on Sunday, he alleges

> that the offer of a part-time post as assistant curate of St Alban the Martyr, Holborn, in London, was withdrawn, after several bishops had expressed concerns about his outspoken views.

I thought this was interesting – a progressive white woman told the conservative black man what he should think about racism:

> In February 2020, the Archbishop of Canterbury told the General Synod that the Church was still "deeply institutionally racist" (News, 11 February 2020).
>
> […]Mr Robinson, who is black, wrote on Sunday that he "fundamentally disagreed with this approach", and described it as "divisive and offensive".
>
> "I do not think the claim that either the Church, or wider society, is institutionally racist has ever been supported by robust evidence," he wrote.
>
> Mr Robinson says that, in a meeting with [the Bishop of London, the Right Reverend Sarah] Mullally, she said to him: "Calvin, as a white woman, I can tell you that the Church is institutionally racist."

What I'd like to see from Christians is seriousness about the need to find a career where your views can be kept secret from nosy progressives like the Bishop of London, the Right Reverend Sarah Mullally. My goal in life is to never have my Christian activities be subject to the authority of the Bishop of London, the Right Reverend Sarah Mullally. Or an employer like her. Or a judge like her. Or a pastor like her. One of the reasons why Christians don't stand up to the secular left is because we make too many friends, and then we conform our speech to these friends, in order to be popular.

Should secular leftists be prosecuted for hate speech that incites violence against Christians?

March 28, 2023 | by Wintery Knight | Link | Original Link

So, right now we are living in a time much like 1930s Germany. Back then, the socialist party picked the Jews to be the scapegoat for their problems. Today, socialists in America have picked the Christians to be their scapegoat for their problems. It's not just violent groups like BLM and Antifa. It's the left-wing news media. It's left-wing hate groups like the SPLC.

Trans shooter outside the Children's Ministry

Let's see the latest news about the diversity, inclusion and equity of the secular left, as reported by The Post Millennial:

> Police said during a Monday press conference that the person who killed six including three children at the Covenant Christian school in Nashville was a former student of the academy, Audrey Hale, who identified as transgender and had left a detailed manifesto with plans on how to conduct the attack at the school.
>
> Hale entered the building by shooting through a door on the side, police said. Once inside, Hale reportedly began firing at anyone in sight.
>
> Among the victims were three 9-year-old children, Evelyn Dieckhaus, Hallie Scruggs, and William Kinney, as well as custodian Mike Hill, substitute teacher Cynthia Peak, and school head Katherine Koonce.
>
> […]Officers found that Hale was equipped with at least two assault rifles and a

> handgun, and a search of the family home in Nashville revealed detailed maps and a manifesto of the attack.

We shouldn't be surprised to find out that a transgender activist was responsible for a mass shooting. Mass shootings in America are *almost always* committed by people on the secular left. This is not even the first time that there has been a mass shooting committed by a transgender activist.

Do you remember this story, reported by The Post Millennial?

> Convicted school shooter Devon Erickson, now 20-years-old, was sentenced Friday to life in prison without the possibility of parole.
>
> The former high school student who was charged with opening fire alongside a transgender accomplice on "transphobic" classmates at a Colorado charter school was convicted of all 46 counts, including first-degree murder, back in June.
>
> Erickson partnered with Maya "Alec" McKinney shot one student dead and wounded eight others when the pair executed a plan to kill the movie-watching classmates inside a darkened classroom at STEM School Highlands Ranch on May 7, 2019. The two mass shooters plotted the fatal shooting just three days before graduation and entered through separate doors to maximize the number of students they're able to kill, prosecutors said.

You might think that the secular left would want justice for the victims, but you'd be wrong. They want compassion and non-judgment for the criminals:

> Social justice activists on social media advocated to #AbolishPrisons for McKinney's release so he can "thrive as a trans person." Leftists claimed online

> that “oppressive society” and “a world designed to kill us” had driven McKinney, who was born female but identifies as male, to violence and were at fault.

On Twitter, other trans activists are expressing support for the murderer, blaming Christians and explaining that Christians deserve to be attacked.

Transgender activists are even planning a “Trans Day of Vengeance” and raising money for firearms training. Firearms training.

Daily Wire reports:

> A group of transgender activists is planning a “Day of Vengeance” in Washington, D.C., for March 31-April 2 while raising money for firearms training this week, according to its online materials.

The corporate news media responded to the murder of Christian children like this:

That’s an incitement to violence. Terry Moran, Senior National Correspondent for ABC News also blamed Christians for provoking the transgender activist into murdering their children, including the daughter of the pastor. Here are more reactions to the shooting from the secular left elites, reported by The Federalist.

Although you might expect the Biden administration to focus in on groups that are actually violent, Biden’s law enforcement is more concerned with arresting concerned parents and peaceful pro-life demonstrators. After all, Democrats say, those are the real “domestic terrorists”.

This isn't even the first time that an LGBT activist was involved in domestic terrorism.

Recall this article posted at The Federalist that the Southern Poverty Law Center was the source of the "hate map" which was used by convicted domestic terrorist Floyd Lee Corkins in his attempt to shoot and kill everyone at the Family Research Council. He was stopped by a security guard, and the video above is the footage of the attempted mass murder.

Excerpt:

> Corkins would later admit that he had located Family Research Council's office on a "hate map" produced by the Southern Poverty Law Center, and he planned to shoot people in the building and smear the Chick-fil-A sandwiches on them.
>
> […]Much of the ensuing media coverage ignored or downplayed Corkins' motives, which the *Washington Post* referred to as "a detail sure to reignite the culture wars." A year later, Southern Poverty Law Center founder Morris Dees was still publicly defending the inclusion of Family Research Council on the organization's "hate map."

Just to be clear, this gay activist was convicted of domestic terrorism, and received 25 years in prison.

The SPLC has been linked to Big Tech, and also to the FBI and the armed forces. You'll recall that the FBI has lots of time for arresting peaceful pro-life activists, and investigating concerned parents for "domestic terrorism". They didn't prevent this mass shooting though.

So what should Christians do about this? As Christianity declines in our society, we should expect fewer people to act in ways consistent with the Bible. And that spells trouble – not just for Christians, but for society as a whole. Doctrines like “the image of God” “free will” “Heaven and Hell” “repentance” “forgiveness” etc. make a huge difference to our civil society. You can already see what is happening to unborn children in the womb, and children who are being raised by selfish adults who deprive them of their biological mother or biological father or both. We are turning away from defending the rights of the weak and helpless, and favoring adult selfishness.

For the past hundred years of so, we have accepted a version of Christianity that is comfortable for the Disney-lovers. The emotion-based people. People like Russell Moore and David French, whose first priority is to be loved by non-Christians, rather than to persuade non-Christians to love Christ. Groups like The Gospel Coalition, the ERLC and Christianity Today, that just want to get along with the secular left. These are people who accept Christianity because they have feelings about it, and who think that non-Christians reject Christianity just because they don’t have feelings about it. They have no idea whether Christianity is true as a matter of fact, because they’ve never done the work to investigate it. And that’s why they just capitulate to the hurt feelings of people on the secular left. We can’t rely on them to protect us. They stood by passively, while Christianity ceased to be viewed as a live worldview option for non-Christians. Their laziness, cowardice and ignorance put us in this mess.

How can we get back the space to live our lives consistently with our Biblical convictions? Well, we can use reason and evidence to convince non-Christians that Christians are good, moral people, and that our views are reasonable, and that our way of life is a benefit for society. We can no longer turn inward, and focus on what God has planned to entertain us. Now we have to roll up our sleeves and do the real work of the Great Commission, in the style of 1 Peter 3:15 and 2 Cor 10:5. Origin of the universe, cosmic fine-tuning, origin of life, Cambrian explosion, molecular machines, irreducible complexity, gospel authorship, minimal facts case for the resurrection, etc. We need to be able to defend our views on moral issues with reason and evidence. Our marriages should be better and more stable, and we should be raising better kids, too. Even if non-

Christians aren’t convinced by our intellects and our loving relationships, they should at least respect us enough to not mass murder us.

Scott Klusendorf discusses right to life, assisted reproduction, and end of life

March 29, 2023 | by Wintery Knight | Link | Original Link

Here's the video, featuring my favorite pro-life speakers Scott Klusendorf. Scott is the founder and President of the Life Training Institute. LTI's mission is to make a rigorous, rational defense for pro-life positions with respect to a variety of ethical issues. If you listen to Scott, you will learn a lot, and learn it from someone who has been tested on the battlefield of ideas.

Three topics:

- right to life of the unborn
- reproductive technologies
- end of life questions

40 minutes of guided discussion, 20 minutes of Q&A. This video was apparently recorded in the summer of 2016.

Abortion:

- the 1-minute case for the pro-life position (excellent)
- dealing with those who dismiss the pro-life case as religious
- how and when do people win arguments?
- how does one get better at discussing moral issues?
- who are some of the best books to get informed about life issues?
- what are some of the best books from the other side?
- what is the SLED test? do pro-abortion scholars accept it?
- if abortion were illegal, who should be punished and how much?
- is it inflammatory and dangerous to say that abortion is killing?

Assisted reproductive technologies:

- how should we speak to people considering ARTs?
- what is the underlying issue in ART discussions?
- should pro-lifers be opposed to all use of ARTs?
- what should pro-lifers think about surrogacy?
- which books provide an introduction to ART ethics?

End of life issues:

- what is the central issue in end of life discussions?
- should treatment always be continued or are there situations where treatment can be withdrawn?

Final issues:

- if a student wants to take courses in bioethics, where should they go to take courses or do a degree?
- what is the policy situation for pro-lifers in terms of legislation and SCOTUS decision-making?
- what are some policies that pro-lifers can support as incremental measures that move the issue in the right direction?

I liked this discussion. I tried to listen as someone new to the issue and he did a good job of not assuming any prior knowledge of the debate. My favorite part was his survey of books and arguments on the other side, and what they say. I don't think that most people realize what the implications of the pro-abortion worldview really are for things like infanticide, and so on. The discussion about who should be punished for abortion and how much was new to me – and that actually came up during the last election, during the GOP primary. Personally, I would let the woman get off, and just prosecute the doctor.

It's very very good to listen to crystal clear thinking on these controversial issues from someone who has encountered the other side in their writings, and in public debates with them. Not to mention having to interact with people making decisions in these areas.

Christians should support natural marriage because it protects children from adult selfishness

March 30, 2023 | by Wintery Knight | Link | Original Link

I have been following Katy Faust's work on Twitter. She runs the organization "Them Before Us". She fights laws and policies which allow adults to put their desires above the needs of children. And especially a child's need for a relationship with his or her mother and father. In a recent article for The Federalist, she takes on a Joshua Harris, who is attacking traditional Christian moral values.

She writes:

> In a recent interview, newly ex-mega-church pastor Joshua Harris and author of the 1990s best-seller "I Kissed Dating Goodbye" remarked that the support President Trump has received from the evangelical community has been "incredibly damaging to the gospel and to the church." I'd wager Harris is projecting something fierce.
>
> In August, Harris announced that he and his wife Shannon were divorcing, that he no longer considers himself a Christian, and that he regrets "standing against marriage equality." Just in case the point was lost on any of us, he followed up his announcement by posting a picture of himself eating a rainbow donut at the Vancouver Pride parade.
>
> **It's no coincidence that Harris reversed himself on biblical teachings on sex and marriage while abandoning the core tenets of the faith.**
>
> **The denial of sexual and marital norms by believers is often adjacent to a rejection of the core tenets of the faith. That's because to arrive at these "inclusive" and "affirming" positions on marriage, Christians must exalt intoxicants such as emotion over uncompromising scripture, tradition, and natural law. Once you shift the authority from sola scriptura to sola feels, it's only a matter of time before every other orthodox teaching finds itself on the woke chopping block.**

I love this SO MUCH.

If I had to pick one conclusion that I have found to be true in 30 years of debating Christian truth claims, it would be that the normal process for becoming an atheist has nothing to do with reason or evidence. People abandon their faith in their teens, long before they have ever done any research into whether Christianity is true. And why? Because they know that their desire to be free of the moral demands of Christianity is true. And they know that their desire to be liked by their non-Christian friends is true.

Katy explains that she loves loves to discuss and debate with non-Christians and LGBT people about the issue she cares about: natural marriage and children's rights. But she gets annoyed with Christian leaders who misunderstand the gospel.

She writes:

> Whether approaching the issue from a natural law perspective where male and female complementarity features prominently, or considering the most widely ratified treaty in human history outlines a child's right to be known and loved by their mother and father, or through the lens of scripture where God joins together man and woman in life-long union because he is seeking "godly offspring" (Malachi 2), Christian leaders have no excuse for getting marriage wrong.
>
> Zip. Zero. Nada. Their more-tolerant-than-Jesus definition of marriage (Mark 10:6-9) is, to use Harris' own words, incredibly damaging not only to the church, but to the most vulnerable as well.
>
> The reality is that Christians cannot get gay marriage wrong unless they first get the gospel wrong. Progressive Christians are under the wrong impression that ours is a gospel of affirmation: the idea that God affirms everything we think and say and do and want. This misconceived notion of the gospel believes that for God to genuinely love us, he has to love everything about us.
>
> In this self-esteem-driven, everyone-gets-a-prize culture, a God who sometimes disapproves of our thoughts and behavior (*cough* Psalm 19:14) appears to be quite a bigot. In the "Born This Way" version of the Gaga gospel, Matthew 5:29 would read, "If your right eye causes you to stumble, by all means, redefine the word 'stumble' because, well, I wouldn't want you to lose an eye now, would I?"
>
> An honest reading of scripture reveals that ours is not a gospel of affirmation. Leave aside the 613 laws of the Old Testament in which God is rigidly un-affirming as he imposes devastating consequences on his people when they misuse their words, money, bodies, land, and worship. The New Testament and the gospels are also brimming with commands to put off behaviors that displease God and put on an entirely new nature.

Katy likes to tweet a lot of stories where children who have been impacted by divorce or same-sex marriage or donor-conception or surrogacy speak about how they feel about not having a relationship with their father or mother (or both). But she also knows how to argue against adult selfishness using data.

My advice to Christians is this. If you want to have confidence when defending the Christian teaching on marriage, or defending the rights of children to a Mom and a Dad, then you need to be equipped with research, statistical evidence and stories of those who have been impacted. Being a Christian means advocating for the teachings of Jesus. Jesus cared about children, and he wanted adults to act in a way towards children that would help those children to come to know him and follow him. We should not be affirming adult selfishness when it harms the children who are made to know God.

I think one of the reasons why people like Joshua Harris are abandoning the faith is because abandoning the morality came first. And before the abandoning of morality, there was a refusal to get informed about the harm that sin does. Instead of putting in the

time to look at the evidence, they just altered their worldviews in order to feel good and be liked. Well, feeling good and being liked has never been important to the Christian life. But valuing truth, defending Christian convictions with evidence, and protecting the weak from the strong is found everywhere in the New Testament.

Why do law-abiding Americans insist on owning guns?

March 31, 2023 | by Wintery Knight | Link | Original Link

I'm not originally from the United States, and when I go back home to visit, one of the questions that I get asked a lot is "why do Americans own so many guns?" So in this post, I wanted to look at some stories from the United States about crime and gun violence and see why so many Americans own guns.

My favorite writer on these issues is Amy Swearer, who writes for the Daily Signal. I find that her articles are useful for explaining to people who don't own guns, or want to ban guns, why it might be a good idea to own a gun, and to know how to use it.

The first article to see is a review of 10 examples of defensive gun use from February 2023.

She writes:

> Almost every major study has found that Americans use their firearms in self-defense between 500,000 and 3 million times annually, according to a 2013 report by the Centers for Disease Control and Prevention. In 2021, the most comprehensive study ever conducted on the issue concluded that roughly 1.6 million defensive gun uses occur in the United States every year.
>
> For this reason, The Daily Signal publishes a monthly article highlighting some of the previous month's many news stories on defensive gun use that you may have missed—or that might not have made it to the national spotlight in the first place. (Read other accounts here from past years.)
>
> The 11 incidents below represent only a small portion of the news stories on defensive gun use that we found in January.

Here are a couple of the examples:

> - **Jan. 9, Ellijay, Georgia:** Police said an armed robber who tried to hide his face under a pair of women's panties entered a combined gas station and convenience store and pointed a handgun at the clerk. What he didn't know is that all three customers inside the store were legally armed. Working together, they disarmed the robber and held him at gunpoint until police arrived.
>
> - **Jan. 14, Utica, New York:** When a disgruntled customer at an Applebee's restaurant slashed an employee across the face with a steak knife, police said, an armed diner with a concealed carry permit intervened, ordering the man to drop the knife. He then held the assailant at gunpoint until police arrived.

> - **Jan. 27, Haines City, Florida:** A concealed carry permit holder returned home with his girlfriend to find two intruders in his kitchen. The homeowner drew his gun and fired five rounds at one intruder, striking him four times, before fleeing with his girlfriend and calling police. Responding officers found the wounded intruder—a convicted felon—near the home and were trying to identify and locate the second intruder. In response to the shooting, Haines City Police Chief Greg Goreck reminded reporters that most people in the county are armed, saying: "One should expect that if you are brazen enough to enter into someone's residence and it is not yours, with intent to commit an unlawful act, there may be repercussions."

The second article talks about defensive gun uses by students:

> - **Feb. 14, Seattle:** A couple and their two children were getting out of a family vehicle when two armed robbers threatened them, police said. The father also was armed, however, and exchanged gunfire with the robbers until they fled. In an effort to protect his wife and children, the father moved away from the vehicle to create distance between them and the crossfire. He was shot three times in the lower body, but his actions prevented his wife and children from being hurt.
> - **Feb. 22, Eddy County, North Dakota:** A farmer spotted a wanted murder suspect walking near his property and held him at gunpoint until police arrived, single-handedly ending a two-day, multiagency manhunt.

It's especially important for people living in blue cities or blue states to arm themselves, because the police forces in these areas have had their budgets slashed by Democrats. "Defund the police" sounds so good, but it just gets a lot of peaceful, law-abiding people killed.

It's very important to ask secular leftists who want to ban law-abiding people from owning firearms "what do you expect people to do when criminals want to hurt them?" The answer I get from my atheist Democrat friend is that he expects them to call the police, and wait for them to arrive. There is a real suspicion among secular leftists of law-abiding people defend themselves – especially men. A man defending his family? Why, that's "sexist". Better to call the police and wait for them to arrive.

The peer-reviewed research

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

The book by economist John Lott, linked above, compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, which shows that the 1997 UK gun ban caused violent crime rates to MORE THAN DOUBLE in the four years following the ban. But both studies affirm the same conclusion – more legal firearm ownership means less crime.

One of the common mistakes I see anti-gun advocates making is to use the metric of all "gun-related deaths". First of all, this completely ignores the effects of hand gun ownership on violent crime, as we've seen. Take away the guns from law-abiding people and violent crime skyrockets. But using the "gun-related deaths" number is especially wrong, because it includes suicides committed with guns. This is the majority (about two thirds) of gun related deaths, even in a country like America that has a massive inner-city gun violence problem caused by the epidemic of single motherhood by choice. If you take out the gun-related SUICIDES, then the actual number of gun homicides has decreased as gun ownership has grown.

For a couple of useful graphs related to this point, check out this post over at the American Enterprise Institute.

Knight and Rose Show – Episode 31: Was Jesus a Socialist, Part 2

April 1, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 31 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose continue discussing what the Bible says about Christianity and economics. We discuss Bible passages that support the free enterprise system. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

PLEASE NOTE: Rose is sick with the same thing that I had during the Christmas and New Year's holidays. For me, that lasted about 4 weeks, and I was on a prescription cough suppressant just so I could sleep! So, we have have a delay until we can record episode 3 in this series on Christianity and socialism.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 31:

Episode Summary:

Wintery Knight and Desert Rose look at several passages of the Bible where Jesus speaks about economics issues, and discuss whether his words are more compatible with socialism or free enterprise. What view of property does Jesus assume? Who should redistribute wealth to alleviate poverty – governments or individuals? What does the Bible teach about greed, envy and coveting? We end the episode with book recommendations. This is the second episode of a three-part series.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

Do not expect the woke police in Canada to protect you from an LGBT assault

April 2, 2023 | by Wintery Knight | Link | Original Link

The big story from the weekend came from Vancouver, BC, where a pro-child activist was assaulted *on camera* by a transgender activist. Crowds of police were standing around watching, and one of the female police officers was smirking and laughing as the assault happened. She refused to lift a finger to investigate or make an arrest, and accused the victim of causing his own wound.

Here's the story from The Blaze:

> The Vancouver Police Department is investigating after activist Chris Elston, also known as "Billboard Chris," says he was assaulted Friday at a trans-rights rally.
>
> "The most violent group in the western world are transgender activists," Elston tweeted Saturday. "Here I am getting assaulted in the presence of dozens of police who do nothing," Elston said.
>
> The police officer was not interested in seeing the video of the assault, instead accusing the victim of assaulting himself.
>
> One video of Friday's incident in Vancouver shows Elston, already with what appears to be an open cut on the bridge of his nose from an earlier assault in the public park. That video shows a group surrounding him, chanting "f*** you." Police officers are seen standing by as the swarm quickly grows violent.
>
> The video shows one chanting protester with an orange umbrella and a rainbow flag, standing within inches of Elston, directly behind him. As Elston turns, his elbow appears to graze the protester's fluffy coat collar and Elston appears to place his hand lightly on the protester's collar as he continues turning on the spot.
>
> The video shows the protester immediately go for Elston's neck with what appears to be an attempt at a choking type hold. A scuffle ensues as Elston pulls back from the hold, then pushes the protester away, and tumbles toward the group of officers. As Elston creates some distance between himself and the protester group, one female officer among the several officers in view in the footage, appears to be smiling or chuckling.
>
> […]The first assault at the Vancouver location occurred "within seconds" of his arrival, Elston said, adding that he had called 911 for assistance. According to Elston, the female officer — who appears to be the same officer smiling during the later assault described above — initially suggested Elston might have cut his own nose.

That's what you get for "law enforcement" in Canada.

If you are the victim of violence or vandalism in Canada, the police will probably not do anything to the criminal. Especially if the criminal is in one of the special interest groups favored by the secular left. They might even charge you instead, if you're not in one of the left-wing special interest groups. Canada is not America. It's more like a third world banana republic, where a hierarchy of victimhood determines who is right and who is wrong. There is no law.

From Twitter:

> After my first assault, which occurred within seconds of my arrival, I called 911 for police.
>
> This officer arrived quickly but stayed in her car, so I walked over.
>
> She told me maybe I cut my own nose!
>
> More farcical policing ensued. pic.twitter.com/v6mORvgAjd
>
> — Billboard Chris □□□□ (@BillboardChris) April 1, 2023

And:

> Another angle of the assault on me today. Police did nothing.
>
> The investigating officer says I instigated, and she told me it was a mutual fight. pic.twitter.com/rCQZyntjSY
>
> — Billboard Chris □□□□ (@BillboardChris) April 1, 2023

And:

> The investigating officer loves every minute of this.
>
> She's smiling away as I'm getting assaulted. https://t.co/Kxsn0CLgvD
>
> — Billboard Chris □□□□ (@BillboardChris) April 1, 2023

And:

> I showed this officer footage of @BillboardChris getting physically assaulted 3 TIMES and she says that HE incited violence by wearing his sign…
> Badge number 3081 of the VPD…she wouldn't tell me her name…
> pic.twitter.com/NcGJtdaHW5
>
> — Dan Dicks (@DanDicksPFT) April 1, 2023

Now, I want to say something about the smirking female police officers. I'm not sure if it's the same one in all the videos, or different ones. But something about this really rubbed me the wrong way, and I'm actually quite angry about it.

So, let me start by saying that a woman can't measure the value of a man by reflecting on how his appearance makes you feel. A man with a tall appearance, tattoos, muscles, etc. might make a woman feel protected. But without looking at spiritual ability and moral ability, there is no guarantee that there is a worldview *inside the man* that would cause

that man to protect a woman from a threat. And in any case, not every threat is a bear to wrestle with. Sometimes the threat is in the public school classroom, or even inside the woman's desires.

So, when you look at Billboard Chris, you have to look past his appearance. And when you do that, you'll see that this about as good of a man as you can make. Why? Because a good man protects children and animals from stronger people who want to hurt them. The man can be tall, the man can be short. The man can be handsome, the man can be ugly. The man can be rich, the man can be poor. The man can be smart, the man can be dumb. But what makes a man good for his family, and good for society, is that he is willing to deploy whatever strength, thinking, money, etc. he has to defend the weak from the strong. And Billboard Chris does that.

And that brings me to the smirking affirmative action police officer. And it brings me to the rule of secular leftist women over men in Canada, as a whole. Canada is a society that is *dominated* by the feelings-based priorities of secular leftist women. From the banning of free speech, to the banning of guns, to the high tax rates, to the single payer health care, to the coddling of criminals, gay rights, taxpayer-funded abortions… the whole society is set up to punish men who want to lead a home based on moral and spiritual ability. So when I see this immature police officer smirking at Chris, I find it infuriating. Chris is the kind of man that women should look up to and support. But in a country like Canada, what you get from the whole society is this smirking mockery. And that's why marriage is in a steep decline in Canada. Men don't marry women who mock spiritual and moral leadership. Men might have hook-up sex with immoral women, but men don't commit to them. Men don't make babies with women who are opposed to God and morality.

Billboard Chris says he is scheduled to be on Tucker Carlson on Monday night. I want everyone to be clear on what a banana republic Canada is. Don't go there. Don't spend your money there. It's not a country of laws. It's just a left-wing dictatorship where the police do the bidding of the secular left. Keep out of there.

Ron DeSantis signs universal school choice bill into law

April 3, 2023 | by Wintery Knight | Link | Original Link

I'm watching Republican candidates for president closely to see whether they are performing any actions to oppose the secular left. One person who is building up a nice resume is Florida governor Ron DeSantis. In this post, I'll look at his latest achievement, then look at how Tennessee Republican leaders are responding to the recent murder of Christians by secular leftists in Nashville.

First, Ron DeSantis, reported by Focus on the Family:

> Florida Governor Ron DeSantis signed a historic school choice bill into law earlier this week, making Florida the largest state in the union to give parents universal school choice for their children.
>
> The bill (HB 1) promotes school choice in multiple ways. Among other benefits, the bill:
>
> - Eliminates financial eligibility restrictions and allows any student who is a resident of Florida and is eligible to enroll in K-12 to participate.
> - Eliminates the enrollment cap on students who can participate in the Family Empowerment Scholarship for Educational Options.
> - Requires the development of a new online portal for parents that shows every educational option available for their student.
> - Expands the number of scholarships for students with unique abilities by tripling the annual increase from 1% to 3%.
>
> […]"Florida is number one when it comes to education freedom and education choice, and today's bill signing represents the largest expansion of education choice in the history of these United States," said Gov. DeSantis.
>
> "When you combine private scholarships, charter schools, and district choice programs, Florida already has 1.3 million students attending a school of their choosing," the governor added. "These programs have been instrumental in elevating student achievement over the past twenty years."

The article goes on to point out education freedom successes in other Republican-run states; Nebraska, Arkansas, Iowa and Utah. You're not going to see wins for parents in blue states like New York and California, because these states are not pro-child.

Add this action to the list of previous DeSantis actions:

- making collection of union dues optional for teachers
- flying illegal immigrants to Massachusetts
- elect conservatives to school boards

- teach students about the historical record of communism
- ban grooming of young children
- protect wildlife
- banning biological males from women's sports
- punishing Big Tech social media companies for censoring conservatives

Meanwhile, in Tennessee, Governor Bill Lee has proposed a new law to protect children from violence.

Daily Wire:

> Every Tennessee private and public school will have the resources necessary to hire an armed guard if Governor Bill Lee (R-TN) gets his plan through a Republican-led legislature.
>
> Next week, Lee will propose a plan to funnel millions of dollars to public and private schools to beef up security following the mass shooting at a Nashville Christian elementary school on Monday. Lee's plan would place an armed school resource officer (SRO) in every public school and provide funding for private schools to hire armed guards with the same level of training as those in public schools. Private schools would not be forced to join in on the program…
>
> […]The governor also addressed "mental health concerns," adding that his new plan will seek more mental health support through school-based behavioral health liaisons…

You might be wondering if Tennessee can afford this, but don't worry. They had a massive surplus last fiscal year, as conservative business owners are fleeing blue states to come to Tennessee.

The Tennessee senators are also busy looking out for kids:

> Earlier this week, Tennessee Republican Sens. Marsha Blackburn and Bill Hagerty announced that they will introduce The SAFE School Act at the federal level. The legislation seeks to establish "a $900 million grant program that will allow both public and private schools to train and hire veterans and former law enforcement officers to serve as school safety officers, hire off duty law enforcement officers, and provide funding to harden schools and increase physical security."

I saw last week that Democrats were howling for Republicans to "do something". Well, Republicans are doing something. But the something they're doing is not banning all gun ownership and self-defense for law abiding people. Democrats created this crisis, by manufacturing a generation of mentally ill children in their government-run public schools. Well, Republicans have a solution, although it's not the one that the Democrats want.

New study: “social contagion” is a major factor in teen and young adult gender dysphoria

April 4, 2023 | by Wintery Knight | Link | Original Link

Previously, I had blogged about a small study published in 2018 by Brown University’s Dr. Lisa Littman. That study was controversial, because it falsified the narrative about transgenderism held by secular leftists. The new study, published in March 2023 in Archives of Sexual Behavior, confirms the Rapid Onset Gender Dysphoria theory first advanced by Littman. Let’s take a look.

The study is here, on Springer Link.

Excerpt from the Abstract:

> During the past decade there has been a dramatic increase in adolescents and young adults (AYA) complaining of gender dysphoria. One influential if controversial explanation is that the increase reflects a socially contagious syndrome: Rapid Onset Gender Dysphoria (ROGD).
>
> We report results from a survey of parents who contacted the website ParentsofROGDKids.com because they believed their AYA children had ROGD. Results focused on 1655 AYA children whose gender dysphoria reportedly began between ages 11 and 21 years, inclusive. These youths were disproportionately (75%) natal female. Natal males had later onset (by 1.9 years) than females, and they were much less likely to have taken steps toward social gender transition (65.7% for females versus 28.6% for males). Pre-existing mental health issues were common, and youths with these issues were more likely than those without them to have socially and medically transitioned.
>
> Parents reported that they had often felt pressured by clinicians to affirm their AYA child’s new gender and support their transition. According to the parents, AYA children’s mental health deteriorated considerably after social transition.

Breitbart reported about the study and noted:

> When asked if their child had friends who “came out as transgender around the same time,” 55.4 percent said “yes,” with that response being significantly higher for females, (60.9 percent) than it was for males (38.7 percent).
>
> […]The study also revealed that parents said they oftentimes felt pressured by clinicians to go along with their child’s new gender identity and support their transition. The parents added that their children’s “mental health deteriorated considerably after social transition.”
>
> […]Parents also estimated that before developing gender dysphoria, their child was spending an average of 4.5 hours per day “on the internet and social media.”

> When asked whether a stressful event in their child's life may have contributed to the onset of gender dysphoria, 72.6 percent of parents answered "yes."

One of the differences between men and women, in my experience, is that the majority of men tend to generate their worldview by making plans that are likely to achieve goals, whereas the majority of women tend to get their goals from the culture, and pursue those goals by doing what feels good "in the moment". I have been told this by women who were never like this, and by women who grew out of this once they experienced failure. That's why transgenderism is especially problematic for girls, because if it is being spread by social cues and pressures, then girls are typically going to be more susceptible to that than boys.

Let's talk about the previous study.

Here's how the study was first reported by Science Daily:

> This month, a Brown University researcher published the first study to empirically describe teens and young adults who did not have symptoms of gender dysphoria during childhood but who were observed by their parents to rapidly develop gender dysphoria symptoms over days, weeks or months during or after puberty.
>
> […]The study was published on Aug. 16 in *PLOS ONE*.

Peer pressure / The Internet:

> The pattern of clusters of teens in friend groups becoming transgender-identified, the group dynamics of these friend groups and the types of advice viewed online led her to the hypothesis that friends and online sources could spread certain beliefs.
>
> [….]"Of the parents who provided information about their child's friendship group, about a third responded that more than half of the kids in the friendship group became transgender-identified," Littman said. "A group with 50 percent of its members becoming transgender-identified represents a rate that is more 70 times the expected prevalence for young adults."

Mental disorders / traumatic events:

> Additionally, 62 percent of parents reported their teen or young adult had one or more diagnoses of a psychiatric disorder or neurodevelopmental disability before the onset of gender dysphoria. Forty-eight percent reported that their child had experienced a traumatic or stressful event prior to the onset of their gender dysphoria, including being bullied, sexually assaulted or having their parents get divorced.

This article at The Federalist had a few examples to illustrate the conclusion of the study. I'll pick two.

>

> The study includes other eye-opening information, such as case studies of several children's stories.
>
> - "A 14-year-old natal female and three of her natal female friends were taking group lessons together with a very popular coach. The coach came out as transgender, and, within one year, all four students announced they were also transgender."
> - "A 14-year-old natal female and three of her natal female friends are part of a larger friend group that spends much of their time talking about gender and sexuality. The three natal female friends all announced they were trans boys and chose similar masculine names. After spending time with these three friends, the 14-year-old natal female announced that she was also a trans boy."

I thought this quote from that article was interesting as well, given the culture's obsession with "bullying", which is a nebulous term that can mean actual bullying, or mere disagreement.

> The study also may indicate that school "anti-bullying" programs typically created by LGBT activist organizations such as the Human Rights Campaign may help accelerate children identifying as transgender by pushing peers and authority figures to profusely express their support.

Coming out as transgender means instant fame and popularity, because you're a victim, and everyone has to be nice to you… or else:

> "Great increase in popularity among the student body at large. Being trans is a gold star in the eyes of other teens," wrote one parent on the study response form. Another wrote, "not so much 'popularity' increasing as 'status' … also she became untouchable in terms of bullying in school as teachers who ignored homophobic bullying …are now all at pains to be hot on the heels of any trans bullying."

So becoming transgender has social rewards, especially for people who are being bullied. White girls are constantly being bullied for their race in public schools, so identifying as transgender is a quick and easy way for them to get out of the oppressor class and into the victim class

Left-wing hate group Southern Poverty Law Center to face defamation lawsuit

April 5, 2023 | by Wintery Knight | Link | Original Link

Have you heard about the Southern Poverty Law Center? This is a group that spreads hatred about conservative Christians, and has even been connected to acts of domestic terrorism committed by left-wing activists. Somehow, they've always managed to escape legal consequences for their hateful smears of Christians and conservatives. But now they've been sued again.

Here's the news from the Daily Signal:

> The Southern Poverty Law Center routinely brands mainstream conservative and Christian organizations "hate groups," placing them on a map with chapters of the Ku Klux Klan, but most lawsuits aiming to hold the SPLC accountable for this alleged defamation have failed.
>
> On Friday, however, a federal judge denied the SPLC's motion to dismiss a defamation lawsuit, allowing the case to proceed.
>
> The SPLC branded the Georgia-based Dustin Inman Society an "anti-immigrant hate group" in February 2018 after the SPLC had previously stated in 2011 that it did not consider the society a "hate group." The society, named after a 16-year-old Georgia boy killed in a 2000 car crash caused by an illegal immigrant, aims to combat illegal immigration.

The SPLC is apparently in favor of having Americans killed by illegal immigrants, so they brand anyone who disagrees as "a hate group". But to me, if you aren't siding with an innocent child against an illegal immigrant who commits crimes, then you are the real hater, and your organization is the real "hate group".

So let's find out more about the SPLC. The author of this Daily Signal post has actually written an entire book about them, and here is his summary:

> As I explain in my book "Making Hate Pay: The Corruption of the Southern Poverty Law Center," the SPLC… [brands Christians and conservatives as] "hate groups" in an effort to raise money and demonize its ideological opponents. The SPLC has an endowment of more than $500 million and bank accounts in the Cayman Islands. Amid a racial discrimination and sexual harassment scandal in 2019 that led the SPLC to fire its co-founder, a former employee came forward, calling the "hate" accusations a "highly profitable scam."

And he even has a summary paragraph of the SPLC's links to gay activists convicted of domestic terrorism against Christians:

> The lawsuit cites the 2012 terrorist attack in which a man targeted the Family Research Council's headquarters in Washington, D.C., after finding the council on

> the SPLC's "hate map." The man pleaded guilty to committing an act of terrorism and received a 25-year prison sentence. The SPLC condemned the attack, but has kept the Family Research Council on its hate map ever since.

This is not the only time that the SPLC has been involved with hateful violence against innocent people.

Here's the story from Daily Wire:

> An attorney with the far-left nonprofit Southern Poverty Law Center (SPLC) was arrested Sunday for allegedly committing domestic terrorism to stop a police facility from being built.
>
> The Atlanta police department said Sunday night that Thomas Webb Jurgens was among the 23 people charged after a "group of violent agitators used the cover of a peaceful protest of the proposed Atlanta Public Safety Training Center to conduct a coordinated attack on construction equipment and police officers. They changed into black clothing and entered the construction area and began to throw large rocks, bricks, Molotov cocktails, and fireworks at police officers."
>
> According to the State Bar of Georgia, Thomas Webb Jurgens is an attorney for the SPLC who was admitted to the bar in 2021.

The Daily Signal article notes that the SPLC has been sued successfully:

> "Making Hate Pay" details multiple defamation lawsuits against the SPLC from organizations and individuals branded as "hate groups" or "extremists." The SPLC paid $3.375 million to settle with Maajid Nawaz, a Muslim reformer it had branded an "anti-Islamic extremist."

But they clearly haven't learned their lesson. I hope that the next penalty is 10 times that amount. Maybe then, their hateful donors will learn to support organizations that actually help people, and do good in the world.

Bible study: what difference does the resurrection of Jesus make?

April 6, 2023 | by Wintery Knight | Link | Original Link

Here's an article from Bible.org, written by famous New Testament manuscript expert Dan Wallace.

What does the Old Testament say about the doctrine of the resurrection in Judaism?

He says:

> The resurrection of the dead was not *plainly* revealed in the OT until very late in salvation history. It was not until the Jews were taken in captivity, in the sixth century BC, that this was clearly articulated. Daniel 12:1-2 is the principal text: it speaks of the resurrection of both the righteous and the unrighteous:
>
> At that time shall arise Michael, the great prince who has charge of your people. And there shall be a time of trouble, such as never has been since there was a nation till that time; but at that time your people shall be delivered, every one whose name shall be found written in the book. And many of those who sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt. (RSV)
>
> Why was it not *clearly* revealed till then? It was not revealed until there was a *felt* need for it. When the Jews had no present (because of the captivity) they had to look to the future. The revelation of the resurrection came at precisely the time when the people of God needed *hope* for the future.
>
> What is significant about this is how masterful are God's insights into human nature. In the NT era, one religious group in Palestine did not embrace the resurrection as a true doctrine: the Sadducees (cf. Mark 12:18)–that is why they were "sad, you see!" The Sadducees were in charge of the temple. They derived their income from the sacrifices. In a sense, they were the precursors to modern TV evangelists. They had it good! They were the rich aristocracy that ran the place.
>
> **Those who have it good in this life don't often long for the next. The Sadducees illustrate this. The resurrection is a truth especially precious to those who are poor and those who are hopeless. It is precious to those who long for heaven enough that earth holds no sway over them.**

This means something to me. I didn't grow up with parents who had any plan for me. I had to figure out what I was supposed to be doing with my life on my own, because they were both too busy doing their own things. This is true even to this day. After I became a Christian, there were many things that I wanted to achieve in this life. But for a variety of reasons, those most of those things never happened. I wanted to do great things for God, like getting married, having a family, getting a PhD and teaching computer science in a

secular university. But things that I had intended to do for God just didn't happen the way I had hoped.

I often find myself thinking of Heaven, and having that eternal perspective on this life. One of the things that is the hardest to accept is that being a Christian makes many things I'd like to do a lot harder. It certainly didn't open any doors at school, or now, at work. I'm glad my salvation doesn't depend on achieving anything in particular. And I'm especially glad that my salvation doesn't depend on what anyone thinks of me. I find it almost impossible in this culture to get any respect by doing the things that I think are really important.

I think if a person were really successful at what they tried to do, then it would be really hard for them to give up living and go to be with Jesus.

What did Jesus intend to achieve with his resurrection?

Did you know that Jesus provided the resurrection as evidence for those who were skeptical of his claims to be God stepping into history?

Here's an article from Got Questions? on the "Sign of Jonah", which appears in the gospels of Matthew and Luke.

It says:

> The phrase "sign of Jonah" was used by Jesus as a typological metaphor for His future crucifixion, burial, and resurrection. Jesus answered with this expression when asked by the Pharisees for miraculous proof the He was indeed the Messiah. The Pharisees remained unconvinced of Jesus' claims about Himself, despite His having just cured a demon-possessed man who was both blind and mute. Shortly after the Pharisees accused Jesus of driving out demons by the power of Satan, they said to Him, "Teacher, we want to see a sign from you." He answered, "A wicked and adulterous generation asks for a sign! But none will be given it except the sign of the prophet Jonah. For as Jonah was three days and three nights in the belly of a huge fish, so the Son of Man will be three days and three nights in the heart of the earth. The men of Nineveh will stand up at the judgment with this generation and condemn it; for they repented at the preaching of Jonah, and now something greater than Jonah is here" (Matthew 12:38–41).
>
> To fully appreciate the answer that Jesus gave, we must go to the Old Testament book of Jonah. In its first chapter, we read that God commanded the prophet Jonah to go to the city of Nineveh and warn its people that He was going to destroy it for its wickedness. Jonah disobediently ran from the Lord and headed for the city of Tarshish by boat. The Lord then sent a severe storm that caused the crew of the ship to fear for their lives. Jonah was soon thrown overboard and swallowed by a great fish where he remained for "three days and three nights" (Jonah 1:15–17). After the three-day period, the Lord caused the great fish to vomit Jonah out onto dry land (Jonah 2:10).

> It is this three days that Jesus was referring to when He spoke of the sign of Jonah.

I often bring up the Sign of Jonah when I am dealing with Christians who don't want to learn how to explain their faith to non-Christians persuasively. I'm glad that story is in there!

The resurrection is a very important part of the life of the Christian. I argued in this post that it makes a difference to your feelings about your own life, and it makes a difference to your case-making with non-Christians.

Bible study: Was the resurrection body of Jesus spiritual or physical?

April 7, 2023 | by Wintery Knight | Link | Original Link

One of the leading naturalistic attempts to account for Jesus' death, empty tomb, post-mortem appearances, and the early proclamation of the resurrection is that the disciples had individual and group hallucinations. In this case, the New Testament authors would not have meant that the resurrected body of Jesus was physical. But is that what they recorded?

We'll look at the words for 1) resurrection, 2) body and 3)

Here's a quotation from my friend Eric Chabot, from his blog Think Apologetics. He explains why Paul's use of the word "resurrection" to describe what the other witnesses saw means *bodily* resurrection.

He writes:

> The two words are used for resurrection in the New Testament "anastasis" (rising up) and "egersis" (waking up), both imply a physical body**.** Furthermore, the use of the word "opethe" (the Greek word for appeared) shows the Gospel writers did believe that Jesus appeared physically. "There you will see (opethe) him" (Matt. 28:7); "The Lord has risen and has appeared (opethe) to Simon" (Luke 24:24). When they used "opethe" here, it means that He appeared physically to them.

OK so all the words they used for resurrection imply a physical body.

But what about the word for body. Do they imply a physical body?

Yes:

> So when Paul gives his list of appearances in 1 Cor. 15, the issues becomes whether the appearance to him is the same as it was to the disciples. There is no doubt the post resurrection body of Jesus (after the ascension) had to be somewhat different than the body the disciples saw. Also, whenever the New Testament mentions the word body, in the context of referring to an individual human being, the Greek word "soma" always refers to a literal, physical body. Greek specialist Robert Gundry says "the consistent and exclusive use of soma for the physical body in anthropological contexts resists dematerialization of the resurrection, whether by idealism or by existentialism." [9] Furthermore, in N.T. Wright's The Resurrection of the Son of God shows that the Greek word for resurrection which is "anastasis" was used by ancient Jews, pagans, and Christians as bodily in nature.

What about the nature of Paul's appearance? Was that a hallucination, or seeing some objective reality? Did the people with Paul see or hear anything?

Eric Chabot writes this in another place:

> The Bible says, “they heard” the same voice Paul did ” (Acts 9: 7). But they “did not see anyone ” (Acts 9: 7). Notice Paul was physically blinded by the brightness of the light. One way or the other, the experience involved something that was external to Paul. It wasn’t something that was the same thing as a vision that Paul talks about in 2 Cor. 12:1. Furthermore, the phrase “he let himself be seen’” (ōphthē , aorist passive,), is the word Paul uses in 1 Cor. 15:7 to describe of his own resurrection appearance as the other ones in the creed.

Paul didn’t get a bodily resurrection appearance, but he got an objective appearance that people nearby could see (as a bright light) and hear. His appearance, coming 5-8 years after the appearances to the disciples, should not be seen as overriding their appearances, which were appearances of the bodily resurrected Jesus.

If you want to read something a little more challenging, I found a paper from the Evangelical Theological Society (ETS) from their journal, where it talks more about soma and anastasis. If you want a bit of a challenge, download the PDF and read it. It’s by Kirk R. MacGregor and the title is “1 Corinthians 15:3B–6A, 7 And The Bodily Resurrection Of Jesus”.

William Lane Craig debates James Crossley on the resurrection of Jesus

April 8, 2023 | by Wintery Knight | Link | Original Link

This is my favorite debate on the resurrection.

You can watch the debate here:

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence.

SUMMARY

William Lane Craig's opening speech

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women

    - the testimony of women of women was not normally allowed in courts of law
    - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
    - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
    - the response was that the disciples stole the body
    - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
    - this material is extremely early, withing 1-3 years after the cross
    - James, the brother of Jesus, was not a believer when he got his appearance
    - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
    - Peter: attested by Luke and Paul
    - The twelve: attested by Luke, John and Paul
    - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

James Crossley's opening speech

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

William Lane Craig's first rebuttal

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't

undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

James Crossley's first rebuttal

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

William Lane Craig's second rebuttal

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

James Crossley's second rebuttal

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling

- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for

that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

William Lane Craig's conclusion

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments
- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

James Crossley's conclusion

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

Did the early church invent the divinity of Jesus over a long period of time?

April 9, 2023 | by Wintery Knight | Link | Original Link

How early is the doctrine of the divinity of Jesus?

When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography.

The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

1 Corinthians

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is

stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

[4] Hear, O Israel: The LORD our God, the LORD is one.

[5] Love the LORD your God with all your heart and with all your soul and with all your strength.

[6] These commandments that I give you today are to be upon your hearts.

[7] Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

[8] Tie them as symbols on your hands and bind them on your foreheads.

[9] Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

[4]So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

[5]For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

[6]yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

Philippians

Check out Philippians 2:5-11.

[5]Your attitude should be the same as that of Christ Jesus:

[6]Who, being in very nature God, did not consider equality with God something to be grasped,

[7]but made himself nothing, taking the very nature of a servant, being made in human likeness.

[8]And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

[9]Therefore God exalted him to the highest place and gave him the name that is above every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

Mark's gospel

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this

passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

The "Q" source for Matthew and Luke

Here's Matthew 11:27, which is echoed in Luke 10:22:

[27]"All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]"All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him."

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier "Q" source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

Soros-backed DA convicts army veteran of murder for defending himself from Antifa

April 10, 2023 | by Wintery Knight | Link | Original Link

There's a happy ending to this story, but I still think it's important to pay attention. I'm very picky about where I live, because I think it's important to pick the juries, judges, police and district attorneys that reflect Constitutional values. Let's look at a story about someone who thought it was fine to live and work in a far-left Democrat county. But don't worry, this story has a happy ending.

Fox News reports:

> The shooting involving Sgt. Perry occurred during Black Lives Matter demonstrations that erupted across the Texas state capital and the rest of the United States nearly three years ago.
>
> Perry, who was stationed at Fort Hood at the time, was driving for Uber to make extra money in downtown Austin on the night of July 25, 2020, when he encountered a large crowd of protesters. They were illegally blocking city streets that night, according to police, as protesters in Austin and elsewhere had done during the weeks of rioting.
>
> Among the protesters was 28-year-old Garrett Foster, who was carrying an AK-47. Perry's defense team says that the demonstrators encircled and starting pounding on his vehicle and that Foster raised the firearm at Perry, prompting him to open fire with a handgun he legally carried for self-defense.
>
> "When Garrett Foster pointed his AK-47 at Daniel Perry, Daniel had two tenths of a second to defend himself. He chose to live," Doug O'Connell, an attorney for Perry, perviously told Fox in a statement.
>
> […]Perry drove to a safe location away from the scene and called 911 to report what had happened. Officers spoke to Perry that night and released him, but a grand jury returned an indictment for murder and aggravated assault with a deadly weapon one year later in July 2021.

Travis county is famous for being very far to the left. They always side with criminals against law-abiding people. It was a very poor decision by Perry to live in Travis county, and take the chance of facing far-left police, district attorneys, judges and juries.

But fortunately, Travis county is in Texas, and Texas has an amazing Republican governor.

Fox News reports:

> Texas Gov. Greg Abbott, R., looks at pardoning Perry, tweeting Saturday, "I am working as swiftly as Texas law allows regarding the pardon of Sgt. Perry," adding that the state's Board of Pardons and Paroles must recommend pardons,

> but that he made the request and urged the board to expedite its review.
>
> Other state officials, including Texas Lt. Gov. Dan Patrick, support the move to pardon Perry. Patrick joined Fox News' Lawrence Jones on Saturday to break down the case.
>
> "This DA, like a lot of the George Soros-supported DAs across the country in our big, blue cities, seemed to let criminals go free and go after the innocent," he said.
>
> The case's lead detective, who maintains Perry acted in self-defense, is considered the "best" in the city of Austin, according to Patrick, who also reiterated claims that Garza instructed the detective to remove any exculpatory slides from his 158-slide presentation of evidence from the case.
>
> "He says he believes that the evidence he [the detective] would've presented to the grand jury would have possibly led to them not even indicting [Perry]," Patrick said.
>
> The detective maintains that Garza's conduct was not only unlawful, but bordered on criminal conduct of witness tampering.

This is a good time for Americans to think about how the far left handles issues of crime and self-defense. If you live in a blue city in a blue state, you should consider what might happen to you if you have to defend yourself. Right now, we are seeing left-wing public schools turning out hundreds of mentally disturbed children. The law enforcement is calling law-abiding citizens "domestic terrorists", while treating real BLM and Antifa criminals leniently. It would be a mistake to put yourself under the power of the secular left. There might not be a governor there to pardon you, if you get into trouble with them.

Study: belief in free will linked to ability to behave morally and to help others

April 11, 2023 | by Wintery Knight | Link | Original Link

A while back I finished reading "God's Crime Scene", the new book by J. Warner Wallace. I wanted to post something about some studies he mentioned in Chapter 6, on free will. This is one of the places where he found evidence in a surprising area.

Wallace says that free will makes more sense if theism is true, because we have non-material souls that interact with our bodies, but are not causally determined by them. On atheism, only matter exists, and you can't get free will (or consciousness) from matter. So atheists like Sam Harris and Alex Rosenberg, for example, deny free will, because they are materialists and atheists.

Anyway, here's what he writes on p. 256:

> In 2008, researchers from the University of Minnesota and the University of British Columbia conducted experiments highlighting the relationship between a belief in determinism and immoral behavior. They found students who were exposed to deterministic literature prior to taking a test were more likely to cheat on the test than students who were not exposed to literature advocating determinism. The researchers concluded those who deny free will are more inclined to believe their efforts to act morally are futile and are, therefore, less likely to do so.
>
> In addition, a study conducted by researchers from Florida State University and the University of Kentucky found participants who were exposed to deterministic literature were more likely to act aggressively and less likely to be helpful toward others." Even determinist Michael Gazzaniga conceded: "It seems that not only do we believe we control our actions, but it is good for everyone to believe it."" The existence of free will is a common characteristic of our experience, and when we deny we have this sort of free agency, there are detrimental consequences.

I decided to look up these studies.

Here's the abstract for first study: (2008)

> Does moral behavior draw on a belief in free will? Two experiments examined whether inducing participants to believe that human behavior is predetermined would encourage cheating. In Experiment 1, participants read either text that encouraged a belief in determinism (i.e., that portrayed behavior as the consequence of environmental and genetic factors) or neutral text. Exposure to the deterministic message increased cheating on a task in which participants could passively allow a flawed computer program to reveal answers to mathematical problems that they had been instructed to solve themselves. Moreover, increased cheating behavior was mediated by decreased belief in free

> will. In Experiment 2, participants who read deterministic statements cheated by overpaying themselves for performance on a cognitive task; participants who read statements endorsing free will did not. These findings suggest that the debate over free will has societal, as well as scientific and theoretical, implications.

And the abstract for the second study: (2009)

> Laypersons' belief in free will may foster a sense of thoughtful reflection and willingness to exert energy, thereby promoting helpfulness and reducing aggression, and so disbelief in free will may make behavior more reliant on selfish, automatic impulses and therefore less socially desirable. Three studies tested the hypothesis that disbelief in free will would be linked with decreased helping and increased aggression. In Experiment 1, induced disbelief in free will reduced willingness to help others. Experiment 2 showed that chronic disbelief in free will was associated with reduced helping behavior. In Experiment 3, participants induced disbelief in free will caused participants to act more aggressively than others. Although the findings do not speak to the existence of free will, the current results suggest that disbelief in free will reduces helping and increases aggression.

So what to make of this?

If you're an atheist, then you are a physical object. And like every other physical object in the universe, your behavior is determined by genetic programming (if you're alive) and external inputs. Material objects do not have the ability to make free choices, including moral choices.

Here's prominent atheist Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

Atheist William Provine says atheists have no free will, no moral accountability and no

moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

(Source)

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible. No free will means no morality. Can you imagine trying to get into any sort of enterprise with someone who has this view of moral choices? A marriage, or a business arrangement, etc? It would be crazy to expect them to behave morally, when they don't even think that moral choices is possible. It just excuses all sorts of bad behavior, because no one is responsible for choosing to do the right thing.

Believers in materialism are going to struggle with prescriptive morality, including self-sacrificial care and concern for others. Their worldview undermines the *rationality* of the moral point of view. You might find atheists acting morally for their own purposes, but their worldview doesn't rationally ground it. This is a big problem for people who can see objective morality woven into the universe – and themselves – because they have the awareness of objective right and wrong.

Choosing to do the right thing

I think what atheists like to say is "I can be moral, too". That's not interesting. What is interesting is whether it is rational for you to be moral when doing the right thing sets you back. When I look at the adultery of Dawkins, the polyamory of Carrier, the divorces of Shermer and Atkins, etc. I am not seeing anything that really wows me about their ability to do the right thing when it was hard for them to do it. They all deny free will of course, and think that trying to resist temptation is a waste of time.

Wallace explains how the awareness of free will and moral choices caused him to turn away from atheism, in this blog post.

He writes:

> As an atheist, I chose to cling to naturalism, in spite of the fact that I lived each day as though I was capable of using my *mind* to make *moral choices* based on more than my own opinion. In addition, I sought *meaning and purpose* beyond my own hedonistic preferences, as though meaning was to be discovered, rather than created. I called myself a naturalist while embracing three characteristics of reality that simply cannot be explained by naturalism. As a Christian, I'm now able to acknowledge the "grounding" for these features of reality. My *philosophical* worldview is consistent with my *practical* experience of the world.

I think atheists who want to be honest about their own experience of first-person consciousness, free will, moral realism, etc. will do well to just accept that theism rationally grounds all of these things, and so you should accept theism. Theism is real. If you like morality, and want to be a virtuous person, then you should accept theism.

Report: attacks on churches have tripled in the first three months of 2023

April 12, 2023 | by Wintery Knight | Link | Original Link

The Biden administration, including federal law enforcement, seems to be ignoring crimes against Christians, but the number of those crimes is climbing. There's a new report about it put out by the Family Research Council, a conservative Washington, D.C. think tank. Here's an article from the Daily Signal that talks about it.

Excerpt:

> Last week's mass murder of six people at a church-run Christian school constitutes 2023's deadliest act of violence against churches, which have increased nearly three times this year compared to last year, a new report from Family Research Council finds. The number of anti-church attacks in 2022 had already tripled over four years, a previous report found.
>
> In all, assailants attacked churches 69 times in the first three months of 2023, compared with 24 such acts during the same period last year, a 288% increase. The rising tempo of anti-Christian assaults—which includes arsons, bomb threats, vandalism, and sacrilege—has affected places of worship in 29 states. The motives behind such desecration run the gamut from pro-abortion activism or controversies over transgender ideology to apparently senseless acts of destruction.
>
> "American churches are increasingly bearing the brunt of anger and aggression, whether that's from political or other motivations," the report's author—Arielle Del Turco, assistant director of the Center for Religious Liberty at Family Research Council—told The Washington Stand. "This contributes to an environment of hostility toward Christianity."
>
> The acts of anti-church aggression documented between January and March of this year include:
>
> - 53 incidents of vandalism.
> - 10 suspicious fires.
> - Three gun-related incidents.
> - Three bomb threats—including a pipe bomb recovered outside Philadelphia's 127-year-old St. Dominic Catholic Church.
>
> "If this rate continues, 2023 will have the highest number of incidents of the six years FRC has tracked," the report notes. The number of church attacks in 2023 already exceeds "the entirety of 2018, in which we identified only 50 incidents, or 2020, in which we identified 54."

Now, this hostility against Christianity is largely caused by Christians refusing to celebrate

and affirm behaviors that are self-destructive, or destructive of others, or both. The culture today seems intent on doing what feels good "in the moment", and they aren't able to think about what happens next. So, you have people causing permanent damage to their reproductive organs, then being surprised to find out they no longer have the ability to enjoy sex. Rather than admit that they are responsible, the people who do this turn to those who warned them, and attack.

And the people who hate Christians and churches aren't capable of defending their views rationally.

Here's an article from Daily Wire, about a transgender professor with multiple degrees from Harvard, who agreed to debate Michael Knowles:

> Deirdre McCloskey, a trans-identifying professor, no longer wants to debate Daily Wire host Michael Knowles, dropping out of an event that was scheduled for next Tuesday at the University of Pittsburgh.
>
> Knowles was set to appear with the University of Illinois Chicago professor at Pitt to debate "transgenderism and womanhood."

McCloskey is utterly uninterested in finding the truth and only interested in stirring up hatred and violence towards people who do not fit his own views. That's why he refused a formal debate.

More:

> Knowles suspected that McClosky learned it would be tough to win a debate against someone who brings arguments based on truth and love after discovering that Knowles isn't the hateful bigot the media often portrays him to be.
>
> "Perhaps he has learned that I'm not the loose cannon that the liberal media have dishonestly portrayed," Knowles added. "Perhaps he's learned that my opposition to transgenderism derives, not from hatred, but from love of the truth, in this case regarding epistemology and anthropology. Despite reiterating his willingness to debate, Professor McCloskey seems to have understood that his arguments would not have survived scrutiny, so he chose to concede rather than lose in front of CSPAN's cameras."

If you can't articulate a case for your views with reasons and evidence, then what's left? What's left is vandalism and violence. Death threats and shouting insults. That's what the secular left teachers and administrators in our public schools have produced. A generation of anti-intellectual barbarians with no self-control, and no rational basis for objective moral values or duties.

New book about science and faith issues “Science and Faith in Dialogue” is free to download!

April 13, 2023 | by Wintery Knight | Link | Original Link

One of the best resources I know of for keeping track of what’s going on in the world of apologetics is the Apologetics Awareness Twitter account (and it’s also on Facebook). Apologetics Awareness shared a post from Truthbomb Apologetics that mentioned a new FREE TO DOWNLOAD book. I looked over the table of contents and the chapter authors, and I think you should download it. I did.

Here is the introduction:

> *Science and Faith in Dialogue* presents a cogent, compelling case for concordance between science and theism. The term *theism* refers, in this book, to the belief in God’s existence. Within theology, the term theism is often used to convey a range of presuppositions about the nature and attributes of God. Based on scientific and natural theological perspectives, two pillars of natural theology are revisited: the Cosmological Argument and the Argument from Design. The book argues that modern science provides undeniable evidence and a scientific *basis* for these classical arguments to infer a rationally justifiable endorsement of theism as being concordant with reason and science — nature is seen as operating orderly on comprehensible, rational, consistent laws, in line with the conviction that God is Creator.

Here is the table of contents:

- Chapter 1 – Logical fallacies and false dichotomies in the science and faith debate: impact on worldview and public opinion – **Frederik van Niekerk**
- Chapter 2 – Qualified agreement: How scientific discoveries support theistic belief – **Stephen C. Meyer**
- Chapter 3 – Cosmological fine-tuning – **Hugh Ross**
- Chapter 4 – Local fine-tuning and habitable zones – **Guillermo Gonzalez**
- Chapter 5 – Materialistic and theistic perspectives on the origin of life – **Fazale R. Rana**
- Chapter 6 – Are present proposals on chemical evolutionary mechanisms accurately pointing toward first life? – **James M. Tour**
- Chapter 7 – Engineering principles better explain biological systems than evolutionary theory – **Brian Miller**
- Chapter 8 – The evidence of foresight in nature – **Marcos Eberlin**
- Chapter 9 – Evolutionary models of palaeoanthropology, genetics, and psychology fail to account for human origins: a review – **Casey Luskin**
- Chapter 10 – Rumours of war and evidence for peace between science and Christianity – **Michael N. Keas**

You can find biographies of the chapter authors here, on the Discovery Institute web site.

The Evolution News blog has been publishing excerpts from the book. So far, they've featured Stephen C. Meyer and Guillermo Gonzalez.

Here's Stephen C. Meyer:

> This chapter reasserts this classical view and argues that scientific evidence does provide epistemological support (though not proof) for the theistic worldview affirmed by biblical Christianity (see e.g. Ac 17, Col 1, Rm 1). It will develop a model of the relationship between science and theistic belief that I call "qualified agreement" or "mutual epistemic support." This model maintains that, when correctly interpreted, scientific evidence and biblical teaching can and do support each other. While accepting some disagreement about details as inevitable given the limits of human knowledge, advocates of this model affirm a broad agreement between the testimony of the natural world and the propositional content of Judeo-Christian theism — between science and religion so defined.

And Guillermo Gonzalez:

> It is helpful to split fine-tuning into two distinct types, which we will call "global" and "local." Global tuning deals with the global properties of the observable universe. These include the masses of the fundamental particles, the strengths of the four fundamental forces, the initial cosmological conditions, and the cosmological constant.
>
> In contrast, local tuning includes things that are not universal in their properties: planets, stars, and galaxies. Not only do we know that planets, stars and galaxies do not have fixed properties, we actually observe them to vary in their properties over a broad range. We can study how life depends on the local parameters while keeping the global parameters fixed. We can also tally their numbers. For local tuning, then, we have the hope of accurately quantifying the available probabilistic resources and estimating how much of our local circumstances can be explained by observer self-selection.
>
> Historically, local tuning has been explored within the context of exobiology or astrobiology. Motivated by the desire to find other inhabited planets, astrobiologists have sought to determine the full range of environments compatible with life (i.e. habitable environments). Over the past 20 years, considerable progress has been made towards this end. In the following section, I review the state of our knowledge about habitable environments (Gonzalez 2005). In the section 'Implications for global tuning,' I return to the topic of global tuning and describe how local and global tuning are linked.

I'm familiar with all of those chapter authors by name, and I've read most of them. These are some of the best authors on this topic. I've added the book to the right column of the blog, where I always display the book I'm currently reading. You can check my What I am

Reading page to find out what I've been reading.

Washington House passes bill to allow government to hide children from parents

April 14, 2023 | by Wintery Knight | Link | Original Link

People like to throw around the word “fascism” a lot these days, without really understanding what it means. Let me explain what it means. Fascism occurs when a government uses its power to override the basic human rights of citizens. The right to free speech. The right of religious liberty. Etc. On Thursday, there was a story in the news that I think really gives a good example of fascism.

First, here’s the news from Clark County Today:

> The Washington House has passed a bill allowing shelters to keep runaway juveniles from their parents to get an abortion and/or gender surgeries that include removing a girl’s breasts or uterus.
>
> […]Currently, if a runaway minor goes to a youth shelter, the organization must inform the parents or legal guardians within 24-72 hours. However, state law provides “compelling reasons” for them not to do so, including the belief that notifying the parents or legal guardians would subject the child to abuse or neglect.
>
> […]The bill does not state when or if the parents ever need to be notified of their child’s whereabouts.
>
> Combined with HB 1469, which **has passed in both chambers**, the two policies would allow youth from other states to run away from home, go to a Washington youth shelter seeking an abortion or gender surgery, and the parents would not have to be notified. Also, none of the medical records related to any of those services could be obtained.

It’s the work of the feelings-oriented compassionate “don’t judge” crowd:

> “I am speaking to youth across our nation, across our state, and our communities.” Rep. Tana Senn, D-Mercer Island. “I see you. I affirm you, that I hear you, that I love you. With this passage of the bill, we are saying Washington state does, too.”
>
> […]“Kids’ lives are literally at stake,” Rep. Nicole Macri, D-Seattle, told colleagues. “This bill is intended to keep them safe.”

Basically, if you try to parent your child in Washington state, the government will treat you like a child abuser, and take your child from you. Although you know enough to pay their salaries, you don’t know enough to raise your own child. Your child is the property of the state as much as the taxes they collect from you. You’re a slave. You have no autonomy. Your rulers know best how to spend your money, and how to regulate your religion, your morals, your home.

Republican state representative Jim Walsh has been sending out updates about the legislation, and he put out a statement Thursday night:

His government website says:

> "Since the vote on SB 5599, I've been contacted by thousands of concerned Washingtonians about this attack on parents' rights and families. Sponsors and supporters of this bill have overstepped the constitution and case law in promoting this policy, which would allow state bureaucrats to hide minor children from custodial parents and legal guardians. This bill is wrong—legally, ethically and morally.
>
> "Among its many flaws, the bill assumes families that don't 'affirm' a child's short-term desires are being abusive. Wrong! Sometimes love requires parents to not affirm their child's whims. Loving parents guide their children as they grow. Sometimes that means saying 'no.'
>
> "This is not the first policy approved this session that turns the power and machinery of state government against families. Lawmakers promoting these changes put wedges between children and their parents, grandparents and the people who love them.
>
> "During floor debate, we heard the tired old cliche that 'it takes a village to raise a child.' That's false. That notion has resulted in exploding crime rates, homelessness and rising teen suicide rates in Washington. Enough. Parents are the primary stakeholders in their children's upbringing—not the government."
>
> **SB 5599** was approved on a party-line vote of 57-39, 2 excused. The bill now heads to the Senate for a concurrence vote on the amended version of the bill.

Every single Republican voted against the bill. Every single Democrat voted for it.

The Democrat party, like all the other big government parties of the past, are aligned with fascism. They want to take control of the economy, abolish marriage, and educate children to love the government more than they love their parents.

What conservatism stands for is simple. Low taxes, free enterprise, marriage and family, human rights – including free speech and right to life, small government that is bound by a constitution which limits its power. Fascism cannot ever be a phenomenon of the political right. It is always a phenomenon of the political left. They want to take your money, and then use it to force you to live how they want you to live.

Secular left feminist Sarah Stankorb explains why women leave Christianity

April 15, 2023 | by Wintery Knight | Link | Original Link

I sometimes read articles from mainstream conservative pastors and theologians. One of these is the famous Doug Wilson who blogs at Blog and Mablog. Well, recently he was attacked by a secular left feminist named Sarah Stankorb. I looked over her recent articles, and a pattern emerged about what she – and the women she writes about – think that Christianity is about.

Here's an article entitled "These Evangelical Women Are Abandoning Trump and Their Churches".

She talks about a woman named Katie Loveland, who leaves her church for the following reasons:

1. If a church allows a man to act like a fool towards women, then Christianity is false.
2. If a church allows a man who has passed a background check and holds a concealed carry permit to be armed so he can protect church members from attacks like this one, then Christianity is false.
3. If Christians support a politician who has a pro-life record of demonstrated achievements over a politician who promises to remove all state and local restrictions on abortion from conception to birth, then Christianity is false.

And another woman named Elaina Ramsey, and her reasons for rejecting Christianity:

1. If Christianity requires you to disagree with your gay and queer friends, then Christianity is false.
2. If Christians refuse to marry you because you've been raped, then Christianity is false.
3. If the Bible records (and condemns) the rape of Bathsheba by David, then Christianity is false.
4. If Christianity teaches that murdering humans is wrong, and science says that the unborn are human, then Christianity is false.

And more about another woman named Deirdre Sugiuchi, and her reasons for rejecting Christianity:

1. If your father claims to be a Christian and spanks you, then Christianity is false.
2. If you are sent to an abusive Christian reform school for being rebellious, then Christianity is false.
3. If Christianity feels anti-gay, anti-black or anti-woman, then Christianity is false.
4. If the United States opposes Al Qaeda for carrying out the 9/11 attack, then Christianity is false.

Are you seeing a pattern here?

It turns out that a lot of emotion-based people claimed to be Christians and were accepted as "Christian", without any rational basis for believing it. And later on, when Christianity made them feel bad about being reckless and irresponsible, or when it loses them non-Christian friends, then they abandoned it. It's not that they discovered that Christianity is illogical. It's not that they discovered evidence to falsify Christian truth claims. Their stated reasons for leaving Christianity are entirely subjective. And none of the reasons do the work of falsifying core Christian truth claims, such as God's existence, the inspiration of the Bible, or the historicity of the resurrection of Jesus.

Just to review, here are some of the reasons why authentic Christians believe in Christian theism:

- scientific evidence for the origin of the universe
- scientific evidence for cosmic fine-tuning
- scientific evidence for the origin of life
- scientific evidence for habitability
- scientific evidence for sudden origin of body plans
- scientific evidence for molecular machines
- scientific evidence for irreducible complexity
- the argument from consciousness
- the argument from objective morality
- the historicity of the resurrection of Jesus

These arguments – and many more like them – are defended by scholars in books published by top academic presses. But I see no evidence that emotion-based ex-Christians *have ever read such books*. Why would they? They aren't interested in forming their worldview based on objective reality. They aren't interested in constructing a life plan where their desire for happiness comes second to following Jesus.

People who abandon Christianity because of feelings or experiences have not "left Christianity". They just stopped faking being Christians. They were never actually Christian in the first place. To be a Christian in the first place, you have to know that Christianity is true. People who accept the arguments for Christianity listed above have *just as many disappointments with God, bad experiences with Christians, and bad experiences with churches as people who were guided by their emotions and experiences.*

In fact, I personally know women who grew up fatherless, or had defective parents, or other setbacks. They got themselves into a lot of trouble with churches and immoral men, and yet today, not only are they solid Christians, but they actually take the lead in gospel enterprises, such as apologetics. Why? Because for them, the objective truth of Christianity was more important than their subjective feelings and experiences.

The differences between Christians and non-Christians is that Christians overlook bad feelings, shame and rejection, because we know facts don't care about our feelings. For

real Christians, the normal Christian life *requires* bad feelings, disappointments, bad experiences and rejection by non-Christians. We actually read the Bible, and so we expect bad things to happen to us.

Note: if you are relying on someone to act in a Christian way – say, as a marriage partner – then you'd better find out what kind of "Christian" they are, by asking them how they arrived at their beliefs. Do not marry a fake Christian who just reads romance novels and fiction. A person can't determine the truth of Christianity by focusing on career, travel, entertainment, promiscuity, etc.

Wayne Grudem explains what the Bible says about parents and schools

April 16, 2023 | by Wintery Knight | Link | Original Link

This is a must-listen lecture from famous pastor Wayne Grudem.

The MP3 file is here.

Note: public schools = government-run schools.

Topics:

- Does God care whether we people marry and have children?
- Does God care whether Christian parents raise their children to know him?
- Should government promote bearing children?
- What are some effects of declining birth rates in other countries?
- What are the economic effects of declining birth rates?
- Who has the right to decide how children are trained: government or parents?
- What does the Bible say about parents having to raise children to know him?
- Does the government have the responsibility for training children?
- What do educational bureaucrats think of parents training children?
- What do school boards think of parents training children?
- Should school boards be elected by local, state or federal government?
- Should Christians be opposed to government-run education? (public schools)
- How should schools be viewed by parents? As a replacement or as a helper?
- How are schools viewed by those on the left and in communist countries?
- How can you measure how supporting a government is of parental rights?
- How is parental authority viewed in left-wing EU countries like Germany?
- How is parental authority respected in the United States?
- Should parents have a choice of where their children go to school?
- What is a voucher program? How is it related to parental autonomy?
- How does competition (school choice) in education serve parental needs?
- Why do public school teachers, unions and educrats oppose competitition?
- How well do public schools do in educating children to achieve?
- Does the government-run monopoly of public schools produce results?
- Does paying more and more money to public schools make them perform?
- How do teacher unions feel about having to compete in a voucher system?
- Does the public school monopoly penalize the poorest students?
- Does the public school monopoly penalize children of certain races?
- Does the public school monopoly cause racial prejudice?
- What else should parents demand on education policy?
- Is it good for parents when schools refuse to fire underperforming teachers?

This podcast is just amazing! This is what we need to be teaching in church. Church

should be the place where you go to learn and reflect about how to tailor your life plan based on what the Bible says. And I think that this whole notion of free market – of choice and competition benefiting the consumer (parents) – applies to everything that government does, especially education and health care. The genius of America is that our Founding Fathers engineered a system that reflected all of this knowledge of economics, which then made it much easier for individuals and families to enjoy liberty and a higher quality of life. If we want to keep the benefits, we have to remember why these decisions were made at the founding of our nation.

What sort of objective morality are secular leftists capable of?

April 17, 2023 | by Wintery Knight | Link | Original Link

Just looking at the policies that secular leftists vote for, you can get a pretty good picture of what they consider moral. Abortion is good for secular leftists. Same-sex marriage is good for secular leftists, because children shouldn't be raised by their biological parents. Infanticide is good for secular leftists. Selling the body parts of aborted babies is good for secular leftists. But that's not all.

Here's something from Life News:

> A former Planned Parenthood director suspected of child pornography crimes was found dead by suicide Tuesday in New Haven, Connecticut, according to local authorities.
>
> The Blaze reports Tim Yergeau, 35, of New Haven, reportedly killed himself five days after police raided his apartment as part of a child pornography investigation.
>
> Yergeau worked at the abortion chain for approximately four years from 2018 to 2022 as the director of strategic communications for Planned Parenthood of Southern New England. An Instagram profile that The Blaze identified as his shows numerous photos of his pro-abortion advocacy, including wearing a Planned Parenthood T-shirt and participating in pro-abortion events.
>
> New Haven Police Chief Karl Jacobson told The Middletown Press that "the person who died was definitely the suspect in a child pornography investigation and the person who committed suicide."
>
> "It was an open investigation, so he knew he was going to be arrested," Jacobson added.
>
> […]Police have not released details about the child pornography investigation yet. They said they are still investigating whether other individuals were involved.

Here is a photo of him supporting the abortion provider: (right)

LGBT Activists Supporting Planned Parenthood

The reason I linked to the LifeNews article, is because they talked about previous bad behavior from secular leftists who worked at Planned Parenthood:

> This is not the first time a Planned Parenthood employee has been accused of sex-related crimes. Former Planned Parenthood abortionist Roger Ian Hardy was accused of sexually molesting several former patients and female staffers in 2016 before he fled the country.
>
> The abortion chain also has a long history of ignoring or helping to cover up sexual abuse, especially involving underage girls.
>
> Meanwhile, Planned Parenthood aborted more than 383,000 unborn babies in 2020, while bringing in more money than ever before: $1.714 billion income, aided in part by $633.4 million taxpayer dollars. Planned Parenthood's political arm also donates huge amounts of money to electing Democrats to office.
>
> Its patient numbers have been dropping steadily in recent years amid numerous reports of alleged unethical and illegal activities, including selling aborted baby body parts, botching abortions that killed women, covering up the sexual abuse of minors, exploiting young girls by selling cross-sex hormones and more.
>
> Hundreds of its employees also have voiced racism complaints, including "systemic racism," "abusive behavior and financial malfeasance." Other employees have accused Planned Parenthood of pregnancy discrimination.

When you look at studies about what issues atheists are most supportive of, politically, abortion is right near the top. It is *very important* to atheists that they be allowed to engage in recreational premarital sex with people, then commit murder in order to get

out of the consequences of their own actions. You can learn a lot about atheist moral character by looking at the things they vote for, and the things they celebrate. They voted for an infanticide supporter in Barack Obama. They vote for the same-sex marriage supporter (deprive children or their mother or father or both) in Joe Biden. This is what they believe – that adults, being strong, should be able to pursue pleasure at the expense of children, because they're weak. Right now, you can see the secular left fighting to be able to make money off of sex-change drugs and surgeries for children with depression, autism, etc. They don't care about the harm they're causing, they just want to do what they want to do without moral boundaries and without being judged by Christians. That's what secular leftism is all about. That's the point of it.

Are all sins equally bad? Or are there degrees of severity for different sins?

April 18, 2023 | by Wintery Knight | Link | Original Link

This question came up recently so I did some digging on theology web sites to find what Bible verses applied to the question.

Here's what Ligonier said:

> It's clear that we have different degrees of sin when we consider the warnings of Scripture. There are at least twenty-two references in the New Testament to degrees of rewards that are given to the saints in heaven. There are different levels, different rewards, and different roles in heaven. The Bible warns us against adding to the severity of our judgment. Jesus said to Pontius Pilate, "He who delivered me over to you has the greater sin" (John 19:11). Jesus measures and evaluates guilt, and with the greater guilt and greater responsibility comes the greater judgment. It's a motif that permeates the New Testament.
>
> The idea of gradation of sin and reward is based upon God's justice. If I commit twice as many sins as another person, justice demands that the punishment fits the crime. If I've been twice as virtuous as another person, justice demands that I get more of a reward. God tells us that entrance into heaven will be only on the basis of the merit of Christ, but once we get to heaven, rewards will be dispensed according to works. Those who have been abundant in good works will receive an abundant reward. Those who have been derelict and negligent in good works will have a small reward in heaven. By the same token, those who have been grievous enemies of God will have severe torments in hell. Those who have been less hostile will have a lesser punishment at the hands of God. He is perfectly just, and when He judges, He will take into account all of the extenuating circumstances. Jesus said, "I tell you, on the day of judgment people will give account for every careless word they speak" (Matt. 12:36).

A while back, my friend Dina sent me a sermon where that exact passage (John 19) was brought up by the pastor.

I think the correct position is that *any sin* is enough to separate you from God, but some sins are more severe than others in God's objective standard of right and wrong.

OK, that was fine and good, but then I noticed a few days later that Michael Krueger had also blogged about this "all sin are equal" view, too.

Krueger says this:

> First, to say all sins are the same is to confuse the *effect* of sin with the *heinousness* of sin. While all sins are equal in their effect (they separate us from God), they are not all equally heinous.

> Second, the Bible differentiates between sins. Some sins are more severe in terms of impact (1 Cor 6:18), in terms of culpability (Rom 1:21-32), and in terms of the judgment warranted (2 Pet 2:17; Mark 9:42; James 3:1).

Even more Bible references, so we're not on the wrong track.

So then why do some people insist that all sins are equal? It turns out that it is coming from the secular ideal of *non-judgmentalism*.

Krueger explains:

> We should begin by observing that this phrase does not come from Scripture. People do not use it because it appears in the Bible. Why then do they use it?
>
> One reason, as noted above, is that some Christians use this phrase to uphold the seriousness of sin. It is viewed as a way to remind people not to be dismissive about their sin or regard it is a triviality.
>
> Others use this phrase as way to "flatten out" all sins so that they are not distinguishable from each other. Or, to put it another way, this phrase is used to portray all human beings as precisely the same. If all sins are equal, and all people sin, then no one is more holy than anyone else.
>
> In a world fascinated with "equality," this usage of the phrase is particularly attractive to folks. It allows everyone to be lumped together into a single undifferentiated mass.
>
> Such a move is also useful as a way to prevent particular behaviors from being condemned. If all sins are equal, and everyone is a sinner, then you are not allowed to highlight any particular sin (or sinner).
>
> Needless to say, this usage of the phrase has featured largely in the recent cultural debates over issues like homosexuality. Yes, homosexuality is a sin, some Christians reluctantly concede. But, they argue, all sins are equal in God's sight and therefore it is no different than anything else. Therefore, Christians ought to stop talking about homosexuality unless they are also willing to talk about impatience, anger, gluttony, and so on.

Krueger also posted this fascinating follow up post, where he looks at how the phrase is being used by people on Twitter.

Look at these tweets:

- > All sins are equal. People tend to forget that. There is no bigger or smaller sin. Being gay and lying, very equal.
- > all sins are equal in God's eyes. whatever you're doing, is no better than what someone else is doing.
- > If you have sex before marriage please don't come on social media

> preaching about the wrongs of homosexuality. All sins are equal

- Need people to realize that all sins are equal… don't try to look down on me or question my faith just cuz you sin differently than I do.
- Don't understand why you're so quick to judge me, when all sins are equal. So much for family..
- if you think being gay is a sin, let me ask you something, have you not done anything wrong in your life? all sins are equal. we're sinners
- Nope no difference at all. All sins are equal no matter what you're running for. The bible says do not judge lest ye be judged
- A huge problem I have with religion is the notion that all sins are equal. Like pre-martial sex and murder are the same amount t of bad.
- people do bad things because they believe that all sins are equal and ~god~ loves y'all equally so he's going to forgive you naman ha ha ha
- It a sin to condemn another sinner and their actions. All sins are equal. So what makes you better than the person you're condemning?
- I think so b/c having sex before marriage doesn't make you less of a women then if you waited until marriage.. all sins are equal soo
- friendly reminder, all sins are equal in gods eyes so you're not better than I am in any way. please worry about your own sins before mine.
- People don't like when I suggest abortion as an option. This is a free country and all sins are equal so mind your business!!!
- What I do is no worse than wat you do… all sins are equal no matter what it is… a sin is a sin
- to god all sins are equal so you have no right to compare your sins to someone else's bc in the end it doesn't matter

The first thing that I noticed is that premarital sex and homosexuality are the most popular sins. I would think that divorce and abortion would be up there in the rankings, as well.

Something strange has happened in our society such that more and more people want to be led by their feelings, rather than be bounded by rules or standards. When people get caught breaking moral rules, rather than be accountable, they attack the person judging

them. They would rather escape the judgment of their peers than admit fault and try to fix the mistake, and do better next time.

It's so bad now, that the people who *have* morals and who *make* moral judgments are seen as the real bad people. The immoral people are on the offense, and even trying to ban people from being able to disagree with them. We're seeing that with people who are being attacked for defending natural marriage against divorce and redefinition of marriage. In France, they want to make speech critical of abortion a criminal offense. And in Canada, they've now made speech critical of the gay agenda a criminal offense. (It's already a human rights tribunal offense)

What is even more interesting is when the people who push the "don't judge me" line try to justify it from the Bible. Very strange, but we seem to have forgotten the value of setting moral boundaries. Now moral boundaries are "evil". Instead, having compassion for people who break the moral boundaries and harm themselves and others is "good".

California man chooses to make a baby with a progressive woman, disaster ensues

April 19, 2023 | by Wintery Knight | Link | Original Link

So, there was a time when men could be less picky with women, and everything would be fine. The woman would not turn crazy, and attack the man. The government would not step in and get involved. But today, men need to accept that times have changed. And men have to be more careful about who they marry. And the government and the courts are much more likely to step in an ruin the man's life.

Here's a story Rose sent me from Daily Wire. (By the way, she is still coughing a lot, and not ready to record part 3 of Christianity and Socialism).

Excerpt:

> A San Francisco dad is fighting a nightmarish custody battle for his toddler son, who he says is being raised "non-binary" by his mother, who claims to be genderless.
>
> Harrison Tinsley, 31, is seeking full custody of his son Sawyer, 3, who currently spends half of his time with Tinsley's ex-girlfriend, the boy's mother. Sawyer's mother, 30, uses they/them pronouns for the boy and puts him in dresses and makeup, photos provided by Tinsley appear to show. Sawyer also told his dad that his mother put him in princess shoes on a trip to Disneyland, a video of the conversation shows. Sawyer's mother may have thought about raising her son "non-binary" before he was even born. In what appears to be a Facebook post during her pregnancy, she refers to Sawyer as "my sweet baby boy or girl or neither if that's what you feel."
>
> Sawyer himself rebels against his mom and insists he is a boy, his dad says.
>
> […]Gender confusion is not Tinsley's only concern for his son — he is also concerned for the child's immediate safety.
>
> Back in 2021, Sawyer's mother was arrested and booked in jail for felony child endangerment when then-1-year-old Sawyer fell off a bed during an altercation between the mother and her roommate, police body cam footage viewed by The Daily Wire shows.
>
> The San Francisco police gave custody of Sawyer to the mother's two dads for the night and put her on a psychiatric hold at the hospital. She was ultimately not convicted of a crime.

This sounds terrible, but what can single men learn from this? Well, we recently had a story where an Army vet was charged and convicted of murder for defending himself from an Antifa terrorist who was armed with an AK-47. Why? Because this happened in Austin, TX, which is incredibly liberal. So, step one would probably be to be careful where

you live. Harrison lives in California.

Second, he shouldn't be making babies with women he's not married to. The whole point of marriage is to make sure that there has been some communication and vetting before you get into the bedroom and make babies. Marriage protects babies from parents who are only interested in fun. Babies aren't fun. That's why we used to make people commit before having them.

This, look at this woman's background. I always ask women "are your parents still married?" when taking them out on dates. It's a very important question.

Now watch this:

> The mother herself now identifies as "non-binary," although she did not when she was dating Tinsley, court documents show.

Fourth, she runs an ultra-progressive non-profit:

> LGBT issues have been a major theme in her life — she was adopted and raised by two older gay men in the Bay Area, where she still lives and runs an ultra-progressive non-profit.

What a woman does for a living is a really important clue to their personality. Don't get involved with ultra-progressive women. Recent studies show that white progressive women have extremely high rates of mental illness and drug use.

Speaking of mental illness, here's number five:

> During the psychiatric hold at the hospital, Sawyer's mother told a psychiatrist that she has borderline personality disorder, a condition that can involve impulsive and risky behavior, the psychiatrist later testified in San Francisco family court.
>
> Child Protective Services investigated the police incident and concluded that Sawyer's mother was not a safety threat to her son. Her mental health was a "complicating factor, but not a safety issue," reads the CPS report, provided by Tinsley.
>
> Sawyer's mother was on five different medications for PTSD, mood stabilization, ADHD, and anxiety at the time of the CPS investigation, the CPS report said.
>
> Sawyer's mom can be heard on the police body cam footage mentioning that she drank alcohol earlier the same day.

You can't count on government and courts to do the right thing for children. They don't see women as guilty, they don't punish them as long as they punish men, and they don't think that male leadership is good for children. ("Smash the patriarchy") This is why you don't make babies with progressive women. They will do terrible things to your children (abortion, transing, let live-in boyfriends molest them, etc.) and no one will listen to you. I blogged about a case from British Columbia, Canada, and then another case from California.

Look:

> Sawyer's pediatrician, Dr. Danielle Alkov, works at a youth gender clinic that offers hormone therapy and so-called gender-affirming surgery referrals. She testified as an expert witness in court and said she has worked with children as young as 12. She also mentioned a nearby clinic that works with children as young as 3, Sawyer's current age.
>
> The court ordered that Alkov continue to be Sawyer's primary care physician.

This part reminds me of the case from California that I mentioned, where the female judge refused to let the father present scientific evidence about the harm of transing his child:

> Tinsley's lawyer said he had planned to present scientific materials demonstrating the harm of treating Sawyer as if he had no gender, but they ran out of time in court.
>
> During that trial, Sawyer's mother said in court that she has had suicidal ideations multiple times in her life.

Also, false accusations are normally taken seriously in blue cities and blue states:

> Meanwhile, she has defamed Tinsley repeatedly, he said. Sawyer's mother has called the father of her child a rapist and even claimed Sawyer is the product of rape and that Tinsley has raped other people as well, a friend told police. She began making these allegations when Tinsley started fighting for custody, he said.

This is not the way that men should be spending their life savings:

> Tinsley said he has spent all the money he ever saved on legal bills. His mother even contributed additional money, but funds are running low, he said. He recently started a fundraiser in hopes he can afford to continue fighting for custody of his son.
>
> "I will do anything to keep my son safe and happy with who he is. I hope to inspire other parents with similar situations to be brave and speak up," Tinsley told The Daily Wire.
>
> In the meantime, Tinsley says he takes off work on the days he takes care of Sawyer, reading to him, taking him to the park, and spending as much time as possible with his young son.

My advice to men is to only have children with women who are staunch conservatives who hate feminism, CPS, public schools, divorce courts, socialism, etc. Otherwise, they are going to turn on you and hurt your children.

Should we expect to know what God’s reason is for allowing evil and suffering?

April 20, 2023 | by Wintery Knight | Link | Original Link

Here is an article by Steven Cowan about the problems of evil and suffering.

Intro:

> The problem of evil is no doubt the most serious challenge to belief in God. Even religious believers find it troubling that evil exists in the world—and so much evil! It is puzzling, to say the least, that an all-powerful, absolutely good being would allow evil to exist in his creation. And yet it does. Evil and suffering exist and they are often overwhelming in their magnitude.

Now let’s find out what a noseeum is, and how it relates to the existence of evil and suffering:

> However, perhaps God’s existence is incompatible with a certain kind of evil that exists. For example, the atheist William Rowe has argued that God’s existence is inconsistent with pointless or gratuitous evil. By “pointless evil,” Rowe means evil that does not and cannot serve a greater good. And Rowe believes that there is such pointless evil in the world. He thus concludes that God does not exist. Rowe’s argument may be simply stated as follows:
>
> 1. If God exists, there would be no pointless evil.
> 2. There is pointless evil.
> 3. Therefore, God does not exist.
>
> […]But, is there pointless evil in the world? Rowe thinks there is. To show that there is pointless evil, Rowe introduces what he calls the “noseeum inference.” Like the pesty little bugs that some readers may be familiar with, a “noseeum” is something that you cannot see—it is a “no-see-um.” And a noseeum inference is a conclusion drawn on the basis of what one does not see. The basic structure of all noseeum inferences looks like this:
>
> 1. I cannot see an x.
> 2. Therefore, there probably is no x.
>
> We all make noseeum inferences everyday of our lives. Every time I go to cross a street, I look both ways and I step out into the street only after I “no-see-um” a car coming.
>
> […]Rowe applies this kind of noseeum reasoning to God and evil. Rowe suggests that if we cannot see a reason for a particular instance of evil, then there is probably not a reason. Suppose we hear about a very young child who is tortured

> to death to amuse some psychotic person. We think about this event and we examine all the circumstances surrounding it. No matter how hard we try, we cannot see any good reason why this child had to suffer the way she did. Since we cannot see a reason why God would allow this child to suffer, there probably is not a good reason—the child's suffering was pointless. Of course, Rowe would be quick to point out that he is not speaking merely hypothetically. There are cases like this in the news every day—real-life cases in which we shake our heads in frustration, wondering why God would allow such a thing.
>
> Is Rowe correct in his conclusion? Do such examples prove that there is pointless evil in the world? I don't think so. To see why, we must recognize that noseeum inferences are not all created equal. Some noseeum inferences, as we have seen, are reasonable and appropriate. But, many are not. Suppose I look up at the night sky at the star Deneb and I do not see a planet orbiting that star. Would it be reasonable for me to conclude that there is no planet orbiting Deneb? Of course not. Suppose that using the best telescopes and other imaging equipment presently available, I still cannot see a planet around Deneb. I would still be unjustified in concluding that there was no such planet.

In that example, the planet is the noseeum. Just because you look really hard, you can't be confident that the planet is not there. And similarly with the problem of evil and suffering, looking really hard and finding no reason does not mean that there is no reason. It just means that you are not in a good position to see the reason. You don't know enough to to be sure that there is no reason, because of your limitations as a human being.

To *know* that any given instance of evil or suffering is *gratuitous/pointless* requires a high level of knowledge. How much knowledge? Well, consider this paper by the late William Alston of Syracuse University, who lists six problems with the idea that humans can *know* that any particular instance of evil and suffering is gratuitous. (You can get the PDF here)

According to the paper, human beings just do not have the capability to know for certain that God has NO morally sufficient reason for allowing any particular instance of evil and/or suffering. God's morally sufficient reason is a noseeum. To know for sure that there is no reason, we would need to have more knowledge than we do.

Also, remember that on the Christian view, the good aim that God has is NOT to make humans have happy feelings in this life, regardless of their knowledge, wisdom and character. That's what atheists think, though. They think that God, if he exists, is obligated to make them feel happy all the time. They don't think that God's goal is being actively involved in forming their knowledge, wisdom and character. God has a purpose – to work in the world so that everyone who can freely respond to him will respond to him. The Bible says that allowing pain and suffering is one of the ways that he gets that group of people who are willing to respond to respond to him – FREELY. To be able to claim that evil is gratuitous, the atheist has to show that God can achieve his goal of saving all the people he wants to save *while permitting less suffering in the world.* And that is a very

difficult thing for an atheist to show, given our human cognitive limitations.

Report: Hunter laptop letter from security officials was requested by the Biden campaign

April 21, 2023 | by Wintery Knight | Link | Original Link

I saw three interesting Biden administration scandals on Thrusday night, while reading at Just The News. The first one is about the Hunter Biden laptop. The second one is about the Biden administration's refusal to prosecute Hunter Biden. And the third was about the head of the CDC lying about the COVID vaccine's effectiveness.

First one:

> A former acting CIA director has admitted to Congress that he organized the letter that falsely portrayed Hunter Biden's laptop as Russian disinformation in an effort to influence the 2020 election in favor of Joe Biden and that he did so at the direction of current Secretary of State Antony Blinken, according to a letter released Thursday by House Judiciary Committee Chairman Jim Jordan.
>
> The extraordinary admission by career intelligence officer Michael J. Morell provides stunning evidence that the now-infamous letter from 51 security officials in October 2021 was not an organic intelligence community initiative but rather a political dirty trick originating with Blinken and the Biden campaign.
>
> […]He also testified that the Biden campaign team coordinated to release the statement on the laptop to a specific reporter at the Washington Post and admitted that he got involved to help give Biden a leg up on Trump during the debates.
>
> "There were two intents," he said. "One intent was to share our concern with the American people that the Russians were playing on this issue; and, two, it was [to] help Vice President." When asked why he wanted to help Biden, he replied, "because I wanted him to win the election."

Second one:

> A decorated supervisory IRS agent has reported to the Justice Department's top watchdog that federal prosecutors appointed by Joe Biden have engaged in "preferential treatment and politics" to block criminal tax charges against presidential son Hunter Biden, providing evidence as a whistleblower that conflicts with Attorney General Merrick Garland's recent testimony to Congress that the decision to bring charges against Biden was being left to the Trump-appointed U.S. Attorney for Delaware.
>
> […]Two powerful House Committee chairmen vowed Wednesday that they would investigate and hold the Biden administration accountable if they were involved in criminal activity. House Oversight Committee Chairman James Comer said that "obstruction of justice" could have occurred.

> […]"It's clear from our investigation that Hunter and other members of the Biden family engaged in deceptive, shady business schemes to avoid scrutiny as they made millions from foreign adversaries like China," the statement continued. "We've been wondering all along where the heck the DOJ and the IRS have been. Now it appears the Biden Administration may have been working overtime to prevent the Bidens from facing any consequences."

Third one:

> As the feds abandon a one-size-fits-all COVID-19 vaccine strategy in the face of plunging booster uptake, growing research on serious adverse events and the first government payments to victims of the novel therapeutics, the CDC's director is trying to rewrite history.
>
> In a hearing Wednesday, Rochelle Walensky told the House Appropriations subcommittee that funds her agency that COVID vaccines only stopped preventing transmission of the virus due to "an evolution of science," contradicting her own agency's uncertainty about the products during the early mass vaccination campaign and its contemporaneous data.
>
> The exchange was prompted by Rep. Andrew Clyde (R-Ga.) reminding Walensky that she told MSNBC host Rachel Maddow March 29, 2021 that CDC data suggest "vaccinated people do not carry the virus" or "get sick," based on both clinical trials and "real-world data."
>
> Walensky responded that the statement was true at the time, when the "wild-type" virus was dominant, but then revised it by saying "even if they got sick" infected people could not transmit COVID. Because of the "evolution of the virus" that's no longer true, she told Clyde.
>
> Hearing watchers quickly noted the CDC pulled the rug out from Walensky three days after her Maddow interview in a statement to The New York Times. "The evidence isn't clear" on transmission by "fully vaccinated" people, which is "possible," the agency said.

This story from Fox News was interesting, too:

> The House on Thursday passed legislation aimed at preventing biological males from competing as transgender athletes in girls' and women's sports at schools across the country, after a debate in which several Democrats accused Republicans of "bullying" transgender students by calling up the bill.
>
> The Protection of Women and Girls in Sports Act passed in a 219-203 vote Thursday morning — all the "yes" votes came from Republicans, and all the "no" votes came from Democrats.

It reminds me of the #EvangelicalsForBiden, and their view that voting for Biden would make the government behave more morally. Donald Trump picked three Supreme Court justices who repealed Roe v. Wade. That wasn't good enough for Russell Moore and David

French and the rest of the fake Christians. They wanted the scandals that I wrote about in this post. That’s the morality they wanted. And they got many low-information Christians to vote for that morality, too. I hope Christians vote for good policies in 2024.

William Lane Craig debates Alex Rosenberg: Does God Exist? Video, audio and summary

April 22, 2023 | by Wintery Knight | Link | Original Link

Here is the video of the debate:

Here is my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

The debaters

- William Lane Craig
- Alex Rosenberg

Below is the summary.

Dr. Craig's opening speech:

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.
4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

Dr. Rosenberg's opening speech

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates

- You didn’t need to come out on this cold night
- Craig’s arguments have all been refuted
- Dr. Craig just doesn’t listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points
- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don’t require causes

- I am going to pretend that Craig said that “every effect requires a cause”
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can’t see
- There are things we can’t see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato’s dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don’t require God

Sixth argument: Mormonism undermines Dr. Craig’s three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn't have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

Dr. Craig's first rebuttal

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It's too restrictive: There are truths that cannot be proved by natural science.
2. It's self-refuting: no scientific proof for naturalism exists.

That's why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg's own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism

6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg's responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it's not that we still have silicon to make life out of. It's that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the minimal set of historical facts about Jesus agreed to by the majority of ancient historians across the ideological spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

Dr. Rosenberg's first rebuttal

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said.

Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

Dr. Craig's second rebuttal

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

Dr. Rosenberg's second rebuttal

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can't God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus' burial isn't historical, like the majority of scholars across the broad spectrum of scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

Dr. Craig's concluding speech

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New testament).

Dr. Rosenberg's concluding speech

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig's arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don't look at the origin of the universe, the fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

Biden administration stalling release of transgender mass shooter's manifesto

April 23, 2023 | by Wintery Knight | Link | Original Link

I remember watching the response of the Biden administration to the murder of 3 Christian children by a transgender domestic terrorist. The White House spokeswoman, a radical leftist, said that transgender people are under attack. No sympathy for the victims. The families were not invited to the White House. And now we find out that Biden's FBI is deliberately hiding the shooter's manifesto.

New York Post reports:

> Nashville shooter Audrey Hale's manifesto is a "blueprint on total destruction" which the FBI are stalling releasing, according to local politicians, who describe its contents as "astronomically dangerous".
>
> Almost a month after Audrey Hale, who identified as transgender, killed six at the city's Covenant elementary school before being shot by police authorities have yet to release a motive or any of the writings seized from her home, despite growing pressure.
>
> Rep. Tim Burchett, (R-Tenn.) told The Post he knew the FBI was behind the delay, saying the news was "disappointing" and calling for documents to be released to grieving loved ones as well as members of Congress.
>
> The manifesto "could maybe tell us a little bit about what's going on inside of her head," he added. "I think that would answer a lot of questions."
>
> Twenty journals, five laptops, a suicide note and various other notes written by Hale were seized from the house she shared with her parents as well as two memoirs, five Covenant School yearbooks and seven cellphones, according to a search warrant.
>
> […]The two agencies handling the investigation, Metro Nashville Police Department and the FBI, each deferred The Post to the other agency when contacted. Although MNPD is leading the investigation, spokesperson Don Aaron said material related to Hale is still "under analysis" by the FBI.

What is the reason for delaying the manifesto? Initially, I thought it was good to take time to hide any details of the shooter's destructive plans, which might inspire copy cat crimes. But there's been lots of time to do that by now. What the public needs to see are the shooter's motivations. And I think that the reason that's being suppressed is because there is a 1-for-1 overlap between the shooter's hatred of Christians and the hatred of Christians among rank-and-file Democrats in all walks of life. The FBI doesn't want Christians to wake up and start realizing how much their way of life is endangered by anti-Christian bigotry and animus on the secular left.

The article notes:

> Former police officer-turned author and adjunct professor at John Jay College of Criminal Justice Joseph Giacalone said the public “has a right to know” what’s in the manifesto “even if it’s heavily redacted,” but believes authorities are worried about the effect releasing it could have.
>
> “I think what the FBI is really concerned here with, and I think law enforcement, is that if there is something in there that is truly damaging for the transgender community, I think they are hesitant to do it because they are afraid of a violent backlash against that protected class of people.”

Right. They’re not worried about Christians as a “protected class of people”. They’re worried about secular leftist Democrats as a protected class of people. They’re worried that mass shooters who share the Democrat political platform will look bad. And they’re worried that shaming one of their own would hurt them at election time. So the solution of the Biden FBI is just to hide the evidence.

New study: more sexual experience does not make you a better relationship partner

April 24, 2023 | by Wintery Knight | Link | Original Link

Today, most young people think that they are building up their relationship resumes by having casual sex. They think that they are elevating their value proposition to a marriage partner by having casual sex, and all that comes with it – the lack of emotional bond, the lack of commitment, the lack of partnership, the painful break-ups, the decline of trust, etc. But what does the research say?

I got this news from pro-child social conservative Katy Faust, who was tweeting out amazing stories on Twitter on the weekend. Giver her a follow.

Here's the report from Institute for Family Studies about the new study.

Methodology:

> Our findings are based on a new study using data from The National Couples and Pornography Study. The data sample was collected independently by Qualtrics from their existing data panel during 2020. It consists of 3,750 individuals in committed couple relationships, including 1,942 married adults, on whom we focused in this study. The demographically diverse sample was recruited from across the U.S. based on quotas for age, race, education level, and geographic region.
>
> We examined the effects of sexual experience on marriage across four married groups:

- ***Group 1: Inexperienced*** – These are individuals who were sexually inexperienced prior to marriage and who have only had sex with their spouse (19.5% of the sample).
- ***Group 2: Less Experienced*** – These were individuals with between 2 to 4 lifetime sexual partners before marriage, which is less sexual experience than the average adult in the sample (33.4% of the sample).
- ***Group 3: More Experienced*** – These are individuals who reported a total number of 5 to 9 lifetime sexual partners. This is the group that captures the average person in the sample (24.4% of the sample).
- ***Group 4: Highly Experienced*** – The final group includes those who reported 10 or more total lifetime sexual partners. This group made up 22.7% of the sample.

Now let's look at the findings, starting with relationship satisfaction:

> **Sexually inexperienced couples have the highest levels of relationship satisfaction.**
>
> While over 1 in 5 spouses in the Inexperienced group were likely to report a very high level of relationship satisfaction, only 1 in 7 of those in the More Experienced group were likely to report the same level of satisfaction. This dropped even further for those in the Highly Experienced group, with less than 1 in 10 of spouses reporting that they are very satisfied with their marriage. Thus, sexually inexperienced spouses are more than twice as likely to report that they are highly satisfied with their marriages than are spouses with high levels of sexual experience (*see Figure 1*).

And the findings about marital stability:

> **Having multiple sexual partners before marriage is strongly associated with lower marital stability.**
>
> Similar to other studies, we found that sexual experience prior to marriage is correlated with lower stability in marriage and a greater likelihood of divorce. Specifically, we found that inexperienced men and women who have only had sex with their spouse have a nearly 45% chance of reporting a very high level of relationship stability in their marriage, whereas only 25% of married individuals with 5 to 9 lifetime sex partners, and only 14% of married individuals with 10 or more lifetime sex partners report a similarly high level of relationship stability.

And the findings about sexual satisfaction and emotional connection:

> **Spouses who have only had sex with their current spouse have the highest levels of sexual satisfaction and emotional connection in their marriage.**
>
> Nearly 1 in 5 married men and women who have only had sex with their spouse report that they are “very satisfied” with multiple aspects of their sexual relationship. In comparison, only 1 in 10 married men and women who are “highly sexually experienced” (meaning they had 10 or more sexual partners before marriage) report similar levels of sexual satisfaction (*see Figure 3*). Also, nearly 80% of married individuals who were sexually inexperienced before marriage report the highest level of emotional closeness in their marriage, which is more than 20% higher than individuals who have had multiple sexual partners.

Now let me give my comments about this.

I follow a lot of content that features young people talking about sex in relationships. The dominant view among young people is that they are becoming better relationship partners when they engage in casual sex. They say that they are learning about their own needs, and about what to look in other people so that their needs will be met. They think that more casual sex is like more work experience on a resume, and that this is what marriage-minded people of the opposite sex will be impressed with. They think that their

Sexual Revolution approach to sex is going to lead to more stability, more relationship satisfaction, more emotional connection, and more sexual satisfaction.

So the first thing is that the research falsifies this. And you can see how this works by just thinking about the break-ups. Break-ups have the effect of making people look for the exits in relationships. Instead of committing first, and then taking responsibility to build and maintain the relationship, they are looking to get out of it to avoid being hurt. And they are always trying to make sure that their needs are met, and avoiding committing too much to the other person. They neither know nor care what the other person is trying to achieve, and they aren't engaged in helping them to do that.

Also, consider that most young people are not forming their beliefs with knowledge that is likely to make them a better person. Concepts that are familiar to experienced Christians such as forgiveness and self-sacrificial love are nowhere in their worldviews. Biblical Christianity provides a rational basis for loving a spouse well, even when you don't feel like it. Which is very useful in a marriage. They have a pretty self-serving view Christianity, something like "don't judge" and "listen for the voice of God telling you his plan to make you happy".

Instead their views are being formed by radical feminism, popular culture, celebrity worship, materialism, an almost fanatical focus on judging people by appearances, being led by feelings and peer-approval, etc. They expect to have stability and quality in a relationship where skills like forgiveness, self-denial, delayed gratification, planning, achieving goals together, etc. are critical. Imagine wanting to retire early. Is someone on the path to early retirement if they are guided entirely by their feelings? If they do only what feels good "in the moment"? If none of the peers who influence them have achieved this goal? Today, relationships are just a case of the blind leading the blind. It doesn't work.

LGBT activists are behaving badly, but the secular left wants to punish Christians

April 25, 2023 | by Wintery Knight | Link | Original Link

I'm in a bit of a grouchy mood these days, looking at how the secular left is becoming increasingly divorced from morality. When Christians speak up against what they're doing, they turn on us and say we are the real villains. "Don't judge" they cry, "it will make the weirdoes feel bad!" It seems to me that we are making a lot of withdrawals on the bank account of civilization, but no deposits.

Here is the first story of secular left depravity, reported by The Post Millennial:

> A former Oregon elementary school teaching assistant and "drag mom" to a controversial child drag performer has been convicted of 11 felonies over the distribution of child sex abuse content and sentenced to less than a year in a local jail.
>
> Kelsey Meta Boren, 33, was convicted in Lane County, Ore. on March 23 of 11 felony counts of encouraging child sexual abuse in the first degree. A single charge of using a child in a display of sexually explicit conduct was dismissed as part of the plea deal. Boren was sentenced to 330 days in county jail—30 days for each felony count—in a sweetheart deal agreed upon between the district attorney's office and her counsel.
>
> Before being arrested, Boren worked as a teaching assistant for special education students at Veneta Elementary in Veneta, Ore.

And another one reported by The Post Millennial:

> An Idaho high school teacher has been arrested on suspicion of raping a 16-year-old boy. Eric McDermott, 59, of Boise was booked into the Ada County Jail on Monday on charges of rape and sexual battery committed by lewd or lascivious acts on a minor child.
>
> McDermott, who taught World Studies 8 and AP Human Geography, and coached basketball at Fairmont Junior High School, was also an outspoken LGBT activist.
>
> […]Following McDermott's arrest, the Idaho Tribune dug into his past and revealed that he had been a prominent LGBT activist. He volunteered with the Pride Foundation's Idaho Leadership Action Team, and appeared in numerous photographs the organization published to social media.
>
> On McDermott's social media, he openly discussed "youth outreach," and the Tribune noted that he traveled all over the state attending drag shows and pride events in search of "volunteers" as young as sixteen. He also promoted sexually explicit literature aimed at teens via an online forum Goodreads, revealing that he made copies of a book series available to his junior high school students to

> borrow, the same series he conceded is "probably a bit more mature for this group's target audience overall."

So, what's the argument against all this from the secular left? Silence. Only those rascally Christians are concerned about these things. And the secular left is actually more interested in stopping Christians from judging, than they are with stopping child abuse.

Here's a story about Oregon reported in the Daily Signal:

> The state of Oregon refused to allow a Christian mother of five to adopt two children after she said her religion would not let her take a young minor to receive cross-hormone injections—a policy that could prevent up to 78% of Americans from adopting children. Requiring adoptive parents to facilitate transgender procedures acts as a form of religious discrimination against many world religions, her attorneys say.
>
> Jessica Bates has sued five Oregon state employees for adoption guidelines that effectively say, "Conservative Christians need not apply," according to her legal brief.
>
> Oregon state law requires all would-be adoptive parents to "respect, accept and support" the adoptee's professed "sexual orientation, gender identity, [and] gender expression." Bates said mandatory classes in the state's adoption application process said this included using a child's preferred pronouns, presenting same-sex relationships in a positive light, and taking children who identify as LGBT to transgender procedures.
>
> […]Bates expressed concern that Oregon state guidelines could prevent her from taking all her children to a church that upholds traditional beliefs on gender or teaching them Bible lessons that may contain verses that contradict "state orthodoxy."

Banning Christians from adopting children is bad enough, but it's not enough for the secular left. They want to escalate to violence in order to prevent any "judging".

Here's a story from The Post Millennial:

> Utah State Senator Mike Kennedy's Alpine city house was vandalized this week with red spray paint after sponsoring of SB16, a bill later signed into law that banned medical sex changes for minors, reports local news. The vandals spray painted the GOP state legislator's home with "these trannies bash back" and "fash."
>
> On Friday, Kennedy posted images of the vandalism on Facebook and said, "To those who seek to use violence, vandalism, and intimidation to deter me from standing up for what is right, let me be clear: you will not succeed. I will not be deterred by your cowardly actions. The recent vandalism to my family's home was not just an attack on me, but on the very principles our state stands for."
>
> Kennedy, who is a Doctor of Medicine (MD) continued, "We will not let fear and

> violence control our destiny. As Utahns, we will always stand up and push back against radicals who seek to push their agenda in our state. I am more determined than ever to work with the good people of Utah to make our state a better place for all, especially our children, and I won't back down."
>
> […]The bill was opposed by Equality Utah, an LGBTQ activist group…

Sometimes, people on the secular left worry that they might be doing bad things, which is why they are so interested in forcing people to celebrate them. But conservative Christians don't need any celebration. When we look at what the secular left stands for, we know we're right.

I'm seeing a lot of curiosity about theism in general and Christianity in particular from non-religious independents lately. I think they are realizing that evil is real, and evil is being promoted by the secular left. And they want to run as far away from them as possible, so they don't get lumped in with them on the day of judgment. I hope you are all ready to answer questions about Christian topics, because we are about to have a lot of curious customers. And they aren't going to be asking the trendy lefty "Christians" for answers. They're going to be asking the real Christians – the ones who fought the evil. The ones who protected the children from evil.

Is the definition of atheism “a lack of belief in God”?

April 26, 2023 | by Wintery Knight | Link | Original Link

First, let’s see check with the Stanford University Encyclopedia of Philosophy:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God.
> What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God. Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.” If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars. There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).” Logically where you place the negation makes a world of difference.
>
> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There’s a history behind this. Certain atheists in the mid-twentieth century were promoting the so-called “presumption of atheism.” At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist. Atheism is a sort of default position, and the theist bears a special burden of proof with regard to his belief that God

exists.

So understood, such an alleged presumption is clearly mistaken. **For the assertion that "There is no God" is just as much a claim to knowledge as is the assertion that "There is a God." Therefore, the former assertion requires justification just as the latter does. It is the agnostic who makes no knowledge claim at all with respect to God's existence. He confesses that he doesn't know whether there is a God or whether there is no God.**

But when you look more closely at how protagonists of the presumption of atheism used the term "atheist," you discover that they were defining the word in a non-standard way, synonymous with "non-theist." So understood the term would encompass agnostics and traditional atheists, along with those who think the question meaningless (verificationists). As Antony Flew confesses,

the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)

Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.

One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.

So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of atheism without shouldering its responsibilities.

> This is disingenuous and still leaves us asking, “So is there a God or not?”

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know.* We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these “subjective atheists”?

Dealing with subjective atheists

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says “I lack a belief in the gravitational force!”. When you engage in serious discussions with people about God’s existence, you only care about what people know and what they can show to be true. We don’t care about a person’s psychology.

New study: couples who cohabitate before marriage have higher risk of marital dissolution

April 27, 2023 | by Wintery Knight | Link | Original Link

When I was in college studying computer science, there was a new idea going around called “design patterns”. Basically, this was a cookbook of component arrangements that were “best practices” for solving certain problems. Depending on your problem, you might try different patterns, like Observer, Visitor, Strategy, etc. And it turns out that there are design patterns for social issues, too.

Cohabition Instability

Here’s a new report from the Institute for Family Studies:

> Fifty to 65% of Americans believe that living together before marriage will improve their odds of relationship success. Younger Americans are especially likely to believe in the beneficial effects of cohabitation, and to view living together as providing a valuable test of a relationship ahead of marriage. Yet living together before marriage has long been associated with a higher risk for divorce, contradicting the common belief that cohabitation will improve the odds of a marriage lasting.
>
> […]Using a new national sample of Americans who married for the first time in the years 2010 to 2019, we examined the stability of these marriages as of 2022 based on whether or not, and when, people had lived together prior to marriage. Consistent with prior research, couples who cohabited before marriage were more likely to see their marriages end than those who did not cohabit before marriage.

Key findings:

> - 34% of marriages ended among those who cohabited before being engaged, compared to 23% of marriages for those who lived together only

> after being either married or engaged to be married.

And this from the key takeaways was interesting:

> - Reasons for moving in together also matter: People who reported that their top reason for moving in together was either to test the relationship or because it made sense financially were more likely to see their marriages end than those who did so because they wanted to spend more time with their partner.
> - Having a greater number of prior cohabiting partners is associated with a higher likelihood of marriages ending.

I think the key point in these studies is that couples who decide to commit are moving in very different reasons than couples who just slide into cohabitation because it's convenient.

It's interesting because it shows that being cautious about commitment is more likely to cause instability. The attitude seems to be "I'll keep doing this as long as it makes me happy".

With commitment, the attitude is going to be more like "let's decide to unite, and then it will be on us to make it work". The old marriage vows were all about that commitment. I really have to wonder whether people mean it when they say those words today, they are so counter to our hedonistic culture.

I think what people should be looking for is a mate who thinks that the relationship works better if both people work at it. If you have one person who thinks that it is the other person's job to make them happy, run from that relationship. Like, if you are always doing little things to help the other person do well in their tasks and purposes, and they never do anything to help you, then that's a bad sign. You don't want to commit to someone who thinks that relationships should be effortless, that they don't have to do anything to put gas in your fuel tank in order to make you perform.

Ideally, you want someone who thinks that it's fun to put fuel in your tank, and thinks that it's their job to do that for you. Just because they like to see your engine run.

New study: more than half of all female-to-male transgender teens attempt suicide

April 28, 2023 | by Wintery Knight | Link | Original Link

A recent study by a researcher out of Brown University found that the exploding rates of transgender young people is being driven in part by social factors. In particular, coming out as transgender gives young people instant popularity, and everyone around them feels obligated to affirm them and agree with them. Or else. What's missing? What's missing is any sort of warning about the dangers of transgenderism.

The Daily Wire reports on a new study from the American Academy of Pediatrics.

Excerpt:

> A new study from the American Academy of Pediatrics found an alarming number of teens who identify as transgender or nonbinary have attempted suicide at least once, showcasing the dangers of the transgender movement. More than half of all female-to-male transgender teens, for example, have attempted to end their lives.
>
> Researchers behind the study used data collected from more than 600 teens over a 36-month period, June 2012 to May 2015, from the "Profiles of Student Life: Attitudes and Behaviors" survey.
>
> The study found that female-to-male trans teens had the highest suicide attempt rate of all other identity groups surveyed: 50.8%. Unsurprisingly, other gender-confused teens had outrageously high rates of suicide attempts, too. Nonbinary adolescents, meaning teens who do not identify exclusively as female or male, were found to have a 41.8% suicide attempt rate; male-to-female trans teens had a 29.9% rate; and "questioning" teens had a rate of 27.9%.
>
> By comparison, teens who identified as their biological sex and corresponding gender suffered relatively low (though still too high) rates: females were found to have a 17.6% rate while males had the lowest of any other group at 9.8%.

When I tell LGBT people about the health risks of their choices, and cite peer-reviewed studies, the most frequent response is that they get angry and even violent and demand approval. I have even heard threats that if I don't approve of what they feel like doing, then they will kill themselves, and their blood will be on my hands.

The thing is, there is a study about that. Even though LGBT people think that approval will make them feel better about what they are doing, it's not true. In societies where social approval and government support of LGBT behaviors are HIGHER than in America, the suicide rates are still extremely high.

Life Site News explains:

> A study out of Sweden published last month has found that suicide risk among

> active homosexuals is high even in a region that is highly tolerant of same-sex behaviour.
>
> Published in the *European Journal of Epidemiology*, the authors found that men in same-sex “marriages” were at three times greater risk of suicide than men who are married to women.
>
> The authors note in their abstract:
>
> Even in a country with a comparatively tolerant climate regarding homosexuality such as Sweden, same-sex married individuals evidence a higher risk for suicide than other married individuals.

Just in passing, what a strange way to respond to disagreement. I have people disagree with me on moral issues and conservative policies, etc. all the time. It never occurs to me to threaten to commit suicide if they don’t approve. I also don’t try to get them fired, insult them, shame them, vandalize their property, assault them, murder them, or drag them in front of a government-run political correctness panel. I don’t even mind that they use their free speech to disagree with me. After all, they are people made in the image of God, with an equal right to be in a relationship with God. I can’t do anything that is going to cause them to think that God doesn’t love them.

It’s useful to remember that the Christian view on life is not to neglect God’s design and tell people to do whatever they want. The Christian view is to tell people God’s design, set boundaries, and encourage people to make good decisions. Christians don’t believe in love as mere acceptance. Christians believe in “love warns”. And that applies to truth claims as well as moral claims. I tell young people not to run up student loan debt studying useless non-STEM degrees. They might feel bad, but it’s the truth: they won’t be able to find a job that allows them to pay the money back. Warning people about sexual issues is the same thing, in my mind.

Wayne Grudem explains what the Bible says about spending, saving and charity

April 29, 2023 | by Wintery Knight | Link | Original Link

A practical lecture on money – spending, saving, charitable giving – from famous pastor Wayne Grudem.

I like the way that Wayne Grudem navigates the Bible finding the passages that tell you who God is, so that you can make better decisions by analyzing alternatives and choosing the one that gives your Boss a maximum return on investment. He's very practical.

The MP3 file is here.

The PDF outline is here.

Spending:

- Christianity does not teach asceticism (= don't enjoy anything in this world), Paul condemns it in 1 Timothy 4:1-5
- When you buy nice things, even if it is a little more expensive, it's an opportunity to be thankful for nice things that God has provided
- Even being rich is OK, but don't let it make you haughty and arrogant, and don't set your hopes on your money (see 1 Tim 6:17)
- It is important for you to earn money, and you are supposed to use it to support yourself and be independent
- It is possible to overspend and live recklessly (Luke 15:13) and it's also possible to overspend and live too luxuriously
- *Increasing your income through career progression is wise*, because it allows you to give away more and save more
- God gives us freedom to decide how much we spend, how much we give away, and how much we save
- every choice a Christian makes with money will give him or her more or less reward in his or her afterlife
- Do not spend more than you have – you should make every effort to get out of debt as quickly as possible

Saving:

- Saving money is wise so you can help yourself and others, and have money in your old age when you will not be working
- If you do not save your own money, you end up being dependent on others (e.g. – family or taxpayers)
- Not saving money for the future is a way of "putting God to the test" (Matt 4:7)
- You are to "be dependent on no one", to the extent that you can (1 Thes 4:12)
- We don't know the future, that's why we should prepare for an emergency, and buy

insurance to guard (James 4:13-17)
- It's right for us to learn how to save to be able to buy bigger assets, like a car or a college education
- Saving and investing in stocks and bonds lets people in business start and grow companies, creating jobs and new products
- *Don't over-save, trusting too much in money more than you trust in God* (Ps 62.10; Matt 6:19,24; Luke 12:15-21)

Giving:

- it is required for the people of God to give something out of what they earn, but no percentage is specified (Deut 26:12-13)
- you do not give money to become right with God, you can't earn your salvation
- *a Christian gives to show God that you trust him to take care of you, and to experience trusting him through your giving*
- the quality of your resurrection life with God is affected by giving you do for the Kingdom (Phil 4, Matt 6:19-21; 1 Tim 6:18-19)
- when you get involved in the lives of others and give to them, you have the joy of experiencing caring for others (Acts 20:35)
- it's possible to give too little, but it's also possible to give too much – be careful about pride creeping in as well

The first part of this lecture made me think of my treat for the week, which is to get a double chicken burrito bowl after my weight lifting. It is very easy to say grace when you are hovering over a double chicken burrito bowl. It is good to have nice things especially when it makes you thankful for what you have.

I was so happy listening to this talk because he was condemning bad stewardship, which I see in a lot of young people these days. I was happy until he got to the part about trusting in your savings for your security, and then I thought – that's what I do wrong! I save a lot but it's not just for emergencies and to share with others, like he was saying – I want a sense of security. This was more of a temptation in my 20s than it is now in my 30s, though.

Charity should hurt

I can remember being in my first full-time job as a newly hired junior programmer when the 2001 recession struck. I would cry while signing checks to support William Lane Craig's Reasonable Faith ministry, because I was so scared. I had no family or friends where I lived to help me if anything went wrong, and that's been the story of my working life. If anything goes wrong, there is no backup. But it's that experience of crying when I gave that allows me to say today "that's when I became the man I am, that's what a man does when he is a follower of Jesus". If you are not doing the actions of charity, then you will not having the experience of trusting God and letting him lead you. There is more to the Christian life than just saying the right things – you have to do the right things.

Don’t follow your heart

If you’re scared about giving when you are young, then do what I did in my 20s: work 70-hour weeks, get promoted often, and save everything you earn. I volunteered every Saturday for 9 months in order to get my first white-collar part-time job when I was still in high-school. The faster you increase your savings, the easier it’s going to be to take a *genuine interest* in caring for the people around you. Read Phil 1 (fellowship), Phil 2 (concern for others), and Phil 4 (charity). Turn off your emotions and desires when it comes to choosing what to study and what work to do, and put Philippians into practice. Your freedom to give is very much tied to the quality of your decisions of what to study, where to work, how much you spend on entertainment, and so on. That’s why you need to turn off your feelings and desires and do what works, even it it’s not fun, and even if it involves responsibilities, expectations and obligations.

How to falsify a religion using scientific or historical evidence

April 30, 2023 | by Wintery Knight | Link | Original Link

Will the universe expand forever, or will it collapse and bounce?
(Image source)

What I often see among atheists is this tendency to set up expectations of how God would have acted and then complain that he doesn't met those expectations. I don't think that this is a good way to argue against a religion, because it's subjective. God isn't obligated to comport with atheist expectations. A much better way of evaluating religions is to test the claims each makes against evidence.

So in this post, I wanted to show how a reasonable person can evaluate and reject different worldviews using evidence.

Falsifying a religion using science

Consider this argument:

1. Hindu cosmology teaches that the universe cycles between creation and destruction, through infinite time.
2. The closest cosmological model conforming to Hindu Scriptures is the eternally "oscillating" model of the universe.
3. The "oscillating" model requires that the universe exist eternally into the past.
4. But the evidence today shows the the universe, and time itself, had a beginning at the big bang.
5. The "oscillating" model requires that the expansion of the universe reverse into a

collapse, (= crunch).
6. In 1998, the discovery of the year was that the universe would expand forever. There will be no crunch.
7. Therefore, the oscillating model is disconfirmed by observations.
8. The oscillating model also faces theoretical problems with the "bounce" mechanism.

Notice how the oscillating model is falsified by mathematics and experimental evidence. Remarkable, when you remember how the public schools would play Carl Sagan videos which promoted this no-Creator model of the universe.

The absolute origin of the universe out of nothing is also incompatible with atheism, Buddhism, Mormonism, etc. because they also require an eternally existing universe.

Atheism in particular is incompatible with the universe "coming into being", because that would be a supernatural cause – a cause that created the natural world. According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: "Religious humanists regard the universe as self-existing and not created."). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing.*

Falsifying a religion using history

Consider this argument:

1. To be a Muslim, you must believe that the Koran is without error.
2. The Koran claims that Jesus did not die on a cross. (Qur'an, 4: 157-158)
3. The crucifixion of Jesus is undisputed among non-Muslim historians, including atheist historians.
4. Therefore, it is not rational for me to become a Muslim.

I'm going to support the premise that Jesus was crucified by citing historians from all backgrounds.

Consider some quotes from the (mostly) non-Christian scholars below:

> "Jesus' death as a consequence of crucifixion is indisputable." Gert Lüdemann
>
> "That he was crucified is as sure as anything historical can ever be." J.D. Crossan
>
> "The passion of Jesus is part of history." Geza Vermes
>
> Jesus' death by crucifixion is "historically certain". Pinchas Lapide
>
> "The single most solid fact about Jesus' life is his death: he was executed by the Roman prefect Pilate, on or around Passover, in the manner Rome reserved particularly for political insurrectionists, namely, crucifixion." Paula Fredriksen
>
> "The support for the mode of his death, its agents, and perhaps its co-agents, is overwhelming: Jesus faced a trial before his death, was condemned, and was executed by crucifixion." L.T. Johnson

> “One of the most certain facts of history is that Jesus was crucified on orders of the Roman prefect of Judea, Ponitus Pilate.” Bart Ehrman

That’s 7 famous historians: 3 atheists, 3 Jews and 1 moderate Catholic. The atheists, Ludemann, Crossan and Ehrman, have all debated against the resurrection of Jesus with William Lane Craig. Johnson is the moderate Catholic, the rest are Jewish historians. The Koran was written in the 7th century. That is why no professional historian accepts the Koran as more authoritative than the many earlier Christian and non-Christian sources for the crucifixion story. Many of the sources for the crucifixion are dated to the 1st century. It’s not faith. It’s history.

I have seen debates with Muslim scholars, and I have never once heard them cite a non-Muslim historian to the effect that Jesus was not crucified. To my knowledge, there is no (non-Muslim) historian who denies the crucifixion of Jesus in his published work.

Can Christianity be falsified by science or history?

Yes. If you prove that the universe is eternal than would falsify the Bible’s claim that God created the universe out of nothing. That would be a scientific disproof. If you could find the body of Jesus still inside a tomb, that would falsify the Bible’s claim about a resurrection. That would be a historical disproof. The nice thing about Christianity is that we make lots of testable claims. When someone claims to be a Christian, it’s a good thing if they can show how they arrived at that conclusion. Being able to square God’s existence with science, and Jesus’ resurrection with history are two crucial steps to showing the reasonableness of Christianity.

Michael Knowles debates young secular left feminists for 5 hours on @Whatever podcast

May 1, 2023 | by Wintery Knight | Link | Original Link

I like to watch shows where people debate how modern radical feminism has affected dating, marriage and parenting. One show I watch clips of is the @Whatever podcast. The co-host is a very conservative Christian. Recently, one of the liberal women on the panel walked off the set when the co-host said he would not have bedroom fun with a trans woman.

I think Ben Shapiro and Matt Walsh both played the audio from that exchange on their popular podcasts, which you can see here:

> Full video of the RAGE QUIT and her STORMING off after he says he would NOT sleep with a transwoman. pic.twitter.com/5tFDqPA7pJ
>
> — whatever (@whatever) February 28, 2023

Daily Caller wrote about it, too. I know that these shows have vulgar language, but I enjoy watching them because it's fun to see feminists running into the consequences of their own choices.

Anyway, Daily Wire host Michael Knowles showed up to debate the lady who walked off the @Whatever set. They call her "RageQuit Keeko". For those of you who do not play games, a rage quit is when someone is playing a multi-player game, and loses, and then quits the game in a rage. I watched the whole 5-hour debate with Knowles and Keeko on Saturday, while playing a new game that Rose bought me. (Saturday is for playing games, walking, doing chores and lifting weights!) The speakers covered a lot of interesting topics. I never got bored.

I want to embed a few clips from the 5-hour show, then talk about one in particular. (Warning: some very vulgar language at times – not for kids!)

Transgenderism:

Feminism:

Promiscuity:

Abortion:

And this is the one I care about the most – about the existence of God:

So, the first thing to point out is that Michael Knowles is 1) Catholic and 2) has a degree in English. So you're not going to get the sophisticated arguments of William Lane Craig, or the discussion of scientific evidence of Stephen C. Meyer, etc. out of him. Most Catholic "apologists" just repeat slogans from Aquinas, and that's what Michael does. (There are some exceptions, like Jay Richards and Michael Behe) But the funny thing is, even these simple, outdated Catholic slogans – using one and two syllable words – are literally

incomprehensible to “RageQuit Keeko”. She dismisses them as world-salad at best, or insanity at worst. It’s like she’s never heard a single argument for the truth of Christianity (e.g. – the kalam argument, or cosmic fine-tuning) that didn’t already assume the Bible was true, or use religious-sounding language.

So why blog on this? Well, elsewhere in the debate, Keeko explains that she was raised Catholic, and then threw it all away. And what’s interesting is that her reasons appear to be 1) a revulsion for Christians judging other people for their sin, and 2) a variety of intellectual objections to Christian truth claims. Whatever happened in her Catholic upbringing, it sure didn’t work to make her resistant to the culture. Did anyone have a defense of pro-life, or a defense of man-woman marriage, or a defense of pre-marital abstinence? Unlikely. Did anyone have answers to her intellectual objections to the Bible, God or Jesus? Very unlikely.

The response to the secular culture from most popular Bible-talkers is just ineffectual hand-wringing (Al Mohler, Alistair Begg) or sophisticated-sounding capitulation (John Piper, Tim Keller). Nobody seems to know how to make a logical argument for core Christian truth claims, and then back it up with mainstream science or history. No one has even read J. Warner Wallace or Sean McDowell, much less Stephen C. Meyer or N. T. Wright. Most people in church just talk about Disney, Netflix, vacations, sports, etc. The best Christians authors to read, they say, are the dumbed-down ones who make you feel good. After all, isn’t Christianity about feelings and community? If Keeko encountered this approach to discussing the truth of Christianity, then no wonder she left.

So in the 5-hour episode, I noticed a few arguments against Christianity raised by the young secular left feminists:

- any talk about religion is literally nonsense talk
- there are many different religions, so how could any one be true?
- the Bible has been changed many times
- all objections to abortion or gay rights are religious in nature
- religion is not necessary for me to feel good / be liked
- religious people divorce at the same rates as non-religious people

(Some of those might be from other clips, I watched so many while playing my new game). In general, I think it would be a good idea for people raised in the church to understand that Christianity is not intended to make them feel good or be liked. They seem to think that if they can feel good and be liked without it, then they don’t need it.

The point is that these objections are not being addressed head-on by the church. When you attend church, there is no question and answer. The pastor speaks, and everyone says Amen. The choir sings. There is no homework. No one discusses any of these topics at church or at home. And if you go to Bible study, it’s feminist leftist Beth Moore asking “how does this verse make you feel?”. All of the simple objections that young people eventually encounter in the culture can easily be defended using simple books from people like J. Warner Wallace, Sean McDowell, Paul Copan, Frank Turek, Scott Klusendorf,

Katy Faust, Michael Licona, etc. I can recommend so many 200 page introductory-level books on these topics, but the pastors never seem to want to equip the flocks.

And what about the parents? Most parents (who are the main defenders of Christianity for their children) again find a way to make the status quo sound pious and virtuous. Parents always have a reason why the best way to protect their kids from the culture is to pray about it, or to do fun activities, or send them to youth group. The answer can never be "let's sit down and read this Sean McDowell book chapter by chapter, and talk about it." They always want to spiritualize doing whatever it is that they want to do "God told me to pray about your doubts." I just find it ridiculous that parents and pastors think that children can develop a Christian worldview without settling questions about God's existence and Jesus' resurrection and objections to Christianity using the ordinary tools of an educated, practical, private-sector-working adult: reason and evidence.

It's very annoying to me. Parents and pastors act as though church attendance is going through the roof. They think that Christians are improving their worldviews to be more Biblical. How is that happening? It must be happening by magic, because it sure isn't happening by effort and planning. When are we going to accept that the Billy Graham fundamentalist piety way of raising Christian kids isn't working, and we're going to have to settle down and read some science, history and philosophy in order to counter these objections that come out of the mouths of these young adults?

This is why Christianity has lost its place in the public square.

Do religious people have a lower divorce rate than non-religious people?

May 2, 2023 | by Wintery Knight | Link | Original Link

Yesterday, I blogged about a discussion between the Daily Wire's Michael Knowles and some young secular left women, on the @Whatever podcast. I talked about the view that one woman had, that arguments for God's existence and Christianity in particular were nonsense. But another woman said that Christianity doesn't make your risk of divorce any lower, so there's no benefit to being a Christian, and seeking out a Christian spouse. Is she right?

Let's take a look at some data from a study, so we can really see what the evidence is.

Here's something from the Institute for Family Studies:

> When trying to understand how much people value something, economists pay particular attention to the value of what people give up in order to estimate how much they value what they get in exchange. Money is a common metric for value, but time is another metric that is sometimes easier to use. When it comes to Christianity, people are often reluctant to discuss how much money they contribute to their churches but are more forthcoming when asked how much time they spend on religious activities. Economists who study religion often use the frequency of church attendance as a proxy for the strength of an individual's religious beliefs.
>
> Using this line of reasoning, we can divide the American population into two groups: 1) the "devout," or those who attend church two to three times a month or more; and 2) the "non-devout," or those who attend church once a month or less. The following analysis used data for people ages 25 to 54 from the General Social Survey (GSS).

So, the first point is that secular left feminists are unlikely to get married *at all*, and that's because marriage is moral rational in the Christian worldview than it is in the secular leftist worldview:

> Here, it is clear that marriage rates have been falling for the population as a whole. But those who attend church on a regular basis are significantly more likely to marry than their less devout peers. Breaking this analysis down further by race,[2] we see higher rates of marriage among regular church attenders in both white and black populations.
>
> There appear to be social and economic forces occurring over time that are causing decreased marriage rates for all Americans. But for both black and white Americans, marriage is falling significantly faster for people who do not attend church regularly. This is creating a growing gap in marriage rates between the devout and non-devout over time. And the widening gap in marriage may

> indicate a growing separation of shared culture between the devout and non-devout.

People think that they can just chop the God out of Christianity, and the same morals will just continue as before, with no rational foundation for it. But marriage involves a loss of personal freedom to pursue pleasure, at least in the short-term. Atheism is about hedonism. That's why atheists support abortion – because when someone else gets in the way of their pleasure, they think murder is a fine way to keep the good times rolling for themselves. It's what Darwin called "survival of the fittest", and this is what atheists believe. When atheists are faced with a conflict between their own happiness, and the loss of personal freedom that marriage requires, they choose not to get married. That's why atheist states have such low marriage rates.

Marriage itself is self-sacrificial – you're making a safe place for children to have stability, at your own expense. So that's the first difference between church-attending Christians and secular left feminists – marriage rates. It's no use complaining when you are a hedonist that you can't find a good spouse to marry. You're a hedonist, and you're looking for a hedonist to marry. That's not the kind of person who enters a commitment that requires self-control and self-denial. You might as well expect two psychopaths to run a successful business together than to expect two morality-deniers to get married and stay together.

Far-left Pew Research that 64% of members of a couple of Christian denominations are married. But for atheists, it's a measly 36%. Atheists don't get married.

OK, and what did they find about the divorce rates of these different groups of people – devout and non-devout?

This:

Devout vs Non-Devout Divorce Marriage

The article says:

> The figure above shows that divorce rates are significantly lower for white Americans who attend church regularly and this difference remains significant

> across all decades.

A previous study out of Harvard University reached the same conclusion:

> Considerable research over the last two decades has been devoted to the relationship between religious participation and health and well-being. Our research on this topic at the Harvard T.H. Chan School of Public Health links religious service attendance to a number of better health outcomes, including longer life, lower incidence of depression, and less suicide. Our work also indicates that religious service attendance is associated with greater marital stability—or more specifically, with a lower likelihood of divorce.[1]
>
> We are not the first to study the relationship between religious service attendance and the likelihood of divorce. In fact, a number of studies have found similar results: namely, that those who attend religious services are about 30 to 50 percent less likely to divorce than those who do not.[2]

It's really important for young people to make sure that the actions they take *today* are taking them towards the goal they want to reach tomorrow. Young people, especially women, seem to have a disconnect between their words and actions. They say they want marriage. They say they want to avoid divorce. But their actions in the moment take them closer and closer to not marrying at all, or divorcing if they do marry.

Young people, especially women, love to make decisions on the basis of feelings. They need a "spark" in order to know that a person is "their person". The person that "the universe" has "manifested" for them to be effortlessly happy. They expect a tall, tattoo'd atheist with a criminal record for domestic violence to marry them, and make them live happily ever after. Why? Because there is a spark. There are tingles. There is a feeling in the moment. And surely, choosing what you want in the moment will get you long-term results, right? That's why the marriage rate is declining. Does anyone have the courage to tell these young fools the truth?

Guest post: Christians should oppose Black Lives Matter

May 3, 2023 | by Wintery Knight | Link | Original Link

The following is a guest post by a friend of mine who is also a software engineer.

The Problems with Black Lives Matter

All over Facebook I've seen naïve Christians posting Black Lives Matter (BLM) material, hashtags, and even donation links. According to their official statements BLM aims to:

1. "Disrupt the Western-prescribed nuclear family structure"
2. Foster a "queer-affirming network" and "freeing ourselves from the tight grip of heteronormative thinking," instead of helping people escape LGBT lifestyles and live as God intended.
3. "A national defunding of police," BLM is a member of M4BL which also calls for abolishing prisons.
4. BLM parent group M4BL is pro-abortion: "we demand reproductive justice that gives us autonomy over our bodies and our identities."
5. BLM parent group M4BL is anti-capitalist. The alternative to capitalism is removing the freedom to buy and sell and putting the government in charge of resources. When government power is absolute, all checks and balances against evil disappear and atrocities become inevitable. I know of 100 million people who didn't have a good time in anti-capitalist countries, especially minorities.
6. BLM finds racism in everything with no concept of forgiveness. While masking the much larger and real causes of black inequality in the US. More on that below.

These goals don't seem very Christian.

Some Christians say they only support the slogan "black lives matter" but not the organization. They're probably friends with people who call themselves "National Socialists" and enjoy re-explaining to everyone they meet how it's not actually the

German kind. To each their own. Yet better slogans could be used to support black people.

Avoid the slackidasical “all lives matter” retort. That distracts from the real issues:

Black Inequality

Black inequality in the US is real. But BLM promotes a false narrative, blaming it entirely on modern systemic racism. If that’s true, why are blacks 3 times more likely to receive government assistance than whites? Why are police are about twice as likely to use lethal force against *whites* under arrest than blacks (although more likely to use non-lethal force against blacks)?

Before getting to the real reasons let’s first dig into that last source. It comes from the left-leaning Center for Policing Equity. The wording in their report focuses on specific localities where the police are harsher on blacks. But the overall data tells a different story. In tables 6 and 7 on page 20, police are 1.73 times more likely to use lethal force against whites under arrest than blacks, and 2.41 times more likely to use lethal force against whites under arrest for violent offences. Black Lives Matter and the left-leaning media would never tell you this.

Don’t police just arrest blacks way more than whites? Yes, absolutely. You can even find stats showing unarmed blacks are 5 times more likely to be killed by police than unarmed whites, a product of being arrested much more frequently. But unfortunately (trigger warning) it’s because in the US, blacks commit significantly more crime:

I looked up the FBI data this meme links to, converted it to rates per million and got the same result. Non-lethal crimes have a similar proportion by race.

What are the Real Causes of Black Inequality?

Perhaps the court systems are racist and blacks are convicted of murder more often? One could speculate so, but murders involve more investigation than most crimes, and you'd have to argue the system is so biased it only makes it appear as if blacks are 12.8 times more likely to kill whites than whites kill blacks. Quite a stretch.

Use careful grace in sharing these stats, as they're easily abused by the small number of people wishing to paint blacks as an unredeemable, inferior race. Instead consider the better explanations for black inequality:

1. 2.7 times more black children (65%) grow up in single parent homes than white children (24%). 17% of blacks were born out of wedlock in 1940 but that number is >70% today. Other races also increased but not nearly as much. We know broken families are strongly correlated with poverty, poor education, crime, and many other ills.
2. As noted, blacks are three times more likely to receive government assistance than whites, a number that's changed very little in 40 years. If welfare programs lifted people out of poverty, by now shouldn't we see more than a slight decrease in blacks on welfare? Rather I suspect welfare increases rates of fatherlessness: women don't need a man when the government pays the bills.
3. Universities, employers, the government, and the media use "soft racism," giving special treatment to blacks, sometimes causing an unhealthy and unnecessary inferiority complex.
4. Due to this persecution narrative, and fear of being called racist, poor behavior among blacks isn't called out, worsening the broken family cycle. Even being used as an excuse for the poor behavior of the recent rioters. Black CNN journalist Don Lemon received a "firestorm of criticism" for pointing to out-of-wedlock births as a problem among blacks.

I'm curious. Will you argue that fatherlessness leads to negative outcomes among whites, but a 2.7x greater rate among blacks doesn't significantly increase their negative outcomes? Really?

Perhaps it's even possible that police target blacks more frequently because these issues actually do lead them to commit more crimes, causing some police to subconsciously be more suspect of blacks? I don't know if that's true, but if so who is at fault?

Is Racism Still a Major Issue?

Before continuing please read this piece by conservative commenter David French (white), who adopted his black daughter from Ethiopia. He describes how through many incidents it made him realize racism is still alive and well in America.

Meanwhile, the black economist Thomas Sowell offers a contrary view:

Who's right? David French says he used to think there were almost no racists. I'm still in that place. I don't know anyone who is racist other than one or two people I met on strange corners of the internet. After adopting his daughter French discovered that yes, of course racism still exists, outlining several real incidents of bias against her. For example his daughter's friend said, "My dad says it's dangerous to go black people's neighborhoods." Alt-right trolls even made a cruel meme of his young daughter in a gas chamber.

Such memes are of course reprehensible. But French uses the wrong benchmark. The real question is not if racism exists, but if blacks face greater external hardship than other groups? People who are too smart, dumb, fat, thin, short, tall, attractive, ugly, rich, poor, Christian, or amoral. Or any other category. Almost everyone belongs to at least one. French doesn't address that question.

Compared to Christian Persecution in the US (Yes, Really)

I can't answer for most of those groups. But I am a Christian. I'm very glad to live in the US with its many Christian freedoms. I don't even feel comfortable talking about Christian "persecution" in the US because other parts of the world have it so much worse. Yet there are still examples of anti-Christian discrimination here:

1. I know a Christian friend who was kicked out of her PhD biology program for being a creationist. An intelligent, articulate, and polite one at that. I used to think people like her must've just been belligerent, but I hear similar stories from nearly every creationist or intelligent design proponent I speak to. Many keep their beliefs hidden. Books and documentaries are filled with such stories. Well known professor and textbook author Larry Moran has even called for universities to flunk by default any students who believe in intelligent design: "Flunk the IDiots." Forbes later wrote a glowing bio of Moran for his stance. Imagine the outrage if Moran called to flunk all black students!
2. In 2016, hapless Chinese scientists published a paper in the journal PLOS One, stating that the human hand shows "proper design by the Creator." The remark was in passing and the rest of their paper had nothing to do with the evolution or design. As soon as this was realized, I watched as the backlash unfolded in the comments section. Five editors of PLOS One requested the whole article to be retracted (rather than the wording removed), two of those editors said they'd resign if it wasn't

retracted. Two others said the editor who approved the paper should be fired. And five scientists commented, saying they'd boycott PLOS One. Then the paper was retracted. Even though the Chinese researches explained they only meant to say "mother nature," and English wasn't their first language. No other issue with their research was found. That backlash was only for a translation issue. Imagine if they'd been Christians who actually believed God designed life.

3. Practicing Christians are no longer allowed to hold certain jobs in the United States. A county clerk like Kim Davis cannot in good conscious abet two people into a lifelong commitment to live in sin, yet was jailed for refusing. California once banned all judges who volunteered with the Boy Scouts because the group previously required heterosexual scout leaders.
4. Many friends often tell me they can't publicly speak out against homosexual behavior in fear of losing their jobs. I doubt their employers have issue with vegetarians saying meat is murder.
5. And of course secularists make memes, sometimes violent, mocking Christians all the time. So what.

Imagine if I took the crime stats above and marched around with signs about "white genocide" or "systemic racism" because blacks are more likely to get welfare or whites more likely to be shot while under arrest. That'd make me a complete narcissistic jerk. Or worse if I used it to justify arson, looting, and violence. Yet I'd still be more correct than Black Lives Matter because at least the data supports me.

I don't think there's anything special about hardships faced by US Christians. You could make a similarly troublesome list for hardships of unattractive and overweight people, probably worse. I'm not planning any protests for them or for US anti-Christian discrimination. That's too minor compared to many greater injustices in the world. And please don't take this and claim I've said racism no longer exists. The experiences of David French's daughter are bad things that need to stop. But unlike in decades past, I'm not convinced it's currently any worse than hardships faced by any number of other classes of people for a wide variety of reasons.

The Media Amplifies Racism for Profit

A couple weeks ago I posted to Facebook about Israel planning to ban their only Christian news station for proselytizing. Two friends commented that it was a great idea, because Christians indoctrinate people. I get similar comments often. Oh woe is me! But imagine if they'd instead called for banning black history? Call CNN! We found another Amy Cooper!

Although sometimes doing well, George Floyd had a long and sometimes violent criminal record. Nobody thinks he deserved to die. I'm glad the officers involved are being investigated. But put his case in perspective. People do awful things for many reasons. In the United States each year we have:

- 600,000+ abortions
- 250,000 deaths from negligent medical errors
- 15,000 murders
- 1,500 dead from child abuse.
- 1,000 suspects killed by police (with 90 to 95% attacking police or another person). Among a total police force of more than 800,000.
- 85 police officers killed.

Despite all that, the deceptive media amplifies any incident with a white perpetrator and black victim. Everyone knows about George Floyd, but few have heard of Tony Timpa (white), who in 2016 also begged for his life as police suffocated and made fun of him. The media gets away with this bias because almost everyone actually does hate racism, leading to collective outrage. So much that it brings riots, looting, and buildings on fire. Plus news media profit from increased news viewership of these riots. While the media ignores many greater injustices in the previous list.

The leftist media then uses Black Lives Matter as a front to push ridiculous leftist policies like defunding the police. Oh you're against BLM? Racist.

Black inequality in America is real. If you love people of all races as Christ commands, then you should want to solve this problem. That can only be done if we tackle the real causes, and not the left-leaning media's exaggerated racism narrative that masks them.

North Carolina Republicans have super-majorities in both chambers, here's what's happening

May 4, 2023 | by Wintery Knight | Link | Original Link

I have a close friend who lives in North Carolina, and she thinks that it's a great state, and that it's about to get a lot more conservative because they now have Republican supermajorities that can override the governor's veto. I have noticed a lot of good stories in the news about North Carolina, and I thought that I might collect a few stories about what they are up to.

First, this one from yesterday, reported by Life News:

> Pro-Life legislators in North Carolina have introduced a bill to ban abortions on unborn babies starting at 12 weeks. While pro-life advocates were hoping for legislation to protect babies starting at conception or at least a heartbeat bill protecting them beginning at 6 weeks, the political reality of the situation prevented that.
>
> North Carolina Republicans face an uphill battle in getting legislation approved because pro-abortion Democrat Governor Roy Cooper is certain to veto any pro-life legislation and stronger pro-life protections for babies would have a more difficult time securing the supermajority necessary to override his veto.
>
> North Carolina Republican legislative leaders said on Tuesday there's agreement for a 12 week bill and House Speaker Tim Moore and Senate leader Phil Berger both said they would push the pro=life legislation in their respective chambers.

Now for a couple stories about cleaning up their elections, so that Democrats can't steal them by voter fraud.

This one from Life Site News:

> With its new conservative majority, the North Carolina Supreme Court on Friday reversed prior decisions against state voting rules and a Republican-redrawn districting map, a boon to the GOP's prospects going into the 2024 elections.
>
> The Carolina Journal reports that the state's highest court, on which two Democrat justices were replaced with Republicans last year, voted 5-2 to reinstate North Carolina's 2018 law requiring photo identification in order to vote and districting maps favorable to Republicans in congressional and state legislative races, and to forbid felons from voting in state elections until they have completed their sentences.
>
> All three rulings were issued "with prejudice," meaning that opponents cannot challenge them again.

Nice. And how about this one from The Federalist:

> After scoring significant victories in the legislature in the 2022 midterms, North Carolina Republicans are introducing legislation that would bar state and local election officials from accepting or using private money to conduct elections.
>
> SB 89 stipulates that state and local election boards, as well as county boards of commissioners, are prohibited from accepting "private monetary donations, directly or indirectly, for conducting elections or employing individuals on a temporary basis."
>
> Concerns surrounding the use of private money to conduct elections became prominent following the 2020 election cycle, during which Meta CEO Mark Zuckerberg gifted nonprofits such as the Center for Tech and Civic Life (CTCL) hundreds of millions of dollars. These "Zuckbucks" were then siphoned into local election offices in battleground states around the country to change how elections were administered, such as by expanding unsecure election protocols like mail-in voting and the use of ballot drop boxes.
>
> To make matters worse, the grants were heavily skewed towards Democrat-majority counties, essentially making it a massive Democrat get-out-the-vote operation.

That's how Biden was able to win the election in states where he wasn't even competitive in the polls.

And this one, from Daily Wire:

> The University of North Carolina (UNC) made a move against woke culture on Thursday, banning controversial so-called diversity, equity, and inclusion (DEI) requirements from the school's hiring and promotion process.
>
> The university's Board of Governors reportedly voted Thursday to secure the ban, following pressure from Color Us United, a non-profit committed to speaking out "against those who want to divide America."
>
> UNC "shall neither solicit nor require an employee or applicant for academic admission or employment to affirmatively ascribe to or opine about beliefs, affiliations, ideals, or principles regarding matters of contemporary political debate or social action as a condition to admission, employment, or professional advancement," the resolution said, adding that an employee or applicant can't "be solicited or required to describe his or her actions in support of, or in opposition to, such beliefs, affiliations, ideals, or principles."

A lot of this is going to hinge on who wins the governor post in 2024, and this guy (reported in The Federalist) is the guy who Republicans are running:

> Mark Robinson believes Republicans and conservatives should never concede the cultural narrative, and that the party's greatest need is to put forward those who can speak with force, conviction, and eloquence about the party's shared values with everyday Americans. The lack of articulateness in such matters is, of course,

> a perennial complaint about GOP political discourse. However, if anybody is in a position to do something about it, it is the man who will be, barring incident, the first black lieutenant governor of North Carolina.
>
> I've witnessed a great many politicians give a great many speeches, but I've seldom come across one with the natural ease and ability to combine passion and reason the way Robinson does when he gets warmed up on his favorite issues. His is a national-level talent that the GOP would ignore or sideline at its peril.
>
> I saw a display of Robinson's appeal last summer when he addressed a Back the Blue rally in downtown Raleigh. He electrified the audience and with a speech basically shut down the Antifa and Black Lives Matter protestors cat-calling and drumming on the periphery, striking them, at least momentarily, silent and dumbfounded.

I hope a lot of conservatives move there from blue states, and tilt the balance more. No point living in a blue state if you can get out. Don't pay taxes to people who hate you, and your values. Just move. I like to make spreadsheets comparing all the interesting rankings of states, like fiscal solvency, state legislatures, pro-life and self-defense. According to my spreadsheets, across all measures that I care about, the two best states in the union are Florida and Tennessee.

Are modern women building their resumes to attract to marriage-minded men?

May 5, 2023 | by Wintery Knight | Link | Original Link

I've been watching a bunch of episodes of the @whatever podcast, and really enjoying the fact that the Christians are allowed to say what they think about dating and relationships, and that the non-Christians are explaining in their own words what their view of relationships is. And it's very interesting to see how modern women have a disconnect between "in the moment" and "some day".

So, I have a couple of clips from a show to show you what I mean. In this clip, the men on the left of the room – Brian Atlas, the host, and Chase, the evangelical Christian – challenge the two non-Christian women on the right side of the room. They ask whether a boyfriend can expect his girlfriend to stop going to bars and night clubs. These are places where alcohol is served, women wear sexy clothes, and men flirt with drunk women and try to take them home for sex. All the non-Christian women on the panel call this demand that they not go to bars and clubs "controlling". They don't see why being in a relationship should cause them to have to give up any aspect of their pursuit of pleasure. If they want validation from hot guys, and maybe some extra sex, then they should be able to look for it in bars and night clubs.

Remember, this video has a lot of bad language. It's not for kids.

So, watch this clip from 1:05:21 to 1:28:45: (23 min and 24 seconds)

So, these young women want to focus on having fun in their early 20s, because that's what they want to do. And then later on, when they get much older, then they might be ready for a man to marry them and give them children.

A marriage-minded man is looking for a woman who is willing to control her behavior so that she becomes safe to marry. So that she can focus on her husband. So that she can spend time nurturing and raising her children. She can't spend money on frivolous things. She can't spend money on vacations and entertainment and alcohol. She can't smoke while she's pregnant. She can't buy expensive hand bags and get cosmetic surgery. But these young women aren't willing to give up any of these things. They want to have fun. And marriage is seen as "boring", until they decide in their late 30s that they finally want it. Men who want to focus on marriage early are "controlling". Men who want women to focus on preparing to build a home and a family are "controlling" men.

The problem with this, as one of the men points out, is that those bar and night club experiences do not make the woman attractive or stable for marriage. Marriage is an enormous financial and legal risk for men. They can be thrown into jail for inability to pay alimony and child support. They can lose custody of their kids in family courts. They can have their parental rights nullified by feminist judges. Women are actually more likely to commit non-reciprocal domestic violence than men, according to this recent study:

> Almost 24% of all relationships had some violence, and half (49.7%) of those were reciprocally violent. In nonreciprocally violent relationships, women were the perpetrators in more than 70% of the cases.

Men have to be extremely careful about marriage. And when young women are taught to be self-centered from 18-35, this is not good preparation for being a wife and mother. "Hoe phases" and "party stages" doesn't look good on a resume. I would not hire a college grad to write software, if their entire resume was playing video games and memorizing movie scripts. If you want the job, you have to be able to show that you can do the job. Jobs are not meant to entertain you. There is work to do, and results are expected. The same thing is true of marriage. Men are making the hiring decisions, there, and we do look at women's resumes.

Men are the keepers of commitment. If a woman wants commitment, she has to apply for commitment, and prove she is worth being committed to. Men are looking for marriage-related behaviors and capabilities. Chastity. Sobriety. Conservative political views. Accurate theology. Apologetics. Experience building others up to be useful for God. Spending restraint. Saving and investing. STEM degrees. Cooking ability. The ability to be content at home. Willingness to learn what husbands like, and to play with husbands. Fitness. Nutrition. Respect for male leadership. Etc.

Consider this clip from 2:32:54 to 2:43:24: (10 min, 30 seconds)

Here the Christian co-host Chase explains to the women that if they pick a Christian man, he will be able to lead them to focus on the most important things in life early on. The single mother is excited that some men would want to help to avoid mistakes with bad boys. But again, the two blondes who insisted on hedonism rebel against the leadership of good men. They want to be free to pursue pleasure, and not listen to the leadership of Christian men. They don't want to focus on marriage. They don't want to prepare their character for marriage. They don't want to control their desires, so they can get a long-term result. They want to SAY that they want marriage and children "some day", but they want to choose what feels good "in the moment". And they definitely prefer hot bad boys who are permissive. They don't want good men who want to lead them to get into shape for marriage.

I think the older generation of Christian women has NO IDEA that this is what younger women are like. 70 years ago, women would jump into the arms of men who wanted to step in and lead on moral and spiritual issues. They were not interested in "tingles" caused by physical attraction. They were interested in men who could step in and make marriage and parenting easy for them. Men who were serious about earning. Men who were serious about fighting evil. Men who were involved in the home, and effective at leading the children to have accurate beliefs and good moral character. But those days are *long gone.*

Today, young women are choosing men based on the feelings they get from being validated by those men. They like men who "don't judge". They like men with attractive appearances who are having a lot of sex with other women. They like men who spend

their money on displayed wealth, rather than save for a downpayment on a home. Good men are ignored until these women realize that their plan isn't working, and suddenly they want to "settle down". But good men know that a woman who makes a good man her "last resort" in her late 30s will never respect him as a leader in the home.

Men don't HAVE to get married and have kids in order to be happy. We can just work hard, stack our cash high, retire early, and work on our ministry goals. Working for God on evangelism and apologetics is enormously fulfilling for a man. Just ask Paul.

Physicist Victor Stenger debates William Lane Craig: Does God Exist?

May 6, 2023 | by Wintery Knight | Link | Original Link

This debate took place on March 1, 2010 at Oregon State University.

In this debate, Victor Stenger does affirm his belief that the universe could be eternal in his second rebuttal (1:02:30), thus denying the standard Big Bang cosmology. He also denies the law of conservation of energy and asserts that something can come from nothing in his concluding speech (1:33:50). He also caused the audience to start laughing when he said that Jesus was not moral and supported slavery. There is almost no snark in this summary. Instead, I quoted Dr. Stenger *verbatim* in many places. I still think that it is very entertaining even without the snarky paraphrasing.

The debate includes 30 minutes of Q&A with the students.

Here's the video of the debate:

Dr. Craig's opening speech:

- The ontological argument
- The contingency argument
- The cosmological argument
- The moral argument
- The resurrection of Jesus (3-fact version)
- Religious experience

Dr. Stenger's opening speech:

- There is no scientific evidence for God's existence in the textbooks
- There is no scientific evidence for God acting in the universe
- God doesn't talk to people and tell them things they couldn't possibly know
- The Bible says that the Earth is flat, etc.
- There is no scientific evidence that God answers prayers
- God doesn't exist because people who believe in him are ignorant
- Human life is not optimally designed and appears to be the result of a blind, ad hoc evolutionary process
- The beginning of the universe is not ordered (low entropy) but random and chaotic
- It's theoretically possible that quantum tunneling explains the origin of the universe
- The laws of physics are not objectively real, they are "our inventions"
- Regarding the beginning of the universe, the explanation is that something came from nothing*
- Nothing* isn't really nothing, it is "the total chaos that we project existed just before the big bang"
- If something has no structure, then "it is as much nothing as nothing can be"

- Consciousness is explainable solely on the basis of material processes
- There are well-informed, rational non-believers in the world and God would not allow that

Dr. Craig's first rebuttal:

Stenger's argument that there is no objective evidence for God's existence:

- First, it is not required that God rely only on objective evidence in order to draw people to himself (Alvin Plantinga)
- Second, God is not required to provide evidence to everyone, only to the people who he knows would respond to him
- Third, Craig gave lots of objective evidence, from science, history and philosophy
- Stenger asks for certain evidence (answered prayers, prophecy, etc.), but Craig presented the evidence we have

Stenger's argument that the balance of energy is zero so "nothing" exists:

- if you have the same amount of assets and liabilities, it doesn't mean that nothing exists – your assets and liabilities exist
- Christopher Isham says that there needs to be a cause to create the positive and negative energy even if they balance
- the quantum gravity model contradicts observations
- the vacuum is not the same as nothing, it contains energy and matter
- the BVG theorem proves that *any* universe that is expanding must have a beginning

Stenger's argument that mental operations can be reduced to physical operations:

- mental properties are not reducible to physical properties
- epiphenomenalism: is incompatible with self-identity over time
- epiphenomenalism: is incompatible with thoughts about other things
- epiphenomenalism: is incompatible with free will
- substance dualism (mind/body dualism) is a better explanation for our mental experience
- God is a soul without a body

Dr. Stenger's first rebuttal:

Craig's cosmological argument:

- Craig's premise is "everything has a cause", but quantum mechanics has causeless events
- There are speculative theories about how something could have come into being uncaused out of nothing
- "I don't know of a single working cosmologist today who believes there was a singularity prior to the Big Bang"
- "If there wasn't a singularity then there's no basis for arguing that time began at

that point”
- “There’s no reason from cosmology that we know of that the universe can’t be eternal”
- “When I talk about an eternal universe, I mean a universe that has no beginning or end”
- The Hartle-Hawking model doesn’t have a beginning
- “There was no violation of energy conservation by having a universe coming from nothing”
- “The universe *could have* come from a previous universe for example or even just from a region of chaos”
- The paper by Vilenkin is counteracted by other papers (he doesn’t specify which ones)

Craig’s moral argument:

- Dr. Craig is arguing from ignorance
- But morality can be decided by humanity just like governments pass laws, and that’s objective
- Dr. Craig has too little respect for the human intellect
- I don’t need to tell me that slavery is wrong
- The Bible supports slavery
- Atheists can behave as good as theists
- Morality just evolved naturally as an aid to survival

Craig’s resurrection argument:

- No Roman historians wrote about the execution of Jesus
- The empty tomb is doubtful because it is only mentioned in the gospels, not by Paul
- John Dominic Crossan says there was no empty tomb
- Christianity only survived because the Roman empire thought that they were useful

Dr. Craig’s second rebuttal:

Craig’s cosmological argument:

- There is no reason to prefer an indeterministic interpretation of quantum mechanics
- Dr. Stenger himself wrote that deterministic interpretations of quantum mechanics are possible
- The vacuum in quantum mechanics is not nothing
- The quantum vacuum he proposes cannot be eternal
- The cosmological argument does not require a singularity
- The Hartle-Hawking model is from 1983
- Hawking says that there is a beginning of space and time *after* that model
- The Hartle-Hawking model *does still have a beginning of time* – the model is not eternal

- The BVG theorem that requires a beginning for expanding universes is widely accepted among cosmologists

Craig's moral argument:

- Stenger redefined objective to mean that most people agree with it – but that's not what objective means
- Objective means right and wrong whether anyone accepts it or not
- Richard Dawkins himself says that on atheism there is "no evil and no good" – why is he wrong?
- Even Dr. Stenger says that morality is the same as passing laws – it's arbitrary and varies by time and place
- But on his view, right and wrong are the same as deciding which side of the road to drive on
- But somethings really are right and some things are really wrong

Craig's resurrection argument:

- Josephus is a Roman historian and he wrote about Jesus, for example
- There were four biographies of Jesus are the best sources for his life
- The scholars that Stenger mentioned are on the radical fringe

Dr. Stenger's second rebuttal:

Knowledge and the burden of proof:

- Dr. Craig has to bear the burden of proof, not me – because his claim is more "extravagant"
- "I don't have to prove that a God was not necessary to create the universe"
- "I don't have to prove that a God did not design the universe and life"
- "I don't have to prove that the universe did not have a beginning"
- "I don't have to prove that God did not provide us with our moral sense"
- There are a lot of books written about how morality evolved naturally
- "I don't have to prove that the events surrounding the supposed resurrection of Jesus did not take place"
- Bart Ehrman says that the gospels are generally unreliable (Note: Ehrman accepts all 3 of Craig's minimal facts)
- Just because people are willing to die for a cause, does not make their leader God, e.g. – the Emperor of Japan

Aesthetic concerns about the universe:

- I don't like dark matter and I wouldn't have made the universe with dark matter
- I don't like the doctrine of penal substitution
- I don't like the doctrine of original sin
- I don't like the heat death of the universe

Dr. Craig's conclusion:

The case for atheism:

- Dr. Stenger had two arguments and he has to support his premises
- Dr. Craig addressed his two arguments and each premise and Dr. Stenger never came back on it

The contingency argument:

- Dr. Stenger has dropped the refutation of this argument

The cosmological argument:

- The theoretical vacuum he proposes cannot be eternal

The moral argument:

- He asserts that things are wrong, but there is no grounding for that to be objective on atheism

The resurrection of Jesus:

- There are surveys of scholars on the empty tomb and 75% of them agree with it
- Bart Ehrman agrees with all 3 of the minimal facts that Dr. Craig presented
- Ehrman's objection to the resurrection is not historical: he's an atheist – he thinks miracles are impossible

Religious experience:

- No response from Dr. Stenger

Dr. Stenger's conclusion

The cosmological argument:

- "I argued that we have very good physical reasons to understand how something can come from nothing"
- "There is a natural tendency in the universe… to go from.. simpler thing to the more complicated thing"
- The transition from a vapor to a liquid to ice shows how something could come from nothing
- "It cannot be proven that the universe had a beginning"

The moral argument:

- Objective morality, which is independent of what people think, could be developed based on what people think

- “Jesus himself was not a tremendously moral person… he had no particular regard for the poor… he certainly supported slavery… he was for the subjugation of women” (audience laughter)

The resurrection argument:

- Bart Ehrman says that the majority of the gospels are unreliable

Religious experience:

- I don’t see any evidence that there is anything more to religious experience than just stuff in their heads

God’s purpose of the world should be to make people feel happy:

- God could have made people feel happier
- God could have made people not die
- God could could have made the universe smaller: it’s too big
- God could have made it possible for humans to live anywhere “even in space”

New study: trans kids prescribed MORE anti-psychotic drugs after starting transition than before

May 7, 2023 | by Wintery Knight | Link | Original Link

Transgenderism is the hot topic of discussion between secular leftists and moral people these days. Every time I see a study about this issue, I'm blogging about it, so that I can find all the studies I need when I have to debate this. One thing you hear from the secular left is that parents must allow kids to transition, or they will suffer declines in mental health. But what does the data say?

Here's the latest study, reported by Fox News:

> Children taking anti-psychotic medication in the military health system for serious mental illness were later administered "gender-affirming pharmaceuticals," according to Department of Defense health records, with one of its air base physicians claiming the gender drugs could "melt away" psychotic conditions such as a schizophrenia diagnosis.
>
> A study published in The Journal of Sexual Medicine in 2021 entitled, "Mental Healthcare Utilization of Transgender Youth Before and After Affirming Treatment," discussed internal DoD health records from 2010-2018.
>
> The review showed that transgender kids in the DoD health system were being given heavy psychotropic medications such as anti-psychotics while being sent through a "gender-affirming" pipeline.

So, the authors of the study thought that transitioning children would cause their mental health problems to just disappear. But the study actually found the opposite:

> The study yielded unflattering results on the effects the gender treatments had on kids' mental health. Not only did it find no significant psychological benefit, but many children had their psychotropic medication increased after gender-related drugs were administered.
>
> "Among 963 [transgender] youth using gender-affirming pharmaceuticals, mental healthcare did not significantly change and psychotropic medications increased following gender-affirming pharmaceutical initiation," the study said.
>
> "The most pronounced increases in psychotropic medication were in… anti-psychotics and lithium," a mood stabilizing medication commonly used to treat bipolar disorder.

The secular left likes to say that hormone therapy is a treatment for the mental illnesses that these young people have. But this study doesn't show that, it shows that they were taking even more psychotropic medications after beginning their sex changes.

Here are some of the other studies I've blogged about before:

- New study: more than half of all female-to-male transgender teens attempt suicide
- Controversial study on Rapid Onset Gender Dysphoria and transgenderism re-published
- Study: sex-reassignment surgery does not improve mental health of transgender people
- New study: “social contagion” is a major factor in teen and young adult gender dysphoria
- New study: there is no gay gene that causes homosexuality
- New study: 50% of biological males in women’s prisons convicted of sex crimes
- New study: psychotherapy improves mental health of autistic teens with gender dysphoria

Issues in educating children to be effective and influential Christians

May 8, 2023 | by Wintery Knight | Link | Original Link

So, in this post I'm going to briefly go over three challenges to producing effective, influential children. First, choose a better spouse. Second, Christian classical schools. Third, socialist countries make homeschooling and private Christian schools effectively illegal.

1. Choose a better spouse

So let's start with the first one. Christian parents and pastors need to educate young people to choose spouses who are equipped educate to produce effective and influential children.

So in the case of choosing a man who will be involved in producing effective, influential children, here are some tips:

- don't choose a man based on attraction to his appearance or displayed wealth
- whether homeschooling or private Christian schools, the man should have chosen a major and a career that allows him to pay to avoid public schools
- it's better to choose a man whose career allows him to work from home, so that he is available to supervise the education, and discipline the children as they grow
- he should demonstrate his ability to move people in his circle of influence to greater effectiveness and influence, for example making them try harder at school and work, or get better at defending the Christian worldview, especially on controversial issues

So in the case of choosing a woman who will be involved in producing effective, influential children, here are some tips:

- don't choose a woman based on attraction to her appearance or sexual availability
- children need their their mothers at home from birth to age 5, so if a woman has a career, then she needs to put it on hold during that time. If a woman wants to do a career to benefit the Christian community as a whole, e.g. – Supreme Court justice, then she should probably not have children between those ages
- it's better to choose a woman who has demonstrated the ability to do hard things, so that she has the ability to take responsibility and be accountable for producing results, e.g. – a degree in computer science, and two years of private sector coding experience
- she should demonstrate her ability to move people in her circle of influence to greater effectiveness and influence, for example making them try harder at school and work, or get better at defending the Christian worldview, especially on controversial issues

It’s no good to complain when the children arrive that your spouse isn’t involved in spiritual and moral education. The time to settle that was when you were training to evaluate and choose your spouse. And Christian parents and pastors have a role to play in equipping young people to make better choices.

2. Classical Christian schools

I’ve looked over the curricula of a number of these classical Christian schools, and I am not convinced that they are useful for producing effective, influential Christians.

Suppose I were trying to educate my child to be the next Jay Richards or the next Stephen C. Meyer or the next Kristen Waggoner or the next Clarence Thomas. Are classical Christian schools useful for producing results like that?

Education has two goals. 1) educating the person in valuable skills, so that they can earn a lot of money without sacrificing family engagement, and without violating their conscience. 2) it should teach young people to resist the culture on the basis of reason and evidence. If we are talking about God’s existence or origins, then we are dealing with mainstream science. If we are talking about gospel reliability or the resurrection, then we are making historical arguments using mainstream evidence. If we’re talking about religious pluralism or the problem of evil, then we’re talking about mainstream philosophical theology and philosophy of religion. Etc.

I have yet to meet anyone involved with classical Christian schools who was steering young people into careers where they would make a lot of money, working from home, and not exposing themselves to cancel culture. You would think that these classical Christian schools would be focused on careers like developing software with open-source components, but they don’t have the skills. Secondly, apologetics is poorly handled in these curricula. If there is any, it’s presuppositional – an approach that is used by none of the most effective and influential Christian scholars. The ones who actually debate non-Christians and move the ball downfield in the culture.

3. Move to a conservative state in a conservative country

Many Christian men and women often pooh-pooh my seriousness about marriage and parenting planning. They say “I was born in Washington, and it’s a fine state. The public schools are great here. And I’m sure the government, although entirely Democrat, will respect my rights as a parent and as a Christian. After all, I pay their salaries.” But this is just laziness and ignorance. The people who say this don’t want the burden of having to make plans, and execute plans in order to produce effective, influential children.

Consider this article from Daily Wire, about Germany – a secular socialist state:

> Home education has been outlawed in Germany for more than a century; four years ago, the European Court of Human Rights ruled against a family from Darmstadt, Germany, which had asserted the right to homeschool their children. Private religious schools, although legal, must follow state-mandated curricula from the area in which they are located.
>
> Tobias Riemenschneider, a pastor at Evangelical Reformed Baptist Church in

> Frankfurt, Germany, said in an interview with The Daily Wire that the nation's restrictive education laws present "great difficulty to parents who are convinced by their Christian faith that it is God's will for them to raise their children themselves in the nurture and admonition of the Lord." He noted that parents who defy government sanctions against home education risk incurring considerable fines, prison sentences, and the possibility that authorities will take their children.

The same kind of stuff is happening now, in states like Washington and California.

It's just like those Christian-owned business in SOGI states. SOGI states elevate sexual orientation and gender identity to be a protected category, like race. Christian businesses in those states think "well, I was born here, and my family is here, so I'm going to start a business here, and keep right out of politics. I'm sure God will make my laziness and ignorance work out". They are taken by surprise by being persecuted by secular left tyrants. A much better plan is to be serious about moving to a state with low taxes, high liberty, and support for the plans of Christian parents. It's better to spend your own money on educating your kids, rather than to spend it on legal defense.

Is it easy for a woman to get pregnant after age 30?

May 9, 2023 | by Wintery Knight | Link | Original Link

This UK Daily Mail article is a bit old now, but I still it's important to spread around the knowledge about when a woman's fertility starts to decline. Somehow, in this age of feminism, there is this idea that women can put off pregnancy into their 40s. The truth is quite different. Let's take a look at the facts from an unlikely source – the British socialist single-payer health system.

It says:

> One of Britain's top NHS fertility specialists last night issued a stark warning to women: Start trying for a baby before you're 30 – or risk never having children.
>
> In a strongly worded letter to Education Secretary Nicky Morgan, consultant gynaecologist Professor Geeta Nargund has also demanded that teenagers are taught about the dangers of delaying parenthood, because of the spiralling cost to the taxpayer of IVF for women in their late 30s and 40s.
>
> Professor Nargund cites the agony of a growing number of women left childless as a key reason why fertility lessons must be included in the national curriculum. Her controversial intervention – in which she warns Britain faces a 'fertility timebomb' – will fuel the debate over the best time to start a family, amid the rise in women delaying motherhood to pursue careers.
>
> […]Arguing passionately for fertility lessons, she tells Mrs Morgan: 'Information is power and the best way to empower people to take control of their fertility is through education.' Prof Nargund said last night: 'Ideally, if a woman is ready for a child, she should start trying by the time she is 30. She should consider having a child early because as a woman gets older, her fertility declines sharply.'
>
> If a woman started trying early enough, doctors would still have time to diagnose problems and take action before it was too late, she said.
>
> Her comments were endorsed by Professor Allan Pacey, outgoing chair of the British Fertility Society.
>
> **'You need to be trying by 30 because if there is a problem and you need surgery, hormones or IVF, then you've got five years to sort it out,' he said. 'If a woman starts trying at 35, doctors have got to sort it out when she is already on a slippery fertility slope'.**

Let's see how accurate women's beliefs about fertility and age are.

Consider this article from Aeon magazine.

It says:

> Many studies show that women are not only woefully ignorant when it comes to fertility, conception and the efficacy of assisted reproductive technologies (ART) –

> but they overestimate their knowledge about the subject. **For instance, a 2011 study in *Fertility and Sterility* surveyed 3,345 childless women in Canada between the ages of 20 and 50; despite the fact that the women initially assessed their own fertility knowledge as high, the researchers found only half of them answered six of the 16 questions correctly.** 72.9 per cent of women thought that: 'For women over 30, overall health and fitness level is a better indicator of fertility than age.' (False.) And 90.9 per cent felt that: 'Prior to menopause, assisted reproductive technologies (such as IVF) can help most women to have a baby using their own eggs.' (Also false.) Many falsely believed that by *not* smoking and *not* being obese they could improve their fertility, rather than the fact that those factors simply negatively affect fertility.
>
> […]**According to a 2011 study in *Human Reproduction*, which surveyed 410 undergraduate students, most overestimated a women's chances of spontaneous pregnancy in all age groups, but particularly after receiving IVF beyond age 40.** Only 11 per cent of the students knew that genetic motherhood is unlikely to be achieved from the mid-40s onward, unless using oocytes or egg cells frozen in advance. 'This can be explained by technological "hype" and favourable media coverage of very late pregnancies,' the authors concluded.

People see graphs of pregnancy chances, but they forget that the rate of miscarriage is also increasing as you age. So, even if you get pregnant, there is a higher risk of miscarriage. Not to mention ectopic pregnancies, and pregnancy complications. It's also harder to get pregnant your first time after age 30. It's easier to get pregnant after 30, if it's not your first time. Also, pregnancies after 30 are much harder on a woman's body than pregnancies in her 20s.

So, I guess now I'll issue my advice to women in their 20s on how to avoid infertility:

If you went to college, chances are that you absorbed a lot of feminism. Feminism emphasizes being free of constraints, feeling happy, having fun, career over family, and independence from the needs of men and children. You need to renew your mind in order to undo the cultural denigration of marriage and children. Get yourself a marriage mentor, ask for book recommendations that will educate you about the challenges and rewards of marriage. A good marriage mentor will explain to you why marriage is a better plan than the feminist plan, and will emphasize self-denial, self-sacrifice, self-control and serving others. It's only by getting specific about marriage and parenting that your heart will change to want to work on marriage rather than work on the things that the feminist culture prefers.

I guess my closing advice would be to be careful about the things you hear about marriage in the culture. It's very tempting to just believe the words of other people, when they tell you what you want to hear. A lot of people have agendas that sound good, but ultimately, they don't satisfy. Once your fertility is gone, it's really gone. IVF and egg-

freezing are expensive and unreliable. Again, you should look into this yourself, rather than rely on people who say whatever you want to hear so that you will like them.

The importance of having a narrative when confronting the assumption of naturalism

May 10, 2023 | by Wintery Knight | Link | Original Link

How do you present theism as a rational belief to a person who thinks that the progress of science has removed the need for God?

Canadian science writer Denyse O'Leary writes about the history of cosmology at Evolution News.

Excerpt:

> What help has materialism been in understanding the universe's beginnings?
>
> Many in cosmology have never made any secret of their dislike of the Big Bang, the generally accepted start to our universe first suggested by Belgian priest Georges Lemaître (1894-1966).
>
> On the face of it, that is odd. The theory accounts well enough for the evidence. Nothing ever completely accounts for all the evidence, of course, because evidence is always changing a bit. But the Big Bang has enabled accurate prediction.
>
> In which case, its hostile reception might surprise you. British astronomer Fred Hoyle (1915-2001) gave the theory its name in one of his papers — as a joke. Another noted astronomer, Arthur Eddington (1882-1944), exclaimed in 1933, "I feel almost an indignation that anyone should believe in it — except myself." Why? Because "The beginning seems to present insuperable difficulties unless we agree to look on it as frankly supernatural."
>
> One team of astrophysicists (1973) opined that it "involves a certain metaphysical aspect which may be either appealing or revolting." Robert Jastrow (1925-2008), head of NASA's Goddard Institute for Space Studies, initially remarked, "On both scientific and philosophical grounds, the concept of an eternal Universe seems more acceptable than the concept of a transient Universe that springs into being suddenly, and then fades slowly into darkness." And Templeton Prize winner (2011) Martin Rees recalls his mentor Dennis Sciama's dogged commitment to an eternal universe, no-Big Bang model:

> For him, as for its inventors, it had a deep philosophical appeal — the universe existed, from everlasting to everlasting, in a uniquely self-consistent state. When conflicting evidence emerged, Sciama therefore sought a loophole (even an unlikely seeming one) rather as a defense lawyer clutches at any argument to rebut the prosecution case.

> Evidence forced theorists to abandon their preferred eternal-universe model. From the mid 1940s, Hoyle attempted to disprove the theory he named. Until

> 1964, when his preferred theory, the Steady State, lost an evidence test.

Here is a quick summary of some of the experimental evidence that emerged in the last few decades that caused naturalists to abandon the eternal universe that they loved so much when they were younger.

The importance of having a narrative

Now I want to make a very, very important point about Christianity and the progress of science. And that point is that it is very important that Christians present the evidence in exactly the way that Denyse presented it in that article – in its historical context, featuring the conflict between naturalists and the experimental evidence.

All Christians should be familiar with the following basic pieces of evidence which fit the war between science and naturalism narrative:

1. The origin of the universe
2. The cosmic fine-tuning
3. The origin of life (biological information)
4. The sudden origin of the Cambrian phyla
5. The habitability/observability correlation

When you talk about these evidences as a Christian theist to non-Christians, you have to have cultivated a genuine interest in reconciling your beliefs with science. You have to accept that there are two books that reveal God's character and attributes. The book of nature, and the book of Scripture. And you need to be flexible about getting these two books to fit together. The book of nature gives us natural theology (see Romans 1). It tells us that God is Creator and Designer. The book of Scripture tells us that God stepped into history as a man to save us by taking the punishment for our headlong rush away from God, which the Bible calls sin. Science is one way that humans can recover some of basic knowledge about God. Knowledge that is only possible because God created and designed the universe (and us) in such a way that we are capable of making discoveries, and that the universe is capable of being explored and understood.

It's very important to present these five basic evidences to non-Christians in the historical context. And here is the story you must tell: "In the beginning, there was the naturalism, and the naturalism tried to argue from ignorance that God was not Creator and God was not Designer. And then came the science, and now people have to give up their naturalism in order to account for the science". That's the narrative you use when talking to non-Christians about science.

In the beginning was the naturalism:

1. In pre-scientific times, atheists maintained that the universe was eternal
2. In pre-scientific times, atheists maintained that a life-permitting universe was as likely as a life-prohibiting universe
3. In pre-scientific times, atheists maintained that the cell was a simple blob of Jello that could spontaneously emerge in some warm pond

4. In pre-scientific times, atheists maintained that the sudden origin of the Cambrian phyla would be explained by subsequent fossil discoveries
5. In pre-scientific times, atheists maintained that there was nothing special about our galaxy, solar system, planet or moon

But then science progressed by doing experiments and making observations:

1. Scientists discovered redshift and the cosmic microwave background radiation (evidence for a cosmic beginning) and more!
2. Scientists discovered the fine-tuning of gravity and of the cosmological constant and more!
3. Scientists discovered protein sequencing and exposed the myth of "junk DNA" and more!
4. Scientists discovered an even shorter Cambrian explosion period and the absence of precursor fossils and more!
5. Scientists discovered galactic habitable zones and circumstellar habitable zones and more!

And now rational people – people who want to have true beliefs about reality – need to abandon a false religion (naturalism).

Now naturally, science is in a state of flux and things change. But you have to look at the trend of discoveries, and those trends are clearly going against naturalism, and in favor of Christian theism. No one is arguing for a deductive proof here, we are simply looking at the evidence we have *today* and proportioning our belief to the concrete evidence we have *today*. People who are guided by reason should not seek to construct a worldview by leveraging speculations about future discoveries and mere possibilities. We should instead believe what is more probable than not. That's what a *rational* seeker of truth ought to do. Proportion belief to probabilities based on current, concrete knowledge.

Atheism, as a worldview, is not rooted in an honest assessment about what science tells us about reality. Atheism is rooted in a religion: naturalism. And the troubling thing we learn from looking at the history of science is that this religion of naturalism is insulated from correction from the progress of science. Nothing that science reveals about nature seems to be able to put a dent in the religion of naturalism, at least for most atheists.

It falls to us Christian theists, then, to hold them accountable for their abuse and misrepresentation of science. And that means telling the story of the progress of science accurately, and accurately calling out the religion of naturalism for what it is – *a religion rooted in blind faith and ignorance that has been repeatedly and convincingly falsified by the progress of science in the modern era*.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life

- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

Leaked messages: leftists in government want parents who oppose their agenda to be fired

May 11, 2023 | by Wintery Knight | Link | Original Link

Many leaders in the Christian church think that this whole "culture war" is just overblown. No one is out to get Christians, they say. Christianity isn't under attack. We just need to win the secular left over by treating them nicely, and not believing "Republican party" ideas, like the Constitution, male-female marriage, secure borders, low taxes, and right to life. But what does the secular left think?

This article from ABC local news in Virginia (archived) is very interesting:

> Some Loudoun County residents were threatened, and one even lost his job, after a social media group allegedly worked to dox them after the residents spoke out at school board meetings, according to documents a whistleblower sent 7News.
>
> "I was taken back when I received a phone call from the sheriff's department – a deputy – saying I was being threatened online," Loudoun County resident Mark Winn told 7News.
>
> The online threats happened in a Facebook group called the "Loudoun Love Warriors."
>
> The "Loudoun Love Warriors" group includes campaign volunteers, supporters, and staff for several Loudoun County elected officials, 7News learned after investigating the group members' ties.
>
> 7News obtained hundreds of messages from a whistleblower in the group who thought the conversations were going too far.

Look how many people in the group are in government, law enforcement and school boards:

> The "Loudoun Love Warriors" group includes people who appear to be associated with Loudoun County Commonwealth's Attorney Buta Biberaj, County Supervisor Juli Briskman, School Board Chair Ian Serotkin, school board member Brenda Sheridan, school board member Atoosa Reaser, school board member Erika Ogedegbe, school board candidate Anne Donohue, sheriff candidate Craig Buckley, and Chair Phyllis Randall. None of these elected officials personally made any threats.

What's interesting to me is how many WOMEN there are in the group. Here's a New York Post article about "Buta Biberaj".

It says:

> A top Virginia prosecutor sought jail time for the dad who was arrested at a school board meeting while protesting his daughter's rape — despite having run

> on a George Soros-funded campaign against mass incarcerations, according to reports.
>
> Bronx-raised Loudoun County Commonwealth Attorney Buta Biberaj personally prosecuted dad Scott Smith, 48, after he was arrested at a raucous June 22 public meeting, Loudoun Now noted at the time.
>
> The county's top prosecutor pushed for jail time as well as a fine and anger management for Smith, even though he was only facing misdemeanor charges of disorderly conduct and resisting arrest — and his lawyer insisted he had been illegally detained, the court report said.

That's what she did to a father whose daughter had been raped in a girl's washroom by a student with male equipment. The father pays her salary with his taxes! But she didn't feel any responsibility to treat him well.

Anyway, back to the original article. The threats made against the parents are very interesting. And keep in mind that the parents are paying the salaries of the government workers who are saying this:

- "I'm gonna find his employer."
- "And holding that company accountable until he is fired."
- "Lets make him unemployable by love or by force."
- "I want to contact his employer to do just that. Ruin his livelihood."
- "Say goodbye to your job f***** [middle finger emoji]."
- "I want every single person who clapped for that ousted en masse and their livelihoods ruined:)."

And these are even worse:

- "Im telling you. SOMETHING has to happen to one of them."
- "Something public and permanent."
- "Lines drawn in the cement."
- "Lives needs to be ruined beyond repair."
- "Lets actually destroy them. Grind them."
- "If he had said that s*** about black kids or autistic kids I would shoot him."
- "We REALLY need to find this guy."
- "You guys need to stop protesting and start fighting back against these people Time to just do something different to shut them down."
- "F*** just getting him [fired]."
- "Im soooo ready to show up with guns lol."
- "His life needs to be PERMANENTLY disassembled."

And then they posted the addresses of the homes of the parents who they disagreed with. What bothered them the most was when one of the parents quoted verses from the Bible. That seems to be what really drove them crazy. But remember – the Biden administration said that it was *concerned parents* who were the real "domestic

terrorists”.

I found another article about this story at Daily Wire, if you want to read more about the people involved.

And here is one of the women admitting that she e-mailed the employers of men who wanted to protect children from abuse and mutilation:

> Chardonnay Antifa: “Im actually one of the people that sent emails to people’s employers.” pic.twitter.com/osF9SMYAzY
>
> — I Know Where I Belong…In VA-10…Maybe. (@PACTstopcrt) May 10, 2023

So, it’s very important for Christians and conservatives to understand where the secular leftists in government, law enforcement and the school boards stand. Christians think “oh, these are nice people, just like us”. But they’re not just like us. They’re just like Stalin, Mao, Hitler and the other socialist fascists who want to force their views on others. Parents who want their children to believe in God, morality, the Constitution, etc. are in their way. And they aren’t afraid to use threats, coercion, vandalism, and even violence in order to force parents to bow to them.

Southern Baptist Convention suffers largest decline in church membership

May 12, 2023 | by Wintery Knight | Link | Original Link

Protestant denominations are suffering declines in membership. Challenges like secularism, feminism and socialism are causing people to leave the church. And the response so far seems to be one of two things. From the conservatives, we hear that pastors need to *teach the Bible more clearly*. And from the progressives, we hear that churches need to *adopt the political causes of non-Christians*.

Here's an article about the largest Protestant denomination in the United States, reported in Daily Wire. This is written by Ben Zeisloft.

He writes:

> Membership in the Southern Baptist Convention witnessed the largest single-year decline in at least a century as the nation reels from the aftermath of lockdown mandates and pastors become concerned about the denomination's theologically liberal drift.
>
> The nation's largest Protestant denomination saw a decline from 13.7 million members in 2021 to 13.2 million members in 2022, a decrease of more than 3% which continues the trajectory seen over the last three years, according to data released by Lifeway Research, a provider of church business services for the Southern Baptist Convention.

I'm what you would call a conservative, Bible-believing Christian. I don't come out of a background of crazy sin and rebellion. But I did grow up in a non-Christian home, and my influences at that time were my two selfish parents, television, foolish students with no life experience, and public school teachers. So, I considered myself just as lost as any sinner. My brother actually continued down the path laid out by these influences, and our lives now are like night and day. My view of Christianity is that you put away your own selfish desires, and take up new Christian priorities. You stop worrying about what happened to you. You start looking for things you can do to build the relationship with the Boss.

My development as a Christian involved learning how to defend Christian truth claims and moral values to non-Christians, with reasons and evidence. But the perspective of people who grew up in the church is really different from mine. I tell them that church attendance is declining, because people have intellectual questions, and they have no reasons to think that our moral teachings are better. The church leaders disagree. They say that we just need to be nicer, and judge less, and have more fun activities to draw people in.

My friends who support the SBC know more about Disney and Star Wars than they do about how to defend basic Christian truth claims. They don't want to learn how to make a

case for God's existence, Jesus' resurrection, natural marriage or right to life. So, Christian churches just continue down the path of decline. The leaders think that Beth Moore is a better champion of Christianity than William Lane Craig. They promote Beth Moore, not William Lane Craig.

More:

> Those who continued to profess Christianity became increasingly theologically liberal in their beliefs: a survey from Ligonier Ministries found that the share of self-identified evangelicals who believe "gender identity is a matter of choice" rose from 22% to 37% between 2020 and 2022, while the share who believe "the Bible's condemnation of homosexual behavior doesn't apply today" more than doubled from 11% to 28% over the same time horizon.
>
> Record decline in Southern Baptist Convention membership occurs as hundreds of pastors throughout the country notice the liberal direction of the denomination. The trend is perhaps most palpable at the institutional level: Southern Baptist Convention President Bart Barber and other leaders have faced criticism for neglecting to rebuke the dozens of churches which have installed female pastors, a practice denounced in the Baptist Faith and Message.
>
> Officials at the Ethics and Religious Liberty Commission, the denomination's public policy arm, meanwhile endorsed a red flag law in Tennessee months after they opposed a bill in Louisiana that would have criminalized abortion for all parties involved, even though Southern Baptists passed a resolution affirming that "the murder of preborn children is a crime against humanity that must be punished equally under the law" the previous summer. Former Ethics and Religious Liberty Commission President Russell Moore said three years ago that ministers should persuade church members to accept vaccination and wear face masks.

Here's what the churches that leave the SBC are saying:

> "You can take our church off your mailing list," one pastor replied. "We do not support the socialist movement that has infiltrated the convention and are no longer a member."
>
> "Our congregation is no longer in the SBC because of their liberal stances on this and their support in fighting an abolition bill in Louisiana," another minister said. "I pray along with you that the SBC leadership would be convicted by your efforts and the many churches like us who are stepping away," added a third pastor.
>
> "We truly appreciate your efforts to uphold the Bible. I'm just letting you know that our church voted to leave the SBC this past summer," commented a fourth. "We felt that this issue was just one that should have been addressed in 2022. There were other issues, so we chose to become non-denominational and break from the SBC."

I attended an SBC church recently for about 7 months. The pastor told me how conservative he was. How much he loved to read systematic theology. Then three things happened. First, he blocked my efforts to start an apologetics small group. Second, he invited a member of the far-left ERLC to push for open borders. Third, the pastor made the claim that “Jesus was a refugee” in a Bible study he was leading. There was no plan to counter secularism, feminism or socialism in this church. Instead, it was just the Democrat party line. I quit going, There just isn’t any interest in fighting any of the battles that are causing people to leave the church. The leaders are not excited to recommended Christianity to non-Christians as a set of *correct* answers to life’s biggest questions, along with meaningful work to do for the Boss. A new uniform every morning, no matter how badly you dirtied up the previous one the day before.

I think that’s a pretty good offer, and we should focus on making that offer to non-Christians, and learning how to answer their questions. Jesus didn’t try to entertain people into the Kingdom. He made claims, and authenticated those claims with evidence. I don’t know why Christian leaders think that their approach is better.

Dr. Walter Bradley lectures on scientific evidence the creation and design of the universe

May 13, 2023 | by Wintery Knight | Link | Original Link

This lecture is special to me, because I bought a VHS tape of it just after I started working full-time, and watched it a million times. A lot of people come to their convictions about God's existence because of parents or church or intuitions, but for me it's all about the scientific evidence. This lecture changed my life. I wish more people taught their children about this evidence! This lecture was delivered at the University of California, Santa Barbara.

About the speaker:

> Dr. Bradley received his B.S. in Engineering Science and his Ph.D. in Materials Science from the University of Texas in Austin.
>
> Dr. Bradley taught for eight years at the Colorado School of Mines before assuming a position as Professor of Mechanical Engineering at Texas A&M University (TAMU) in 1976.
>
> During his 24 years at Texas A&M, Dr. Bradley served as Head of the Department of Mechanical Engineering at Texas A&M University and as Director of the Polymer Technology Center, and received five College of Engineering Research Awards. He has received over $4,500,000 in research grants and has published over 140 technical articles and book chapters. He has also co-authored "The Mystery Of Life's Origin: Reassessing Current Theories. He is a Fellow of the American Society for Materials and of the American Scientific Affiliation and serves as a consultant for many Fortune 500 companies.
>
> He currently serves as Distinguished Professor of Engineering at Baylor University.

The lecture: (63 minutes lecture, 25 minutes audience Q&A)

Summary slide:

This slide summarizes the content of the lecture

Introduction:

- At the beginning of the 20th century, people believed that the progress of science was pointing away from an intelligent Creator and Designer, and towards naturalism
- A stream of new discoveries has shifted the support of science towards theism, and away from naturalism
- Richard Dawkins, an atheist, says that nature only has the appearance of design, but that if you look closer, naturalistic mechanisms can account for the appearance of design
- When deciding between design and apparent design ("designoid"), it matters whether you think there is an intelligence there to do the designing

Evidence #1: The Big Bang:

- an eternal "steady state" universe is more compatible with naturalism, but a created universe is more compatible with a Creator
- In 1929, Hubble used telescopes to observe that the light from distant galaxies was *redshifted.* The further away galaxies were, the faster they were moving away. Therefore, space is expanding in all directions, suggesting an explosive origin of the universe
- In 1965, the discovery of the cosmic microwave background radiation matched a prediction of the Big Bang cosmology, and of the creation event
- In 1992, the COBE space telescope allowed us to test four specific predictions of the Big Bang model, especially the predictions for light element abundances (hydrogen and helium), which matched the predictions of the creation model

Evidence #2: Simple mathematical structure of the physical laws

- the simple mathematical structure of natural laws allows us to understand these laws, make discoveries, and engineer solutions to problems
- early scientists saw the mathematical structure of the universe to mean that nature was designed by an intelligent to be understood
- the fundamental equations of the laws of the universe can be easily written on one side of one sheet of paper
- Eugene Wigner's famous paper, "The Unreasonable Effectiveness of Mathematics in the Physical Sciences" makes the point that this simple structure is an unexpected gift that allows is to do science

Evidence #3: fine-tuning of the physical constants and quantities

- in order for any kind of complex life to survive, we need stars that provide energy within specific ranges for long periods of time
- in order for any kind of complex life to survive, we need planets with stable orbits that will not suffer from extreme temperature swings as it varies in distance from its star
- in order for any kind of complex life to survive, we need stable atomic structure
- in order for any kind of complex life to survive, we need to have chemical diversity and correct relative abundances of each element
- organic life has minimum requirements: process energy, store information, replicate, and you can't fulfill those functions if there is only one element, e.g. – hydrogen
- the energy level from the photons from the sun have to match the energy levels of the different elements in order to drive the chemical bonding needed for life
- These requirements for life of any imaginable type depend on the values of the constants and quantities. The constants and quantities cannot vary much from what they are, or the universe will lose the characteristics (above) that allow it to support complex life of any imaginable time
- For example, ratio of strong force to electromagnetic force:
  – if 2% larger, then no stable hydrogen, no long-lived stars, no compounds containing hydrogen, e.g. – water
  – if 5% smaller, no stable stars, heavy hydrogen would be unstable, few elements other than hydrogen

Evidence #4: initial conditions for habitability

- Universe: expansion rate of the universe must be fast enough to avoid a re-collapse, but slow enough to allow matter to clump together and form stars and planets for complex life to live on
- Planet: right distance from the star to get the right climate
- Planet: right mass to retain the right atmosphere

Evidence #5: origin of life and information theory

- It’s possible to explain every process in an automobile engine using plain old naturalistic mechanisms – no supernatural explanation is necessary to understand the processes
- But the existence of engine itself: engineering all the parts has to be explained by the work of an intelligence
- Similarly, we can understand how living systems work, but the existence of the living systems requires an intelligence
- Even the simplest living system has to perform minimal function: capture energy, store information and replicate
- Living systems are composed of objects like proteins that are composed of sequences of components complex such that the order of the components gives the overall structure function
- Developing the components for a simple living cell is very improbable – even given the large number of galaxies, stars and planets in the universe, it is unlikely that complex, embodied life would exist *anywhere* in the universe

Evidence #6: more initial conditions for habitability

- Location within the galaxy: you need to be away from the center of the galaxy, because the explosions from dying stars, and excessive radiation will kill life
- Location within the galaxy: you need to be close enough to the center in order catch the heavy elements you need for life from the explosions of other stars
- Location within the galaxy: the best location is between two arms of a spiral galaxy, where you can get the heavy elements you need from dying stars, but without being hit with explosions and harmful radiation
- Star mass: determines rate at which the sun burns, determines the energy level of photons that are used to drive chemical bonding reactions, determines the length of time the star will be stable
- Star mass: star mass must be the correct value in order to allow liquid water on the planet’s surface, while still preserving stable orbit

I wish there was more curiosity about science in churches, and young Christians understood *how critical science is* for grounding the rationality of the Christian worldview. We need to be training up more scientists who think about the big questions, like Dr. Walter Bradley.

Peter Williams lectures on the historical reliability of the gospels

May 14, 2023 | by Wintery Knight | Link | Original Link

This is a lecture I found from British historian Dr. Peter J. Williams.

Here's the main lecture: (54 minutes)

And here's the Q&A: (9 minutes)

About Peter Williams:

> **Peter J. Williams** is the Warden (CEO) of Tyndale House and a member of the Faculty of Divinity in the University of Cambridge. He received his MA, MPhil and PhD, in the study of ancient languages related to the Bible from Cambridge University. After his PhD, he was on staff in the Faculty of Divinity, Cambridge University (1997–1998), and thereafter taught Hebrew and Old Testament there as Affiliated Lecturer in Hebrew and Aramaic and as Research Fellow in Old Testament at Tyndale House, Cambridge (1998–2003). From 2003 to 2007 he was on the faculty of the University of Aberdeen, Scotland, where he became a Senior Lecturer in New Testament and Deputy Head of the School of Divinity, History and Philosophy. In July 2007 he became the youngest Warden in the history of Tyndale House. He also retains his position as an honorary Senior Lecturer in Biblical Studies at the University of Aberdeen.

Summary of the lecture:

- What if the stories about Jesus are legendary?
- were the gospels transmitted accurately?
- were the gospels written in the same place as where the events happened?
- do the gospel authors know the customs and locations where the events happened?
- do the gospels use the right names for the time and place where the events took place?
- do the gospels disambiguate people's names depending on how common those names were?
- how do the New Testament gospels compare to the later gnostic gospels?
- how do the gospels refer to the main character? How non-Biblical sources refer to Jesus?
- how does Jesus refer to himself in the gospels? do the later Christians refer to him that way?
- how does Jesus teach? do later Christians teach the same way?
- why didn't Jesus say anything about early conflicts in the church (the Gentiles, church services)?
- did the writers of the gospels know the places where the events took place?
- how many places are named in the gospels? how about in the later gnostic gospels?

- are the botanical details mentioned in the gospels accurate? how about the later gnostic gospels?

And here are the questions from the audience:

- how what about the discrepancies in the resurrection narratives that Bart Ehrman is obsessed with?
- what do you think of the new 2011 NIV translation (Peter is on the ESV translation committee)?
- how did untrained, ordinary men produce complex, sophisticated documents like the gospels?
- is oral tradition a strong enough bridge between the events and the writers who interviewed the eyewitnesses?
- what does the name John mean?
- why did the gospel writers wait so long before writing their gospels?
- do you think that Matthew and Luke used a hypothetical source which historians call "Q"?
- which gospel do critical historians trust the least and why?

I really enjoyed watching this lecture. He's getting some of this material from Richard Bauckham's awesome book "Jesus and the Eyewitnesses", so if you aren't familiar with it, you can get an idea of what's in it. Peter Williams is a lot of fun to listen to – an excellent speaker.

And you can listen to the Peter Williams vs Bart Ehrman debate. That link contains a link to the audio of the debate as well as my snarky summary. It's very snarky.

Dr. James Tour to debate evolutionist on the origin of life this Friday

May 15, 2023 | by Wintery Knight | Link | Original Link

Yes, there will be a live stream. Yes, it will be open to the public.

Dr. James Tour is famous among Christians for his accurate, informed skepticism about naturalistic theories of the origin of life. But how would his ideas survive attacks from a critic? We're about to find out.

- **ABOUT:**

Join us for an exciting debate between Dr James Tour and Dave Farina on The Science of Abiogenesis.

This in-person event will take place on Fri May 19 at 7:00 PM CST in Keck Hall 100, Houston, TX and will be streamed LIVE on YouTube!

Dr. James Tour is a world-renowned scientist and professor of chemistry at Rice University. He will be presenting evidence that he believes demonstrate huge problems and hype in the origin of life field.

Dave Farina is a prominent atheist and Youtuber who will argue for the theory of abiogenesis, the idea that life arose from non-living matter through natural processes.

Join us Friday May 19 at 7PM CT at Rice University or ONLINE to for this highly anticipated event! See more at tourvsfarina.com

- **TOPIC:**

ARE WE CLUELESS ABOUT THE ORIGIN OF LIFE?

- **WHEN:**

May 19th, 2023, at 7 PM CT

- **WHERE:**

Stream the debate LIVE at watch.tourvsfarina.com. It's the ONLY place to watch the debate between Dr. James Tour and Dave Farina LIVE from Rice University on May 19th at 7 PM CT.

If you are near Houston, then you can attend in person. I'm going to be watching the live stream, instead:

It's being streamed via YouTube.

As an introduction to the debate, recall that there are 3 parts to the origin of life problem.

- First, you have to come up with the building blocks of the components.
- Second, you have to sequence the building blocks correctly to build the components.

- Third, you have to assemble the components into a living, self-replicating cell.

All three of these areas are challenging for atheists who believe that life was not created by an intelligent agent.

I remember learning about professor Dave from this recent article from Evolution News:

> The saga of renowned organic chemist James Tour and atheist YouTube personality Dave Farina continues in the second season of Tour's video series on the origin of life. As a recap of Season 1, Farina responded to Tour's critique of origin-of-life research with a critique of Tour's claims. Tour then created a 14-part video series detailing the multitude of errors in Farina's response. It also serves as an advanced tutorial on the dismal state of origin-of-life research.
>
> Farina in turn responded to Tour's video series with two new videos (here, here) that included interviews with three scientists: Lee Cronin, Bruce Lipshutz, and Steve Benner. Cronin and Benner are considered leading origin-of-life researchers, and Lipshutz is a highly respected synthetic chemist. Their testimony was intended both to discredit Tour's assessment of the field and to assure viewers that researchers are making steady progress in unraveling the mystery of life's origin. Tour's new series exposes that the truth is the exact opposite.

That post by Brian Miller is excellent. You can drill down as far as you want to, but if you just are new to the topic, he gives you the big picture.

I thought this part was interesting:

> The most problematic interview was with Bruce Lipshutz, describing his design of surfactant molecules that enable amide/peptide bonds. Farina claimed that Lipshutz was challenging Tour's statement that amino acids do not spontaneously link together in water. The problem is that Lipshutz sent Farina the video clip about his research for a completely different purpose. He was unaware Farina used the clip to challenge Tour's claim, and he never even saw Tour's video. Most importantly, Lipshutz was not linking together amino acids, and he was not performing the chemistry in water but in a hydrophobic pocket (here, here).
>
> What Farina did not know was that Tour has been friends with Lipshutz for nearly forty years, so he emailed Lipshutz asking him about his comments. Lipshutz not only stated that he was unaware he was in Farina's video, but he acknowledged that his research is irrelevant to the question of amino acids linking into chains in water.

And this is very direct:

> Farina is a committed atheist who has demonstrated that he is not encumbered by the same ethical standards that James Tour is. He is also not trained in the

> chemistry that Tour addressed in his videos, so his misrepresentation of the science is not surprising. What was far more disturbing to Tour was the extent to which Cronin and Benner exaggerated the relevance of their experiments to the question of life's origin.

So, there is a lot of deception, intentional or unintentional, going on from the naturalistic side of the debate.

When my YEC friend told me how excited he was about this debate, I had an idea about why he was. And I think it's because Professor Dave has been talking about things he doesn't understand for a long time on social media. I knew that he didn't have the same credentials as Dr. Tour, who works in the labs and publishes research. So a YouTuber with a large following is going up against a specialist with real-world knowledge and experience. So, we are looking forward to a public resolution of this debate. A lot of non-Christians who have been following Dave are about to have their worldview rocked.

Are Mormon doctrines supported by philosophy, science and history?

May 16, 2023 | by Wintery Knight | Link | Original Link

This post presents evidence against Mormonism/LDS in three main areas. The first is in the area of science. The second is in the area of philosophy. And the third is in the area of history.

The scientific evidence

First, let's take a look at what the founder of Mormonism, Joseph Smith, believes about the origin of the universe:

> "The elements are eternal. That which had a beggining will surely have an end; take a ring, it is without beggining or end – cut it for a beggining place and at the same time you have an ending place." ("Scriptural Teachings of the Prophet Joseph Smith", p. 205)
>
> "Now, the word create came from the word baurau which does not mean to create out of nothing; it means to organize; the same as a man would organize materials and build a ship. Hence, we infer that God had materials to organize the world out of chaos – chaotic matter, which is element, and in which dwells all the glory. Element had an existance from the time he had. The pure principles of element are principles which can never be destroyed; they may be organized and re-organized, but not destroyed. They had no beggining, and can have no end." ("Scriptural Teachings of the Prophet Joseph Smith", p. 395)

A Mormon scholar named Blake Ostler summarizes the Mormon view in a Mormon theological journal:

> "In contrast to the self-sufficient and solitary absolute who creates *ex nihilo* (out of nothing), the Mormon God did not bring into being the ultimate constituents of the cosmos — neither its fundamental matter nor the space/time matrix which defines it. Hence, unlike the Necessary Being of classical theology who alone could not *not* exist and on which all else is contingent for existence, the personal God of Mormonism confronts uncreated realities which exist of metaphysical necessity. Such realities include inherently self-directing selves (intelligences), primordial elements (mass/energy), the natural laws which structure reality, and moral principles grounded in the intrinsic value of selves and the requirements for growth and happiness." (Blake Ostler, "The Mormon Concept of God," *Dialogue: A Journal of Mormon Thought 17* (Summer 1984):65-93)

So, Mormons believe in an eternally existing universe, such that matter was never created out of nothing, and will never be destroyed. But this is at odds with modern cosmology.

The Big Bang cosmology is the most widely accepted cosmology of the day. It denies the past eternality of the universe. This peer-reviewed paper in an astrophysics journal explains. (full text here)

Excerpt:

> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Christian cosmology requires such a creation out of nothing, but this is clearly incompatible with what Mormons believe about the universe. The claims about the universe made by the two religions are in disagreement, and we can test *empirically* to see who is right, using *science*.

Philosophical problems

Always Have a Reason contrasts two concepts of God in Mormonism: Monarchotheism and Polytheism. It turns out that Mormonism is actually a polytheistic religion, like Hinduism. In Mormonism, humans can become God and then be God of their own planet. So there are many Gods in Mormonism, not just one.

Excerpt:

> [T]he notion that there are innumerable contingent "primal intelligences" is central to this Mormon concept of god (P+M, 201; Beckwith and Parrish, 101). That there is more than one god is attested in the *Pearl of Great Price*, particularly Abraham 4-5. This Mormon concept has the gods positioned to move "primal intelligences along the path to godhood" (Beckwith and Parrish, 114). Among these gods are other gods which were once humans, including God the Father. Brigham Young wrote, "our Father in Heaven was begotten on a previous heavenly world by His Father, and again, He was begotten by a still more ancient Father, and so on…" (Brigham Young, *The Seer*, 132, quoted in Beckwith and Parrish, 106).
>
> […]The logic of the Mormon polytheistic concept of God entails that there is an infinite number of gods. To see this, it must be noted that each god him/herself was helped on the path to godhood by another god. There is, therefore, an infinite regress of gods, each aided on his/her path to godhood by a previous god. There is no termination in this series. Now because this entails an actually

> infinite collection of gods, the Mormon polytheistic concept of deity must deal with all the paradoxes which come with actually existing infinities…

The idea of counting up to an actual infinite number of things by addition (it doesn't matter what kind of thing it is) is problematic. See here.

More:

> Finally, it seems polytheistic Mormonism has a difficulty at its heart–namely the infinite regress of deity.
>
> […]Each god relies upon a former god, which itself relies upon a former god, forever. Certainly, this is an incoherence at the core of this concept of deity, for it provides no explanation for the existence of the gods, nor does it explain the existence of the universe.

Now let's see the historical evidence against Mormonism.

The historical evidence

J. Warner Wallace explains how the "Book of Abraham", a part of the Mormon Scriptures, faces historical difficulties.

The Book of Abraham papyri are not as old as claimed:

> Mormon prophets and teachers have always maintained that the papyri that was purchased by Joseph Smith was the actual papyri that was created and written by Abraham. In fact, early believers were told that the papyri were the writings of Abraham.
>
> […]There is little doubt that the earliest of leaders and witnesses believed and maintained that these papyri were, in fact the very scrolls upon which Abraham and Joseph wrote. These papyri were considered to be the original scrolls until they were later recovered in 1966. After discovering the original papyri, scientists, linguists, archeologists and investigators (both Mormon and non-Mormon) examined them and came to agree that the papyri are far too young to have been written by Abraham. They are approximately 1500 to 2000 years too late, dating from anywhere between 500 B.C. (John A. Wilson, Dialogue: A Journal of Mormon Thought, Summer 1968, p. 70.) and 60 A.D. If they papyri had never been discovered, this truth would never have come to light. Today, however, we know the truth, and the truth contradicts the statements of the earliest Mormon leaders and witnesses.

The Book of Abraham papyri do not claim what Joseph Smith said:

> In addition to this, the existing papyri simply don't say anything that would place them in the era related to 2000BC in ancient Egypt. The content of the papyri would at least help verify the dating of the document, even if the content had been transcribed or copied from an earlier document. But the papyri simply tell us about an ancient burial ritual and prayers that are consistent with Egyptian

> culture in 500BC. Nothing in the papyri hints specifically or exclusively to a time in history in which Abraham would have lived.

So there is a clear difference hear between the Bible and Mormonism, when it comes to historical verification.

There are Roman Catholics in my family but I'm not one: why not?

May 17, 2023 | by Wintery Knight | Link | Original Link

I am re-posting this post because recently a well-known Christian apologist changed his worldview from Protestant to Catholic, and I thought I would explain why I have not done so.

In this post, I explain why I'm not Roman Catholic. And I also explain how Protestant Christians arrive at their beliefs. We'll start with J. Warner Wallace on Purgatory, then I'll go second.

Purgatory

Here's the first article from Cold Case Christianity, by the Master of the Evidence J. Warner Wallace. He writes about the Roman Catholic doctrine of purgatory, and his experience with studying and then rejecting it.

Here is his introduction:

> The notion of purgatory assumes many of us die with unforgiven sins that need to be purged from our account; some of us are not good enough to go to heaven, but not bad enough to go to hell. Purgatory, therefore, is a temporary, intermediate place (or state of being) where good deeds and works can be performed in order to purge our impurity prior to our final destiny with God. Although millions of Catholics believe purgatory to be a reality, the idea needs to be tested in light of the Scripture. Is purgatory something we, as Bible believing Christians, should accept as true?

He's got a stack of Bible verses to make two points against Purgatory: first, that Jesus' death on the cross is sufficient to atone for *all* our rebellion against God, and we don't need to endure any suffering or punishment to supplement it. And second, the teaching about the afterlife in the Bible says that believers are immediately ushered into the presence of God after they die (without resurrection bodies, yet), while unbelievers are separated away from God.

Here's what he says about the first point:

> **Our Salvation Isn't Based On Our Good Works**
> According to the Biblical doctrine of Salvation, forgiveness is not based on the good works of the believer. For this reason, deeds or works performed for those in purgatory are both unnecessary and ineffectual:
>
> **Romans 3:21-24, 27-28**
> But now a righteousness from God, apart from law, has been made known, to which the Law and the Prophets testify. This righteousness from God comes through faith in Jesus Christ to all who believe. There is no difference, for all have

> sinned and fall short of the glory of God, and are justified freely by his grace through the redemption that came by Christ Jesus… Where, then, is boasting? It is excluded. On what principle? On that of observing the law? No, but on that of faith. For we maintain that a man is justified by faith apart from observing the law.
>
> **Romans 8:1**
> Therefore, there is now no condemnation for those who are in Christ Jesus, because through Christ Jesus the law of the Spirit of life set me free from the law of sin and death. For what the law was powerless to do in that it was weakened by the sinful nature, God did by sending his own Son in the likeness of sinful man to be a sin offering.
>
> **Our Salvation Is Based On Jesus' Work on the Cross**
> According to the Biblical doctrine of Salvation, Jesus' work on the cross (His blood) purifies us from allsin. For this reason, there isn't a lingering sin problem requiring the existence of a place like purgatory:
>
> **Titus 2:13-14**
> …we wait for the blessed hope—the glorious appearing of our great God and Savior, Jesus Christ, who gave himself for us to redeem us from all wickedness and to purify for himself a people that are his very own, eager to do what is good.
>
> **1John 1:7b**
> …the blood of Jesus, his Son, purifies us from all sin.
>
> **1John 1:9b**
> …he is faithful and just and will forgive us our sins and purify us from all unrighteousness.
>
> **1John 2:2**
> He is the atoning sacrifice for our sins, and not only for ours but also for the sins of the whole world.
>
> **Hebrews 10:14**
> …because by one sacrifice he has made perfect forever those who are being made holy.
>
> **Our Salvation Has, Therefore, Already Been Guaranteed**
> According to the Biblical doctrine of Salvation, Jesus has already purified and purged believers of sin based on our faith in Him. For this reason, there is no need for a place like Purgatory where additional purging must be performed…
>
> […]The Biblical doctrine of Salvation clearly eliminates the need for purgatory.

I was never able to find anything in the Bible to support purgatory. It's a very very late doctrine that was unknown to the early church until the late 2nd / early 3rd century, where it is spoken about by a handful of people. But lots of weird doctrines were creeping up on the fringe around that time, so we shouldn't be surprised… the point is that they have no support from the Bible, and not in the community of believers for the first 150

years after the death of Jesus.

The bodily assumption of Mary

Anyway, my turn now. The Roman Catholic church teaches that Mary was "bodily assumed" into Heaven. Let's see if that is in the Bible or in the early church.

Here's what I found:

1. To be a Roman Catholic, you need to believe in Papal infallibility in matters of dogma.
2. In 1950, the Pope pronounced the assumption of Mary to be infallible dogma.
3. This pronouncement was solicited by a petition featuring over 8 million signatures.
4. There is no historical record of this doctrine in the Bible.
5. No early church father mentions the assumption until 590 AD.
6. Documents dated 377 AD state that no one knows how Mary died.
7. The assumption appears for the first time in an apocryphal gospel dated about 495 AD.

Data

I only cite Roman Catholic sources for my facts.

6. "But if some think us mistaken, let them search the Scriptures. They will not find Mary's death; they will not find whether she died or did not die; they will not find whether she was buried or was not buried … Scripture is absolutely silent [on the end of Mary] … For my own part, I do not dare to speak, but I keep my own thoughts and I practice silence … The fact is, Scripture has outstripped the human mind and left [this matter] uncertain … Did she die, we do not know … Either the holy Virgin died and was buried … Or she was killed … Or she remained alive, since nothing is impossible with God and He can do whatever He desires; for her end no-one knows." (Epiphanius, Panarion, Haer. 78.10-11, 23. Cited by Juniper Carol, O.F.M. ed.,*Mariology*, Vol. II (Milwaukee: Bruce, 1957), pp. 139-40).

7. "The idea of the bodily assumption of Mary is first expressed in certain transitus–narratives of the fifth and sixth centuries. Even though these are apocryphal they bear witness to the faith of the generation in which they were written despite their legendary clothing. The first Church author to speak of the bodily ascension of Mary, in association with an apocryphal transitus B.M.V., is St. Gregory of Tours." (Ludwig Ott, *Fundamentals of Catholic Dogma*(Rockford: Tan, 1974), pp. 209–210).

It should be noted that the apocryphal gospel in which the doctrine of the assumption of Mary first appeared was condemned as heretical by two Popes in the 5th and 6th centuries. However, I was not able to find a CATHOLIC source for this fact, so I deliberately chose not to use it in my case.

Conclusion

The first thing I want to say is that the Bible is not the only place you look to decide these issues. You also look in church history, and you are looking for a clear chain of custody of

the doctrine as far back as it can go. Purgatory and the perpetual virginity of Mary have some track record, but the bodily assumption of Mary is just nowhere – not in the Bible, not in the Early Church fathers. So that's the silver bullet against Roman Catholicism, since they made it "infallible".

This post is more directed to non-Christians to sort of show you how we do our homework. I am the first Protestant in my family. We have half the family who is Muslim, and the other half mostly Hindu, with some Catholic. I had to debate all these people growing up, and I wiped the floor with them. It was not even close. I simply settled on the beliefs that allowed me to win every argument, every time. That's how you do religion. If you have to go against your whole family in order to be right, you do it. It's not good to be wrong about things just because that's what your family believes. These things were not pushed hard on me by my parents, I studied them on my own in order to win arguments. After a while of winning, I found myself acting consistently with what I was arguing for. Although that might sound really weird to you, that's probably the right way to do this. Don't listen to parents and church, find your own way forward by winning arguments, and believing only what the evidence supports.

Although most people think that if I had kids, I'd bully them into my beliefs, I actually would not. Because that's not what worked on me. What really works is fighting about evidence, welcoming questions, and allowing differences of opinion. Being free to pursue truth is more important in the long run than coercing your kids to act nicely.

Supporting baby ending means supporting sex-selection baby ending

May 18, 2023 | by Wintery Knight | Link | Original Link

Is it OK to end a baby just because she is not a boy? If you're conservative, or a Christian, then you probably think that's morally wrong. It's a living being with a human DNA signature that is distinct from the mother's DNA and the father's DNA. But, if you're a secular leftist, then that's a perfectly good reason for ending a baby. After all, they have to keep the good times rolling, don't they?

Here's an article from the far-left The Atlantic (link goes to archive.is, not The Atlantic) where they interview a doctor who performs sex-selection baby ending.

Excerpt:

> He specializes in ab*rt**ns late in pr*gn*ncy—the rarest, and most controversial, form of ab*rt**n. This means that H**n ends the pr*gn*ncies of women who are 22, 25, even 30 weeks along.
>
> […]In the 1970s, physicians did not induce f*t*l demise during ab*rt**n, and once or twice, during a procedure at 15 or 16 weeks, he used forceps to remove a f*t*s with a still-beating heart. The heart thumped for only a few seconds before stopping.
>
> […]The reason doesn't really matter to H**n. Medical viability for a f*t*s—or its ability to survive outside the uterus—is generally considered to be somewhere from 24 to 28 weeks. H**n, though, believes that the viability of a f*t*s is determined not by g*st*tional age but by a woman's willingness to carry it…he'll take the case—usually up until around 32 weeks…
>
> […]H**n had told me about a woman who'd sought an ab*rt**n because she didn't want to have a baby girl. I thought he had refused. But when I followed up to ask him why, I learned that I had misunderstood… It was their choice to make, he explained.

Keep in mind that sex-selection baby ending is supported by all Democrat voters. Regardless of what they say with words, when it comes to policy, they want sex-selection baby ending to be legal. And if you disagree with it, then the FBI and DOJ think that you are a domestic terrorist for disagreeing with it. So please be extremely careful in the comments, as the federal government doesn't look kindly on people who disagree with them on this issue. And the only way to stop that is to win the next election.

When arguing this issue, I find it useful to get the person to agree that if the woman can choose to end the baby for any reason, or for no reason at all, then there are no limits. Sex-selection baby ending is OK. Race-selection baby ending is OK. And if the woman just changes her mind about wanting the baby, then that's fine, too.

In the interview, the doctor talks about the "white supremacy" of his opponents. This is

despite the fact that a disproportionately large number of baby endings are performed on non-white mothers. In fact, the practice was started by white supremacists who wanted to eliminate races that they didn't think much of. And the doctor is helping them to achieve that goal, although he's smart enough to lie about it, in order to help himself to feel good about taking in the fees. He's being paid a lot of money to do what he does. Just like the slave owners made a lot of money off of their slaves. Every single individual person who supports baby ending today would have supported slavery in those times. It's the same argument – dehumanize a group people in order to make more money.

I'm posting this so that when you argue this issue, you bring up these cases of sex-selection and race-selection, and make your opponent sign off on them. Don't listen to their evasive words. "I'm a moderate" "I'm a centrist" "I'm politically homeless". If they voted for Biden, they support these cases. The words don't matter. Only their actions matter. Secular leftists like to talk to themselves about how reasonable they are. And it sounds so good to them. They feel better. They talk themselves out of the responsibility for their actions. "I'm not a bad person for destroying people made in the image of God" they say. But happy talking to yourself doesn't work on The Judge.

Again, be careful in the comments.

Paternity fraud case shows how pro-marriage conservatives see men as expendable

May 19, 2023 | by Wintery Knight | Link | Original Link

When terrible things happen to men in this society, you often get comments from people saying “well, it’s his fault, he chose a bad woman”. And I agree that men often make poor choices because they focus on attraction instead of on character. But what if a man is an innocent bystander, and is falsely accused by a woman he doesn’t even know? Is it still his fault then?

Here is the news story from Fox 2 Detroit.

Excerpt:

> A Metro Detroit man cleared his name after Friend of the Court sent him a letter saying he had a baby with a woman he never met.
>
> “She don’t know me, how do you just put my name down? How do you just put anybody’s name down?” DeAngelo Smith said. “I don’t know her. Never seen her. Still to this day, haven’t talked to her, and it just proves the baby has no ties to my name.”
>
> Late last year, DeAngelo received a letter from Friend of the Court in Berrien County saying that he was the father of a baby girl.

His wife was the first to see the accusation:

> His wife first spotted the letter in the mail from Friend of the Court.
>
> “Let’s just set the record, I trust my husband,” Tyahvia Smith said. “I know his character, man of integrity.”

They contacted his employer:

> While waiting for the child’s mother to take the baby for a DNA test, DeAngelo said the school where he teaches received an inquiry for possible garnishment in case the child was his.
>
> “It made it something that is not being alleged, but now it’s something that’s being taken into action and no paternity has been established,” he said.
>
> Finally, the woman had the DNA test done, and DeAngelo has since gotten a letter confirming he was not the father.

Legislation introduced by Republican Jim Runestad to prevent this from happening has been tied up for eight years… in a Republican-led legislature:

> “It’s very unfortunate, but paternity fraud is not a unique, unusual situation in Michigan,” Sen. Jim Runestad (R-White Lake) said.
>
> Runestad said he has been pushing for new legislation on the matter for the past

> eight years. Currently, there is no penalty for lying and a DNA test is not required before a person is contacted about the paternity of the child.

The fact that there are no consequences for doing this means that women are going to keep doing it again and again.

Does masculinity mean that a man should give a woman whatever she wants?

I sent this story to a conservative pro-marriage friend, and she said "So what? How many times does something like this happen?" Her only concern was that this story made women look bad. She had previously told me that "masculinity is when a man uses his strength to protect and provide for women". So, then it is just "masculine" for this innocent man to pay for a child who isn't his own. Why would he object to paying? Does he not like children?

Most people today like the changes that feminism has made for women. They like public schools run by women that discriminate against boys. They like women taking out huge student loans for useless non-STEM degrees, then demanding bailouts from taxpayers. They like women taking part in hook-up culture. They like women using no-commitment bad boys for validation. They like no-fault divorce laws. They like false accusations during divorce trials. They like biased domestic violence laws. They like paternity fraud. They like massive welfare spending designed to reward women who make reckless decisions. And they like feminist judges stripping fathers of parental rights for refusing to agree with the transing of their kids.

Men are expendable when it comes to creating greater happiness for women. So what's wrong with sending a man a bill for a woman who needs some money for a child that isn't his? It's horrible to tell a woman that she can't do what she feels like doing. It's horrible to tell a woman that she has to pay the costs of her own actions. Just make a man pay for it. Men are big and strong, they can handle it. And besides, women never tell lies. We have to believe all women. We have to force men to make women happy. That's "masculinity".

Society pressures men to get married

This "believe all women" attitude that is shared by many Christians and conservatives becomes a problem for men when men are pressured to get married. This society makes marriage a risky enterprise for men. And men have to understand that this pressure to get married is often coming from people who see men as expendable in the cause of increasing women's happiness. The person telling you to get married is often the same person who thinks that a DNA test shouldn't be performed in a paternity case.

Men have to understand that the command to "get married" is coming from pro-marriage activists who think that men exist solely to make women happy. Who cares about the risks and costs of marriage for men? Who cares about men's needs and desires? Who cares what reasons a man has for marrying? Who cares about a man's standards for his wife? Who cares about a man's plan for his marriage? He should just be pressured to get married. Just like the falsely accused paternity fraud victim should have to pay.

It's not the purpose of men's lives to get married and have kids

Always remember that according to the Bible, serving God is *more honorable* than getting married and having children. (Read 1 Cor 7:8-9 and 2 Tim 2:4) Many social conservatives try to guilt men into getting married and having children by denying the risks and costs of marriage for men. They think that Christianity's main purpose is to force men to make women happy, regardless of what women offer to men in exchange. That's the actual view of several of my social conservative Christian friends.

Men are designed to serve God first and foremost. And it's much easier to serve God if you are not encumbered by alimony, child support, false accusations, denial of due process, paternity fraud, feminist judges, etc. Only women who honor that obligation, and want to help a man to meet that obligation, should be taken seriously for marriage and child-rearing.

Does peer-reviewed research support a naturalistic origin of life?

May 20, 2023 | by Wintery Knight | Link | Original Link

So, on Friday night, there was a debate between Dr. James Tour and Professor Dave, an atheist with a bachelors degree who makes YouTube videos. The atheist spent his entire opening speech attacking Tour's character. When Tour asked him to show him origin of life chemistry, he refused. The atheist shuffled through papers he apparently found by Googling, and read the titles. When asked what was in them, he said that he couldn't remember.

But I was trying to decide who won the debate. There was one place where the atheist claimed that the early Earth had no molecular oxygen. He needs that to be true, in order for the chemistry that creates the building blocks of life to work. So I thought I would talk about a paper that refutes that. After my argument, I'll talk about another mistake that the atheist made in the debate. Based on those two mistakes, I concluded that the atheist was speaking errors either intentionally or unintentionally, and therefore lost the debate.

Here's a paper published in the prestigious peer-reviewed science journal *Nature*, entitled "The oxidation state of Hadean magmas and implications for early Earth's atmosphere".

Evolution News explains what the paper is about.

Excerpt:

> A recent *Nature* publication reports a new technique for measuring the oxygen levels in Earth's atmosphere some 4.4 billion years ago. The authors found that by studying cerium oxidation states in zircon, a compound formed from volcanic magma, they could ascertain the oxidation levels in the early earth. Their findings suggest that the early Earth's oxygen levels were very close to current levels.
>
> […]Miller and Urey conducted experiments to show that under certain atmospheric conditions and with the right kind of electrical charge, several amino acids could form from inorganic compounds such as methane, ammonia, and water. Several experiments have been done using various inorganic starting materials, all yielding a few amino acids; however, one key aspect of all of these experiments was the lack of oxygen.
>
> If the atmosphere has oxygen (or other oxidants) in it, then it is an oxidizing atmosphere. If the atmosphere lacks oxygen, then it is either inert or a reducing atmosphere. Think of a metal that has been left outside, maybe a piece of iron. That metal will eventually rust. Rusting is the result of the metal being oxidized. With organic reactions, such as the ones that produce amino acids, it is very important that no oxygen be present, or it will quench the reaction. Scientists, therefore, concluded that the early Earth must have been a reducing

> environment when life first formed (or the building blocks of life first formed) because that was the best environment for producing amino acids. The atmosphere eventually accumulated oxygen, but life did not form in an oxidative environment.
>
> The problem with this hypothesis is that it is based on the assumption that organic life must have formed from inorganic materials. That is why the early Earth must have been a reducing atmosphere. Research has been accumulating for more than thirty years, however, suggesting that the early Earth likely did have oxygen present.
>
> […]Their findings not only showed that oxygen was present in the early Earth atmosphere, something that has been shown in other studies, but that oxygen was present as early as 4.4 billion years ago. This takes the window of time available for life to have begun, by an origin-of-life scenario like the RNA-first world, and reduces it to an incredibly short amount of time. Several factors need to coincide in order for nucleotides or amino acids to form from purely naturalistic circumstances (chance and chemistry). The specific conditions required already made purely naturalist origin-of-life scenarios highly unlikely. Drastically reducing the amount of time available, adding that to the other conditions needing to be fulfilled, makes the RNA world hypothesis or a Miller-Urey-like synthesis of amino acids simply impossible.

If you read the paper's abstract, it finds that molecular oxygen would have been present by the end of the Hadean era. The earliest signs of life we have are from just after the end of the Hadean era. So, its undeniable that molecular oxygen was present. Did professor Dave lie, or was he just ignorant? One thing for sure, he pronounced that there was no oxygen in the same confident, insulting voice that he used for the rest of his presentation.

OK, so with that out of the way, Professor Dave also cited a paper in the journal *Science*. And there is an article on Creation.com by Johnathan Sarfati, who has a PhD in chemistry, about that very paper.

His post says:

> It's likely that the media reports you mention were referring to the paper in *Science* journal by Tracey Lincoln and Gerald Joyce.[1] Quite often, the media hype just doesn't match what was actually discovered. To be fair, Joyce, a well known chemical evolutionist, made it clear that he and his Ph.D. student Lincoln had not produced life, despite the headlines.[2] Much earlier, Joyce admitted:

> "The most reasonable assumption is that life did not start with RNA … . The transition to an RNA world, like the origins of life in general, is fraught with uncertainty and is plagued by a lack of experimental data."[3]

> Joyce and Lincoln started off with a fairly long RNA molecule. Given that nothing like RNA appears in Miller–Urey experiments, this already shows unjustified

> interference from an intelligent investigator. In fact, not even the building blocks, ribonucleotides, appear in such experiments, and they do not spontaneously form RNA. In fact, there are numerous chemical difficulties with obtaining RNA by blind undirected chemistry, the only sort allowed on the hypothetical primordial earth, as chemical evolutionist A.G. Cairns-Smith points out in his book Genetic Takeover4 (see extract at Cairns Smith: Detailed criticisms of the RNA world hypothesis). And it's a huge step from RNA to the genetic code, its major use today.

> Furthermore, this paper didn't demonstrate replication but ligation—joining two small RNA pieces, previously designed to be a match to the longer strand. So this research already assumed not just one but three RNA strands. For this to be relevant to chemical evolution, the two pieces just by chance had to have pretty close to the complementary base pairs of the first piece—natural selection could not be invoked before reproduction.
>
> Furthermore, since polymerization is unfavorable, the RNA pieces must be chemically activated in some way. Note that a catalyst merely accelerates the approach to equilibrium; it doesn't change it (see diagram and explanation in Dino proteins and blood vessels: are they a big deal?). The paper states that one of the two joining RNA strands has a triphosphate group on the end. This is very reactive, so would be an unlikely component of a primordial soup, and would not last long even if it appeared. So a supply of matching activated RNA pieces likewise shows unacceptable investigator interference.
>
> See also Does ribozyme research prove Darwinian evolution? for a critique of an earlier Joyce paper on alleged ribozyme evolution, as well as Self-replicating peptides? which has many similarities to the recent Joyce claim.

Now Tour seemed to let this problem drop in the debate. It just seems that Professor Dave was assuming from the titles of the papers that they were relevant to the problem of life. Well, scientists always sound optimistic in their papers. I know, I had to write one for my masters degree thesis, and it was published. That's why you have to look at the data and be skeptical. Sadly Dave wasn't able to be skeptical. He wanted something to be true, so he just didn't bother to interact with challenges to his view. The whole problem with the origin of life is that there are many counter-factual conditions, experimenter interferences, etc. that have to be done to make things work at all. Dave reads the titles of papers, but he just isn't aware of how the experimenters have adjusted the experiments in ways that are not true to the conditions on the early Earth.

Dr. Tour lost his temper and shouted a lot during the debate, so I don't think the debate is worth watching. However, if you want to watch a good debate on the origin of life, try this one between Dr. Fazale Rana vs Dr. Michael Ruse. And if you want to see a good explanation of the sequencing problem, check out this lecture by Dr. Stephen C. Meyer. (who has also debated atheists who didn't lie, shout or insult him – and they even had doctoral degrees)

Stephen C. Meyer and Keith Fox debate intelligent design and evolution

May 21, 2023 | by Wintery Knight | Link | Original Link

From Justin Brierley's "Unbelievable" podcast.

Details:

> Stephen Meyer is a leading proponent of Intelligent Design who directs the Centre for Science and Culture at the Discovery Institute in Seattle. His [first] book "Signature in the Cell" claims to show that the DNA code is the product of intelligent mind, not naturalistic processes. Keith Fox is Professor of Biochemistry at Southampton University. He chairs the UK Christians in Science network but disagrees strongly with ID. They debate how life could have originated and whether design is allowed as an explanation in science.

Download the MP3 here. (Direct link to file)

Summary: (stuff in italics is my snarky paraphrase)

Meyer:

- background and how he got interested in intelligent design
- his research focus is on the origin of life – the first replicator
- summarizes the history of origin of life studies
- authored the book "Signature in the Cell"
- the DNA enigma: where did the information in DNA come from?
- naturalistic explanations of the DNA information have failed
- but intelligent agents are known to be able to produce information
- the best explanation of the information in DNA is that an intelligent agent authored it
- Meyer's book was named by atheist philosopher of science Thomas Nagel as a Times Literary Supplement Book of the Year in 2010
- why is design so controversial? Many people think that Darwin explained why nature appears design
- the Darwinian view is that nature can create the appearance of design using mutation and selection
- however, Darwinian mechanisms cannot explain the origin of the first living cell, it assumes replication, and the origin of life is about where the first replicator comes from

Fox:

- Meyer's argument is not about the evolution of life after the first cell
- Meyer's case for design is about the origin of life

- naturalists do not know a naturalistic explanation for the origin of life
- there are a number of naturalistic hypotheses for the origin of life, like the RNA-first hypothesis
- maybe in a few years one of them will turn out to be correct
- what intelligent design is arguing from a gap in our current naturalistic knowledge to infer that God intervened in nature

Meyer:

- that's not what intelligent design is at all
- the approach ID theorists use is the inference to best explanation
- you evaluate all explanations, non-intelligent causes and intelligent causes
- you prefer the best possible explanation
- we know that minds are capable of producing information just like the information we find in DNA

Fox:

- living cells replicate, so they have the ability to introduce mutations as they replicate and then some of those mutations can be selected
- so maybe the process of replicating that living cells do created the first living cell
- maybe the first living cell created itself, X brought X into being, self-creation, what's irrational about that?

Meyer:

- the issue is the origin of life – where did the first living cell come from?
- you cannot appeal to the operations that a living cell can perform to explain the origin of the first living cell
- there was no first living cell operating before the first living cell
- there was no replication, mutation or selection before the first living cell
- in fact, in my book I show that there is no known naturalistic mechanism that is able to produce the information needed for the first living cell
- *nothing can create itself, that is self-contradictory*

Fox:

- Well, you are just saying that because something is complex that God did it

Meyer:

- Sadly, no. What I actually said needed to be explained was the information, not complexity
- And we know from software engineering that the process of adding information to code is performed by programmers
- in the absence of any adequate naturalistic explanation for information, we are

justified in taking the explanation that we are familiar with – namely, intelligent agency – based on our uniform, universal experience of what causes information

Fox:

- well, maybe we can appeal to the mutation and selection in existing living cells to explain the origin of the first living cell
- maybe there were living cells before the first living cell, and then these other living cells created the first living cell

Meyer:

- we can't keep invoking mutation and selection when those processes are not operating prior to the origin of the first living cell

Fox:

- well maybe some bare-bones self-replication molecule was a precursor to the first living cell

Meyer:

- even to generate very limited replicator would require a large amount of information
- the argument I am making is – where does the evolution come from?

Fox:

- well, maybe we will think of an explanation for information that is naturalistic in 20 years
- we've thought of explanations to things that were NOT information before
- so maybe we will be able to think of something to explain information based on our ability to explain NOT information before

Moderator: Change topics: the Dover decision

Meyer:

- the Discovery Institute opposed the policy that causes the trial
- the wording of the statute was poor
- the judge was completely wrong in his decision
- young earth creationists used the phrase "intelligent design" to cover their agenda
- intelligent design is an inference using the normal methods of science

Fox:

- intelligent design is a science stopper because it stops looking for a naturalistic explanation
- everything in nature must have a naturalistic explanation
- everything has to be explained using matter and time and chance

- it just has to be that way!!!!

Meyer:

- well, what luck would you have explaining an effect like Mt. Rushmore?
- can you explain that using matter,time and chance?
- Mt. Rushmore was the product of intelligence, not wind and erosion
- similarly, there is information in the cell, and we know that intelligence causes information

Fox:

- So you are saying that we don't understand and therefore an intelligence is necessary?

Meyer:

- no I am saying we DO understand and we are making an inference based on that understanding
- you are the one who is insisting on a material explanation because you pre-suppose materialism
- we know that minds have causal powers, and we can infer mind as an explanation from information

Fox:

- well nature is a seamless chain of material causes and effects

Meyer:

- agents can act without violating the laws of nature
- even humans can act as intelligent agents to create information in books, and they don't violate the laws of nature
- intelligent causes are real, and they explain effects in nature

Fox:

- you're trying to impose on science something to do with meaning and purpose

Meyer:

- no that's not what we're doing, we're inferring from from the fact that we ourselves are known causes of information to the fact that an intelligence cause is the best explanation for information in the cell

Fox:

- *but I am a materialist*, I need a materialist explanation

Meyer:

- mind IS an answer to the how question
- we infer to mind in many other scientific disciplines, like cryptography, archaeology, etc.
- a materialist might accuse an archaeologist of engaging in a “scribe-of-the-gaps” argument, but the best explanation of an artifact with information is a scribe
- we are inferring that mind is the cause from the nature of the effect: information

Moderator: is it appropriate to call DNA “information”
Fox:

- well DNA is just a molecular polymer, any reference to information is just by analogy

Meyer:

- DNA is a molecular polymer, but it also exhibits the property of specified complexity
- the arrangement of bases, which function as machine instructions in a software program, for performings task in the cell
- we have observed that the property of specified complexity always comes from an intelligence

Fox:

- well, maybe there are other sequences that would work, so maybe it’s really not uncommon to develop functioning sequences by chance alone, without an intelligence

Meyer:

- you can measure how precise the functional specificity is in DNA and proteins

Moderator: is Shannon information the same as functional information
Meyer:

- Shannon information refers to the sequences of digits or symbols that do not necessarily have any function, i.e. – a four character string QSZX has as much Shannon information as WORD. However, only the latter is functional against the pattern of the English language. There are arrangements of DNA bases and amino acids that have the same number of symbols/characters as a functional sequence would have, but they have no biological function – they do not exhibit specified complexity

Fox:

- Well, maybe there are lots and lots of sequences of DNA and proteins so that it is fairly easy to get a functional one by chance

Meyer:

- DNA sequences that are functional are extremely rare, protein sequences are even more rare
- this is not my opinion, this is what the research shows – functional protein sequences are rare

Fox:

- well maybe there are other functional sequences that are occur before the first functional sequence that are precursors to the first functional sequence
- maybe there are billions of years of replication, mutation and selection before the first replication, mutation and selection

Meyer:

- you can't get to the first selectable functional sequence by appealing to precursor selectable functional sequences – there are no selectable functional sequences before the FIRST one
- you have to get the first selectable functional sequence by chance alone, because there is nothing to mutate or select before the first replicator
- the chance hypothesis has been rejected because the minimal amount of information for the simplest replicator is too high to get by chance alone, given the resources, including time, that are available

Moderator: *Keith are you confident that naturalism will be able to substantiate these naturalism-of-the-gap speculations that you offer in response to Meyer's actual science that we have today?*

Fox:

- well, it is hard to know for sure because it was just a fluke event
- but there's nothing irrational or unscientific or miraculous about it – the fluke would have a material explanation
- there is nothing that we can detect that would implicate God, my speculations about a fluke which I cannot observe or measure or test would all be compatible with an atheistic worldview that omits God as a causal entity

Meyer:

- where are those material processes that could account for this fluke then?
- the whole point of this argument is that the information in DNA transcends the material components in the sequence
- it's the arrangement of the material parts/letters/characters/symbols/instructions that needs to be explained

Fox:

- Well, I just have a different philosophy of science that rules out intelligent causation a priori

Meyer:

- Yes, that’s the difference between us – you pre-suppose that all explanations of natural phenomena must exclude intelligent causes

There is a bit more where Meyer talks about how parts of the cell are implementations of various design patterns (Gang of Four design patterns) that are used by software architects who design software.

Stephen C. Meyer lectures on intelligent design and the origin of life

May 22, 2023 | by Wintery Knight | Link | Original Link

A MUST-SEE lecture based on Dr. Stephen C. Meyer's book "Signature in the Cell". One of my favorite 6 arguments for a Creator and Designer is the origin of the simplest replicating living system. When you look into the cell, what you'll find is carefully sequenced components that for complex structures, like proteins. In this lecture, you'll learn all about this "biological information".

I highly recommend watching the lecture, and looking at the slides. The quality of the video and the content is first class. There is some Q&A (9 minutes) at the end of the lecture.

Topics:

- intelligent design is concerned with measuring the information-creating capabilities of natural forces like mutation and selection
- Darwinists think that random mutations and natural selection can explain the origin and diversification of living systems
- Darwinian mechanisms are capable of explaining small-scale adaptive changes within types of organisms
- but there is skepticism, even among naturalists, that Darwinian mechanisms can explain the origin of animal designs
- even if you concede that Darwinism can account for all of the basic animal body plans, there is still the problem of life's origin
- can Darwinian mechanisms explain the origin of the first life? Is there a good naturalistic hypothesis to explain it?
- there are at least two places in the history of life where new information is needed: origin of life, and Cambrian explosion
- overview of the structure of DNA and protein synthesis (he has helpful pictures and he uses the snap lock blocks, too)
- the DNA molecule is composed of a sequence of bases that code for proteins, and the sequence is carefully selected to have biological function
- meaningful sequences of things like computer code, English sentences, etc. require an adequate cause
- it is very hard to arrive at a meaningful sequence of a non-trivial length by randomly picking symbols/letters
- although any random sequence of letters is improbable, the vast majority of sequences are gibberish/non-compiling code
- similarly, most random sequences of amino acids are lab-proven (Doug Axe's work) to be *non-functional gibberish*
- the research showing this was conducted at Cambridge University and published in

the Journal of Molecular Biology
- so, random mutation cannot explain the origin of the first living cell
- however, even natural selection coupled with random mutation cannot explain the first living cell
- there must already be replication in order for mutation and selection to work, so they can't explain the first replicator
- but the origin of life *is* the origin of the first replicator – there is no replication prior to the first replicator
- the information in the first replicator cannot be explained by law, such as by chemical bonding affinities
- the amino acids are attached like magnetic letters on a refrigerator
- the magnetic force sticks the letters ON the fridge, but they don't determine the specific sequence of the letters
- if laws did determine the sequence of letters, then the sequences would be repetitive
- the three materialist explanations – chance alone, chance and law, law alone – are not adequate to explain the effect
- the best explanation is that an intelligent cause is responsible for the biological explanation in the first replicator
- we know that intelligent causes can produce functional sequences of information, e.g. – English, Java code
- the structure and design of DNA matches up nicely with the design patterns used by software engineers (like WK!)

There are some *very good tips* in this lecture so that you will be able to explain intelligent design to others in simple ways, using everyday household items and children's toys to symbolize the amino acids, proteins, sugar phosphate backbones, etc.

Proteins are constructed from a sequence of amino acids:

A sequence of amino acids forming a protein

Proteins sticking onto the double helix structure of DNA:

Some proteins sticking onto the sugar phosphate backbone

I highly, highly recommend this lecture. You will be delighted and you will learn something.

Here is an article that gives a general overview of how intelligent design challenges. If you want to read something more detailed about the material that he is covering in the lecture above related to the origin of life, there is a pretty good article here.

There is a good breakdown of some of the slides with helpful flow charts here on Uncommon Descent.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature

Florida governor Ron DeSantis is stacking up achievements ahead of 2024 announcement

May 22, 2023 | by Wintery Knight | Link | Original Link

I've been blogging about DeSantis' achievements for some time, but a whole bunch of new ones just happened. I want to make sure that people have a good grasp on everything that he's is accomplishing. How else would you choose a candidate for president, except by looking at what battles he's fought and won? DeSantis has just visited Iowa and New Hampshire, and I'll cover that too.

So, here come the stories.

High tourism and low unemployment:

> Gov. Ron DeSantis' office celebrated that Florida witnessed a record 37.9 million visitors in the first quarter of 2023, the highest ever recorded in a quarter.
>
> That tally includes 34.6 million domestic visitors and 1.8 million international.
>
> […]Florida's unemployment rate also held at a low 2.6% for April, which the governor's office bragged is the lowest "among the top 10 largest states."

Florida's new six-week abortion ban:

> In a recent interview, Trump said that the six-week abortion ban recently signed into law by DeSantis may be "too harsh" in the eyes of "many people within the pro-life movement."
>
> […]"What are your thoughts on that?" DeSantis was asked.
>
> […]"As a Florida resident, you know, he didn't give an answer about, 'would you have signed the heartbeat bill that Florida did?'" he continued. "That had all the exceptions that people talk about the legislature put it in."
>
> […]"I signed the bill. I was proud to do it. He won't answer whether he would sign it or not."

No sex-reassignment surgeries on kids:

> Gov. Ron DeSantis signed a bill to ban sex reassignment surgeries and medications for minors Wednesday.
>
> […]State funds are prohibited from being used for these treatments. This includes state counties, municipalities, districts and commissions.
>
> Physicians are required to receive written informed consent from adults receiving the surgeries or prescriptions.
>
> The governor said it also gives the Florida courts temporary jurisdiction to intervene and halt procedures for out-of-state children.
>
> "You have actually some states in this country that want to be a haven for these

> types of procedures, and even welcome minors without their parents consent," DeSantis said. "We're obviously doing the opposite here."

No pronouns required in Florida schools:

> Gov. Ron DeSantis signed a bill into law Wednesday that will prohibit a school from requiring students and teachers to use preferred pronouns and adds guidelines for books that citizens wish to challenge in schools.
>
> "We're not doing the pronoun olympics in Florida. It's not happening here," DeSantis said.
>
> DeSantis said the law, HB 1069, makes sure that Florida students and teachers will "never be forced to declare pronouns in school, or be forced to use pronouns not based on biological sex."
>
> "There's a lot of nonsense that gets floated around and what we've said in Florida is, we are going to remain a refuge of sanity, and a citadel of normalcy, and kids should have an upbringing that reflects that," DeSantis said.

No kids at drag queen shows:

> Gov. Ron DeSantis signed a bill into law to penalize businesses and people who admit children into "adult live performances."
>
> […]The law authorizes Florida to fine, suspend, or revoke the license of any public establishment that admits a child to "adult live performances" that depict or simulate nudity, sexual conduct, or lewd exposure.

Pre-game prayer is allowed:

> Gov. Ron DeSantis signed legislation to protect youth sports in Florida on Wednesday, which will also allow high school teams to pray before games.
>
> […]"You have a right to free expression of religion. If government is denying your right to say a prayer before the game, they are infringing your speech, you're not violating anything, but by doing that, and so for them to do it is discriminatory," DeSantis said.

Add these actions to the list of previous DeSantis actions:

- universal school choice
- making collection of union dues optional for teachers
- flying illegal immigrants to Massachusetts
- elect conservatives to school boards
- teach students about the historical record of communism
- ban grooming of young children
- protect wildlife
- banning biological males from women's sports
- punishing Big Tech social media companies for censoring conservatives

Finally, let's see where DeSantis has been traveling to ahead of the 2024 GOP primaries.

Iowa:

> "Governing is not about entertaining. Governing is not about building a brand or talking on social media and virtue signaling,'" said DeSantis at a fundraising event in Sioux Center. "It's ultimately about winning and producing results."
>
> The Florida governor has emerged as the most formidable threat to Donald Trump's securing the GOP nomination.
>
> He's presented himself to voters as a staunch conservative without Trump's distinctive abrasiveness.
>
> Trump was scheduled to host his own Iowa event Saturday in Des Moines, but canceled the event due to a tornado warning.
>
> While Trump and his campaign have raged against DeSantis, the governor has been hesitant to criticize the ex-president who endorsed his gubernatorial campaign in 2018.
>
> DeSantis told voters that in order for conservatives to secure victories in the upcoming elections, they need to remain focused on the issues and "reject the culture of losing," appearing to reference Biden's 2020 election victory over Trump.
>
> "We must reject the culture of losing that has impacted our party in recent years. The time for excuses is over," DeSantis told prospective voters.
>
> "If we get distracted, if we focus the election on the past or on other side issues, then I think the Democrats are going to beat us again."

And New Hampshire:

> Florida Governor Ron DeSantis traveled to New Hampshire late this week where he met with voters, state lawmakers, and the state's governor just days ahead of his anticipated announcement that he will be running for president in 2024.
>
> DeSantis met with voters at the Red Arrow Diner in Manchester where he was very well received by many who thanked him for what he has accomplished in Florida.
>
> DeSantis, 44, focused on talking to voters in the Granite State about economic and family issues like school choice, tax cuts, crime, and inflation, The New York Times reported.
>
> […]DeSantis has been busy racking up large lists of endorsements in recent days, including 37 state lawmakers in Iowa, approximately 50 state lawmakers in New Hampshire, and 99 out of 113 Republicans in the Florida state legislature.
>
> […]"These fights are not easy," DeSantis said. "I think when you look, there's a reason why things have gotten crazy in this country, because there's a lot of powerful people that want it to be, a lot of institutions push that direction. When

> you kind of step out and you speak truth, you get a lot of blowback for that, but I think what I found in Florida is no governor ever received more incoming, I would say in modern history, than me, during my first term, particularly with COVID, but it really went on after that, a lot of narratives generated."

Interesting that he mentioned COVID, as Donald Trump recently criticized DeSantis for opening up his state, comparing him unfavorably to NEW YORK GOVERNOR ANDREW CUOMO. Yes, really. And you might remember that Trump issued commendations to "Operation Warp Speed" members, including Deborah Birx and Anthony Fauci. Something to think about.

Will computers and robots ever become self-aware?

May 23, 2023 | by Wintery Knight | Link | Original Link

There is a very famous thought experiment from UC Berkeley philosopher John Searle that all Christian apologists should know about. And now everyone who reads the Wall Street Journal knows about it, because of this article. (Full text available at archive.md)

In that article, Searle is writing about the IBM computer that was programmed to play Jeopardy. Can a robot who wins on Jeopardy be "human"? Searle says no. And his famous Chinese room example (discussed in the article) explains why.

Excerpt:

> Imagine that a person—me, for example—knows no Chinese and is locked in a room with boxes full of Chinese symbols and an instruction book written in English for manipulating the symbols. Unknown to me, the boxes are called "the database" and the instruction book is called "the program." I am called "the computer."
>
> People outside the room pass in bunches of Chinese symbols that, unknown to me, are questions. I look up in the instruction book what I am supposed to do and I give back answers in Chinese symbols.
>
> Suppose I get so good at shuffling the symbols and passing out the answers that my answers are indistinguishable from a native Chinese speaker's. I give every indication of understanding the language despite the fact that I actually don't understand a word of Chinese.
>
> And if I do not, neither does any digital computer, because no computer, qua computer, has anything I do not have. It has stocks of symbols, rules for manipulating symbols, a system that allows it to rapidly transition from zeros to ones, and the ability to process inputs and outputs. That is it. There is nothing else.

Here is a link to the full article by John Searle on the Chinese room illustration.

By the way, Searle is a naturalist – not a theist, not a Christian. Now, let's hear from a Christian scholar who can make more sense of this for us.

Here's a related article on "strong AI" by Christian philosopher Jay Richards.

Excerpt:

> Popular discussions of AI often suggest that if you keep increasing weak AI, at some point, you'll get strong AI. That is, if you get enough computation, you'll eventually get consciousness.
>
> The reasoning goes something like this: There will be a moment at which a computer will be indistinguishable from a human intelligent agent in a blind test. At that point, we will have intelligent, conscious machines.

This does not follow. A computer may pass the Turing test, but that doesn't mean that it will actually be a self-conscious, free agent.

The point seems obvious, but we can easily be beguiled by the way we speak of computers: We talk about computers learning, making mistakes, becoming more intelligent, and so forth. We need to remember that we are speaking metaphorically.

We can also be led astray by unexamined metaphysical assumptions. If we're just computers made of meat, and we happened to become conscious at some point, what's to stop computers from doing the same? That makes sense if you accept the premise—as many AI researchers do. If you don't accept the premise, though, you don't have to accept the conclusion.

In fact, there's no good reason to assume that consciousness and agency emerge by accident at some threshold of speed and computational power in computers. We know by introspection that we are conscious, free beings—though we really don't know how this works. So we naturally attribute consciousness to other humans. We also know generally what's going on inside a computer, since we build them, and it has nothing to do with consciousness. It's quite likely that consciousness is qualitatively different from the type of computation that we have developed in computers (as the "Chinese Room" argument, by philosopher John Searle, seems to show). Remember that, and you'll suffer less anxiety as computers become more powerful.

Even if computer technology provides accelerating returns for the foreseeable future, it doesn't follow that we'll be replacing ourselves anytime soon. AI enthusiasts often make highly simplistic assumptions about human nature and biology. Rather than marveling at the ways in which computation illuminates our understanding of the microscopic biological world, many treat biological systems as nothing but clunky, soon-to-be-obsolete conglomerations of hardware and software. Fanciful speculations about uploading ourselves onto the Internet and transcending our biology rest on these simplistic assumptions. This is a common philosophical blind spot in the AI community, but it's not a danger of AI research itself, which primarily involves programming and computers.

AI researchers often mix topics from different disciplines—biology, physics, computer science, robotics—and this causes critics to do the same. For instance, many critics worry that AI research leads inevitably to tampering with human nature. But different types of research raise different concerns. There are serious ethical questions when we're dealing with human cloning and research that destroys human embryos. But AI research in itself does not raise these concerns. It normally involves computers, machines, and programming. While all technology raises ethical issues, we should be less worried about AI research—which has many benign applications—than research that treats human life as a means rather than an end.

When I am playing a game on the computer, I know exactly why what I am doing is fun – I am conscious of it. But the computer has no idea what I am doing. It is just matter in motion. The computer's behavior is just the determined result of its programming and the inputs I supply to it. And that's all computers will ever do. Trust me, this is my field. I have the BS and MS in computer science, and I have studied this area. AI has applications for machine learning and search problems, but consciousness is not on the radar. You can't get there from here.

Target partners with Satan supporter on new transgender clothing line

May 24, 2023 | by Wintery Knight | Link | Original Link

Do you shop at Target? I stopped shopping there in 2004, when they banned the Salvation Army from their stores during the Christmas holiday season. At the time, I thought to myself "I wonder if this is being caused by an anti-Christian bias". And then more stories came out showing that they really might be. Let's take a look at some of Target's actions, and decide whether we should shop there.

Here's the story from The Federalist:

> Since 2012, Target has happily stocked the front of its stores with pro-LGBT T-shirts, accessories, pet items, party supplies, and decor. In recent years, Target expanded the reach of messages like "trans people will always exist," "queer," and "live laugh lesbian" to the children's section.
>
> […]Target furthered its commitment to advancing radical gender ideology this month when it partnered with a Satan supporter who called for the eradication of anyone who disagrees with the mutilation of children to supply transgender-themed merchandise to Target's "pride" collection.

Target is collaborating with "the U.K.-based brand Abprallen and its designer "Erik," a self-proclaimed "gay trans man".

But is Erik really a Satanist?

> One quick glance at the designer's website and Instagram shows dozens of designs featuring satanic and sacrilegious symbols such as pentagrams, "Satan respects pronouns" T-shirts, "gay as hell" stickers, and stained glass windows covered up by "trans bodies are holy."
>
> "So for me, Satan is hope, compassion, equality, and love. So, naturally, Satan respects pronouns. He loves all LGBT+ people. I went with a variation of Baphomet for this design, a deity who themself is a mixture of genders, beings, ideas, and existences. They reject binary stereotypes and expectations. Perfect," Erik wrote.
>
> […]One particularly graphic image on the designer's Instagram shows a naked demonic creature with a horned skull and mutilated breasts.
>
> In addition to promoting explicit evil, Erik often uses violent language and imagery, with products such as a "burn down the cis-tem" lighter, a "we bash back" mace, and "time's up for transphobes" skull pins to call for action against people who take issue with radical gender ideology and the dangerous mutilation and castration it prescribes. Erik also sells merchandise promoting the murder of babies in the womb.

One can only infer from this that Target supports all this as well. And if you shop there, then so do you. I disagree with all of that, because I'm a Bible-believing Christian and a Constitutional conservative. So I don't shop at Target.

This isn't the first time that Target has gotten into trouble with Christians and social conservatives.

You can see it in their bathroom policies.

Breitbart reports:

> The Target department store chain drew the ire of millions of Americans after it announced it was opening its bathrooms to transgender shoppers and employees and allowing them to choose whatever bathroom they feel like using at any given time.

And Christian Post notes:

> With that in mind, FRC compiled a list of 21 cases reported in the U.S. stretching back to 1999, but most within the last 10 years, where men violated the privacy of women in bathrooms, locker rooms, and other private spaces.
>
> The most recent case was reported on Jan. 17 by WPRI, concerning a man who mounted a camera inside the family bathroom at a Target store in Lincoln, Rhode Island.
>
> Umit Cakmak, 41, of Providence, was arrested by Lincoln police and charged with video voyeurism, with reports noting that the man already had an active warrant for the same crime.
>
> In a similar case from July 2016 in Idaho Falls, a man who identifies as transgender was arrested on one count of felony voyeurism for taking photos of another woman changing clothes at a Target store in Ammon.

And then of course there was the banning of the Salvation Army from the sidewalks outside of Target stores during the Christmas holidays.

Christian Post reports:

> Target shoppers won't be hearing the sound of bells ringing or a polite "Thank You" when they contribute to Salvation Army Kettle Drive this holiday season. The Salvation Army expects the enforcement of Target Corp's non-solicitation policy to hurt projected donations and cutback the ministry's services to the community.
>
> […]The decision will force many Salvation Army locations to reduce services to make ends meet. The Salvation Army in Metro Detroit has already suffered $1 million in income cutbacks this year and will lose the $220,671 in potential donations it collected last year at Target, which can fund 6,000 meals.
>
> "We're going to lose 112 days of food service for the hungry because of (Target's) decision," Russ Russell, Salvation Army executive director of

> development, told The Detroit News.

I’ll bet their Satanist friend really approved of that. Do you? Is it time to stop shopping at Target?

Unmarried 35-year-old woman reflects on her adventurous life of fun, travel and serial cohabitation

May 25, 2023 | by Wintery Knight | Link | Original Link

I found an interesting article featuring a 35-year-old woman who is alarmed that her approach to life has left her in debt and single, with a gap-filled resume of short-term jobs. I thought it might be useful for young women to read this, and consider whether making "rash" decisions and being "adventurous" works out.

She writes:

> I feel like a ghost. I'm a 35-year-old woman, and I have nothing to show for it. My 20s and early 30s have been a twisting crisscross of moves all over the West Coast, a couple of brief stints abroad, multiple jobs in a mediocre role with no real upward track. I was also the poster child for serial monogamy. My most hopeful and longest lasting relationship (three and a half years, whoopee) ended two years ago. We moved to a new town (my fourth new city), created a home together, and then nose-dived into a traumatic breakup that launched me to my fifth and current city and who-knows-what-number job.

Rash decisions, adventure, exploring…. and lots of debt:

> For all these years of quick changes and rash decisions, which I once rationalized as adventurous, exploratory, and living an "original life," I have nothing to show for it. I have no wealth, and I'm now saddled with enough debt from all of my moves, poor decisions, and lack of career drive that I may never be able to retire. I have no career milestones and don't care for my line of work all that much anyway, but now it's my lifeline, as I only have enough savings to buy a hotel room for two nights.

No STEM degree, which means she doesn't like to study hard things that can be tested against the real world for correctness:

> I used to consider myself creative — a good writer, poetic, passionate, curious. Now, after many years of demanding yet uninspiring jobs, multiple heartbreaks, move after move, financial woes, I'm quite frankly exhausted.

Surprised by aging and poor health:

> Also, within the past year I've had a breast-cancer scare and required surgery on my uterus due to a fertility issue. On top of that, I'm 35 and every gyno and women's-health website this side of the Mississippi is telling me my fertility is dropping faster than a piano falling out of the sky. Now I'm looking into freezing my eggs, adding to my never-ending financial burden, in hopes of possibly

> making something of this haunted house and having a family someday with a no-named man.

She's still trying to be the sexpot 25-year-old she used to be:

> I'm dating. I'm working out and working hard. Listening to music I enjoy and loving my cat. Calling my mom…. I'm drinking too much… And with men I date, I feel pressure to make something of the relationship too soon (move in, get married, "I have to have kids in a couple of years"; fun times!). **All the while still trying to be the sexpot 25-year-old I thought I was until what seemed like a moment ago.**

But her plan hasn't worked out:

> I used to think I was the one who had it all figured out. Adventurous life in the city! Traveling the world! Making memories! Now I feel incredibly hollow. And foolish. How can I make a future for myself that I can get excited about out of these wasted years? What reserves or identity can I draw from when I feel like I've accrued nothing up to this point with my life choices?

Well, I've known women like this, and I think we're going to see more and more women like this as the society becomes more secular and feminist. I want to say something about whether she is sincere about wanting to get married and have children, and what women should do to avoid ending up like her.

Do women today understand male nature and marriage?

This woman's demonstrated life plan is that she chose whatever made her feel good from age 18-35+, and now wants to enter into a marriage some time after age 35. And what does marriage mean to her? Has she prioritized entering the traditional roles of wife and mother? Don't listen to her words. Look at her actions. Her actions show that marriage and children were of NO importance to her. And her current approach to getting married and having kids is the same as ever – work out in order to look hot, and try to coerce a man who signs up for recreational sex with no commitment into becoming a man who makes a life-long commitment to provide for her and her children (which is the opposite of what he signed up for). She wants marriage now for the same reason that she's wanted anything: for fun, thrills, adventure and to keep up with her girlfriends who are already married.

What kind of man should she have been pursuing from age 18 to 35, if she really wanted marriage and children? Well, the first thing to realize is that not all men want marriage. And the next thing to realize is that women who are serious about marriage need to focus ONLY on men who want to marry. All the men that the women quoted above wanted in her youth didn't want to marry. They wanted premarital recreational sex with her, and that was fine with her – she chose them, and disregarded the men who were interested in marriage.

A man who was interested in marrying her would have:

- ….told her no to sex before marriage (because the more sexual partners a woman has, the less happy she will be in marriage, and the more unstable her marriage will be).
- …led her to become better at being a wife and mother, by discouraging her thrill-seeking, traveling and wasteful spending, and instead encouraging her focus on a STEM education, career and getting debt-free.
- …led her to develop a Christian worldview in which she would understand the importance of marriage and children, and learn to sacrifice her own interests to love and care for others.

Was she interested in getting ready for marriage? No. She never chose those marriage-minded men. She didn't want to be a wife. The men she chose were chosen for fun, for thrills, and to show off their outward appearance to her girlfriends.

So, who are the men in this group of marriage-minded men? How do you recognize them? Marriage-minded men are interested in marriage because they want to *lead a home*. They will have invested a lot of time learning how to protect others, how to provide, and how to debate and lead on moral and spiritual issues. Marriage-minded men see the marriage enterprise as a way of advancing the causes that they care about most. Women who *really* want to get married will recognize those men, and pursue those men. And they'll do it early, so that they can invest in their husbands early and be young enough to have children.

Ron DeSantis raises 1 million dollars in first hour after presidential announcement

May 25, 2023 | by Wintery Knight | Link | Original Link

I've already been blogging about Ron DeSantis' record of achievements as governor of Florida. DeSantis announced his candidacy on Twitter Wednesday night. 600,000 people wanted to listen, and it crashed Twitter's servers! After that, he went on Fox News to do an interview. We now have a good picture of what we would get from him as president on Day One.

Here's an article from Daily Caller about the Fox News interview:

> "I have always rejected the politicization of the weather and I think what we should be doing in the United States is focusing on being energy-independent and making sure that we are utilizing the resources… and oh, by the way, when you have market-based solutions and when you innovate, in Florida we have seen emissions go down dramatically in the last 10 years, but that is through market and innovation," DeSantis told Fox News host Trey Gowdy.

I like this. He is aware of how green energy policies have affected Germany and California. Those are the exact two examples I use on this blog, as well as Canada, which has seen its electricity prices skyrocket after going green.

> "What Biden wants to do, he wants to take us in a direction where we are like Germany where we don't have a reliable power grid, where prices spike," DeSantis said. "California for example, they have a tough time keeping the lights on, and yet they want to ban the internal combustion engine?"
>
> California has pushed to ban gas stoves, diesel trucks, and gas-powered lawn mowers and leaf-blowers in the name of combating climate change. In August, the state advised citizens not to charge electric vehicles to avoid potential blackouts.

One of the top issues of the 2024 campaign will be what to do about corruption and treason in federal law enforcement.

Daily Caller reports:

> "I would not keep Chris Wray as the director of the FBI, there would be a new one on day one, I think that's very important," DeSantis told Fox News host Trey Goudy. "In terms of an attorney general, you need someone that's got a very strong backbone. You need somebody that knows that if you are going in there and you are taking care of business, The Washington Post is not going to like you, The New York Times is not going to like you, you are going to get attacked by CNN and you have to wear that as a badge of honor."
>
> […]The FBI has frequently been accused of becoming politicized in cases

> involving pro-life advocates and parents protesting at school board meetings, and was involved in censorship of social media, according to documents released in the Twitter Files.
>
> "I think the DOJ and FBI have lost their way, I think they have been weaponized against Americans who think like you and me and I think they have become very partisan," DeSantis said. "Part of the reason that is happening is because Republican presidents have accepted the canard that the DOJ and FBI are 'independent.' They are not independent agencies, they are part of the executive branch, they answer to the elected president of the United States."
>
> Garrett O'Boyle, Stephen Friend and Marcus Allen testified at a hearing held by the House Judiciary Committee's Select Subcommittee on the Weaponization of the Federal Government Thursday about retaliation they faced after they raised concerns about FBI activities, noting their security clearances had been suspended, resulting in them losing their pay and health benefits.
>
> "If the FBI or DOJ, whatever collude with a tech company to try to censor information, everybody involved in that would be fired immediately if I were the president," DeSantis said. "And right now, I think those agencies have been able to go without any real accountability and so guess what, when there is no accountability, the bad behavior is going to continue."

You might remember that Trump appointed Director Wray, so this would be quite a change in policy. Trump also praised the work of COVID tyrants Deborah Birx and Anthony Fauci, praising them for their work in locking down the country. Meanwhile, DeSantis kept Florida open and got a lot of flak from the corporate news media.

DeSantis is running to the right of Trump on abortion. DeSantis signed a 6-week ban on abortion into law in Florida. Trump condemned the law, saying it was "too harsh".

Daily Caller reports:

> Florida Gov. Ron DeSantis said there is "a role" for the federal government in restricting abortions during a Fox News appearance Wednesday evening after he announced his candidacy for president.
>
> […]Florida's heartbeat bill, signed by DeSantis on April 13, restricts abortion after six weeks, with exceptions for rape, incest, human trafficking or when the life of the mother is in danger, and brought the state's abortion restriction down from 15 weeks gestation.
>
> […]Former President Donald Trump criticized DeSantis' signing of the bill, claiming many in the pro-life movement believe the abortion ban was "too harsh." DeSantis seemingly fired back at the former president's remarks, where he insisted it was "the right thing to do."
>
> "When we are acting to protect an unborn child that has a detectable heartbeat, that is humane, that is not harsh – that is the right thing to do," DeSantis said at the National Religious Broadcasters convention in Orlando, Florida, on Monday.

Daily Wire also posted an excellent article about DeSantis' announcement and his record of past achievements. And noted that DeSantis had raised $1 million in the first hour after the announcement. A lot of Trump's former campaign staff have moved over to DeSantis, so he'll have a good experienced team.

As far as I'm concerned, we have to make this election about achievements. If we choose a candidate based on his ability to clown around, insult people, and entertain us, that won't work to get results. Let's just pick the person who is known to get things done in the areas we care about.

New study: At least 1,130 adolescents received “gender-affirming” chest surgeries between 2016 and 2019

May 26, 2023 | by Wintery Knight | Link | Original Link

I have been seeing interesting tweets about the sudden popularity of transgenderism among young people. One of them went something like this. First, they deny that sex-change surgeries are happening. Then, they say they are happening, but not many. Then, they say many are happening, but not to children. Sadly, this new study shows that many are happening to children.

Here’s the story from Daily Wire:

> A new study of nationwide hospital databases found that at least 1,130 adolescents between 2016 and 2019 received “gender-affirming” chest surgeries in the U.S.
>
> The study, published in JAMA Pediatrics, saw a 389% increase in adolescents (ages 12-17) obtaining chest surgeries from 2016 to 2019. An overwhelming majority (1,114) of the adolescents seeking this surgery were female (98.6%), and just 16 were male (1.4%).
>
> “To our knowledge, this study is the largest investigation to date of gender-affirming chest reconstruction in a pediatric population,” the paper’s authors wrote, who are each affiliated with Vanderbilt University Medical Center. “The results demonstrate substantial increases in gender-affirming chest reconstruction for adolescents.”

Here is the breakdown by age:

> The ages of the pediatric patients ranged from 12 to 17, with 42 (5.5%) of the recipients between 12 and 14, 131 (16%) aged 15, 291 (34.5%) aged 16, and 365 (44%) aged 17.

It’s an interesting situation. I would expect parents to set boundaries on their children. First, to shelter them from public schools and social media. But second, at least keep them away from the people who are profiting from “gender-affirming care”.

Speaking of profiting, there was this:

> The median total charges for chest reconstruction were $29,886 ($21,285–$45,147), a number that was adjusted for inflation, the authors note. Most of the chest surgeries (61.1%) were covered by private health insurance, 16.5% used public health insurance including Medicaid, 15.8% paid out of pocket, and 6.7% indicated “other.”

Remember what the lady from Vanderbilt said?

It was reported by Daily Wire:

> "It's a lot of money," VUMC Clinic for Transgender Health's Dr. Shayne Sebold Taylor said at one Medicine Grand Rounds lecture, video reveals. "These surgeries make a lot of money."
>
> Taylor noted that a "chest reconstruction" can bring in $40,000 per patient, and someone "just on routine hormone treatment, who I'm only seeing a few times a year, can bring in several thousand dollars … and actually makes money for the hospital."
>
> Citing the Philadelphia Center for Transgender Surgery, Taylor said vaginoplasty surgeries can generate $20,000, gushing that it "has to be an underestimate," since hospital stay, anesthesia, post-op visits, and other add-ons are not included in the total.
>
> "And the female-to-male bottom surgeries, these are huge money makers," the doctor continued, adding that such surgeries could bring in "up to $100,000" for the hospital.
>
> Some clinics are "entirely" "supported" financially by such phalloplasty surgeries, Taylor boasted.
>
> "These surgeries are labor intensive, there are a lot of follow-ups, they require a lot of our time, and they make money," she emphasized. "They make money for the hospital."

Sadly, for one reason or another, the adults have decided that it is more virtuous to go along with the agenda of the schools and social media, and inflict surgeries on their children. I could never understands why anyone would cut healthy organs off of a child with mental health issues. That would be like putting an anorexic person on a diet.

There was a previous study:

> In July, the same four authors, with the addition of two others, published a separate study on adults who received "gender-affirming" chest reconstruction surgeries. Their results, also using NASS outpatient hospital data, found that 21,293 individuals obtained chest surgeries between 2016 and 2019, a 143.2% increase. The large majority of chest surgeries were performed on female patients, with 82.1% receiving double mastectomies; 27.9% of trans-identifying males received breast augmentations.

When it comes to debating social issues, I like to have studies close at hand. For same-sex marriage, I use studies showing different outcomes for children raised in same-sex homes. For abortion, I use science textbooks showing that the embryo is fully human. It is self-directed and has distinct DNA from either parent. And for transgenderism, I like to use studies like these, showing how health care providers are profiting from the social trends being pushed by the "don't judge" compassion crowd in the public schools. The

study showing that gender-affirming care does not lower the number of suicides (in the long term) is a good one, too.

New study: psychotherapy improves mental health of autistic teens with gender dysphoria

May 27, 2023 | by Wintery Knight | Link | Original Link

My podcast co-host Rose and I both want Christians to argue for the Christian worldview using studies and evidence. We want the other side to reply on feelings and intuitions, while we present hard data. With that said, I have a report on a new study for you that will help you discuss the issue of medical transitioning of autistic adolescents with gender dysphoria.

Consider this report on the new study from Daily Wire:

> The study, published in the Journal of Autism and Developmental Disorders, found that guided, peer support group therapy showed positive mental health outcomes for autistic adolescents struggling with gender dysphoria. The study, conducted in the Netherlands, emphasized the importance of mental health treatments, while deprioritizing medical interventions like puberty blocking drugs, cross-sex hormones, and surgery.
>
> "These findings add to a quickly growing stack of evidence suggesting that it's the psychotherapy and support that is improving these kids' well-being, not medicalized transition," said Dr. James Cantor, Director of the Toronto Sexuality Centre, and associate professor of the University of Toronto Faculty of Medicine.

By the way, you may have heard that most gender dysphoria resolves itself without any need for medical intervention. The article says:

> Dr. Cantor's website, Sexology Today, is often cited as a resource that documents eleven studies finding that roughly 60–90% of children who identify as transgender, but do not socially or medically transition, will no longer identify as transgender in adulthood. These studies were referenced by the group of researchers, who acknowledged that gender dysphoria may resolve on its own.
>
> "In a large proportion of children who express their desire for medical gender-affirming care, this seems to disappear during puberty," the study read.

In a previous post, I blogged about the "social contagion" cause of transgenderism. The technical term is Rapid-Onset Gender Dysphoria (ROGD). Same-age peers and social media play a huge role in children having gender confusion.

But the Daily Wire article had even more interesting information – a link between autism and susceptibility to gender confusion:

> Children and adolescents on the autism spectrum are disproportionately represented among the large, newly emerging cohort of children claiming to be transgender. Over the past 10 years, there have been at least nine studies connecting Autism Spectrum Disorder (ASD) and transgender identities.

> Rates of autistic traits in these studies range from five percent to 54% among those with gender dysphoria, significantly higher than among the general population.
>
> Data from the now-shuttered Gender Identity Development Service (GIDS) at the U.K.'s Tavistock Centre found that autistic adolescents were significantly overrepresented in the population of referrals to the clinic. Pediatrician Dr. Hilary Cass was commissioned to conduct a review of the services provided by the National Health Service and investigate why there has been such a huge rise in the number of adolescent biological girls seeking referrals to gender clinics.
>
> Dr. Cass found that approximately one third of youth referred to GIDS had autism or autistic traits. By comparison, the prevalence rates of autism spectrum disorder during childhood in the UK have been estimated at 1%.

Previously, I blogged about how many countries that are more advanced in treating gender dysphoria are leaning towards psychotherapy instead of medical treatment. Something to think about if people in your life and jumping straight to medical treatment instead of psychotherapy,

Progressive white women report high levels of mental illness in 2020 Pew survey

May 27, 2023 | by Wintery Knight | Link | Original Link

I have the most amazing video for you to see. It's a crazy left-wing activist doxing a libertarian lesbian woman wearing a breathe-through mask. First, let's take a look at the video. Then, we'll look at a recent survey reported by Pew Research in 2020, which assesses how mentally stable far-left feminist women are (self-reported). Then, I'll make some comments for unmarried men.

OK, so here is the video, which was shared by the woman who was doxed. So it's OK for me to share it, since the doxed woman didn't care about it.

So, is this crazy woman rare? Or is she common?

Progressive white women and mental illness

Feminist web site Evie Magazine reported on the some 2020 findings by Pew Research (left-wing pollster):

> A 2020 Pew Research study reveals that over half of white, liberal women have been diagnosed with a mental health condition at some point.
>
> [T]he study, which is titled Pew American Trends Panel: Wave 64, was dated March 2020 — over a year ago.
>
> The study, which examined white liberals, moderates, and conservatives, both male and female, found that conservatives were far less likely to be diagnosed with mental health issues than those who identified as either liberal or even "very liberal."
>
> […]**White women, ages 18-29, who identified as liberal were given a mental health diagnosis from medical professionals at a rate of 56.3%, as compared to 28.4% in moderates and 27.3% in conservatives.**

Here's the part of the data I thought was most interesting:

Who would marry a crazy person?

So, the point about this that I want to make is… who is going to marry these mentally ill progressive white women? Being a good wife and mother takes a certain amount of connection to reality. It takes a certain amount of empathy, compassion, and rationality. These progressive white women don't have any of that. So, who is going to marry them? I know that there are thirsty progressive men (and thirsty conservative men who fake being progressive), who will go ahead and hit it and quit it. Pump it and dump it. But how many men would commit to someone who's mentally ill?

And in fact, that's exactly what we're seeing with the marriage rates:

That's for America, but things are even worse in countries that have slid further toward the secular left edge of the political spectrum.

When you look at marriage rates in Canada and Europe, you understand that men are even LESS likely to choose marriage when they have to pay over 50% of what they earn in taxes. And so the marriage rate is declining. I think young, unmarried women in

Canada and Europe are want to raise taxes in order to get free stuff from government. Single mother welfare, food stamps, abortions, contraceptives, IVF, breast enlargements, etc. Some feminists are even asking for free cosmetic surgery. With a big enough government, they don't have to marry at all. Big government leaves them free to play the field, without having to care about finding a good man. But what if taxes get so high that the few good men those women passed over for 40 years simply can't afford to take on a wife and support multiple children he didn't father? Paying for things like a stay-at-home wife and homeschooling, etc. is expensive. Men can't afford a wife, and also pay for goodies for all the single progressive women with mental illnesses.

Conservative men want nothing to do with daycare and public schools – we know that those facilities are *dominated* by progressive women. And we don't want trouble from feminist lawyers and feminist judges in the divorce courts. Divorce is very expensive for men. And we may never see our children again. Then there are the progressive white women in the workplace, who get very bitter with men as a result of getting wrecked by bad boys. Even if we find a good wife, we still have to deal with all these progressive white women with mental illnesses in positions of power. Is it worth it to take risks like this? It depends on the reward, I guess. There comes a point where the juice isn't worth the squeeze.

Study: white progressives are more racist against minorities than white conservatives

May 28, 2023 | by Wintery Knight | Link | Original Link

What's the definition of racism? Well, it seems to me that a person is racist if they treat people of a different skin color differently than they treat people of their own skin color. So, if a white person treats a black person differently than they do a white person, then the white person is a racist. Because they're discriminating on the basis of skin color. So, who are the real racists? Conservatives? Or Progressives?

The Yale School of Management reports on an academic study that provides the definitive answer to the question:

> According to new research by Cydney Dupree, assistant professor of organizational behavior at Yale SOM, white liberals tend to downplay their own verbal competence in exchanges with racial minorities, compared to how other white Americans act in such exchanges. The study is scheduled for publication in the Journal of Personality and Social Psychology.
>
> […]Dupree and her co-author, Susan Fiske of Princeton University, began by analyzing the words used in campaign speeches delivered by Democratic and Republican presidential candidates to different audiences over the years. They scanned 74 speeches delivered by white candidates over a 25-year period. Approximately half were addressed to mostly-minority audiences—at a Hispanic small business roundtable discussion or a black church, for example. They then paired each speech delivered to a mostly-minority audience with a comparable speech delivered at a mostly-white audience—at a mostly-white church or university, for example. The researchers analyzed the text of these speeches for two measures: words related to competence (that is, words about ability or status, such as "assertive" or "competitive") and words related to warmth (that is, words about friendliness, such as "supportive" and "compassionate").
>
> […]The team found that Democratic candidates used fewer competence-related words in speeches delivered to mostly minority audiences than they did in speeches delivered to mostly white audiences. The difference wasn't statistically significant in speeches by Republican candidates… There was no difference in Democrats' or Republicans' usage of words related to warmth.

More testing confirmed the patronizing white supremacist attitude of whites on the political left:

> They designed a series of experiments in which white participants were asked to respond to a hypothetical or presumed-real interaction partner. For half of these participants, their partner was given a stereotypically white name (such as "Emily"); for the other half, their partner was given a stereotypically black name

> (such as “Lakisha”). Participants were asked to select from a list of words for an email to their partner.
>
> […]The researchers found that liberal individuals were less likely to use words that would make them appear highly competent when the person they were addressing was presumed to be black rather than white. No significant differences were seen in the word selection of conservatives based on the presumed race of their partner.

Conservatives aren’t racist at all – they’re color blind.

One of the reasons why I get along so well with white conservatives is that they don’t patronize me with low expectations, the way that white leftists patronize non-whites. The view of white progressives is similar to the view of white supremacist racists – they think that there is something defective about people like me because of our non-white skin color.

White supremacists and white progressives agree on this: that non-white people aren’t competent enough to make our own decisions. We need help from big government in order to do what whites can do without help. We need to be told what to think for our own good, and shamed if we step out of line. It’s amazing to me that white racist progressives are seen as “compassionate”, when they are the ones who actually believe in the racial inferiority of non-whites.

Memorial Day story: little destroyers fought like battleships in the Battle off Samar

May 29, 2023 | by Wintery Knight | Link | Original Link

I thought about what story from military history to share with you all for Memorial Day. This time, I decided on the story of Lieutenant Commander Robert W. Copeland and his ship the *Samuel B. Roberts.* The story takes place during World War 2, in the Pacific Theater, as the American fleet is battling with the Japanese to re-take the Philippine Islands.

I read about this story in "World War II at Sea: A Global History" by Craig L. Symonds and in "The Last Stand of the Tin Can Sailors" by James D. Hornfischer.

Before we get started, let's learn about some ship classes and weapon capabilities.

Japanese Yamato-class battleship:

- displacement: 72,809 tons
- speed: 27 knots
- 9 x 18.1″ guns
- 12 x 6.1″ guns
- 12 x 5″ guns

Japanese Takao-class heavy cruiser:

- displacement: 15,781 tons
- speed: 35.5 knots
- 10 x 8″ guns
- 4 x 5″ guns

American Fletcher-class destroyer:

- displacement: 2,500 tons
- speed: 36.5 knots
- 5 x 5″ guns

American John C. Butler-class destroyer escort:

- displacement: 1,370 tons
- speed: 28.7 knots
- 2 x 5″ guns

So, this story is from October 25th, 1944. It takes place east of the Philippine islands. The American force "Taffy 3" consists of 6 escort carriers, 3 destroyers, 4 destroyer escorts. An escort carrier is a light aircraft carrier. The Japanese force has 4 battleships, including the Yamato (!), 6 heavy cruisers, 2 light cruisers, and 11 destroyers. The Yamato is the

largest and most powerful battleship ever built. The Americans are severely outnumbered and outgunned.

Normally, American escort carriers would be escorted by much larger ships, because they are so valuable. Carrier aircraft have much longer range and striking power than a battleship. But the Japanese had made a plan to lure Admiral William "Bull" Halsey away from the escort carriers and the invasion force, which he was supposed to be protecting. They used some aircraft carriers as bait, and Halsey chased after them with his battleships, cruisers and destroyers. The Japanese aircraft carriers had few aircraft and air crews, and were thus a weak threat. Halsey also declined to communicate his decision to leave the escort carriers to his superiors. He also refused to respond to messages from Fleet Admiral Nimitz. By the time Halsey returned to his duty, he arrived too late to have any impact on the Battle off Samar.

But what about that force of destroyers and destroyer escorts that stayed with the escort carriers?

Here is an article from Warfare History Network that tells the story:

> At exactly 6:45 on the morning of October 25, 1944, Rear Admiral Clifton A.F. Sprague received a message from one of his pilots on antisubmarine patrol. The admiral recalled that the message went something like this: "Enemy surface force of 4 battleships, 7 cruisers, and 11 destroyers sighted 20 miles northwest of your task group and closing in on you at 30 knots."
>
> […]At 6:58, the ships opened fire. Less than a minute later, colored splashes from the Japanese shells landed astern of Taffy 3.

Two more things I need to explain. First, a "rain squall" is the equivalent of a foxhole in naval warfare. Ships inside the rain squall are invisible to ships outside the rain squall. Second, aircraft carriers must be sailing against the wind in order to launch aircraft.

More:

> Sprague was fully aware of his predicament and did not think that his force of "baby flattops" and their escorts would last 15 minutes against the oncoming battleships and cruisers. As soon as the approaching task force was confirmed as Japanese, he "took several defensive actions in quick succession." He ordered a change in course from north to due east, which pointed Taffy 3 "at full speed toward a friendly rain squall nearby." The new course also turned his carriers into the wind, and at 6:56 Sprague ordered all carriers to begin launching aircraft for torpedo and bombing attacks against Kurita's force. A minute later, he ordered the carriers and their escorts to make as much smoke as possible to screen Taffy 3 from the Japanese gunners. A smokescreen offered scant protection against large-caliber enemy shells, but it was better than nothing.

This part is interesting. I have to highlight the bravery of the torpedo, bomber and fighter pilots:

> After they dropped their bombs, the pilots made dry runs on the enemy ships to distract the Japanese gunners. The commander of Gambier Bay's air group flew his Avenger through enemy flak for two hours after he dropped his bombs. The pilots of the Wildcat fighters were sent in to strafe "with the hope that their strafing would kill personnel on the Japanese warships, silence automatic weapons, and, most important, draw attention from the struggling escort carriers." When their ammunition ran out, the fighter pilots also resorted to dry runs to harass the enemy. One pilot made 20 strafing runs, 10 of them without ammunition.

To me that is astonishing. I would only order my strike aircraft to strafe after dropping their ordnance if the enemy ship was on fire, moving slowly, and far away from her allies.

But it worked:

> "The bombers and torpedo planes were very aggressive and skilful and the coordination was impressive," a Japanese officer told his American interpreter after the war, "even in comparison with the many experiences of American attacks we had already had, this was the most skilful work of your planes."

Next, the American destroyers – *Hoel, Heermann and Johnston* – attacked:

> In addition to his carrier's air groups, Sprague also sent his destroyers and destroyer escorts against Kurita's force. The normal job of these screening warships was to protect the escort carriers from submarines, but now they would be performing a completely different task.

The destroyers did a great job of disrupting the advance of the much stronger Japanese ships with gunfire and torpedoes. The Japanese ships had to dodge the torpedoes, delaying their pursuit of the valuable escort carriers:

> American torpedoes were not fast and were easily avoided. However, the evasive action not only slowed the advance of the Japanese warships but also created confusion. Admiral Kurita himself said, "Major units [warships] were separating all the time because of the destroyer torpedo attacks." He realized that he was losing more tactical control every time his ships had to turn to avoid Taffy 3's torpedoes.
>
> […]Yamato turned away to evade the torpedoes, heading north and keeping on that course for about 10 minutes. This effectively took Yamato out of the fight.

You can read all the details in the article I'm quoting from, but I want to focus on the destroyer escorts – *Dennis, John C. Butler, Raymond, Samuel B. Roberts*.

More:

> Kurita was becoming convinced that he was facing a major American task force, not just a few escort carriers and destroyers. However, the battle was far from over. At about the same time that Hoel was firing her torpedoes at Haguro,

> Sprague ordered his destroyer escorts to begin their runs at Kurita's warships: "Little Wolves form up for a second attack," he barked. "Wolves" was code for the destroyers, while the radio call sign for the destroyer escorts was "Little Wolves." So far, the destroyer escorts had been assigned almost exclusively to antisubmarine patrols. Torpedo attacks against cruisers and battleships were something new to Taffy 3's Little Wolves.
>
> They threw themselves into the task. Raymond took on Haguro, the leading Japanese cruiser. Just before 8 am, she launched three torpedoes at a range of about 6,000 yards. Haguro turned to avoid them while Raymond changed course and got away from the scene as quickly as possible.
>
> Dennis followed the same course of action. She fired her torpedoes at the nearest Japanese cruiser, either Chokai or Tone, and turned sharply to the southwest. At about 8:10, Dennis opened fire with her after 5-inch battery on a cruiser that was already under air attack.

Robert Copeland told the crew of the Samuel B. Roberts:

> We're making a torpedo run. The outcome is doubtful, but we will do our duty.

They set off on their torpedo run, charging the Takeo-class heavy cruiser Chokai. The Roberts launched 3 torpedoes, and one scored a direct hit on the Chokai's stern, contributing to damage that would eventually sink her. The little destroyer got so close to the Chokai that her big 8 inch guns could not lower far enough to hit the Roberts.

On her way back to the escort carriers, the Roberts encountered the Chikuma, a Tone-class heavy cruiser. The Roberts engaged in a running gun battle with the heavy cruiser, firing off over 600 5 inch shells at the much larger ship. She destroyed one of the Chikuma's gun turrets and set fires all over the superstructure of the heavy cruiser. Japanese heavy cruisers and battleships fired at the Roberts. The Kongo, a Kongo-class battleship, hit the Roberts several times below the water line. Copeland gave the order to abandon ship, and the Roberts sunk a bit later, still under fire from larger Japanese ships. 90 of her crew perished, and 120 escaped on life rafts.

Copeland had broadcast this message to his crew before the battle:

> This will be a fight against overwhelming odds from which survival cannot be expected. We will do what damage we can.

And here is a short 12-minute animation that shows what happened in the battle:

In Fredericksburg, TX, at the National Museum of the Pacific War, there is a wonderful movie that shows the whole battle. I've been there.

Since this is Memorial Day, I want to highlight the American casualties of the Battle off Samar:

- 2 escort carriers sunk
- 2 destroyers sunk

- 1 destroyer escort sunk
- 23 aircraft lost
- 4 escort carriers damaged
- 1 destroyer damaged
- 2 destroyer escorts damaged
- 1,161 killed and missing
- 913 wounded

The casualty list would have been a lot worse, if not for the bravery of the pilots, and the crews of the destroyers and destroyer escorts who charged much larger ships to protect the valuable escort carriers.

New study: left-wing extremism linked to psychopathy and narcissism

May 30, 2023 | by Wintery Knight | Link | Original Link

There's an old saying that if you're not a leftist before the age of 30 then you have no heart, and if you're not a conservative after the age of 30 then you have no brain. But are leftists really big-hearted? Does the worldview of leftism really make it rational for the leftist to sacrifice their own interests in order to produce good results for other people? Or is there something else going on?

A new study published in the peer-reviewed journal Current Psychology was reported in the New York Post:

> Left-wing extremism is linked to toxic, psychopathic tendencies and narcissism, according to a new study published to the peer-reviewed journal Current Psychology.
>
> "Based on existing research, we expected individuals with higher levels of left-wing authoritarianism to also report higher levels of narcissism," the authors wrote.
>
> As result of the new data, study authors Ann Krispenz and Alex Bertrams have coined a new term for such psychological behavior: the "dark-ego-vehicle principle."
>
> "According to this principle, individuals with dark personalities — such as high narcissistic and psychopathic traits — are attracted to certain forms of political and social activism which they can use as a vehicle to satisfy their own ego-focused needs instead of actually aiming at social justice and equality," they told PsyPost.

Advocating for left-wing activism isn't being done to get results – it's just being done for personal gain:

> "In particular, certain forms of activism might provide them with opportunities for positive self-presentation and displays of moral superiority, to gain social status, to dominate others, and to engage in social conflicts and aggression to satisfy their need for thrill seeking."
>
> […]Beyond using any means necessary, people of privileged backgrounds who are aligned with LWA often use their narcissism to make activism solely about themselves instead of achieving social equality for struggling groups.
>
> […]"As grandiose narcissists typically desire fame, distinction, elevated social status and high social importance, they can be assumed to strive for influential positions that involve social visibility and outreach as well as access to financial and other resources."

Leftists aren't trying to comply with an objective standard of morality that exists independent of their own desires. For leftists, morality is just a set of social conventions. They shout their allegiance to social conventions, and advocate for trendy causes with Instagram posts, Facebook shares, and bumper stickers. That's why the BLM leaders only gave 33% of the donations they collected to charities to advance BLM goals. The rest they kept in order to buy things like million-dollar mansions and other luxuries. They say one thing to make people like them, then they do something else. And their actions are for their benefit, not any victim group. This is the morality of atheism. Do what's best for you, but paint a picture of yourself as virtuous so people think you're not self-centered.

One issue where the left is hypocritical is on gun ownership vs gun banning. The same leftists who advocate for gun bans often have private security or bodyguards. They want to tell you how they oppose gun violence, but they want armed people to protect them. Their families need to be protected by guns, just not your family.

Leftists are also hypocritical about race. If you're a black person and you blame your problems on white people, they love you. But if you're a black person, and you think that people succeed or fail based on hard work and good decisions, then they hate you. There is no racial hatred like the racial hatred that a white leftist has against black conservatives.

Remember when Democrats were all rushing around warning people to wear masks and stay inside? But they we found out that all the biggest mouths on the left were going to parties and baseball games and hair salons in private, breaking their own rules. The same things happens on climate change. The people who talk the loudest about it are the same ones flying around on private jets.

Democrat politicians are always talking about making the rich "pay their fair share", but if you look at their rates of charitable giving, it's lower than the average American. Sometimes much lower. Again, the talk says one thing, but the actions say something else. Because their goal is to be evil, but paint a picture of themselves as good.

I think it's important for people to understand that loud advocacy for left-wing policies can often be a sign of mental illness. People who want to produce good results are not typically in front of cameras shouting out their virtue. But you'll have to look far and wide to find a leftist who achieves a good result for someone else at their own expense.

Cosmologist Luke Barnes answers 11 objections to the fine-tuning argument

May 31, 2023 | by Wintery Knight | Link | Original Link

This is from the blog Common Sense Atheism.

Atheist Luke Muehlhauser interviews well-respect cosmologist Luke Barnes about the fine-tuning argument, and the naturalistic response to it.

Luke M. did a good job explaining the outline of the podcast.

Details:

> In one of my *funniest* and *most useful* episodes yet, I interview astronomer Luke Barnes about the plausibility of 11 responses to the fine-tuning of the universe. Frankly, once you listen to this episode you will be better equipped to discuss fine-tuning than 90% of the people who discuss it on the internet. This episode will help clarify the thinking of anyone – including and perhaps *especially* professional philosophers – about the fine-tuning of the universe.
>
> The 11 responses to fine-tuning we discuss are:
>
> 1. "It's just a coincidence."
> 2. "We've only observed one universe, and it's got life. So as far as we know, the probability that a universe will support life is one out of one!"
> 3. "However the universe was configured, evolution would have eventually found a way."
> 4. "There could be other forms of life."
> 5. "It's impossible for life to observe a universe *not* fine-tuned for life."
> 6. "Maybe there are deeper laws; the universe *must* be this way, even though it *looks* like it could be other ways."
> 7. "Maybe there are bajillions of universes, and we happen to be in one of the few that supports life."
> 8. "Maybe a physics student in another universe created our universe in an attempt to design a universe that would evolve intelligent life."
> 9. "This universe with intelligent life is just as unlikely as any other universe, so what's the big deal?"
> 10. "The universe doesn't look like it was designed for life, but rather for empty space or maybe black holes."
> 11. "Fine-tuning shows there must be an intelligent designer beyond physical reality that tuned the universe so it would produce intelligent life."
>
> **Download** CPBD episode 040 with Luke Barnes. Total time is 1:16:31.

There is a very good explanation of some of the cases of fine-tuning that I talk about most on this blog – the force of gravity, the strong force, etc. as well as many other

examples. Dr. Barnes is an expert, but he is also very very easy to listen to even when talking about difficult issues. Luke M. is very likeable as the interviewer.

How much does illegal immigration cost Americans who are here legally?

June 1, 2023 | by Wintery Knight | Link | Original Link

First, I have some good news for listeners of Knight and Rose. First, we will have a new episode for you coming out this Saturday around noon. Rose still sounds a bit sick in it, but we found out what was causing her to be sick, and we are working on eliminating it. But for today's post, I just wanted to write something up that I could refer back to if I ever had to answer why I like a secure border.

So, I went looking for a recent article about the costs of illegal immigration, and I found this article from The Daily Signal, written by Erin Dwinell. He is the senior research associate with The Heritage Foundation's Border Security and Immigration Center.

He writes:

> Annually, illegal immigration now costs taxpayers billions of dollars a year. For instance, in states far away from the southern border like Illinois, that cost was $4.59 billion in 2022. That's $930 per household. Every year.
>
> […]Border communities have long been overwhelmed under these policies. The crisis now costs California $21.76 billion and Texas $8.88 billion annually in education, health care, law enforcement and criminal justice system costs, welfare expenditures, and more. Border states are often the subject of shocking reports of epidemics of violent attacks, taxpayers footing the bill for illegal aliens' health care costs, and increased property destruction.

It's not just border states. A lot of states are run by Democrats and they refuse to enforce immigration policies. The voters in these blue states want to be seen as tolerant and generous. But there's a price to pay:

> At a rate of $65,116 per alien, New York City Mayor Eric Adams estimates his city will need to spend $2.8 billion in the next fiscal year to deal with the rapid influx.

The costs are for things like health care, education, state and local government benefits, legal representation, etc. Boy, that sure is a lot of money just to be able to virtue signal to the rest of America about how generous you are.

But the funny thing is, Democrat voters aren't actually generous. They talk about being generous, but when the bill comes due, they don't want to pay it. As I blogged about recently, leftism is mostly about loudly talking about being on board with the latest thing. It's a social activity. People say whatever they have to say in order to seem virtuous, as long as it doesn't cost them anything.

And that's what we see when illegals arrive in blue states:

> Florida Gov. DeSantis followed through on his promise to drop off illegal immigrants in progressive states, sending two planes full of migrants to Martha's

> Vineyard on Wednesday.
>
> A video provided to Fox News Digital shows the migrants deplaned at Martha's Vineyard Airport in Massachusetts.
>
> "If you have folks who are inclined to think Florida is a good place [to settle], our message to them is we are not a sanctuary state, and it's better to be able to go to a sanctuary jurisdiction," DeSantis told a crowd Thursday afternoon.
>
> "And yes, we will help facilitate that transport for you to be able to go to greener pastures," he added.
>
> […]The migrants boarded a bus Friday that departed the liberal island haven and arrived at Joint Base Cape Cod, where Republican Gov. Charlie Baker opened a shelter.

Sadly, the Democrats deported all of their illegal props at the local military base, and last I heard, they were planning to build a wall, like the MULTIPLE walls around Barack Obama's house.

It's not just Martha's Vineyard thinks that illegal immigrants should be welcomed in, then immediately deported. It's Chicago, Illinois – one of the most progressive cities in America.

The New York Post reports:

> Chicago residents condemned local leadership last week for plans to house illegal immigrants in a shuttered high school in the neighborhood.
>
> Chicago is one of many cities overwhelmed by illegal immigrants seeking asylum amid crisis at America's southern border.
>
> During a May 4 community meeting at South Shore International College Preparatory High School, local residents expressed their outrage at the proposal of housing hundreds of migrants in an already struggling area.

Again, remember that study I blogged about. The "morality" of the secular left is simple. Talk and talk and talk about loving your fellow man. As long as it doesn't cost you anything, personally. We have to get better at understanding that people who talk about the poor are just serving themselves. The people who say "help the poor" don't help the poor themselves. The people who say "don't judge" say that because they don't want you to judge them. It's just selfishness.

It's important to understand that the secular left doesn't intend to pay any of the costs suggested by their generous talk. They expect YOU to pay for their virtue-signaling. That's why we must never let them win elections.

Watch Daily Wire's "What is a Woman?" documentary for FREE all weekend

June 2, 2023 | by Wintery Knight | Link | Original Link

There was some interesting controversy at Twitter on Thursday night. Daily Wire had arranged to offer their "What is a Woman?" movie for free on Twitter for 24 hours, starting at 8 PM Eastern on Thursday night. But they ran into some trouble with some progressive employees at Twitter, who censored it. But now it's back. I have the link, and the story about what happened.

The link to the documentary.

> It's the movie they really don't want you to see: #WhatIsAWoman?
>
> Watch the explosive documentary starring @MattWalshBlog FREE on Twitter for 24 hrs. https://t.co/qDi7thCNid
>
> — Daily Wire (@realDailyWire) June 2, 2023

The story, from Daily Wire:

> Twitter restricted the launch of The Daily Wire's hit documentary "What Is A Woman?" on the platform Thursday evening after Elon Musk, the company's owner, said earlier in the day that attempts to restrict the film were a "mistake" and would be "fixed."
>
> Daily Wire co-CEO Jeremy Boreing revealed in a lengthy Twitter thread Thursday morning that Twitter had canceled a deal to stream "What Is A Woman?" and "would no longer provide us any support and would actually limit the reach of the film and label it as 'hateful conduct' because of 'misgendering.'"
>
> "Specifically: In the film, a father refers to his 14-year-old daughter as 'her,' and a store owner uses the 'wrong' pronoun in a confrontation with a transgender woman," Boreing said.
>
> Musk responded to Boreing's Twitter thread by saying that "this was a mistake by many people at Twitter," adding that the streaming "is definitely allowed."
>
> However, when the entire hour-and-a-half documentary was uploaded to Twitter at 8:13 p.m., the film was quickly restricted and received a label that read: "Visibility Limited. This Tweet may violate Twitter's rules against Hateful Conduct."

Who could have done this inside of Twitter. Well, although Twitter is a software company, they hire a lot of progressive people. In America, we give a lot of student loans to people who want to study useless, worthless degrees. Then when they get out, with tens of thousands of student loan debt, and a worthless degree, they go work for woke companies like Twitter. They have a lot of confidence in themselves, but not a lot of

ability to produce results.

Look:

> Ella Irwin, the head of Twitter's trust and safety department — the department that appears to have been responsible for the label being applied — abruptly resigned from the company Thursday afternoon. Her internal Slack account was quickly deactivated by the company, Fortune reported.
>
> The designation on the film blocked Twitter users from being able to retweet or share the video with their audiences. The video garnered 5,000+ retweets/quote retweets in just a couple of minutes after being published before it was restricted.
>
> "That was fast," Boreing responded. "Even after @elonmusk said Twitter's threat to label What Is A Woman 'hateful conduct' and to throttle the film's reach was a mistake, Twitter did that very thing instantly upon the film going live."

The tweet still has a "hate speech" warning as of my time of writing (Thursday night – I write all my posts the night before and schedule them all for 10 AM Eastern) and you can't retweet it.

Well, you better watch this movie for free while you can. I've seen it, and it's great. You will not regret watching it. My favorite scenes: his interviews of the Planned Parenthood woman, and the LGBT male professor. Absolutely perfect.

Knight and Rose Show – Episode 32: Was Jesus a Socialist, Part 3

June 3, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 32 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose conclude our discussion about Christianity and economics. We discuss whether socialism or free enterprise is better for Christian liberties and life plans. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

PLEASE NOTE: During this episode, Rose was still stick and coughing a lot. After an air duct cleaning and removing all the very old carpet in her house, she is now completely cured. She has a couple of conference talks next week, (a keynote and a breakout) that she needs to work on. We will try to fit a recording in this week so you have one for next week.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 32:

Episode Summary:

Wintery Knight and Desert Rose look at history and discuss whether socialism has been good for Christians. We discuss whether successful European countries are good examples of socialism. We discuss whether high tax rates and government ownership of businesses has been good for Christians in Canada. We then turn to the free market system, and discuss whether it is any better for Christians. Finally, we answer objections to the free market system. This is the third episode of a three-part series.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

What can Christians learn from the bravest naval aviator at the Battle of Midway?

June 4, 2023 | by Wintery Knight | Link | Original Link

I have been reading lots of books about the World War II battles in the Pacific theater lately, and I wanted to write a post about one of the heroes I found who was the most compelling to me. You may have seen him in the old 1976 Midway movie or the new 2019 Midway movie. But neither movie tells the full story. The man I am talking about is Lt. Commander John C. Waldron.

John Waldron was the leader of the torpedo bomber squadron on the Hornet. This squadron was composed of outdated and slow Devastator torpedo bombers, armed with the Mark 13 Mod 1 torpedoes, which malfunctioned about 90% of the time.

I found an article on the Federalist that tells the story of John Waldron:

> Now there are countless men and woman who deserve to be singled out for their valor, but with the 75th anniversary of the Battle of Midway just around the corner, I thought it would be appropriate to call your attention to one of the bravest men who ever lived. A man who, knowing he was facing certain death, led the first attack against the Japanese aircraft carriers and played a direct role in what would be a decisive victory for the United States, and a defeat from which Japan would never recover. That man was Lt. Commander John C. Waldron.
>
> Now for those who don't know, the Battle of Midway was the turning point in the Pacific theater. The Japanese had an elaborate plan that involved attacking the U.S. base on Midway Island in order to lure the Americans into a battle which the Japanese High command felt their experience and tactics would overwhelm and annihilate the American fleet. With no significant U.S. naval presence, Hawaii and the entire West Coast would be at risk of invasion. But the Americans broke the Japanese code and set a trap of their own – hoping to destroy their enemy's carriers and thereby establish U.S. dominance in the Pacific. And that was exactly what happened : The U.S. fleet surprised the Japanese, sank their four carriers, and took the first real step to winning the Second World War.
>
> John Waldron was 42 years old when the *USS Hornet* steamed towards Midway on June 1st, 1942. Born and raised on a reservation in South Dakota, he had never seen the ocean until he attended the Naval Academy. It wasn't long after he graduated that he moved into naval aviation. He had been assigned to be the squadron leader of the *Hornet's* torpedo bombers in late 1941 and had been drilling his men tirelessly ever since. Waldron had the reputation of a tough as nails, no-nonsense commander. Not surprising, since Waldron was a direct descendant of the warriors from the Oglala Lakota tribe – part of the Great Sioux Nation. The tough skin he developed came from decades of derision from his peers over his meager beginnings, and from the racism directed at his Native

> American heritage. Waldron didn't care what anyone thought of him – all he wanted to do was fight for his country. He was a natural leader and his men would follow him into the gates of Hell, which, as fate would have it, is exactly what they would do in the upcoming battle.
>
> On the morning of June 4th, the Americans were ready to spring their trap, but in the preflight briefing aboard the *Hornet* there was a problem. Stanhope Ring, who was in command of the carrier's air group, directed his pilots to head northwest of the last reported position of the Japanese fleet. Waldron disagreed with this decision, feeling that they should head in the exact direction of that last sighting. He wasn't shy about expressing this opinion, much the displeasure of Ring. Waldron continued to lobby his superior officer several times after the briefing ended, but to no avail.

The Federalist article doesn't talk much about Stanhope Ring, but the book I just finished called "The Battle of Midway" by Craig L. Symonds did. Ring was a very tall, good-looking, and white officer who had breezed up the chain of command thanks to his good looks and confident manner. He loved to show off for cameras, and pull rank on subordinates. He was too proud to admit that Waldron was right in front of the other pilots.

More:

> The air strike force took off from the deck of the *Hornet* – fighters, dive bombers, and the 15 planes in Waldron's torpedo squadron. This force would be joined in the air by similar strike forces from the other U.S. carriers – the *Yorktown* and the *Enterprise*. Shortly after the Hornet's air group was airborne, Waldron couldn't contain his anger anymore. He broke radio silence to tell Ring that they were headed in the wrong direction. He repeated that comment and Ring issued a terse reply that he was in charge of this group and to stay the hell off the radio. Waldron waited a couple of minutes before replying "The hell with you" and peeled his squadron off and headed due west, where he felt the Japanese fleet was.
>
> Less than an hour later, Waldron was proved right. He had led his squadron on a direct line to the enemy. Waldron broke radio silence again to signal to Ring that he had found the fleet, but Ring and the rest of the *Hornet's* planes were too far away to hear. So now, Waldron was faced with a brutal decision. If he went in to attack, he would do so without any fighter protection, and they'd be totally at the mercy of the Japanese fighters. To make matters worse, the U.S. planes (Douglas Devastators) were hopelessly outdated aircraft – their top speed was about a third of what the Japanese fighters could do. They had hoped to get the newer Grumman Avengers, but the *Hornet* had left Pearl Harbor before they had arrived from the mainland. All of this meant that Waldron and Torpedo 8 were looking at a suicidal attack run. […]Waldron got on the radio again and told his men "We will go in. We won't turn back. Former strategy cannot be used. We will attack. Good luck!"

> And with that, the planes of Torpedo 8 closed up their formation and bore down on the Japanese fleet, some seven miles distant.
>
> The Japanese fighters quickly pounced on the Americans, who were going in low and slow – the only way torpedo bombers can attack. One by one the planes from Torpedo 8 were shot down. […]Every single plane in Torpedo 8 was destroyed and not one torpedo hit a Japanese ship.

Not only were the torpedo bombers of John Waldron's VT-8 (Hornet) shot down, but two more waves led by Eugene Lindsey VT-6 (Enterprise) and Edward Massey VT-3 (Yorktown) were also repulsed without a hit.

More:

> History might have viewed Waldron's attack as more insane than brave, and utterly pointless….except for what happened next. Shortly after his failed attack, the torpedo squadron from the *Enterprise* attacked the fleet – and right after that the torpedo squadron from the *Yorktown*. Both of those squadrons had devastating casualties as well (10 of 14 planes lost and 10 of 12 respectively) without inflicting any damage on any Japanese ship. But these three attacks in succession drew the Japanese fighter cover down so low, that it left their carriers exposed to dive bomber attacks. It also burned up a lot of fuel for the fighters, who now needed to land before they could continue their defense of the fleet. The attacks also forced the Japanese carriers into defensive maneuvers, so they were unable to land any planes or launch any for a strike on the American carriers.

In addition to using up their fuel and coming down to low altitude, the Japanese CAP (combat air patrol) fighters also used up most of their dangerous 20 mm ammunition. They mostly had much weaker 7.7 mm ammunition remaining when the dive bombers from the Enterprise and Yorktown arrived.

More:

> As the Japanese were trying to compose themselves after the three fierce but harmless attacks, the American dive bombers from the *Enterprise* and *Yorktown* arrived and quickly struck. Within minutes, three of the Japanese carriers were in flames – the heart of the Imperial Navy had been gutted.
>
> […]The other planes from the Hornet never found the Japanese ships. Ring kept his planes flying in that northwesterly direction until they were too low on fuel to keep going. They returned to the *Hornet* with their full payload of bombs.
>
> […]Now, there were a lot of heroes that day – some who lived and some who died, but the valor that John Waldron displayed in defying orders he knew were wrong and then attacking the enemy when he knew it meant certain death, place him on a special level. His actions directly helped the Americans win this crucial battle, which turned the tide of the war in the favor of the United States. He got

> the Navy Cross for his actions that day, but it seems astonishing to me that he wasn't awarded the Medal of Honor – he is definitely worthy of it.

You can learn more about the Battle of Midway in this helpful video:

So, here is what I wanted to say about this.

John Waldron was not properly equipped by his organization to make a difference at Midway. His planes were too old and slow, his torpedoes almost never worked. His leader was an arrogant, incompetent coward who prevented him from leading others to find and attack the actual targets. The only way he could do something to his enemy was to disobey orders and go off on his own. If he had lived, he probably would have been court-martialed for insubordination. After Waldron was shot down, every single one of the men in his squadron continued their attack until they too were all shot down. Everyone watching must have thought "what a waste of effort". It was only later that it became evident to all that what he did was necessary for the second wave to succeed.

This plaque at the United States Naval Academy Club honors the three commanders of the torpedo bomber squadrons:

Plaque honoring the Midway torpedo bomber squadron commanders

According to the Family Research Council, the plaque reads:

> The torpedo attacks of Waldron, Lindsey, and Massey had followed hard upon each other by luck. What was not luck, but the soul of the United States in action, was the willingness of the torpedo plane squadrons to go in against hopeless odds. This was the extra ounce of martial weight that in a few decisive minutes tipped the balance of history.

When I read this story, it immediately occurred to me that this is the problem that serious Christians are facing today. Parents and pastors are not equipping young people to actually make a difference. Instead of finding and fighting the real targets: atheism, radical feminism, communism, etc., all our forces have been sent on wild goose chases, so that now "Christians" are actually trying to promote the priorities of the secular left, e.g. – global warming, wealth redistribution, affirming sexual immorality, open borders,

critical race theory, etc.

The few of us who actually know how to do our jobs are poorly equipped. We are prevented from leading by organizations that are focused on feelings rather than results. We can only hope that our decision to attack against hopeless odds somehow paves the way for a second wave to succeed. It has happened before, and that’s why we should be brave and continue to engage our opponents using tools that work (philosophy of religion, evidential apologetics, scientific research, historical evidence, chastity, sobriety, self-control, good stewardship of our educations, careers and finances, effective charitable giving, self-sacrificial love, etc.).

Pre-ban study: 53% of mothers with gender-confused boys have mental illness

June 5, 2023 | by Wintery Knight | Link | Original Link

Normally, on this blog, every other post is some "new study" that I can use in discussing the controversial issues of the day. A lot of the best new studies get unpublished if they go against the worldview of the secular left, for example, the famous ROGD study. (That one was later re-published). Or they don't get published at all. It's fun to see what was allowed to get published pre-ban.

Here's a study that's on PubMed, one of my favorite web sites for studies.

Abstract:

> This pilot study compared mothers of boys with gender identity disorder (GID) with mothers of normal boys to determine whether differences in psychopathology and child-rearing attitudes and practices could be identified. Results of the Diagnostic Interview for Borderlines and the Beck Depression Inventory revealed that mothers of boys with GID had more symptoms of depression and more often met the criteria for Borderline Personality Disorder than the controls. Fifty-three percent of the mothers of boys with GID compared with only 6% of controls met the diagnosis for Borderline Personality Disorder on the Diagnostic Interview for Borderlines or had symptoms of depression on the Beck Depression Inventory. Results of the Summers and Walsh Symbiosis Scale suggested that mothers of probands had child-rearing attitudes and practices that encouraged symbiosis and discouraged the development of autonomy.

Fifty-three percent of the mothers of boys with gender identity disorder were diagnosed with Borderline Personality Disorder or had symptoms of depression.

Now, there are concerns I have about this study. First, it's a small number of research subjects, which is understandable because back in 1991, there were not a lot of kids with gender identity disorder.

So what is Borderline Personality Disorder? Here is the description from the NIH:

> People with borderline personality disorder may experience intense mood swings and feel uncertainty about how they see themselves. Their feelings for others can change quickly, and swing from extreme closeness to extreme dislike. These changing feelings can lead to unstable relationships and emotional pain.
>
> People with borderline personality disorder also tend to view things in extremes, such as all good or all bad. Their interests and values can change quickly, and they may act impulsively or recklessly.

I don't know much about mental illness, but I've been told never to date (much less marry) someone with BPD, because it is the most serious mental illness.

This finding from the study is interesting to me, because it suggests a reason why we are seeing this enormous surge in LGBT identification among young people. Sure, there is peer pressure, that's what the study on ROGD was about. But now it suggests a chain between radical feminism, the Sexual Revolution, the decline of women's happiness, and their transgender children.

We know for certain that women are experiencing far greater unhappiness after radical feminism became widespread, because they don't like the goodies of radical feminism – promiscuity, abortion, careers, etc. – as much as they liked being married to a good man, and being a stay-at-home mother.

Daily Wire noted this in 2017:

> According to a recent study from Yale University researchers, liberated, college educated women are freezing their eggs because they can't find a man to marry and have children with before their natural childbearing years expire. In the U.K., for instance, one in five women is childless when their natural reproductive years expires, as opposed to one in ten women a mere generation prior.
>
> So what's to blame for this onslaught of college-educated yet terribly empty women?
>
> The short answer is feminism.

The short answer is feminism, because although women claim that it's men's fault for not marrying them, no man with a brain would ever marry a feminist. It's actually become too dangerous for men to even date feminists. I don't even talk to them. The character traits that go with the feminist worldview are not just anti-marriage, they're dangerous to men. Women who blame the bad results of their own choices on men are not safe to even speak to.

And as I've noted before, the decline of marriage is causing a massive spike in mental illness. Not in conservative women – just in progressive women.

Feminist web site Evie Magazine reported on the some 2020 findings by Pew Research (left-wing pollster):

> A 2020 Pew Research study reveals that over half of white, liberal women have been diagnosed with a mental health condition at some point.
>
> [T]he study, which is titled Pew American Trends Panel: Wave 64, was dated March 2020 — over a year ago.
>
> The study, which examined white liberals, moderates, and conservatives, both male and female, found that conservatives were far less likely to be diagnosed with mental health issues than those who identified as either liberal or even "very liberal."
>
> […]**White women, ages 18-29, who identified as liberal were given a mental health diagnosis from medical professionals at a rate of 56.3%, as compared to 28.4% in moderates and 27.3% in conservatives.**

Here’s the part of the data I thought was most interesting:

It turns out that marriage accounts for a lot of women’s happiness. But by allying themselves with radical feminism, women have made themselves totally unattractive to marriage-minded men. I think that the explosion of kids with gender identity disorder is just one of the ways that feminism is working itself out.

Meet four heroes of the D-Day invasion of Normandy on June 6th, 1944

June 6, 2023 | by Wintery Knight | Link | Original Link

I thought it might be a good idea to write up something about D-Day in order to help people understand some of our military history, and to put the spotlight on some real heroes. I don't regard artists, athletes, dancers, singers, actors, or other celebrities as heroes. It really alarms me that so many people know more about these fake heroes than they do about real ones.

Weakness emboldens aggressors

For one thing, many people don't understand how British and American libertarian isolationism made World War 2 into a much bigger mess than it needed to be. As historian Victor Davis Hanson explains in the lecture I linked below, the Allied nations were much stronger and better equipped than the Axis nations before the war started. The Axis nations developed better weapons after the war started. But Germany and Japan didn't think that the Allied nations would do anything if they were aggressive. We know this from their writings and correspondence. They thought that British and Americans were just too scared of war to stop them.

Germany and Japan tested their hypothesis out by re-arming and annexing territory from their neighbors. Britain and America were led by libertarian isolationists, so they didn't fight back. The aggressors correctly understood that libertarian isolationists didn't have the will to oppose them, even if they were weaker than the Allies. But the more they re-armed and annexed territory, the stronger they became. The Allied nations waited too long to confront them. And that's why World War 2 was much harder to win than it needed to be.

Here's a very good lecture about the causes of World War 2 by an actual military historian, Victor Davis Hanson:

So, that's the first point I wanted to make: libertarian isolationism causes wars. Although libertarians claim to oppose war, they actually cause war, due to their weakness in the face of evil. So who stops wars? People who favor a strong defense, and show a willingness to fight back against aggression are the ones who REALLY oppose wars. This is called "peace through strength", and you can see it in action in the Cold War, where Ronald Reagan defeated the Soviet Union by making their aggression costly.

Heroes of D-Day

My second concern was to promote the real heroes of D-Day, over the fictional heroes of movies, fiction, music, dancing, sports, and other entertainment nonsense.

Here are the four heroes I chose:

- Major John Howard
- Lieutenant Colonel Benjamin Vandervoort
- Brigadier General Norman Cota
- Major Richard Winters

Let's take a look at each of them.

John Howard

Major John Howard led elements of the British 6th Airborne Division to take two vital bridges southeast of Sword beach. He did this in order to prevent German socialist counterattacks coming from the east. After they took the bridges, they had to repulse German tanks with nothing more than their useless PIAT (Projector Infantry Anti-Tank) grenade launchers. The PIAT was nothing more than a grenade launcher powered by a coiled spring. It was very inaccurate, and only effective to 50 yards. But that's all the British paratroops had to stop tanks, and they made it work. You can read about him in this book by Stephen E. Ambrose, entitled: "Pegasus Bridge: June 6, 1944". This New York Times article tells the story in brief. He also is played by Richard Todd in the famous movie "The Longest Day".

Benjamin Vandervoort

Lt. Col. Ben Vandervoort served with the 82nd Airborne Division. I read about how he lead an infantry attack against German Tiger tanks (!) and infantry in Stephen E. Ambrose's book "Citizen Soldiers: The U.S. Army from the Normandy Beaches to the Bulge to the Surrender of Germany". Ben Vandervoort broke his ankle during the D-Day landing, but he insisted that the medic just "lace it up tight" so that he could supervise the attacking

and holding of Ste. Mere Eglise, southwest of Utah beach, against a vastly superior enemy force. This article tells about how he defended against elite German SS infantry and heavy Tiger tanks at Trois-Ponts, during the Battle of the Bulge. He was outgunned and outnumbered 20 to 1, and had just a few lightly-armed soldiers, two weak 57mm anti-tank guns and some bazookas. He is portrayed by John Wayne in the famous movie "The Longest Day".

Norman Cota

Brig. General Norman Cota is my favorite person in World War 2. At 51 years old, he nevertheless landed at D-Day, and rallied terrified Army Rangers to follow him up the bluff, by telling them that Rangers ought to lead the way. "Rangers Lead The Way" later became the motto of the Army Rangers. He always led from the front, demonstrating how to attack a German machine gun position in a farmhouse to a group of American soldiers who were pinned down. He actually grabbed a bunch of grenades and led the assault team against a heavy machine gun! You can read about him in this short article and in Stephen E. Ambrose's "D-Day: June 6, 1944: The Climactic Battle of World War II". He is portrayed by Robert Mitchum in the famous movie "The Longest Day".

Richard Winters

Major Richard Winters served in the 101st Airborne Division. Winters led an assault against a superior force of heavy machine guns and 105mm field guns. His tactics were so brilliant that they are still studied at West Point today. You can see Richard Winters and Carwood Lipton in the HBO "Band of Brothers" series, or read this book by Stephen E. Ambrose entitled "Band of Brothers: E Company, 506th Regiment, 101st Airborne, from Normandy to Hitler's Eagle's Nest", which is the basis for that series.

I hope this convinces you that military heroes are far more important than the "heroes" of fiction and entertainment. It's alarming to me that people invest more and have more respect for characters in Hollywood science fiction movies, and other such make-believe nonsense. We need to be rooted in reality. In reality, men who fight and die fighting evil to protect your freedoms are the real heroes. People who take military history seriously are able to give respect and gratitude where it is due – a very important part of being a mature, moral human being.

New York Times: LGBT youth have greater approval, but mental health is “significantly worse”

June 7, 2023 | by Wintery Knight | Link | Original Link

A friend shared this article with me, and cleverly archived it so I could link to it from my blog. I had a whole bunch of wonderful stories to blog about, but this one is the best. Do you know how the secular left looks at the poor mental health of LGBT youth, and asserts (without evidence) that more acceptance would make those outcomes better? Turns out the exact opposite is true.

Here’s the left-wing extremist New York Times, dated June 3rd, 2023:

> For L.G.B.T.Q. teenagers, high school is a much more accepting place than even a decade ago. They change their pronouns, go to school dances with people of the same gender, and are more likely than any previous generation to openly identify as gay, lesbian, bisexual, transgender or otherwise queer.
>
> […]Yet there is a darker side. Even as they are increasingly welcomed by peers, their mental health is significantly worse than that of heterosexual young people.
>
> […]Their experiences highlight a “paradoxical finding,” as researchers have described it: Even as social inclusion for young L.G.B.T.Q. people has grown, large health disparities between them and their non-L.G.B.T.Q. peers have not shrunk.

The article talks about the strongest reasons why young people embrace LGBT:

1. there are pro-LGBT TV shows, movies, music.
2. famous pro athletes identify as LGBT
3. the Supreme Court overturned legislation passed by elected legislators
4. “everyone knows someone who is LGBT”
5. social media supports LGBT
6. big corporations support LGBT

Growing up in the situation I was in – poverty, different skin color, two working parents, public schools run by secular leftists – I wasn’t much interested in feeling good in the moment. I wanted an accurate view of the battlefield so I could make good decisions, and get out of the mess I was born into. I read the Bible, Shakespeare and my parents’ textbooks from their night classes at the local universities.

My approach was very different from the secular left. They don’t care about truth, or making good decisions to get good results. They care about living in the moment. They want to give in to their desires now, and point fingers later. They want to borrow money and run up expenses now, and pass the bill to someone else later. They are reckless and irresponsible. And they feel entitled to the life outcomes of those detestable Christians later. But they can’t be bothered to behave like those detestable Christians right now.

People who are LGBT are not facing little to no disagreement or disapproval:

> A recent survey by The New York Times and Morning Consult of 1,574 young adults found that people ages 18 to 28 — who mostly graduated from high school since 2013 — were significantly more likely to know L.G.B.T.Q. students in school than those a decade older, who were teenagers in the 2000s.
>
> The younger group was twice as likely to report knowing at least one transgender student, and three times as likely to have known three or more. Four in 10 said they knew numerous gay, lesbian or bisexual people in high school, compared with a quarter of the older group.
>
> And while both groups reported hearing the words “gay” and “queer” used negatively at similar rates — a data point reflected in interviews with teenagers, who say they still hear “that’s so gay” in school hallways — the younger graduates were significantly more likely to hear those words used in a positive light, too. They were also more likely to have a gay-straight alliance or similar club at their school.
>
> This reflects other data that has found that verbal harassment of L.G.B.T.Q. teenagers declined during the 2010s, while support for same-sex marriage became the norm among young people.

And finally:

> “You’re at the point among young adults where almost all these measures of acceptance are in the high 80s, low 90s,” said Jeff Jones, a senior editor who oversees research at Gallup. “It’s basically getting toward a consensus.”

Sounds wonderful for the secular left. They got the morality of the Bible removed from society. Young people today don’t even know what the Bible teaches are dating, relationships, marriage, sexuality, etc. All they know is TV shows, celebrities, entertainers, athletes, and what their public school teachers tell them.

Just one little problem. Secular leftists don’t get to determine what is objectively right and wrong. In a God-designed universe, God decides what works, and what doesn’t work. And no amount of community, peer-approval, propaganda, etc. is going to overrule God’s design for his creatures.

More:

> As acceptance has grown, though, the mental health of queer youth has continued to suffer. Reported rates of mental health problems among all young people have been rising for the last decade, but non-heterosexual students face far higher rates than straight students.
>
> About 70 percent of high school students who identify as gay, lesbian or bisexual reported persistent sadness, according to recent data from the Centers for Disease Control and Prevention, twice the rate of their heterosexual peers. One in five attempted suicide in the past year, nearly four times the rate of straight

> young people. (The C.D.C. does not track the mental health of transgender youth, but other data shows that roughly half had considered suicide in the past year.)

The New York Times tries to blame these numbers on being in a minority group. But Bible-believing Christians who embrace chastity, marriage, parenting and homeschooling are also a “minority group”. We don’t run the show any more. In fact, we’re the only minority that is still able to be targeted for ridicule and persecution, even by the police and government. But we also don’t have mental illnesses like the poor young people who believed the lies of the secular left, either. I wonder why that is. Could it be that chastity, marriage, parenting and homeschooling are morally right, whether anyone thinks it is or not? Could it be that these activities are self-evidently moral, and therefore just doing them makes the approval and celebration of other people completely unnecessary? For some behaviors, having an audience of One is enough.

Nanotechnology expert Dr. James Tour assesses origin of life research

June 8, 2023 | by Wintery Knight | Link | Original Link

What is involved in creating life from non-life?

Recently, I watched lectures from a recent Science and Faith Conference that occurred at Park Cities Baptist Church in Dallas, Texas. And I thought that Dr. James Tour's talk on origin of life research was the best. So let's see his bio, then we'll take a look at his lecture.

Dr. James Tour:

> James M. Tour, a synthetic organic chemist, received his Bachelor of Science degree in chemistry from Syracuse University, his Ph.D. in synthetic organic and organometallic chemistry from Purdue University, and postdoctoral training in synthetic organic chemistry at the University of Wisconsin and Stanford University.
>
> After spending 11 years on the faculty of the Department of Chemistry and Biochemistry at the University of South Carolina, he joined the Center for Nanoscale Science and Technology at Rice University in 1999 where he is presently the T. T. and W. F. Chao Professor of Chemistry, Professor of Computer Science, and Professor of Materials Science and NanoEngineering.
>
> Tour's scientific research areas include nanoelectronics, graphene electronics, silicon oxide electronics, carbon nanovectors for medical applications, green carbon research for enhanced oil recovery and environmentally friendly oil and gas extraction, graphene photovoltaics, carbon supercapacitors, lithium ion batteries, CO2 capture, water splitting to H2 and O2, water purification, carbon nanotube and graphene synthetic modifications, graphene oxide, carbon composites, hydrogen storage on nanoengineered carbon scaffolds, and synthesis of single-molecule nanomachines which includes molecular motors and nanocars.

> […]Tour has over 650 research publications and over 120 patents.

As he explains in the lecture, his research has frequently been used in the private sector to solve real world problems.

His lecture:

Evolution News had a short blurb of the lecture:

> Rice University chemist James Tour almost defies description in a video now up of his amazing presentation at Discovery Institute's 2019 Dallas Conference on Science and Faith.
>
> At one point he asks for a show of hands of fellow synthetic chemists in the (large) audience. It turns out there are a couple and he demands that they stand up and call him a liar if anything he says isn't true. His message is an alternatively scathing and hilarious indictment of claims from the origin-of-life studies community. Dr. Tour's work in nanotechnology, an ulta-ultra-painstaking field, provides the backdrop for his demonstration that origins scientists don't have the slightest idea how the first life was somehow naturally synthesized by blind, mindless forces.
>
> The field hasn't advanced an inch in 60-plus years. "Everyone's clueless on this but no one wants to admit it." Great scientists writing in the highest profile science journals are "lying to you" when they assert otherwise. "Show me the chemistry" of abiogenesis, he says. "It's not there."
>
> Jim Tour is without parallel. Truly, I'd love to hear from our materialist critics how they would answer any of this.

At the conference, Tour's lecture was accompanied by other great lectures on the origin of the universe and also the Cambrian explosion by Dr. Stephen C. Meyer. Jay Richards spoke on fine-tuning and habitability. You can find the links to those lectures on the Discovery Institute YouTube channel.

What we liked about the lecture by Dr. James Tour was that he did not dumb down the content for a church audience. I was sending screen captures of his slides and short video clips to my best friend Dina while I watched it. I was very excited to see someone so accomplished in his research and entrepreneurship being honest with the laypeople in the church. And I loved the church for letting him speak like a scientist. I didn't understand everything he was saying about the science, but I always understood the point he was trying to make.

Let this lecture encourage to raise your children to focus on science, math, engineering and technology, because you can clearly see the value that we have in Dr. James Tour. We need hundreds more scientists who go to the best schools and make a difference.

I really hope that some of the younger Christians will understand the importance of making scientific evidence for a Creator and Designer more widely known. Learn the areas of science where God's existence can be detected, and put the time in learning how

to make those arguments.

Dr. Stephen C. Meyer explains intelligent design for Prager University

June 9, 2023 | by Wintery Knight | Link | Original Link

I had some very good conversations during the Christmas break, and some of them were about the existence of God and intelligent design. I thought it might be a good idea to help everyone to get an overview of the evidence for a creator and designer using short videos. Dr. Stephen C. Meyer is probably the best author, speaker and debater on these issues, so here is his overview.

It's a series of five 5-minute videos published by Prager University.

Here's number 1: Are Religion And Science In Conflict?

Description:

> Does belief in God get in the way of science? The idea that science and religion are inevitably in conflict is a popular way of thinking today. But the history of science tells a different story.

Here's number 2: How Did The Universe Begin?

Description:

> Was the universe always here, or did it have a beginning? If so, how did it start? Mankind has debated these questions for centuries and has only recently begun to find some answers. And those answers may point to some even more intriguing conclusions.

Here's number 3: Aliens, The Multiverse, Or God?

Description:

> Even staunch Darwinists have acknowledged that life in the universe displays an appearance of design, rather than being created out of random chance. If that's true, where did that design come from? In other words, does a design require a designer?

Here's number 4: What Is Intelligent Design?

Description:

> Chances are if you've heard anything about intelligent design, you've heard that it's faith-based, not science-based. Is that true? Or does modern science, in fact, point us in the direction of a designing intelligence?

Here's number 5: What's Wrong With Atheism?

Description:

> Is there any meaning to life? Or is life nothing more than a cosmic accident? Scientific atheists claim the latter, but ironically, it's science itself that suggests the former.

If this looks interesting to you, you should check out Dr. Stephen C. Meyer's three-book series on creation and design. The first book talks about the origin of life. The second book talks about the fossil record. The third book talks about the origin of the universe, and cosmic fine-tuning.

These videos are just an introduction to these arguments. To really understand the details, you have to read deeply about them. That's why these books are necessary. Christians can only be persuasive when they understand this material well.

Matt Walsh report: transgender health care providers rubber stamp approvals

June 10, 2023 | by Wintery Knight | Link | Original Link

Matt Walsh made some big news this week when he published video of a zoom call between his producer (undercover) and a transgender health care provider. The producer was able to to easily get written material that would satisfy insurance companies. The provider was using templates and just plugging in a few specifics, for each different patient. It took 22 minutes. Why so fast? For the money.

Here's the article from Daily Wire:

> Some of the nation's largest transgender "health care" providers are rubber-stamping approvals for life-altering sex-change procedures — and even falsely representing health diagnoses of patients — so insurance companies will cover the medical expenses, Daily Wire host Matt Walsh revealed in a tweet thread Wednesday.
>
> In an undercover investigation, Walsh and his team discovered how easy it is to get approved for sex-change surgery when one of the host's producers got a thumbs up for an orchiectomy — a procedure to remove testicles — after just a 22-minute virtual appointment with Plume, the largest transgender health care provider in the U.S.
>
> Walsh's producer Gregg Re got scheduled for a video call with Plume after providing a fake name on an intake form. Re made it clear that he had *not* been experiencing gender dysphoria for six months or more, he mispronounced the name of the surgery he wanted, and he said he didn't know what effect the surgery would have on him. Yet, Plume's nurse practitioner told Re "she wanted to write the most 'solid' letter possible to justify surgery," Walsh explained.

Why? For the money:

> Walsh said that in a text message to Re, Plume explained that the letters of recommendation are sent using a template based on standards provided by the radical World Professional Association for Transgender Health, also known as WPATH. Plume sells letters of recommendation for $150 to those seeking transgender surgeries.

Just get the money from the insurance companies:

> Folx, another popular transgender telehealth service, also approves patients for sex-change procedures even if they are not diagnosed with "gender dysphoria," according to Walsh.
>
> "Folx, which provides letters authorizing surgeries for a nominal fee, goes on to admit that 'it's quite possible' patients will receive a letter indicating a gender

> dysphoria diagnosis, even though they ‘really do not have dysphoria,’” Walsh noted. “We reached out to Folx about this. A staff member confirmed that a ‘diagnosis’ of gender dysphoria — with the word ‘diagnosis’ in scare quotes — is a ‘requirement’ for insurance purposes, even if it ‘doesn’t apply.’”

It’s very interesting to think about what the insurance companies will do about this, now that they understand what’s going on. But one thing is for sure – the attorneys general of several states are furious and looking to investigate and prosecute.

Many Americans today don’t really understand how all this spending of money, shifting of responsibility, recklessness, etc. will affect them. They think “don’t judge” and “be nice”. But the truth is that insurance companies only have a certain amount of money. Premiums are collected from policyholders and then used to pay out claims. If insurance companies are paying out claims for frivolous elective surgeries, then they can’t also pay out claims for other things, like broken legs and pregnancies and cancer treatment. The more society becomes reckless, the more money is taken away from the responsible people, to pay for the craziness of the irresponsible people. So all this “tolerance” will eventually hurt you. Why is health care so expensive? Partly because crazy behavior is now covered.

William Lane Craig lectures on naturalistic alternatives to the Big Bang

June 11, 2023 | by Wintery Knight | Link | Original Link

Here's the lecture, which was given in 2004 at the University of Colorado, Boulder.

This lecture might be a little advanced for beginners, but if you stretch your mind first, you shouldn't tear anything. (Note: standard disclaimers apply if you do tear something!)

The description of the video states:

> This is quite simply one of the best lectures William Lane Craig (a philosopher of science) has given. Craig explores the origins of the universe. He argues for a beginning of the universe, while refuting scientific models like the Steady State Theory, the Oscillating Theory, Quantum Vacuum Fluctuation Model, Chaotic Inflationary Theory, Quantum Gravity Theory, String Theory, M-Theory and Cyclic Ekpyrotic Theory.

And here is the description of the lecture from Reasonable Faith:

> A Templeton Foundation lecture at the University of Colorado, Boulder, laying out the case from contemporary cosmology for the beginning of the universe and its theological implications. Includes a lengthy Q & A period which features previous critics and debate opponents of Dr. Craig who were in attendance, including Michael Tooley, Victor Stenger, and Arnold Guminski.

Craig has previously debated famous atheists Stenger and Tooley previously. And they both asked him questions in the Q&A time of this lecture. Imagine – having laid out your entire case to two people who have debated you before and who know your arguments well. What did they ask Craig, and how did he respond?

The scientific evidence

The Big Bang cosmology that Dr. Craig presents is the standard model for how the universe came into being. It is a theory based on six lines of experimental evidence.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies implies an expanding universe
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

It's probably a good idea to be familiar with these if you are presenting this argument,

because experimental science is a reliable way of knowing about reality.

Published research paper

This lecture by Dr. Craig is based on a research paper published in an astrophysics journal, and was delivered to an audience of students and faculty, including atheist physicist Victor Stenger and prominent atheist philosopher Michael Tooley, at the University of Colorado at Boulder.

Here's the peer-reviewed article that the lecture is based on.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole text of the article is posted online here.

FBI file: Biden linked to $5 million bribery scheme when he was vice president

June 12, 2023 | by Wintery Knight | Link | Original Link

Everyone has heard about Hunter Biden's laptop, and how it contained information showing that Joe Biden was using his family members to receive bribes. But up till now, we didn't know how much "10% for the Big Guy" really was. Now we have news about a file from an FBI informant. Sadly, the same corporate news media that denied the laptop isn't talking much about the bribe story.

Here's the story from the New York Post:

> House Oversight Committee Chairman James Comer says an informant file that he's seeking from the FBI links President Biden to a $5 million bribery scheme while he was vice president.
>
> Comer (R-Ky.) revealed the size of the alleged bribe for the first time Wednesday in a letter threatening FBI Director Christopher Wray with contempt proceedings if he doesn't share the file pursuant to a subpoena.
>
> The informant tip is dated June 30, 2020, Comer wrote — an additional clue in the mysterious allegation that triggered a guessing game due to the Biden family's extensive consulting work in countries where the then-VP held sway.
>
> In a remarkable coincidence, Ukrainian officials held a press conference in Kyiv on June 13, 2020 — 17 days before the FBI tipoff — where they showed off $5 million in cash allegedly offered as a bribe to end an investigation of natural gas company Burisma's founder Mykola Zlochevsky.
>
> Burisma employed first son Hunter Biden from 2014 to 2019 and an executive from the firm met Vice President Biden at an April 16, 2015, dinner in Washington.
>
> The cash seized by Ukrainian officials in 2020 was paid in American $100 bills that were put on display — and matches the amount that Joe Biden allegedly received years earlier.

Breitbart had some more details about Joe Biden's network of family members being paid for foreign "consulting" gigs:

> In May, the House Oversight Committee's probe found the Biden family business, over the course of several years, received at least $10 million from business schemes in Romania and China.
>
> "There's a term for that, it's called money laundering … So we feel that this accusation is consistent with a pattern that we're seeing, frankly, in other countries." Comer continued. "FBI officials confirmed that the unclassified FBI-generated record has not been disproven and is currently being used in an

> ongoing investigation."

And more about the FBI file:

> The FBI file originated from an interview the bureau conducted with an informant, who is reportedly a "highly credible" FBI source with a history dating back to the Barack Obama administration.
>
> […]"All we know is two weeks ago they [FBI] tried to act like this [form] didn't exist and now here is the FBI bringing the form to the House of Representatives," Comer said.
>
> Because the FBI refused to provide the file to the full House committee, the House Oversight Committee will move Thursday at 9 AM to hold FBI Director Christopher Wray in contempt of Congress.

I just wanted to write about this to get caught up on the story. It looks like we are now waiting for the FBI to give us the document, or face consequences. I would like to see Christopher Wray and James Comey in the slammer. That's where traitors belong.

California is showing America the next items in the LGBT agenda

June 13, 2023 | by Wintery Knight | Link | Original Link

I worked in places where I met Democrat voters who also attended church. And when Obama was being elected, and same-sex "marriage" was being legalized, I remember what they would say to me. They said "how would gay marriage affect your marriage?" And I explained to them how the redefinition of marriage to eliminate the complementary sexes would have a HUGE effect on society.

Here are a couple of stories showing what comes after same-sex "marriage".

The first one is from the Washington Free Beacon:

> California lawmakers are advancing a bill that would redefine the inability of men to get pregnant as "infertility" and entitle them to insurance-covered fertility treatments.
>
> The legislation, which passed in the Senate late last month and is about to be taken up by the Assembly, would require employer-sponsored insurance plans to cover all nonexperimental fertility treatments, including artificial insemination of pregnancy surrogates. Supporters of the legislation have touted it as an overdue step toward "fertility equality" for LGBT people.
>
> Freshman state senator Caroline Menjivar (D.), who coauthored the bill with Assemblywoman Buffy Wicks (D.), said: "It will ensure that queer couples no longer have to pay more out of pocket to start families than non-queer families. … This bill is critical to achieving full-lived equality for LGBTQ+ people, as well as advancing well-rounded and comprehensive health care for all Californians."

So, what are the consequences of this policy? Well, insurance companies are going to have to charge more for premiums. And since Obama made health insurance *mandatory*, that means that everyone will have to pay more for health care. But wait. This isn't really health care is it? No, this is redistribution of wealth from married homes to LGBT homes. So, Christian husbands and wives who have children the natural way will have to pay the costs for IVF and surrogacy. This is tens of thousands of dollars.

What else? Well, we're going to be making a whole bunch of fatherless and/or motherless children. Think about your own upbringing, how much time you spent with your parents. Even if they were divorced, you could probably see them at least once a year. But in this case, these children will never know one or both of their parents. They are just commodities to the LGBT couples, who just want to be "as good as you".

Here's the second article from Daily Signal:

> A recently amended California bill would add "affirming" the sexual transition of a child to the state's standard for parental responsibility and child

> welfare—making any parent who doesn't affirm transgenderism for their child guilty of abuse under California state law.
>
> […]California courts would be given complete authority under Section 3011 of California's Family Code to remove a child from his or her parents' home if parents disapprove of LGBTQ+ ideology.
>
> By changing the definition of what constitutes the "health, safety, and welfare of [a] child," schools, churches, hospitals, and other organizations interacting with children would be required to affirm "gender transitions" in minors by default—or risk charges of child abuse.

Child abuse. And this is interesting – there will be lots more secular leftists spying into Christian families:

> AB 957 could also expand which organizations provide "evidence" of gender "nonaffirmation" to California's courts.
>
> Because of the addition of "gender affirmation" to the qualifications of California's standards for "health, safety, and welfare," California's courts would now be able to accept reports of gender "abuse" from progressive activist organizations—as long as they claim to provide "services to victims of sexual assault or domestic violence."
>
> In essence, a boy could report his parents to his local school's Gay-Straight Alliance club or other LGBTQ+ organization, who could then report the boy's parents for child abuse.

I've already blogged about the Senior Software Engineer at Apple who was married to the ESG exec who divorced him and transed his kid. The courts sided with her, and stripped him of all parental rights. It's only going to get worse from here.

I have friends who live in California. Young friends, who have just graduated college and are trying to find work. I warn them about the possibility of them losing their kids. They seem to think that all these laws will be struck down. The country that I left 25 years ago has now becoming a tyranny. My friends who stayed are wishing they had left too. When I warn people in California to stop building their careers and lives there, and start somewhere else, they mostly ignore me. But I'm really good at foreseeing threats.

Secular left woman mad because progressive men won't protect and provide

June 14, 2023 | by Wintery Knight | Link | Original Link

There is so much that I would like to say about the video below. For me, it really captures what feminism has taught women about men and relationships. Traditional male roles are: protect, provide, lead on moral issues, lead on spiritual issues. Well, young college-educated single women are certainly interested in protection and provision, but they have zero interest in male leadership.

First, here is the video:

So, this is a young, college-educated, progressive woman. She looks to be about 29 years old. She's probably been having a lot of fun in bars and night clubs, hooking up with hot guys and running up student loans for worthless non-STEM degrees. But 29 is the age when many young feminist women start to notice that their friends are getting married, and so they feel that it's time for them to "keep up" with their friends by also getting married.

The woman in the video doesn't want a man in order to help him with any of his problems. She doesn't want a man because she likes the way he leads her or makes decisions. She wants to get married because she wants to *help herself* to what a husband offers. Specifically, she wants to *help herself* to money, ability to repair a car, ability to renovate a house, vacations, travel, social respectability, social status, etc. That's what she wants. She doesn't want obligations to a man or obligations to children. She wants what a man and children to *benefit her.*

So, what this woman in the video is really asking for is two of the four traditional male roles. She wants a man to do protecting and providing. But she has no interest in a man who has firm views on morality or religion. She wants a sperm-donor, an ATM, and a handyman. But she doesn't want a man who is going to tell her to do anything for God, or for him, or for the kids. No interest at all in a man who will want to lead the family in a Bible study, or protest sex-selection abortions. Religion and morality are disgusting to her – they're brakes on her selfish pursuit of happiness. She likes men who let her make decisions, and who blame others when she is at fault. If babies get in the way of her career, he should approve of her killing them. If two men want to raise a motherless child bought from a surrogate, he should approve of that, too. She wants a man who will put his own kids in daycare and public schools so she can buy a Coach handbag and go on vacation in Barbados. Too bad for the kids. That's what she wants in a man – "don't judge".

But the real key point in this story for me is how this woman expects a secular left man to respect moral obligations. A secular left man thinks that the universe is an accident, that human beings evolved from slime, and that humans have no free will. Atheists don't believe that God holds people accountable for their moral decisions. They think that

morality is just a set of conventions that vary by time and place. On atheism, there are no moral absolutes, just conventions that vary by time and place. And atheists only follow those conventions if following them makes them feel good or look good to others *during their lifetimes*. They support transing kids because they want their college professor or their boss to like them. Who cares about what happens to those kids?

On atheism, morality is just agreeing with the people you want to like you. It's not about taking self-sacrificial stands to protect the weak. Survival of the fittest. That's what atheists believe in. And this woman thinks that she is going to find a man who will have moral obligations towards her when those obligations go against his self-interest. She doesn't want any obligations to him, but she wants him to have lots of moral obligations to her. Absolutely insane.

She also thinks that a man who agrees with her on adult-first, kids-last policies is going to sign up for a lifelong, faithful, marriage commitment. These days, it's hard to get even a good man to agree to take risks with feminist false accusations on college campuses, feminist divorce courts and feminist "me too" workplaces. But why would a man who has a secular leftist worldview want to sacrifice his own interests for such a risky enterprise? Today, only men have obligations. Women are always the victims of someone else. In any disagreement between a man and a woman, the man is always guilty, and the woman is always the victim. The whole society is set up to relieve her of any accountability for her actions. All the costs must be paid by men. Why would a secular leftist man – who has ZERO rational foundation for morality – get legally obligated to a woman who holds that much power over him?

The woman in the video probably thinks that when it comes to marriage, men will just marry when they are impressed with a woman's appearance, and go crazy from being "in love". That's why secular left women spend so much money on their appearance – not just for make-up or clothes, but on manicures, pedicures, and cosmetic surgery, too. Only stupid men marry secular left women because they are "in love" with her fake appearance.

If the woman in the video is expecting a man to commit to her for life, and be faithful, and be a good father, then she's going to have to 1) resign herself to male leadership – because that's what good men want, and 2) upgrade her religious and moral views to match those of a good man. Otherwise, her situation is hopeless. Good men don't get married to secular left feminists. As more young women adopt feminism, you can expect to see the marriage rate decline.

New study: oral contraceptives greatly increase the risk of depression

June 15, 2023 | by Wintery Knight | Link | Original Link

I like to collect studies on my blog so that I can always find them when I get into a debate. One of the things I like to argue against is recreational premarital sex. It's pretty hard to argue this with non-Christians if all you are going to do is quote the Bible. But you can make a pretty good case that will win you the argument from studies, and so I keep a nice collection of studies to use.

Here's the report from The Federalist:

> Oral contraceptives raise the risk of depression, according to a new international study that surveyed more than 264,000 women. Teenagers were at the highest risk, with a 130 percent higher risk of depression in women who started using birth control as adolescents, compared to a 92 percent higher risk among those who started as adults.
>
> The study provides conclusive results to a growing body of research linking oral birth control with the use of anti-depressants, depression diagnoses, and depressive symptoms.
>
> While adult users saw a decrease to more normal risk after using "the pill" for more than two years or getting off the pill, teenage users were still at increased risk even after stopping usage.

Very interesting. I clicked on the link to the study and made sure it was peer-reviewed. It was. So what do we learn from this?

Well, this is not the first time I am hearing about the emotional and mental problems with birth control pills. So, I think the lesson here is to definitely do your research first, so that you don't get involved with things that will cause you problems later. The woman who told me about had tried to go on them, but she immediately noticed how much it changed her moods, and she went off them. I think it caused her some problems in her life, because she ended up taking 5 years to complete her degree, instead of the normal for. So, using these things could really cost you.

Now you might be wondering about other birth control methods, and the team that did this study has a plan for future work:

> This study only examined combination birth control pills, but researchers plan to study other contraceptive options.
>
> "In a future study, we plan to examine different formulations and methods of administration. Our ambition in comparing different contraceptive methods is to give women even more information to help them [m]ake well-informed decisions about their contraceptive options," Johansson said.

The article also notes (with links, which I removed):

> In other studies, birth control methods have also been linked to increased risk of heart attack and stroke, blood clots, breast cancer, and cervical cancer.
>
> Despite significant evidence of risk, researchers still insist that birth control is safe to use…

Normally, I am pretty hard on women on this blog. I feel like they make way too many decisions by following the crowd, instead of thinking about what they want in the long-term, and then making decisions that are likely to get those results – whatever anyone else thinks. I think that women need to be smarter than that, and instead of forming their views by peer pressure, they need to form their views based on truth. And truth is not on the bottom shelf.

I see women getting taught all about sexual topics by public school teachers, entertainers, athletes, celebrities, etc. It makes no sense to me. These people are insulated from real life, for one reason or another. And then I see Planned Parenthood going into the schools and teaching children about birth control and sex. *They make money by getting these kids to become sexual active and then pay them to get abortions*. Young women cannot trust women their own age to know about studies. They can't trust teachers with degrees in English. They can't trust celebrities, entertainers and athletes – they probably cannot even read, much less read studies. Women have to do their own research and make their own plans that work for them.

Today women are being taught from preschool to college and beyond, that they need to use their "young years" to seek happiness by playing the field with tall, hot men who give them tingles. They are told to delay marriage (boring) and children (demanding) for as long as possible, in order to have no-commitment sex with the hottest men they can get. Somehow, having sex with a lot of hot men is thought to raise the value of the woman. It builds her self-esteem, or something. This is objectively stupid behavior. But this is why they jump all over birth control, because it helps them to do stupid things that they've been told to do. They don't even know the long-term effects of the behavior they're doing. It's monkey-see, monkey-do. The blind leading the blind.

So, I think it's good for us as grown-ups to point them towards the data that they should know about. They can certainly ignore it, and go with their feelings. But some of them will prefer to get the real truth about how the world works, and those are the ones we need to reach. They should at least have a choice to make.

By the way, I'm not saying that it's a bad idea to give someone a Bible. I got one when I was young, and that worked for me. But for people who ask questions, you need to have the studies ready. Always be ready for anyone who asks you questions about why you believe what you believe.

Survey: 60 years of feminism has not made women happier

June 16, 2023 | by Wintery Knight | Link | Original Link

I had a conversation this week with someone who was insisting that feminism had made women much happier than in the 1950s and 1960s. So, I thought it might be a good idea to go digging around for some data, and then blog about it so I could find it again. Well, I found some nice survey data from the 2022 American Family Survey. That's not too long ago! Let's see what it says.

This is from the New York Post.

First, just some interesting points about how feminism was sold to women:

> In February, we will mark the 60th anniversary of Betty Friedan's "Feminine Mystique." But given the state of modern feminism, it's hard to imagine there will be much celebration.
>
> Friedan's work, which revealed women's lack of fulfillment as homemakers, laid out the goals of second-wave feminism. Now that women had achieved the right to vote, own property and get an education (the first wave), Friedan and her cohorts argued that women should pursue higher education and careers as a way of achieving personal satisfaction. Others, like Germaine Greer, wrote that the sexual repression of women prevented them from becoming personally fulfilled. But thanks to the pill and changing mores about sex outside of marriage, women could finally achieve the freedom and happiness that had been available to men for millennia.

So, I see a few problems that feminism is supposed to solve. 1) being a stay at home wife and mom isn't as fulfilling as having a job and putting your kids in daycare and public schools. 2) it's not fulfilling to have sex with one man who commits to you for life – that's boring. You need to have sex with a lot of different men, just like the tall, hot, bad boys are doing.

So that's the offer that most women accepted, and that's the view of the most powerful people in our society. We have massive government spending on social programs like daycare and public schools in order to make this plan "work out" to make women happier.

Now let's see the survey data:

> The American Family Survey recently asked: "All things considered, has feminism benefited American families?"
>
> Only a little more than half (58.6%) of respondents said yes. What's interesting, though, is the people who said yes also tend to be among the least happy and fulfilled. In survey after survey, it turns out that people who espouse a secular

> worldview, people who identify as liberals, and people who never attend religious services report the lowest levels of personal satisfaction, but they also report the highest levels of support for feminist ideals. Indeed, as feminism's influence has grown over the past half century, women have become less happy.

How did we get to this point where men are expected to do more housework and child care, and women exchange being wives and mothers for working outside the home, and giving their kids to strangers to raise?

> [M]any feminists would have been happy to dispense with traditional marriage altogether. If that happened, and women still did want to bear children (something many feminists did not encourage), well, someone was still going to have to support them. And so feminist leaders also demanded more government support for women.

When I was in grad school, and had a pet parrot at home, I could barely stand to leave the house. I would call home during breaks, or from the lab after classes. It's not natural for people to leave their kids alone with strangers. I didn't even like leaving my parrot with my older brother to go to class. Didn't trust anyone to look after him. So, I can't imagine how fathers and mothers can be happy about leaving young children with "child care workers" or "public school teachers". They can't be trusted, and they don't reflect my values. So I can't imagine how women could be happy to be separated from their young children.

And here's another problem – promiscuity stinks:

> In 1963, Betty Friedan was writing about "the problem that had no name." But women's problems in the 21st century can absolutely be named. More often, they are trying to raise children on their own, which can be exhausting even with financial resources. They are sexually liberated, but that often means they are going from one relationship to another without any sense of financial security or emotional stability.

One of the reasons why I sailed through high school and college with my chastity intact was because I knew that I wouldn't like going all the way with a girl, and then she would just leave and I would never see her again. So I have no idea women think this is wonderful. I know that they only have eyes for tall, hot bad boys, but I don't think those men should be emulated. If it doesn't work for women, then they shouldn't do it.

Men and women aren't as different than people think. Nobody likes leaving their young children with strangers. Nobody likes being intimate with a person, and then not being able to even talk to them again when you want to. No wonder women are miserable. And as I blogged about before, it's the progressive women who have the highest rates of mental illness and use of medication. The ones who took feminism seriously are the ones who are least happy.

Knight and Rose Show – Episode 33: Are All Religions the Same, Part 1

June 17, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 33 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose start a new discussion about truth in religion. Are religious truth claims the same as ordinary truth claims? How can you test a religion to see if it is teaching the truth? If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 33:

Episode Summary:

Wintery Knight and Desert Rose discuss the view that all religions are equally valid paths to God. We start by talking about what truth is, why truth matters, and the difference between objective and subjective truth claims. We discuss how different religions make different testable truth claims. We look at how different religions answer the question "How did the universe get here?". And then we look at what science has to say about that question. This is the first episode of a three-part series.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

What is the definition of marriage according to Jesus?

June 18, 2023 | by Wintery Knight | Link | Original Link

It's Pride Month! This is when Big Corporations spend an entire month celebrating the LGBT community, and pressuring everyone else to celebrate behaviors and lifestyles that are at odds with the teachings of Jesus. So, since the LGBT activists are about to get 30 days of celebration, I thought I would celebrate what Jesus taught about marriage on my little blog.

Here's what Jesus says about marriage.

Matthew 19:1-11:

> 1 Now when Jesus had finished these sayings, he went away from Galilee and entered the region of Judea beyond the Jordan.
>
> 2 And large crowds followed him, and he healed them there.
>
> 3 And Pharisees came up to him and tested him by asking, "Is it lawful to divorce one's wife for any cause?"
>
> 4 He answered, "Have you not read that he who created them from the beginning made them male and female,
>
> 5 and said, 'Therefore a man shall leave his father and his mother and hold fast to his wife, and the two shall become one flesh'?
>
> 6 So they are no longer two but one flesh. What therefore God has joined together, let not man separate."
>
> 7 They said to him, "Why then did Moses command one to give a certificate of divorce and to send her away?"
>
> 8 He said to them, "Because of your hardness of heart Moses allowed you to divorce your wives, but from the beginning it was not so.
>
> 9 And I say to you: whoever divorces his wife, except for sexual immorality, and marries another, commits adultery."
>
> 10 The disciples said to him, "If such is the case of a man with his wife, it is better not to marry."
>
> 11 But he said to them, "Not everyone can receive this saying, but only those to whom it is given.

To be a Christian, minimally, is to be a follower of Jesus Christ. That means that we accept what Jesus teaches, on whatever he teaches about. We don't overturn the teachings of Jesus in order to make people who are rebelling against God feel better about their rebellion. It is central to the Christian worldview that Christians care more about what God thinks of them than what non-Christians think of them. In fact, Christians are supposed to be willing to endure suffering rather than side with non-Christians against

God’s authority.

Matt Walsh had a fine article about this issue.

He said:

> As Christians, our goal is not to avoid being like the big bad “other Christians,” but to strive to be like Christ Himself. This is one of the advantages to having an Incarnate God. He went around acting and speaking and teaching and generally functioning in our realm, thereby giving us a model to follow. This is the model of a loving and merciful man, and *also* a man of perfect virtue who fought against the forces of evil, condemned sin, defended his Father in Heaven with sometimes violent force, spoke truth, and eventually laid down His life for those He loved (which would be all of us).
>
> […]This is what it means to believe in Christ. Not just to believe that He existed, but to believe that Christ is Truth itself, and that everything He said and did was totally and absolutely and irreversibly true forever and always. Many Christians today — not only the ones in the video, but millions alongside them — seem to think we can rightly claim to have “faith” in Jesus or a “relationship” with Him while still categorically denying much of His Word. This is a ridiculous proposition. We can’t declare, in one breath, that Christ is Lord, and in the next suggest that maybe God got it wrong on this or that point. Well, we *can* make that declaration, but we expose our belief as fraudulent and self-serving. We worship a God we either invented in our heads, which is a false idol, or a God who is fallible, which is a false idol.

If you really accept Jesus as God, then you can’t think he is wrong when he explains what marriage is. Period. End of issue.

Real Christians don’t make excuses for sin. Real Christians present the gospel. The gospel is that all men have rebelled against God and fallen short of perfect submission to and obedience of him. For this, they deserve to be separated from God eternally. Jesus paid the price for this rebellion on the cross, and anyone who accepts him as Savior *and Lord* will be with God eternally after they die. There is no salvation apart from Jesus. That’s what Christians say. And they say it regardless of how weird they look, and how many non-Christians don’t like them for saying it.

Is there evidence of systemic racism in the United States?

June 19, 2023 | by Wintery Knight | Link | Original Link

Systemic racism is the idea that people can't lift themselves out of poverty by making good decisions, because powerful groups in society that hold the poor down, regardless of their decisions. Do you think that America is a place where no matter what choices you make, you'll never be able to be more prosperous? That's what the leaders of Black Lives Matter think.

Here's what Nikole Hannah-Jones, creator of the 1619 Project, says in the New York Times (a former newspaper):

> To summarize, none of the actions we are told black people must take if they want to "lift themselves" out of poverty and gain financial stability — not marrying, not getting educated, not saving more, not owning a home — can mitigate 400 years of racialized plundering.

Got that? It doesn't matter what individual choices a non-white person takes in America, they're going to be poor. The "systemic racism" of the powerful whites will always keep them down. Single motherhood doesn't make people poor, and marriage doesn't make people wealthier. Dropping out of high school doesn't make you poor, and getting a Masters degree in computer science won't make you wealthier.

But let's take a look at the data from the 2019 Census, and see the evidence:

Median US Household Income by Selected Ancestry Groups, 2019		
Indian	Americans	$126,705
Taiwanese	Americans	$102,405
Filipino	Americans	$100,273
Indonesian	Americans	$93,501
Pakistani	Americans	$87,509
Iranian	Americans	$87,288
Lebanese	Americans	$87,099
Japanese	Americans	$85,007
Turkish	Americans	$83,375
Chinese	Americans	$82,281
Korean	Americans	$76,674
Syrian	Americans	$74,047
Hmong	Americans	$73,373
Vietnamese	Americans	$72,161
Cambodian	Americans	$72,038
White	**Americans**	**$69,823**
Ghanaian	Americans	$69,021
Bangladeshi	Americans	$67,944
Guyanese	Americans	$67,772
Egyptian	Americans	$67,187
Palestian	Americans	$67,157
Thai	Americans	$66,763
Laotian	Americans	$66,117
Nigerian	Americans	$65,672

Chart from AEI

Income By Ethnicity in America

White people are doing a bad job of keeping non-whites down

Well, it looks like at least SOME people of color are able to do well in America despite all the “systemic racism” that keeps non-whites down. And do you know what those non-white groups at the top have in common? They’ve made good decisions, they’ve worked hard, they haven’t blamed other people when they fail, and they’ve saved their money instead of spending it on shiny junk.

Let’s look at some decisions that the non-whites who are prosperous have made, that those further down have not.

Asians marry before they have children, so the kids have two parents

Education and marriage

This article is written by the far-left radical Nicholas Kristof, writing in the radically-leftist New York Times (a former newspaper).

Excerpt:

> A new scholarly book, “The Asian American Achievement Paradox,” by Jennifer Lee and Min Zhou, notes that Asian-American immigrants in recent decades have started with one advantage: They are highly educated, more so even than the average American. These immigrants are disproportionately doctors, research scientists and other highly educated professionals.

> It’s not surprising that the children of Asian-American doctors would flourish in the United States. But Lee and Zhou note that kids of working-class Asian-Americans often also thrive, showing remarkable upward mobility.
>
> […]There’s also evidence that Americans believe that A’s go to smart kids, while Asians are more likely to think that they go to hard workers… Asian-American kids are allowed no excuse for getting B’s — or even an A-. The joke is that an A- is an “Asian F.”

One reason Asians students do so well is because their parents are usually married:

> > Strong two-parent families are a factor, too. Divorce rates are much lower for many Asian-American communities than for Americans as a whole, and there's evidence that two-parent households are less likely to sink into poverty and also have better outcomes for boys in particular.

American blacks have a 73% out-of-wedlock birth rate. A huge difference compared to Asians.

So, when Nikole Hannah-Jones tells you that education and marriage don't matter, she's just wrong.

Compound interest

Education and marriage are important, but so is saving your money. The wealthiest people in America are typically the ones who are experts at saving money early, and investing it. They know about the law of compound interest. If you invest money early and leave it alone, then it will grow into a fortune by the time you are read to stop working.

This graph explains compound interest:

Investing $24,000 from age 21 to 41 vs investing $24000 from age 47 to 67

What does Nikole Hannah-Jones say when she looks at that graph? She doesn't think that saving money makes a difference to having more or less wealth. She thinks skin color determines whether saving money makes you wealthy or not. The graph clearly shows what we should be recommending to young people of color. They need to stop spending money and start saving it, and the earlier the better. It doesn't matter what your skin color is, saving money early JUST WORKS.

Similarly, when she says that home ownership doesn't make you more wealthy, this is just terrible advice. It's always better to pay down your own mortgage (at least when interest rates are low like they are now) than to pay someone else rent. You have to live somewhere, and paying for your own home is better because it costs about the same as rent, and then you get to keep the home when you're done paying for it.

Communism

Nikole Hannah-Jones does have a “solution” to disparities in wealth. Her solution is communism. She wants to transfer money from those who earn, to those who don’t. But we already have tried that in the 20st century and it resulted in the deaths of over 100 million people. That’s not my opinion, that’s all documented in a book published by Harvard University Press.

Socialism Communism Countries Per Capita GDP Income

You don’t even have to read the book to know the truth – just look at countries that score low on the Index of Economic Freedom, and compare their GDP per capita to countries that score high on the Index of Economic Freedom. The more communist a nation goes, the less wealth there is for the citizens. That’s why people in Venezuela are eating zoo animals and selling their bodies in prostitution for food, while nearby capitalist countries like Panama and Chile prosper. Nikole Hannah-Jones wants to reduce economic freedom, but we know by looking at other countries that this lowers per-capita GDP.

There’s a lot more than could be said here, but the point is that we need to be telling American blacks to make decisions that match the decisions of other successful non-white communities in America. We need to start teaching young people basic economics so they don’t fall prey to charlatans.

Detective skills are useful when trying to understand hard parts of the Bible

June 20, 2023 | by Wintery Knight | Link | Original Link

I found on Cold Case Christianity about the problem of why one of Jesus' women followers (Mary) did not recognize him at the empty tomb. Now, if you are a skeptic, you look at this story, and you think "that makes no sense" or maybe something worse. But if you give that same difficult passage to a cold case homicide detective, then there's no problem for him to figure it out.

Here's the post. He starts by explaining why this problem is important:

> Skeptics sometimes question the Gospel eyewitness accounts of the Resurrection, particularly related to the early observations of the risen Christ. In John's record of the Resurrection, Mary doesn't immediately recognize Jesus in the garden. In fact, she initially mistakes Him for the gardener (John 20:1-16). How could that happen? Does this passage of Scripture support the claims of conspiracy theorists? Was the resurrected "Jesus" merely an imposter? Was it just someone posing as Jesus? Why wouldn't Mary recognize the resurrected Jesus; the very man who meant so much to her? A closer examination of the Biblical texts may provide some answers.

Here is his approach:

> Given my experience with eyewitnesses, the Gospel accounts contain exactly what I would expect from four eyewitness testimonies; each telling the story from a slightly different perspective and from the innate presuppositions, life experiences and abilities of each witness. I get suspicious when the stories of witnesses are exactly the *same*, not when they vary within acceptable expectations. When people conspired to lie about an event, they typically align their stories. This is not the case with accurate and true eyewitness accounts. *They always vary to some degree*. When evaluating multiple eyewitness accounts, it's my job to assemble the cumulative narrative.

So many times when skeptics get mad at the Bible, they pounce all over it, insisting that it should all make sense to them without any effort. But maybe God expects us to put in the effort, rather than just be passive. Maybe Christianity is work. Maybe God wants to be in a relationship with people who chase after him, instead of people who want their relationship with God to be all one-way – their way. I can think of a million useful skills that would help people to work through Bible problems… knowing Greek, knowing Hebrew, studying the genres of ancient history and ancient biography, etc.

The story of the discovery of the empty tomb is in all four gospels, and after Detective Wallace looked at each passage, he found enough evidence to write this:

> Given these four accounts of Mary's encounter with Jesus in the garden, the following inferences are reasonable:
>
> - The women came to the tomb very early, before it was light outside. They first viewed Jesus in this darkness.
> - The women were *not* looking for a resurrected man; they were looking for a *dead* man. They did not think it possible someone standing behind them could be Jesus.
> - They were afraid and scared, bewildered and wondering. Why? Because they had just experienced an *earthquake*. This is their state of mind as Jesus approaches.
> - Mary is crying; *sobbing* more likely. This is clear from the account we have, and her sobbing clearly affected her ability to see.
> - Mary was standing outside the tomb in the garden when she first viewed Jesus. In this setting, she would expect to see a gardener rather than Jesus.
> - Mary turned away from Jesus. She must have turned away quickly and stayed turned from Him for most of the contact and conversation, because the Scripture tells us she turns *back* toward Him when He mentions her name.

So, there are actually a lot of reasons why Mary the empty tomb visitor might have had trouble recognizing Jesus. I think that's a pretty good case. What do you think?

I think a lot of people come to the Bible with a list of bad behaviors that they don't want to change. Then they look for any little confusing passage to claim that the Bible is not reliable history. Well, maybe God wants to give them just enough confusion to let them go their own way. But for the people who accept that relationships are give and take, with two people working at it, they won't find this to be a problem. They'll put in the effort to puzzle out how to get things to fit together and make sense.

Canada denies organ transplant to naturally-immune grandma who declined vaccination

June 21, 2023 | by Wintery Knight | Link | Original Link

How does Canada's health care system work? Well, when you get paid, they take money from you, and they also take some of the money that your employer wanted to pay you. You keep doing that until you are old enough to be a grandmother, then they deny you health care when you ask for it. But you can die, though. Oh, Canada would love to make you die so you don't use any health care.

Here's the story from the True North, an independent Canadian news source:

> The Supreme Court of Canada will not hear the case of a dying, unvaccinated woman who's been denied an organ transplant.
>
> Sheila Annette Lewis is dying of a terminal illness. She was removed from the top of the organ donor transplant list after refusing to be vaccinated against Covid-19.
>
> Lewis said the Supreme Court owes her an answer as to why it won't hear her case.
>
> "This is the highest court in Canada that doesn't want to do right by the people of Canada," she said in an interview with Rebel News.
>
> Lewis was unsuccessful at both the Alberta Court of Queen's Bench and the Alberta Court of Appeal in 2022, with both levels of court finding that the Canadian Charter of Rights and Freedoms does not apply to the Covid-19 vaccine policies of Alberta Health Services (AHS), the Alberta Hospital where she would receive her transplant, or her transplant doctors. Both courts also dismissed her claims under The Alberta Bill of Rights.

Actually, the Canadian Charter of Rights and Freedoms doesn't apply to any law in Canada. The basic human rights of Canadians – free speech, freedom of religion, freedom of association, parental authority, etc. – are regularly violated by the secular left totalitarian government. The media is funded by the government. The schools are funded by the government. The hospitals are funded by the government. And the government-funded university system discriminates against students who don't accept the dogma of the secular left. There's no way to get justice in Canada.

More:

> In a November ruling, the appeal court acknowledged it's a "virtual certainty" Lewis will die without an organ transplant.
>
> In January, Lewis filed a court application asking the Supreme Court of Canada to hear her case against Alberta Health Services. In March, she provided her Alberta Transplant Program doctors with a privately funded medical report, known as the

> Kinexus Report, establishing her natural immunity to Covid-19.

She's naturally immune, but that doesn't matter to the high priests of the secular left. She has to comply with their worldview and their values. No one can defy the government, and get services from the government. They can pay the government, but they can't get anything back if they disagree with the government.

More:

> Lewis has now filed a new negligence claim against AHS and awaits a court date.
>
> "I'm not going to go away," she said. "I have to fight for my life."
>
> "I don't want to die. I'm 58 years old and I have reason to live. I have grandchildren and I have children."

Well, what you have to do if you are born in Canada is that you have to get out. You have to work your way through the state-run public schools, and the state-run universities. You have to block the state-run media out of your ears. And when you get your degree, you have to get out. You have to get away from the fascists who run the country – using your money to violate your human rights, and take away your freedoms.

Canada is going bankrupt because even after taking $15,000 per household for health care, the Liberal party doesn't have enough money to pay for all the abortions, sex changes, IVF, etc. that they promised to their dysfunctional, reckless, irresponsible supporters. So, what to do? Well, they have to start killing the people who paid into the system for decades, who are now asking for health care.

Daily Signal explains:

> According to the Euthanasia Prevention Coalition, Canada saw a sharp increase in government-assisted suicides last year, with an estimated 13,500 taking place in 2022.
>
> This is a 35% increase from 2021, when 10,064 took their lives through the program. The number represented 3.3% of all deaths in Canada in 2021, which is deeply alarming.
>
> […]In 2020, 7,595 government-assisted suicides occurred in Canada.
>
> […]In 2021, Medical Assistance in Dying expanded to include people with chronic illnesses. The program has become a convenient tool to push the poor and sick to kill themselves.
>
> […]At the end of 2022, lawmakers expanded the program yet again to include people with mental illness.

People are literally dying in the streets in Canada, because although they paid tens of thousands of dollars for health care, the government doesn't see their lives as "worthy of life". Life unworthy of life. That's what the Liberal Party of Canada believes. Never let the secular left take over your country.

What are Hunter Biden, Joe Biden, and the Biden family being investigated for?

June 22, 2023 | by Wintery Knight | Link | Original Link

Whenever I want to understand what's going on with corruption in the Biden administration, I turn to The Federalist, and look directly for Margot Cleveland's column. And she doesn't disappoint! This is a good primer on the Hunter Biden corruption story, so if you don't know the full story, read this post. And then we'll both have somewhere to look if we need to debate it.

So, here's the article from The Federalist by Margot Cleveland.

She starts with some background:

> In 2018, the feds launched an investigation into Hunter Biden, which the son of the now-president publicly disclosed in December 2020, following his father's election. On Tuesday, news broke that Hunter Biden had agreed to plead guilty to two misdemeanor tax counts and had entered a pretrial diversion agreement on a separate firearms count, unleashing outrage from the right over the absence of any money-laundering or bribery counts. But even worse is the U.S. attorney's failure to file these charges against the Biden son in 2019, which suggests shielding Joe Biden from scandal is the operative principle of the Department of Justice and FBI.

Do federal laws apply to the son of the Democrat president?

> The two tax misdemeanor charges spanned only a page-and-a-half and alleged in count one that the president's son, during the 2017 calendar year, received taxable income exceeding $1.5 million and willfully failed to pay income taxes on that amount in violation of 26 U.S.C. § 7203. Count two mirrored count one but charged Hunter with failing to pay the income taxes due on his 2018 calendar year earnings.

Wow, if you or I did that, we'd probably spend about 20 years in a federal penitentiary.

Do federal laws apply to the son of the Democrat president?

> Delaware U.S. Attorney David Weiss filed separate information charging Hunter with violating 18 U.S.C. §§ 922(g)(3) and 924(a)(2), for knowingly possessing a firearm, "knowing that he was an unlawful user of and addicted to a controlled substance…" Sources say, however, that under the pretrial diversion agreement, Hunter Biden will not plead guilty to that felony gun charge, with prosecutors instead dismissing the count "if he remains drug-free and doesn't commit additional crimes for two years."

It's amazing. Normally in cases like this, my understanding is that the minimum sentence

for a gun felony is SEVERAL years in jail, even for a first offense, and even if you plead out.

An interesting connection has emerged between American foreign policy and money received from foreign sources is emerging:

> Weiss's decision to charge Hunter with two tax misdemeanors only weeks after Americans learned that a "highly credible" confidential human source had reported that the Ukrainian owner of Burisma paid the father-son duo each $5 million in bribes looked like an obvious attempt to quell the growing scandal that threatened to engulf the president.

The interesting thing about those charges is that these payments from foreigners were known BEFORE the 2020 election. But for some reason, federal law enforcement declined to do anything about them:

> Weiss sat on those charges before the 2020 election that points to the top Delaware prosecutor protecting the Biden family.

Not just those charges, but the income tax charges too:

> Why then did the Delaware U.S. attorney fail to charge the Biden son in 2019 with those crimes? The answer seems clear: politics.
>
> And if politics drove the U.S. attorney to refrain from charging Hunter before the 2020 election, how could politics not also affect every aspect of the investigation into the now-president's son, including evidence implicating President Joe Biden?

Now, when I look at those millions of dollars being funneled through Biden family members, it makes me wonder whether Joe Biden has been selling out our foreign policy interests to the highest bidder.

Here is what Republican Senator Chuck Grassley said, (reported by The Federalist):

> "Since the FBI's investigation into Hunter Biden began nearly five years ago, I and my colleagues in Congress have uncovered extensive government and bank records indicative of money laundering as well as foreign business schemes that, in any other circumstance, would raise serious criminal and counterintelligence concerns," Grassley said. "Hunter's laptop, which the FBI has had since 2019, contains records corroborating much of this evidence, as well as evidence of other serious criminal violations."

Got that?

"extensive government and bank records indicative of money laundering as well as foreign business schemes that, in any other circumstance, would raise serious criminal and counterintelligence concerns"

More:

> The Iowa lawmaker, who has spent half a decade investigating the first son, went

> on to highlight recent whistleblower reports from the DOJ and Internal Revenue Service (IRS) that claim federal investigators have sabotaged any potential for a significant indictment.
>
> In May, an IRS whistleblower spoke publicly on CBS News about efforts within the DOJ to hamper the federal tax probe.
>
> “There were multiple steps that were slow-walked — were just completely not done — at the direction of the Department of Justice,” said Gary Shapley. “These deviations from the process,” he added, “seemed to always benefit the subject.”
>
> More whistleblowers from within the FBI have made similar allegations that the Department of Justice is working to shield the Biden family from thorough investigations. The plea deal on Tuesday comes as President Joe Biden himself faces credible bribery allegations from his time as vice president.

SIX additional Biden family members being investigated:

> House Republicans who reviewed “suspicious activity reports” housed within the Treasury Department about Hunter Biden’s finances say they’ve expanded their own investigation of the Biden family to “six additional” members.

One of the the first tasks of the next Republican president will be to clean out corruption in high places in our government. We really have to pick someone who is fearless, and punish the Democrat traitors to the maximum extent of the law. And maybe next time, think twice about electing Godless secular leftists to high positions in government. They clearly don’t have the capability for morality that we need in our political leaders.

Testimony of IRS whistleblowers about Hunter Biden bribery investigation

June 23, 2023 | by Wintery Knight | Link | Original Link

I heard there was some news on Thursday night about the IRS investigation of bribery allegations against Hunter Biden and Joe Biden. And there was also news about whether Joe Biden was in the room while Hunter Biden was conducting his business deals. I'm trying to stay on top of this, so that I can know enough to discuss the details with people who ask me what it's all about.

Here's an article by Margot Cleveland in The Federalist.

She says:

> The Delaware U.S. Attorney's Office hid an FBI report that the Ukrainian oil and gas company Burisma paid Hunter and Joe Biden each $5 million bribes, documents released by the House Ways and Means Committee reveal. That revelation eclipses the catalog of other claims of misconduct and political favoritism levied by two IRS whistleblowers, as detailed in the transcripts the House committee released Thursday — and suggests the bribery claims were never investigated.

The information about the bribes was never provided to IRS Criminal Supervisory Special Agent Gary Shapley, "nor to any of the IRS agents acting under his supervision, nor to the FBI agents working with the IRS investigators." Even though they were the ones who would be expected to investigate it.

More:

> Further, Shapley's investigative team was precisely the group to investigate the allegations contained in the FD-1023, as his group is "known as the International Tax and Financial Crimes group," and consists of "12 elite agents who were selected based on their experience and performance in the area of complex high-dollar international tax investigations."

The FBI did their part to protect Hunter Biden by labeling the bribery charges against Joe Biden and Hunter Biden as "disinformation":

> The scandal is not limited to Delaware, however. A related scandal connects to another whistleblower who claims that in "August 2020, FBI Supervisory Intelligence Analyst Brian Auten opened an assessment which was used by a FBI Headquarters ('FBI HQs') team to improperly discredit negative Hunter Biden information as disinformation and caused investigative activity to cease."
>
> Every indication suggests it was the FD-1023 that the FBI HQ's team falsely labeled disinformation, which raises the specter that individuals in the Delaware U.S. Attorney's Office were colluding with FBI HQ to protect the Biden family. It is

> now up to Sen. Chuck Grassley's whistleblower to close the circle.

So, Margot thinks that the reason why the Delaware U.S. Attorney's Office didn't pass the bribery charges on for investigation, is because they were colluding with the FBI to protect the Biden family.

Another interesting story about Biden corruption came out on Thursday. Do you remember how Joe Biden claims that he didn't know anything about his son's business deals? That he never talked to him about it?

Well, consider this from the Washington Free Beacon.

> Photographs on Hunter Biden's abandoned laptop place him at his father's Wilmington, Delaware, residence on the day he invoked President Joe Biden's name in a text message, threatening his Chinese business partner to come down on him with their full weight if the business partner did not fulfill his "commitment."
>
> In that message, sent on July 30, 2017, to an official, Henry Zhao, working with a Chinese energy conglomerate CEFC Energy—linked to Chinese military intelligence—Hunter Biden said he was sitting next to his father and that "we would like to understand why the commitment made has not been fulfilled."
>
> The message became public on Thursday, when Congress made public testimony from an IRS whistleblower, Gary Shapley, who obtained the message during his investigation of Hunter Biden's various tax crimes. Hours after the message was sent, Hunter Biden was pictured at his father's home sitting behind the wheel of the president's beloved 1967 Corvette Stingray with family members.
>
> […]If Joe Biden was sitting next to his son as he sent the message as it suggests, it would be a fatal blow to the president's repeated claims that he never discussed overseas business deals with his son, and the photographs of Hunter Biden at what appears to be a family gathering at the Delaware home is the strongest indication that he was in close proximity to his father when he threatened the Chinese businessman.

It's very interesting, now that we know about these things, to think about all the pious Christians who told us that voting for a President isn't about voting for specific policies or Supreme Court judges. It's really about voting for a good moral and spiritual leader. That's what we were told by the pious #evangelicalsForBiden. Now we're finding out what sort of morality they were wanting us to vote for. Just look at the underage girls on Hunter Biden's laptop. That's what they support as a "return to civility".

Robin Collins and atheist Peter Millican discuss the fine-tuning of the universe for life

June 24, 2023 | by Wintery Knight | Link | Original Link

You might remember Peter Millican from the debate he had with William Lane Craig. I ranked that debate as one of the 3 best I have ever seen, along with the first Craig vs Dacey debate and the second Craig vs Sinnott-Armstrong debate.

Details:

> Science has revealed that the fundamental constants and forces of the cosmos appear to be exquisitely fine-tuned to allow a universe in which life can develop. Is God the best explanation of the incredibly improbable odds of the universe we live in being a life-permitting one?
>
> Robin Collins is a Christian philosopher and a leading advocate of the argument for God from cosmic design. Peter Millican is an atheist philosopher at Oxford University. They debate the issues.
>
> From 'Unbelievable?' on 'Premier Christian Radio', Saturday 19th March 2016.

The debate:

As usual when the atheist is an expert, there is no snark or paraphrasing in the summary.

Summary

Brierley: What is the fine-tuning argument?

Collins: the fine-tuning is structure of the universe is extremely precisely set to allow the existing of conscious, embodied agents who are capable of moral behavior. There are 3 kinds of fine-tuning: 1) the laws of nature (mathematical formulas), 2) the constants of physics (numbers that are plugged into the equations), 3) the initial conditions of the universe. The fine-tuning exists not just because there are lots of possibilities, but there is something special about the actual state of affairs that we see. Every set of laws, parameters and initial conditions is equally improbable, but the vast majority of permutations do not permit life. The possible explanations: theism or the multiverse.

Brierley: How improbable are the numbers?

Collins: Once case is the cosmological constant (dark energy density), with is 1 part in (10 raised to 120th power). If larger, the universe expands too rapidly for galaxies and stars to form after the Big Bang. If smaller, the universe collapses in on itself before life could form. Another case is the initial distribution of mass energy to give us the low entropy we have that is necessary for life. The fine-tuning there is 1 part in (10 raised to the 10th power raised to the 123rd power).

Brierley: What do you think of the argument?

Millican: The argument is worth taking very seriously. I am a fan of the argument. The other arguments for God's existence such as the ontological and cosmological arguments

are very weak. But the fine-tuning argument has the right structure to deliver the conclusion that theists want. And it is different from the traditional design argument tended to focus on biological nature, which is not a strong argument. But the fine-tuning argument is strong because it precedes any sort of biological evolution. Although the design is present at the beginning of the universe, it is not visible until much later. The argument points to at least deism, and possibly theism. The argument is not based on ignorance, it is rooted in "the latest results from the frontiers of science" (his phrase).

Brierley: Is this the best argument from natural theology?

Collins: The cosmological argument makes theism viable intuitively, but there are some things that are puzzling, like the concept of the necessary being. But the fine-tuning argument is decisive.

Brierley: What's are some objections to the fine-tuning argument?

Millican: The argument is based on recent physics, so we should be cautious because we **maybe** we will discover a natural explanation.

Brierley: Respond to that.

Collins: The cosmological constant has been around since 1980. But the direction that physics is moving in is that there are more constants and quantities being discovered that need to be fine-tuned, not less. Even if you had a grand unified theory, that would have to be have the fine-tuning pushed into it.

(BREAK)

Millican: Since we have no experience of other laws and values from other universes, **we don't know** whether these values can be other than they are. Psychologically, humans are prone to seeing purpose and patterns where there is none, so **maybe** that's happening here.

Brierley: Respond to that.

Collins: It is possible to determine probabilities on a single universe case, for example using multiple ways of calculating Avogadro's number all converging on the same number makes it more probable.

Millican: Yes, I willing to accept that these constants can take on other values, ("principle of indifference"). But **maybe** this principle be applied if the improbability were pushed up into the theory?

Collins: Even if you had a grand theory, selecting the grand theory from others would retain the improbability.

Brierley: What about the multiverse?

Millican: **What if** there are many, many different universes, and we happen to be in the one that is finely-tuned, then we should not be surprised to observe fine-tuning. **Maybe** a multiverse theory will be discovered in the future that would allow us to have these many universes with randomized constants and quantities. "I do think that it is a little bit of a promissary note". I don't think physics is pointing to this right now.

Brierley: Respond to that.

Collins: I agree it's a promissary note. This is the strongest objection to the fine-tuning argument. But there are objections to the multiverse: 1) the fine-tuning is kicked back up to the multiverse generator has to be set just right to produce universes with different constants, 2) the multiverse is more likely to produce a small universe with Boltzmann brains that pop into existence and then out again, rather than a universe that contains conscious, embodied intelligent agents. I am working on a third response now that would show that the same constants that allow complex, embodied life ALSO allow the universe to be discoverable. This would negate the observer-selection effect required by the multiverse objection.

Brierley: Respond to that.

Millican: I don't see why the multiverse generator has to be fine-tuned, since **we don't know** what the multiverse generator is. I'm not impressed by the Boltzmann brains, but won't discuss. We should be cautious about inferring design because **maybe** this is a case where we are seeing purpose and design where there is none.

Brierley: Can you negate the discoverability of the universe by saying that it might be psychological?

Collins: These things are not psychological. The selected value for the cosmic microwave background radiation is fine-tuned for life and for discoverability. It's not merely a discoverability selection effect, it's optimal for discoverability. If baryon-photon value were much smaller, we would have known that it was not optimal. So that judgment cannot be explained by

Millican: That's a very interesting new twist.

Brierley: Give us your best objection.

Millican: I have two. 1) Even if you admit to the fine-tuning, this doesn't show a being who is omnipotent and omnisicient. What the fine-tuning shows is that the designer is doing the best it can given the constraints from nature. **If I were God,** I would not have made the universe so big, and I wouldn't have made it last 14 billion years, just to make one small area that supports life. An all-powerful God would have made the universe much smaller, and much younger. 2) The fine-tuning allows life to exist in other solar systems in other galaxies. What does this alien life elsewhere mean for traditional Christian theology? The existence of other alien civilizations argues against the truth of any one religion.

Brierley: Respond to those.

Collins: First objection: with a finite Creator, you run into the problem of having to push the design of that creature up one level, so you don't really solve the fine-tuning problem. An unlimited being (non-material, not composed of parts) does not require fine-tuning. The fine-tuning is more compatible with theism than atheism. Second objection: I actually do think that it is likely that are other universes, and life in other galaxies and stars, and the doctrine of the Incarnation is easily adaptable to that, because God can take on

multiple natures to appear to different alien civilizations.

If you liked this discussion, be sure and check out a full length lecture by Robin Collins on the fine-tuning, and a shorter lecture on his very latest work. And also this the Common Sense Atheism podcast, featuring cosmologist Luke Barnes, who answers about a dozen objections to the fine-tuning argument.

How are carbon taxes and drugs legalization working out in Canada?

June 25, 2023 | by Wintery Knight | Link | Original Link

It's always good for Americans to look north, and see what the secular left is doing in a country where they are the majority. Previously, I blogged about how Canada is expanding their program to kill poor people, people who disagree with the government, people with disabilities, etc. Today I wanted to look at carbon taxes and drug legalization. Let's start with drug legalization.

Here's an article from Daily Wire about Canada:

> Drug overdoses are now the leading cause of death for people ages 10 to 59 in British Columbia after the Canadian province decriminalized several hard drugs.
>
> Deaths from illegal drugs are now higher than homicides, suicides, accidents, and natural disease combined, British Columbia's Public Safety and Solicitor General Ministry said Monday in a press release.
>
> From January to May this year, 1,018 British Columbians died from drug overdoses, a 2.9% increase over that period last year. At least 12,264 British Columbians have died from illegal drugs since April, 2016, according to the ministry.
>
> In January, British Columbia became the first Canadian province to decriminalize fentanyl, heroin, cocaine, methamphetamine, and morphine.
>
> The British Columbia government promised at the time to "treat addiction as a health issue, not a criminal justice one."

What is very interesting is that this lady said that the reason why they did this is because they want to help the people who take drugs to not be afraid or ashamed:

> "Decriminalizing people who use drugs breaks down the fear and shame associated with substance use and ensures they feel safer reaching out for life-saving supports," Jennifer Whiteside, the British Columbia minister for mental health and addictions, said of the plan at the time.

The root cause of the policy is the desire to "don't judge", so that the evil people can feel as good the good people. The important thing being to help people feel good regardless of what they choose to do. Unfortunately, the no-drugs people have to do all the work to give the yes-drugs people free drugs. And they have to pay for their health care, because Canada has single payer health care.

I had a quick look at the biography of the "minister for mental health and addictions", to see if she had any credentials in law, law enforcement, mental health, or addiction.

Nope:

> Jennifer holds a degree in history from Simon Fraser University.

This is a common problem in Canada, where the Liberal Party of Canada frequently appoints "diversity" candidates to important positions, even though those candidates have no earned degrees or private sector experience related to those positions. So, take the finance minister: she has no degrees or achievements in finance. Take the climate change minister: she has no degrees or achievements in climate science – or any scientific field. It doesn't matter if the person doesn't know how to achieve results in the real world. It matters if they are a "good" person (a secular leftist) and if they say "good things" (secular leftist talking points).

Well, speaking of Climate Barbie, their climate change minister, what about the carbon taxes?

> Even with a small drop in wholesale prices for gasoline on the markets today, he says to look for pump prices to jump to $1.49 on average in most places.
>
> The federal carbon tax is to increase to 14 cents per litre of gasoline from its current level of 11 cents per litre. According to the Parliamentary Budget Officer, it will cost the average household between $402 and $847 in 2023, even after the rebates.

Keep in mind that these are not "per gallon" prices. Canadians are going to pay $1.49 *per litre*. There are 3.79 litres in a gallon. So their price per gallon of gas is actually 3.79 x $1.49 = $5.65 a gallon. That's nearly twice what I'm paying for gas.

And it gets worse.

The Toronto Sun notes:

> According to the PBO, by 2030 when the carbon tax is fully implemented, the total cost to households after rebates will be significant. In Newfoundland and Labrador middle income households will pay $680 more annually after rebates, $929 in Saskatchewan, $1,028 in Manitoba, $1,118 in PEI, $1,127 in Nova Scotia, $1,269 in Ontario and $1,460 in Alberta.
>
> Households with higher incomes will pay as much as $9,000 a year in carbon tax outcomes.

Is anyone surprised that Canada is going downhill at this precipitous pace? The prime minister is just a part-time drama teacher and ski instructor, who has nice hair and a famous last name. He doesn't know how anything in the real world works. And Canadians pay for his stupidity, because they elected an imbecile.

What can we learn about communist leaders from the record of history?

June 26, 2023 | by Wintery Knight | Link | Original Link

Now that we have atheistic communists in the majority of the House, Senate and White House, it might be a good idea to take a look at what atheistic communist leaders have done in history. First, let's see how the atheistic worldview of communist leaders affected religious people.

Here is what Josef Stalin did during his rule of Russia in the 1920s and 1930s.

The Library of Congress offers this in their "Soviet Archives exhibit":

> The Soviet Union was the first state to have as an ideological objective the elimination of religion. Toward that end, the Communist regime confiscated church property, ridiculed religion, harassed believers, and propagated atheism in the schools. Actions toward particular religions, however, were determined by State interests, and most organized religions were never outlawed.
>
> The main target of the anti-religious campaign in the 1920s and 1930s was the Russian Orthodox Church, which had the largest number of faithful. Nearly all of its clergy, and many of its believers, were shot or sent to labor camps. Theological schools were closed, and church publications were prohibited. By 1939 only about 500 of over 50,000 churches remained open.

What's the attitude of Democrat candidates to Bible-believing Christians? My read is that they think that Christian values need to be suppressed by the government lest they offend Democrat voters, who seem to be very easily offended these days. You can already see their animus towards Christians in their Equality Act, which eradicates conscience rights in order to protect (some) LGBT people from feeling offended.

The Ukraine Famine

Take a look at this UK Daily Mail article about Josef Stalin.

Excerpt:

> Now, 75 years after one of the great forgotten crimes of modern times, Stalin's man-made famine of 1932/3, the former Soviet republic of Ukraine is asking the world to classify it as a genocide.
>
> The Ukrainians call it the Holodomor – the Hunger.
>
> Millions starved as Soviet troops and secret policemen raided their villages, stole the harvest and all the food in villagers' homes.
>
> They dropped dead in the streets, lay dying and rotting in their houses, and some women became so desperate for food that they ate their own children.
>
> If they managed to fend off starvation, they were deported and shot in their

> hundreds of thousands.
>
> So terrible was the famine that Igor Yukhnovsky, director of the Institute of National Memory, the Ukrainian institution researching the Holodomor, believes **as many as nine million may have died.**
>
> […]Between four and five million died in Ukraine, a million died in Kazakhstan and another million in the north Caucasus and the Volga.
>
> By 1933, 5.7 million households – somewhere between ten million and 15 million people – had vanished. They had been deported, shot or died of starvation.

The Holodomor is just one of the atrocities committed by Soviet Union communists. You may also have heard that they operated a system of labor camps for dissidents that killed millions more. The total number of people killed by Stalin is estimated at 20 to 40 million.

Stalin actually wasn't very good at mass murder compared to another communist, Mao Zedong.

> Can you name the greatest mass murderer of the 20th century? No, it wasn't Hitler or Stalin. It was Mao Zedong.
>
> According to the authoritative "Black Book of Communism," an estimated 65 million Chinese died as a result of Mao's repeated, merciless attempts to create a new "socialist" China. Anyone who got in his way was done away with — by execution, imprisonment or forced famine.
>
> For Mao, the No. 1 enemy was the intellectual. The so-called Great Helmsman reveled in his blood-letting, boasting, "What's so unusual about Emperor Shih Huang of the China Dynasty? He had buried alive 460 scholars only, but we have buried alive 46,000 scholars." Mao was referring to a major "accomplishment" of the Great Cultural Revolution, which from 1966-1976 transformed China into a great House of Fear.
>
> The most inhumane example of Mao's contempt for human life came when he ordered the collectivization of China's agriculture under the ironic slogan, the "Great Leap Forward." A deadly combination of lies about grain production, disastrous farming methods (profitable tea plantations, for example, were turned into rice fields), and misdistribution of food produced the worse famine in human history.
>
> Deaths from hunger reached more than 50 percent in some Chinese villages. The total number of dead from 1959 to 1961 was between 30 million and 40 million — the population of California.
>
> […]Mao kept expanding the laogai, a system of 1,000 forced labor camps throughout China. Harry Wu, who spent 19 years in labor camps, has estimated that from the 1950s through the 1980s, 50 million Chinese passed through the Chinese version of the Soviet gulag. Twenty million died as a result of the primitive living conditions and 14-hour work days.

Whenever I bring up the historical record of communism to Democrats, they always tell me that their leaders have good intentions. But the communist leaders of the past aren't any different from the communist leaders of today. Communist leaders all start out with noble ambitions of wanting to help the poor. The problem is that they don't know anything about economics, so whatever they try doesn't work. Communist policies like nationalizing private industries, printing money, purging wealthy people, imposing tariffs, and imposing price controls cause enormous poverty. And then they need someone to blame for their failure to produce the results they promise.

If we were serious about helping the poor, then we would elect leaders who had experience lifting the poor out of poverty. A business leader or a governor of a state. It's not a popularity contest. We need to choose someone who has already had success at helping the poor. And the best way to help the poor is by helping them to find work so they can earn their own success and chart their own course. After all it's not words that affect our lives. Or the feelings we have about words we like. What affects our lives is policies that produce results. Intentions and rhetoric don't matter, ultimately.

Sweden turning away from “unreliable” wind and solar and back to clean nuclear power

June 27, 2023 | by Wintery Knight | Link | Original Link

I’m very concerned about America switching to renewable energy sources like wind and solar. Renewables are expensive, unstable, unreliable, and harmful to animals – especially birds and bats. I would much prefer if the country relied on fracking and nuclear power, which are zero emission and harmless to animals. Sweden had been focused on renewables, but they’re now moving back to nuclear.

Here’s the story from the The Blaze:

> The Swedish parliament determined last week that in order to ensure the country has a “stable energy system,” it will have to abandon its goal of “100 per cent renewable electricity production by 2040.”
>
> To satisfy electricity demand, which is set to double to around 300 TwH by 2040, Sweden’s right-of-center government announced June 20 that it would instead lean more heavily on nuclear energy and subsidize the construction of new nuclear plants — plants green-lit in 2016 but sidelined for fear they would be too expensive, reported Reuters.
>
> The country, home to just over 10.5 million people, presently has three nuclear plants with six nuclear reactors in commercial operation. The state-owned Vattenfall aims to bring the tally up to eight reactors and refurbish extant facilities.

Wow, what accounts for this big change in direction? Well, the country experiences very cold winters. After poor performance from the renewables during the winter, the people started to demand results – which is why they elected a right-of-center government to make changes.

> Swedish support for nuclear energy is presently at a record high of 56%, up from 42% in 2022, reported Bloomberg.

Sweden knows what to do to fix their energy problems. Other countries are moving to nuclear power in order to get clean, reliable zero-emission low-cost power.

South Korea is going back into nuclear. This article from far-left CNN is from July 2022:

> South Korea, one of the world’s most fossil fuel-reliant economies, is re-embracing nuclear energy, with the government announcing Tuesday it will restart construction on two nuclear reactors and extend the life of those already in operation.
>
> By 2030, the Energy Ministry wants nuclear to make up at least 30% of the country’s power generation – a step up from its previous goal of 27%.

> To meet this, South Korea is restarting construction on two new reactors at the Hanul Nuclear Power Plant on the country's east coast. Construction on the two reactors has been stalled since 2017, when former President Moon Jae-in – who had pushed hard to phase out nuclear energy – took office.
>
> But with a new President in office, South Korea's nuclear industry is returning at full speed.

Japan is restarting their idled nuclear power plants, and planning to build more next-generation nuclear reactors. They need reliable power, and they don't want to count on their neighbors to sell it to them. They want to develop their own energy at home, and lower the prices that their citizens have to pay.

The problem in America is that we've elected people to lead us who have no skills or understanding of how the world works. People like AOC, who were working as bartenders and waitresses are making policy decisions. Why did we elect stupid and corrupt people to run the government? Because they told us what we wanted to hear? I would rather have results than words. This is only going to be fixed when we elect leaders from the grown-up party.

Lori Alexander is right: serious Christian men prefer debt-free virgins without tattoos

June 28, 2023 | by Wintery Knight | Link | Original Link

Marriage stability vs sexual partners,(Teachman et al. JAMF, August 2010)

Christian writer Lori Alexander recently wrote a blog post (H/T Lindsay) urging Christian women to do 3 things:

1. be a virgin before marriage
2. be debt-free before marriage
3. don't get any tattoos

She also urged women to be cautious about college, because it often gets them into debt. I disagree with her a little here. I always urge young women to earn a STEM degree in college, then work a few years to pay off their loans (if any) before marrying. This is because women, like men, need to have the experience of doing something hard that they don't "feel" like doing, in order to grow. STEM degrees teach young people that the world doesn't revolve around them, and that their feelings don't matter when trying to solve a problem in the real world. It's a very useful way for women and men to break themselves out of the desire for free and easy happiness that is so common in our time.

Lori's article drew enormous opposition from both secular and Christian sources. So far, the only people defending her are men's rights sites, like Dalrock (Christian) and Spawny (non-Christian). Every other "Christian" blog or news site that I read disagreed her article, and argued that premarital sex was no big deal, that having debt was no big deal, and

that having tattoos was no big deal.

Let's take a look at her three points, then I'll explain why her article is largely correct, and why she is correct about what she asserts about the criteria that godly men have for women.

Even one non-husband premarital sex partner raises risk of divorce

Virginity

Regarding her first point, virginity is commanded by the Bible, it's in line with peer-reviewed studies on marriage quality and stability. The reason that people find this difficult is that they want the freedom to give in to sexual desires without feeling shame. They want to believe that there is no permanent effect. It doesn't help that parents and pastors are terrified of telling young people, and young women in particular, that promiscuity harms marital stability. Right now, the culture is drowning in feminism. Feminism tells women that the traditional male roles of provider, protector, and spiritual leader are "sexist". The "best" men are good-looking pro-abortion bad boys. If a Christian woman is not able to think through the meaning of sex with respect to marriage enough to control herself, it seriously harms the stability of her future marriage.

Majors by Salary Potential – Full List

RANK	MAJOR	STARTING SALARY	MID-CAREER SALARY
1	Petroleum Engineering	$98,000	$163,000
2	Aerospace Engineering	$62,500	$118,000
3	Actuarial Mathematics	$56,100	$112,000
4	Chemical Engineering	$67,500	$111,000
5	Nuclear Engineering	$66,800	$107,000
6	Electrical Engineering (EE)	$63,400	$106,000
7	Computer Engineering (CE)	$62,700	$105,000
8	Applied Mathematics	$50,800	$102,000
9	Computer Science (CS)	$58,400	$100,000
10	Statistics	$49,300	$99,500
11	Physics	$51,200	$99,100
12	Mechanical Engineering (ME)	$60,100	$98,400
13	Biomedical Engineering (BME)	$54,900	$98,200

Starting and Mid-Career salaries by profession (click for larger image)

Debt-free

Regarding her second point, almost everything a serious Christian man might plan to do for Christ with his marriage is impacted by finances. From education, to marriage timing, to number of children, to home ownership, early investment, to the success of children. to age of retirement. Less money means fewer choices, and less ability to counter challenges. Think of how important money for legal defense is to Christian-owned businesses who are being persecuted, for example. The reason that many people find the Bible's teaching on stewardship difficult is that they don't want to exercise self-control with money if they don't feel like it. They want to waste money seeking fun and thrills, and then act like their poverty could not be avoided. Being debt-free is an indicator of practical wisdom and self-control in a woman.

· CHAPTER 9 ·

Tattoos: Don't

This piece of advice may arrive a bit late for you, but I'd rather discomfit you than leave unsaid a reality check for younger friends.

Fads fade; tattoos don't. These permanent displays of youthful exuberance trigger at best mild amusement, but in some a serious concern about your maturity.

Whether or not you believe that concern to be fair, it is real. The tattoo you cover today will be an obstacle in some situations the rest of your life. Do you need it that much? Is it worth compromising your effectiveness?

This rule of tattoos is easily applied to many other areas of your style of living. Do you do anything to call attention to yourself or to make a statement? If so, is the attention worth it? Most such indulgences are self-defeating, whether it is idiosyncratic hair or clothes, a loud motorcycle, or—later in life—a palatial residence far beyond any ordinary need. The attention you are drawing to yourself is defeating your ambition by marking you as concerned with silly things.

Serious people do not seek attention except for serious purposes.

Chapter 9 of Hugh Hewitt's "In, But Not Of: A Guide to Christian Ambition"

Tattoos

Tattoos are a problem for serious Christian men for several reasons. First, they cost money and for no gain, and can even cause you losses in your career. Second, most people get them because of low self-esteem or vanity or to look rebellious or to look dangerous. None of these motivations should be acted upon by someone with a robust Christian worldview. The money could be better used on charity, or investments, etc. Women show what their priorities really are by how they spend their money and time. Show me a woman's bookshelf, and I'll tell you how seriously she has thought about what it means to be a Christian in all areas of life. Instead of showing me your tattoos to demonstrate your "spirituality", show me your apologetics books, to demonstrate your intellectual engagement. And tell me how you used that information to engage in conversations with educated non-Christians to answer their challenges to your faith. That way I'll know that you use your money to train do hard things in order to have an influence for Christ in serious, practical, effective ways. A woman who can defend her faith and discuss Christianity with non-Christians is demonstrating her ability to raise Christian children in a secular society.

A family praying and reading the Bible

The goal of marriage is to serve God

Today, young people have been taught to follow their hearts, and to deny that there is any authority or practical wisdom that should govern their decisions. They always imagine themselves to be exempt from moral rules, statistics, cause and effect, etc. They think they know better than everyone else – even though they do almost no research on their own. Every adviser who tells them to study computer science instead of creative writing is wrong. Their same-age friends know more about what causes divorces than peer-reviewed research papers. And money should be spent on skydiving and zip-lining, regardless of what financial experts like Dave Ramsey might say.

A woman who has made many mistakes cannot fix those mistakes with words. Rationalizations, evasions, and blame-shifting do not work to show that there has been real repentance. The man can only assess whether grace has caused any real re-prioritization of goals by evaluating her outward actions over a long period of time. Furthermore, if a woman who has made mistakes attacks those who correct her from Bible's teachings on chastity, stewardship, etc., then it's a sign that there is no real repentance.

Choosing a wife wisely doesn't mean that Christian men treat OTHER Christian women poorly. Christian men love all the Christian women. We care for them and support them. But when a man chooses a wife, he is choosing someone who will have more influence on his ability to serve God than anyone else. In my case, the goals for my marriage involve making a difference with apologetics in the church, having many children who will receive the educations and careers they need to have an influence, influencing government to promote Christian-friendly policies, charitable giving, mentoring young Christians, modeling a good marriage to others, and having a home that can serve to host discussions about issues that matter. These things are not free – they take careful planning and execution to achieve.

Lori's advice is intended for men who are serious about making their marriage produce a return for God. Men who are chaste themselves. Men who accept the Bible as an

authority. Men who earned STEM degrees, instead of easy nonsense degrees that don't lead to good careers. Men who earn 6-figure salaries, who buy houses for cash, and who are on track have a 7-figure net worth by age 50. Men who made good decisions cannot risk marrying someone who hasn't prepared for marriage. The wrong woman in the home could ruin the man's effort to produce a marriage that gives glory to God.

Not every man intends to achieve something for God with his marriage, but those who do need to choose a woman who has demonstrated ability at doing the job. For example, if the job requires marital fidelity, then chastity is a good indicator that the woman has the necessary self-control. If the job requires frugality, and practicality, then being debt-free, having a STEM degree, and having some private sector work experience are good indicators that she's qualified for the role. Nothing valuable in life is ever been achieved by being lazy, wild and irresponsible. Serious Christian men look for wives who have applied themselves to difficult tasks that they didn't feel like doing, who achieved success by remaining committed to the plan, in spite of their unhappy feelings and unmet desires.

We have a problem in the church such that we aren't serious about teaching young people to develop marriage-ready character and to make serious plans for marriage. We are teaching them to follow their hearts, and that their feelings and desires are clues about God's will for their happiness. We are teaching them to be uncomfortable with responsibilities, expectations and obligations to others. We are teaching them not to do their own research. We are teaching them not to make practical, wise plans. We are teaching them to ATTACK those who try to get them to be serious about doing what is likely to work. This approach is not working.

My own criteria for a wife are more demanding than Lori's. My advice there is only for serious Christian men who want their marriage to serve God.

Michigan advances bill that makes it a felony to make someone “feel” threatened

June 29, 2023 | by Wintery Knight | Link | Original Link

For years on this blog I’ve been observing what happens to freedom of speech and freedom of religion in countries where the secular left takes power. Michigan is a state that used to be purple, but they’ve moved further and further to the secular left. Let’s take a look at some of their recent leftist actions, then find out what is in their latest piece of anti-free-speech legislation.

Things started to get ugly when the Democrats did very well in the 2022 mid-term elections:

> Democrats are projected to win key races and ballot measures across the board in the Great Lakes State, led by Gov. Gretchen Whitmer’s re-election victory. The party is also set to win multiple tight U.S. House races, enshrine a right to abortion in the state’s constitution, and take control of the state legislature for the first time in 40 years.

It’s the first time since 1983 that Democrats have had control of the legislature. When I think of purple states like North Carolina, they still have a very good conservative legislature. So a Democrat legislature really shows you how far Michigan has fallen. You would think that after Gretchen Whitmer’s horrendous handling of COVID (compared to Florida Governor Ron DeSantis) that they would have thrown the Democrats out, but they didn’t.

It’s not just putting a right to abortion into the state’s constitution. They also repealed the right to work without joining a union:

> Michigan Democratic Gov. Gretchen Whitmer enacted legislation repealing right-to-work laws in the state on Friday, the first time such laws have been overturned in five decades.

So, if you are working in a union dominated field, you have to join a union and pay dues. Unions are overwhelmingly Democrat, and they tend to get involved in the worst social issues. I could never join a union, and now people are being forced to.

This case of a secular leftist shooting an 84-year-old pro-life woman was particularly disturbing:

> A Michigan man who shot an 84-year-old woman campaigning against abortion was sentenced to 100 hours of community service on Tuesday, according to the Associated Press.

She was shot *in the back* by the gunman. But Democrats LOVE when guns are used against Republicans, so he gets a slap on the wrist.

What about election fraud? That's apparently not a serious thing in Michigan:

> A local official in Flint, Michigan, was sentenced to six months of house arrest Monday for misconduct in office after sabotaging a ballot box in her own election in 2020.
>
> After votes were cast in the 2020 primary election for her seat as township clerk, Funk sabotaged the ballot box, making the ballots ineligible for a recount, according to investigators.
>
> She went on to win the general election later that fall.

It's OK, because Democrats are allowed to do that. Michigan in particular has poor election integrity, coming in at rank 28 out of 50, in a recent ranking of election integrity.

Well, with all that said, let's see the latest atrocity from the far left in Michigan, reported by Daily Wire:

> A Michigan hate speech bill that has passed the state House and is now in the hands of the Senate is alarming conservatives, people of faith, and legal experts.
>
> The bill, HB 4474, is part of a package of legislation that would replace Michigan's existing Ethnic Intimidation Act and make it a hate crime to cause someone to "feel terrorized, frightened, or threatened." Under the bill's framework, "sexual orientation" and "gender identity or expression" are included as classes protected against intimidation. If passed, the hate speech legislation would make violators guilty of a felony punishable by up to five years in prison and a fine of $10,000.

Here's a good comment explaining what the bill means to Christians and conservatives who are stuck in Michigan:

> Rep. Angela Rigas, a Republican freshman in the state House, told The Daily Wire that including sexual orientation and gender identity as a "protected class" specifically targets conservatives who speak out against radical gender ideology.
>
> "The state of Michigan is now explicitly allowing the gender delusion issue to be used as a 'protected class.' This opens up numerous issues when it comes to the courts and the continued weaponization of the system against conservatives," Rigas said. "We saw similar concerns when they wanted to pass blocks on 'conversion' therapy. It seems Dems want to be in the business of telling people how to think. We are determined to keep choice and opinion a free choice despite those efforts."

I'm not sure why people would continue to pay taxes to the secular leftists in the Michigan government. You're literally paying for the rope that the fascists will use to hang you. And why? Because you say something that's offensive to them.

Get out of that state.

New study: Biden's regulations have cost nearly every American household about $10,000

June 30, 2023 | by Wintery Knight | Link | Original Link

In Canada, things a cost a lot more than in America. Canada imposes a lot of anti-business regulations and taxes on businesses. For example, businesses have to pay part of the costs of "free health care" for their employees, and they pass those costs on to consumers. Joe Biden also introduced a lot of government regulations since he became president. And we're paying for it.

Here's an article about a new study in the UK Daily Mail:

> Joe Biden's slew of regulations implemented over the course of his two-and-a-half years running the country have cost every American household nearly $10,000.
>
> If the president continues on his current regulation path and is reelected for a second term in 2024, according to the report from the Committee to Unleash Prosperity, Americans could be slammed with a $60,000 increase in costs by 2028.

The study is authored by Casey B. Mulligan, an economist and professor of economics at the prestigious University of Chicago. He also served as chief economist at the White House Council of Economic Advisers.

Here are some of the key findings from the study:

> - As of the end of 2022, the Biden administration imposed new regulatory costs on American households and businesses at a pace surpassing that of the Obama administration during a comparable period.
> - The added costs from these Biden-era final rules, which include both their current and expected future costs, amount to almost $10,000 per household. If regulatory costs continue to rise at the same rate as they did during the Obama administration, the total costs of Biden's rulemaking over an eight-year period would almost reach $60,000 per household.
> - While the automobile fuel economy and emissions standards contribute the greatest single cost, they still account for only a third of the total regulatory costs. Collectively, health, labor, telecommunications, and consumer finance regulations impose costs that exceed those of automobile regulations.

It looks like the costs imposed by these regulations will get a lot worse, should Biden win

a second term. $60,000 per household.

The UK Daily Mail article notes that these costs are separate from inflation, which has also increased during Biden's first term:

> The regulations have contributed to only one part of the massive increased financial burden on Americans since Biden took office, with inflation also impacting consumers' bottom line.
>
> From Biden's election in 2020 to current day, inflation has risen a total of 16.45 percent.
>
> Some items are affected more than others – like food and grocery costs.
>
> Americans saw the cost of beef rise at a much faster rate than average inflation with a 20.4 percent increase from April 2021 to April 2022. And in that same time period the cost of chicken went up by 13.4 percent, while eggs went up by 11.2 percent.

I'm really surprised to see Biden polling competitively with Trump and DeSantis in swing states. In my mind, people should notice that their savings are going down, and their debts are going up, and realize that something is going wrong with our laws and policies.

Far-left CNN posted this in May 2023:

> Americans' debt levels continue to climb to new heights at a time when economic conditions are becoming increasingly less stable.
>
> Household debt balances set a fresh record high of $17.05 trillion during the first quarter, growing $148 billion or 0.9% from the fourth quarter of last year, the Federal Reserve Bank of New York reported Monday.
>
> That debt load has spiked by $2.9 trillion since the end of 2019.
>
> During the first quarter, the increases in debt were seen across practically all categories, with larger (and new record) balances for mortgages, home equity lines of credit, auto loans, student loans, retail cards and other consumer loans.

Does anyone know why Biden is polling around 50% versus Republican candidates? I don't understand why anyone would vote to impoverish themselves and their families. Americans aren't doing well under his leadership, and we should vote for a change of direction in 2024.

Knight and Rose Show – Episode 34: Are All Religions the Same, Part 2

July 1, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 34 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose start a new discussion about truth in religion. Are religious truth claims the same as ordinary truth claims? How can you test a religion to see if it is teaching the truth? If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 34:

Episode Summary:

Wintery Knight and Desert Rose continue discussing whether all religions are equally valid paths to God. In this episode, we look at what different worldviews say about whether the universe is actually designed, or only appears to be designed. We look at scientific evidence for design of the universe, our galaxy, our star, our planet and our moon. We then answer objections to design in nature, and talk about our experiences presenting this evidence to skeptics. This is the second episode of a three-part series.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

Christopher Hitchens debates William Lane Craig: Does God Exist?

July 2, 2023 | by Wintery Knight | Link | Original Link

Here is the video of the debate:

TOPIC: DOES GOD EXIST?

MY NOTES ON THE DEBATE: (WC = William Lane Craig, CH = Christopher Hitchens)

WC opening speech:

Introduction:

WC makes two contentions:
– there are no good arguments for atheism
– there are good arguments for theism

These topics are IRRELEVANT tonight:
– social impact of christianity
– morality of Old Testament passages
– biblical inerrancy
– the debate is whether god (a creator and designer of the universe) exists

1. cosmological argument
– an actually infinite number of past events is impossible
– number of past events must be finite
– therefore universe has a beginning
– the beginning of the universe is confirmed by science – universe began to exist from nothing
– space, time, matter, energy began at the big bang
– the creation of the universe requires a cause
– the cause is uncaused, timeless, spaceless, powerful
– the cause must be beyond space and time, because it created space and time
– the cause is not physical, because it created all matter and energy
– but there are only two kinds of non-physical cause: abstract objects or minds
– abstract objects don't cause effects
– therefore must be mind

2. teleological argument
– fine-tuned constants and ratios
– constants not determined by laws of nature
– also, there are arbitrary quantities
– constants and quantities are in narrow range of life-permitting values
– an example: if the weak force were different by 1 in 10 to the 100, then no life
– there are 3 explanations: physical law or chance or design
– not due to law: because constants and quantities are independent of the laws

– not due to chance: the odds are too high for chance
– therefore, due to design
– the atheist response is the world ensemble (multiverse)
– but world ensemble has unobservable universes, no evidence that they exist
– and world ensemble contradicts scientific observations we have today

3. moral argument
– objective moral values are values that exist regardless of what humans think
– objective values are not personal preferences
– objective values are not evolved standards that cultures have depending on time and place
– objective moral values and duties exist
– objective moral values and duties require a moral lawgiver

4. argument from resurrection miracle
– resurrection implies miracle
– miracle implies God
– 3 minimal facts pass the historical tests (early attestation, eyewitness testimony, multiple attestation, etc.)
– minimal fact 1: empty tomb
– minimal fact 2: appearances
– minimal fact 3: early belief in the resurrection
– jewish theology prohibits a dying messiah – messiah is not supposed to die
– jewish theology has a general resurrection of everybody, there is not supposed to be a resurrection of one person
– jewish theology certainly does not predict a single resurrection of the messiah after he dies
– therefore, the belief in the resurrection is unlikely to have been invented
– disciples were willing to die for that belief in the resurrection
– naturalistic explanations don't work for the 3 minimal facts

5. properly basic belief in god
– religious experience is properly basic
– it's just like the belief in the external world, grounded in experience
– in the absence of defeaters, those experiences are valid

Conclusion: What CH must do:
– destroy all 5 of WC's arguments
– erect his own case in its place

CH opening speech:

1. evolution disproves biological design argument
– evolution disproves paley's argument for a watchmaker

2. god wouldn't have done it that way
– god wouldn't have waited that long before the incarnation
– mass extinction and death before Jesus

– god wouldn’t have allowed humans to have almost gone extinct a while back in africa
– why insist that this wasteful and incompetent history of life is for us, that’s a bad design
– the universe is so vast, why would god need so much space, that’s a bad design
– there is too much destruction in the universe, like exploding stars – that’s a bad design
– the heat death of the universe is a bad design
– too many of the other planets don’t support life, that’s a bad design
– the sun is going to become a red giant and incinerate us, that’s a bad design

3. hitchens’ burden of proof
– there is no good reason that supports the existence of god
– all arguments for god can be explained without god
– atheists can’t prove there is no god
– but they can prove there is no good argument for god

4. craig’s scientific arguments don’t go far enough, they only prove deism, not theism
– the scientific arguments don’t prove prayer works
– the scientific arguments don’t prove specific moral teachings of christianity

5. if the laws of physics are so great then miracles shouldn’t be allowed
– good laws and miracles seem to be in contradiction

6. extraordinary claims need extraordinary evidence
– none of craig’s evidence was extraordinary

7. science can change, so craig can’t use the progress of science
– it’s too early for craig to use the big bang and fine-tuning
– the big bang and fine-tuning evidences are too new
– they could be overturned by the progress of science

8. craig wrote in his book that the internal conviction of god’s existence should trump contradicting evidence
– but then he isn’t forming his view based on evidence
– he refuses to let evidence disprove his view
– but then how can atheists be to blame if they don’t believe
– so evidence is not really relevant to accepting theism

9. the progress of science has disproved religion
– christianity taught that earth was center of the universe
– but then cosmology disproved that

Response to the big bang and fine-tuning arguments:
– was there pre-existing material?
– who designed the designer?

WC first rebuttal:

Reiterates his 2 basic contentions

CH agrees that there is no good argument for atheism
– then all you’ve got is agnosticism
– because CH did not claim to know there is no God

– and he gave no arguments that there is no God

CH’s evolution argument
– irrelevant to christianity
– Genesis 1 allows for evolution to have occurred
– christianity is not committed to young earth creationism
– the origin of biological diversity is not central to christianity
– st. augustine in 300 AD said days can be long, special potencies unfold over time
– also there are scientific reasons to doubt evolution
– cites barrow and tipler, and they say:
– each of 10 steps in evolution is very improbable
– chances are so low, it would be a miracle if evolution occurred

CH’s argument that god is wasteful
– efficiency is only important to people with limited time or limited resources
– therefore god doesn’t need to be efficient

CH’s argument that god waits too long to send Jesus
– population was not that high before jesus
– jesus appears just before the exponential explosion of population
– conditions were stable – roman empire, peace, literacy, law, etc.

CH’s argument that Craig’s scientific arguments only prove deism, not theism
– deism a type of theism, so those scientific arguments work
– all that deism denies is miraculous intervention

CH’s argument that Craig has a burden of proof
– theism doesn’t need to be proven with certainty
– must only prove best explanation of the evidence

CH’s citation of Craig’s book saying that evidence should not overrule experience
– there is a difference between knowing and showing christianity is true
– knowing is by religious experience which is a properly basic belief
– showing is done through evidence, and there the evidence does matter

CH’s rebuttal to the big bang
– there was no pre-existent material
– space and time and matter came into being at the big bang
– the cause must be non-physical and eternal
– cause of universe outside of time means = cause of universe did not begin to exist
– this is the state of science today

CH’s rebuttal to the fine tuning
– CH says scientists are uncertain about the fine-tuning
– craig cites martin rees, an atheist, astronomer royal, to substantiate the fine tuning
– the fine-tuning is necessary for minimal requirements for life of any kind
– the progress of science is not going to dethrone the fine-tuning

CH’s argument about heat death of the universe
– duration of design is irrelevant to whether something was designed

– cars are designed, yet they break down
– design need not be optimal to be designed
– ch is saying why create if we all eventually go extinct
– but life doesn't end in the grave on christianity

CH's rebuttal to the moral argument
– CH says no obj moral values
– but CH uses them to argue against god and christians
– but CH has no foundation for a standard that applies to God and Christians

CH's rebuttal to the resurrection argument
– empty tomb and appearances are virtually certain
– these are minimal facts, well evidenced using standard historical criteria
– best explanation of these minimal facts is the resurrection

CH's rebuttal to religious experience
– prop basic belief is rational in the absence of defeaters
– so long as craig has no psychological deficiency, experience is admissible

CH first rebuttal:

it's not agnosticism
– if there are no good arguments for theism
– then there is no reason for belief in god
– that is atheism
– everything can be explained without god

god wouldn't have done it that way
– homo sapiens is 100K years old
– for 98K years, they had no communication from God
– lots of people died in childbirth
– disease and volcanos are a mystery to them
– life expectancy is very low
– they die terrible deaths
– their teeth are badly designed
– their genitalia are badly designed
– why solve the problem of sin by allowing a man to be tortured to death
– that's a stupid, cruel, bumbling plan

lots of people haven't even heard of jesus
– many of them die without knowing about him
– they cannot be held responsible if they do not know about jesus

the early success of christianity doesn't prove christianity is true
– because then it applies to mormonism and islam, they're growing fast

objective morality
– belief in a supreme dictator doesn't improve moral behavior
– i can do moral actions that you can do

– i can repeat moral positions that you can say

religious people are immoral
– genital mutilation
– suicide bombing

moral behavior doesn't need god
– we need to act moral for social cohesion
– it evolved for our survival
– that's why people act morally
– it's degrading to humans, and servile, to require god for morality

free will
– i believe in free will
– i don't know why, because i can't ground free will on atheism
– a bossy god seems to reduce free will because then we are accountable to god

WC cross-examination of CH:

WC why call yourself an atheist when you have no reasons?

CH because absence of belief is atheism

WC but agnosticism, atheism, verificationism all don't hold that belief, which are you?

CH i think god does not exist

WC ok give me an argument for the claim you just made to know god does not exist

CH i have no argument, but i don't believe in god because it depresses me to think he might be real

WC would you agree that absence of evidence is not evidence of absence?

CH no i don't agree

WC moral argument: it's not epistemology it's the ontology – have you got a foundation for moral values and duties?

CH i do not, it's just evolution, an evolved standard based on social cohesion

CH cross-examination of WC:

CH you said that the historical reports of jesus doing exorcisms are generally accepted – do you believe in devils?

WC i commit to nothing, what I am saying there historical concensus on the reports that jesus did exorcisms

CH what about the devils going into the pigs, do you believe that?

WC yes i do, but the main point i'm making is that the historical reports show that jesus acted with divine authority

CH do you believe in the virgin birth?

WC yes, but that's not historically provable using the minimal facts methods, and i did not use the virgin birth in my arguments tonight, because it doesn't pass the historical tests to be a minimal fact

CH do you believe that all the graves opened and dead people all came out?

WC not sure if the author intended that part as apocalyptic imagery or as literal, i have no opinion on it, have not studied it

CH do exorcisms prove son of god?

WC no, i am only saying that the historical reports show that jesus exercised authority and put himself in the place of god

CH are any religions false? name one that's false

WC islam

CH so some religions are wicked right?

WC yes

CH if a baby were born in saudi arabia would it be better if it were an atheist or a muslim?

WC i have no opinion on that

CH are any christian denominations wrong?

WC calvinism is wrong about some things, but they are still christians, i could be wrong about some things, i do the best i can studying theology so i'm not wrong

WC second rebuttal

Response to CH arguments:

no reasons for atheism
– no reasons to believe that god does not exist
– ch withholds belief in god

why wait so long before contacting humans with jesus
– population matters, not time – jesus waited until there was about to be a population explosion
– there is natural revelation (Romans 1) for those who lived before christ

what about those who never heard
– (*Acts* 17:22-31) god chooses the time and place of each person who is born to optimize their opportunity to know him based on how they will respond to evidence (this is called middle knowledge)
– those who haven't heard will be judged based on general revelation

WC re-assess the state of his five arguments:

cosmological argument
– heat death of the universe won't happen on christianity

moral argument
– if no objective moral standard, can't judge other cultures as wrong
– no transcendent objective standard to be able to judge slavery as wrong

name an action argument
– e.g. – tithing

– the greatest command – love the lord your god your god with everything you've got
– atheists can't do that, and that is the biggest commandment to follow

moral obligations
– there are no objective moral obligations for anyone on atheism
– on atheism, you feel obligated because of genetics and social pressure
– on atheism, we're animals, and animals don't have moral obligations

resurrection
– the belief in resurrection of 1 man, the messiah is totally unexpected on judaism
– they would not have made this up, it was unexpected

religious experience
– experience is valid in the absence of defeaters

CH second rebuttal:

faith and reason
– Tertullian says faith is better when it's against reason

it's easy to start a rumor with faith-based people
– mother teresa: to be canonized she needs to have done a miracle
– so there was a faked miracle report
– but everybody believes the fake miracle report!
– this proves that religious rumors are easy to start
– the resurrection could have started as a similar rumor by people wanting to believe it

name an action
– tithing is a religious action, i don't have to do that

moral argument
– i can be as moral as you can without god
– i can say that other cultures are wrong, there i just said it
– without god, people would still be good, so god isn't needed

religious people did bad things in history
– this church did a bad thing here
– that church did a bad thing there
– therfore god doesn't exist

religion is the outcome of man's struggle with natural phenomenon
– that is why there are so many religions

WC concluding speech

no arguments for atheism presented

What CH has said during the debate:
– god bad, mother teresa bad, religion bad

atheism is a worldview
– it claims to know the truth
– therefore it is exclusive of other views

what does theism explain
– theism explains a broad range of experiences
– origin of universe, CH has dropped the point
– fine-tuning, CH has dropped the point
– moral, CH says that humans are no different from animals – but an evolved standard is illusory, there are no actual moral values and standards, it's just a genetic predisposition to act in a certain way – that's not prescriptive morality
– resurrection, CH has dropped the point
– experience, craig tells his testimony and urges the audience to give it a shot

CH concluding speech

HITCHENS YIELDS HIS ENTIRE CONCLUDING SPEECH!

A question & answer Period followed end of the formal debate

Further study

Check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Six reasons why you should believe in non-physical minds
- William Lane Craig's case for the resurrection of Jesus

The desire to be “winsome” led to the persecution of Christians in America

July 3, 2023 | by Wintery Knight | Link | Original Link

We had a few wins in the Supreme Court, including one of them on the issue of free speech and religious liberty. I found an article about it that made me have a lot of thoughts about why this case went all the way to the Supreme Court – in a country where the rights to free speech and religious liberty are in the Constitution.

Here’s Kylee Griswold in The Federalist, talking about the recent Supreme Court decisions:

> *303 Creative* has finally been decided, and Christians — and all Americans — won. In a 6-3 landmark decision on Friday, the Supreme Court ruled that graphic designer Lorie Smith can’t be compelled to affirm values that conflict with her deeply held religious beliefs about marriage by designing wedding websites for same-sex couples.

How did we get to the point where Christians can be dragged into courts, and lose, and lose, and lose their cases, until they finally win in the Supreme Court? Well, part of the problem is people who claim to be Christians, but act like non-Christians. People who don’t really KNOW whether Christianity is true or not – because they haven’t done the apologetics work. People who just claim Christianity, in order to virtue signal to others. And what happens when Christianity falls out of favor in the culture, and no longer gets them the admiration and validation they crave? Well, then they shift their allegiance to the secular left, but still keeping the language of Christians to describe their apostasy.

More:

> It’s called “winsomeness.” Being winsome is not a novel idea, obviously, nor even a Christian one. To be winsome is to be charming, attractive, or appealing with one’s demeanor or character — an admirable goal, to be sure, and one that should apply to Christians.
>
> But in coopting the idea into a veritable doctrine, Christian leaders morphed winsomeness from a desirable trait into a hermeneutic through which they judge all Christian conviction and conduct… winsomeness became a trump card in matters of spiritual significance. Religious and thought leaders, such as Russell Moore and David French among many others, became victims of the mind virus and infected hordes of others.
>
> […]The gist of the “winsome” ethos is that for Christians to be faithful, they must be perceived as kind and likable by the unbelieving world they hope to evangelize. And the symptoms are easy to identify. Appeasement to radicals. A tossing of other faithful Christians under the bus. Race-baiting wrapped in Christian-ese. An unwillingness to celebrate God-given victory if the “wrong”

> leader made it happen. Deference to tyranny. Hatred of masculinity. The list goes on.

Hatred of masculinity. Most people – even people in the church – like to cash out masculinity as mere protection and providing. It's "servant leadership" according to a recent book by an evangelical egalitarian author. But masculinity doesn't just mean protecting and providing. Masculinity also means moral leadership and spiritual leadership. It means defending morally good beliefs and actions, and fighting against morally evil beliefs and actions. It means defending truth claims, and fighting against lies. So, Christian men can't be "winsomely" capitulating to the secular left on truth and morality. Not if they want to be masculine Christian men.

More:

> But there's a glaring problem with the "winsome" worldview: It ultimately measures a Christian's fidelity to the gospel based on how he is perceived by God's enemies — and in the process, it implies Christians who aren't adored by their unregenerate neighbors are unloving.
>
> So you put your obvious pronouns in your email signature because everyone else at work does it, and you don't want to be known as "that bigot" in your office. Or you post a black box on Instagram because even though you know it serves more to divide people by the color of their skin than to unite them, it looks virtuous. Or you party at your gay friend's wedding because even though you know that union defies God's design for marriage, you don't want to have an awkward conversation or risk jeopardizing a relationship. Or you say yes to a design job for a woman's group that promotes abortions because you don't want them to pass over you for the next opportunity.
>
> […]This version of Christianity doesn't work. What you end up with on the one hand are craven Christians who pat themselves on the back for their likeability while being largely untethered from all principles save the approval of man (which conveniently endows worldly status and prestige, such as a perch at The New York Times).

What should we expect the Christian life to be like if we read the Bible? Well, according to people like Russell Moore, you should expect to go to the White House and meet with Barack Obama and smile with him, despite the fact that he voted for abortion of *born-alive infants* several times as a state senator in Illinois. It's better to be liked by a pro-abortion radical like Obama, than to defend the argument that it should be illegal to abort unborn children. And consider people like David French. He gets articles in the New York Times, but he doesn't defend the truth of Christianity or Christian moral values in those articles. He just wants to be liked by the secular leftist readers of the New York Times.

But what does the Bible really teach about standing up for the truth? Will it make non-Christians like you?

> It no doubt would have been easier for Daniel and his buddies to have bowed to

> the statue of Babylonian King Nebuchadnezzar at his command. After all, showing respect and submission to the king would have cemented the young men in his good graces and perhaps given them spiritual sway down the road. But Daniel's operating principle wasn't likeability or world-defined niceness. It was a fear of God and undivided devotion that empowered the young Jewish exile to look a fiery death squarely in the face and say with confidence I will not bow.

My favorite passage about faithfulness in the Bible is 1 Corinthians 4:1-4. We did an episode of Knight and Rose Show where I talked about my favorite passages of the Bible, where I talked about that one. Check it out if you haven't heard it already.

For Independence Day, let’s learn about George Washington and the Battle of Trenton

July 4, 2023 | by Wintery Knight | Link | Original Link

My favorite book about the American Revolutionary war by far is called “1776”. It’s written by famous historian David McCullough. The part of the book that really stuck out to me was the Battle of Trenton. I think that this battle really defines the essential character of America, as seen in the decision-making of its great general and first President, George Washington.

In the book, I learned about how George Washington and his revolutionary army had suffered a string of defeats at the hands of the powerful Commonwealth army, and their mercenary allies. It was the middle of a freezing cold winter, and the many of the sickly and ill-equipped American troops were just days from having their enlistment contracts run out. Some of the troops were not waiting for their enlistments to expire, they were just deserting. In droves.

Washington was losing, and was just days from losing his Continental Army. If the Americans lost the revolutionary war, then it would mean that every man who signed the Declaration of Independence would be hanged as a traitor. The American revolutionaries had risked everything for liberty, and they were about to lose everything – their money, their property and even their lives.

I found a page that summarizes the battles leading up to the Battle of Trenton.

First battle, a defeat for Washington:

> **The Battle of White Plains**
>
> *October 28, 1776*
>
> RESULT: BRITISH VICTORY
>
> With the British army maneuvering to make his Harlem Heights position untenable, George Washington withdrew from the island of Manhattan, and established a new encampment further north near White Plains, New York.
>
> On October 28, 1776, a flank attack by the British on this new position resulted in the collapse of Washington’s line. Thankfully, he was able to orchestrate an orderly withdrawal that preserved the army. Unfortunately, Washington’s retreat further exposed Fort Washington, which remained garrisoned on Manhattan.

Next, another defeat for Washington:

> **The Battle of Fort Washington**
>
> *November 16, 1776*
>
> RESULT: BRITISH VICTORY
>
> Following the defeat of George Washington’s army at White Plains, New York,

> British General William Howe focused his army's attention on Fort Washington, the last post defended by the Continental army on Manhattan. Although Washington hoped to abandon the fort, his officers convinced him that it needed to be held in order to keep British ships from ascending the Hudson River.
>
> During a carefully-orchestrated, all-out attack on November 16, 1776, British and Hessian forces overwhelmed the fort's garrison after vicious fighting. When he heard the attack begin, Washington, who had stationed himself across the Hudson River in New Jersey, travelled across the river to the enter the fort and personally inspect its defenses. Several officers accompanied Washington, including Generals Israel Putnam, Hugh Mercer, and Nathanael Greene. They convinced Washington to leave the fort just 30 minutes before it was surrounded.

And then, another defeat for Washington:

> **Evacuation of Fort Lee**
>
> *November 20, 1776*
>
> RESULT: BRITISH VICTORY
>
> After the fall of Fort Washington, George Washington made plans for the evacuation of Fort Lee, which stood across the Hudson River in New Jersey. In a letter written to John Hancock on November 19, 1776, the general wrote that "…Fort Lee was always considered as only necessary in conjunction with [Fort Washington]…," and that it would be abandoned as soon as provisions and other supplies were removed.
>
> Unfortunately, a large British force succeeded in scaling the heights close to the fort on November 20, 1776. Faced with superior numbers, Washington called for the immediate evacuation of the fort, which resulted in the loss of dozens of cannon, 2-300 tents, and 1,000 barrels of flour.

That brings us to the Battle of Trenton. Across the Delaware river from Washington's army was an encampment of Hessian mercenaries, fighting for the British. The Hessians believed that Washington's Continental army was in full retreat. The British generals had already written home to the King to tell him that the war was nearly over, and that they had won. But had they?

Washington crosses the Delaware

Here is what Washington decided to do on December 25th, 1776:

> General George Washington's commitment to cross the Delaware River on Christmas 1776 foreshadowed the many hardships faced as well as the eventual victory of the Continental Army during the American Revolution. At first glance, the decision to transport 2,400 Continental soldiers across an icy river in one night, directly into a severe winter storm of sleet and snow seems irrational.
>
> Washington's decision, however, was based on strategic motivation, understanding that the Continental Army desperately needed a victory after

> months of intense fighting with several significant defeats and no major victories. Washington also understood that the element of surprise was the only way that he and his army stood a chance of defeating the highly trained Hessian mercenaries.
>
> On the morning of December 25, 1776, Continental soldiers woke up in their camps along the Delaware River to a frozen, snowy covered ground. Weather conditions worsened and temperatures continued to drop throughout the day. Late in the afternoon, the Continentals left their tents and began to form along the river in anticipation of the night's events. Washington kept almost all of the details of the crossing a secret; as a result, none of the soldiers knew anything about their upcoming mission.
>
> Washington's crossing of the Delaware River on December 25, 1776 allowed his army to strike the Hessians at Trenton the next morning.
>
> Washington's plan was to cross the river at night, march to the nearby town of Trenton, New Jersey, and attack the Hessian garrison right before dawn. Time was Washington's greatest enemy; to combat it his orders called for the various regiments to assemble at their designated crossing points no later than sunset. The close proximity to the crossing points allowed the soldiers to begin the journey immediately after nightfall struck and complete the crossing no later than midnight. Once across, Washington intended for the armies to reassemble and march approximately ten miles to Trenton, arriving there no later than five o'clock in the morning to achieve surprise. Despite his meticulous planning, the schedule failed almost before it even began.
>
> Many of the regiments did not arrive at the river until well after dark. Additionally, a severe winter storm that included wind, rain, snow, hail, and sleet met the soldiers at the banks of the river significantly slowing their crossing. Many of the boats had to combat ice jams and unfavorable currents. To make matters even worse, the extreme darkness caused by the storm made it hard for the boatmen to see the opposite shore.
>
> The necessity of using larger ferries to carry pieces of artillery across the river caused even more delays. Washington crossed the river with John Glover's Marblehead mariners and upon arrival debated whether or not to cancel the entire operation because it was more than three hours behind schedule. Washington decided it was too costly to retreat and he painfully watched as his army continued to trickle across the river.

If you were standing by the river along with Washington watching his sick, frozen, ill-equipped army struggle across the Delaware, then you would probably think that Washington had lost the element of surprise. This attack was just taking too long to happen. Maybe Washington would give up his plan, because things hadn't gone his way. But Washington didn't quit – he persisted.

The Battle of Trenton, December 25, 1776 (click for larger image)

The Battle of Trenton

This is how the battle went down in Trenton, New Jersey:

> Immediately following his famous crossing of the Delaware River, General George Washington marched the Continental Army to Trenton, New Jersey. The army's forces included horses, guns, wagons, and soldiers, stretching for nearly one mile. The weather was worse than it had been crossing the river, but the army continued to proceed as Washington rode up and down the column pressing his men to carry on.
>
> Shortly after eight o'clock on the morning of December 26, 1776, the Continental Army started its charge on the city. Three columns marched through thick snow with Washington personally leading the middle charge. As the soldiers pushed forward, artillery began to fire. At the same time, German drums urgently called the Hessians to arms. To his astonishment, Washington had maintained the element of surprise.
>
> Immediately after the firing began, three Hessian regiments ran from their quarters ready to fight, quickly forming ranks. As the Hessians grouped, the Continental Army entered the city at two points: John Stark marched into the city on River Road from the west, while Nathanael Greene and Washington arrived from the north.
>
> Andreas von Wiederholdt, a Hessian lieutenant, incorrectly reported to Colonel Johann Rall that the Continental Army had surrounded Trenton and there was no available route for retreat. As a result, Rall decided to counterattack Washington within the city and not retreat across Assunpink Creek. This proved to be costly as Washington's forces occupied the highest ground in the city and had clear views of all of Rall's movements.

> Time after time, Washington countered Rall's efforts to outflank the Continentals. Eventually, Washington's forces overpowered the Hessians. Rall was mortally wounded and many of his soldiers broke ranks, fleeing from the fighting. Normally very disciplined, Rall's regiment was confused and disoriented without their commander. They retreated to an orchard east of Trenton where they were forced to surrender.
>
> Despite the large number of Hessians that escaped Trenton, Washington still won a crucial strategic and material victory. In only one hour of fighting, the Continental Army captured nearly nine hundred Hessian officers and soldiers as well as a large supply of muskets, bayonets, swords, and cannons. Washington ordered his soldiers to treat the Hessian prisoners in a humane manner, and the general quickly focused his attention on what to do next. Washington assembled all of his officers in Trenton to discuss whether they should attack another post, hold their position in Trenton, or retreat back across the Delaware. Washington decided that because of the condition of his army, the best move was to return to their camps across the River.
>
> When the Continental Army returned to camp on the Pennsylvania side of the Delaware River, soldiers were exhausted. They had marched and fought for two straight days through rain, snow, sleet, and hail. Washington knew that his army had far exceeded expectations at Trenton and that they faced many more challenges going forward.

Washington won two more battles in rapid succession. Many of his troops re-enlisted because of these victories. There were many battles remaining to fight, and many hardships such as the winter at Valley Forge. But the Battle of Trenton was the turning point of the revolution. George Washington would not let a string of defeats stop him.

What should Christians bring up when discussing truth with Muslims?

July 5, 2023 | by Wintery Knight | Link | Original Link

I have some experience dicussing Islam because my mother's side of the family is all Muslim. My go-to argument has always been to confront them about the Qur'an's claim that Jesus did not die of crucifixion. But I noticed a different argument from Laura Powell, who knows far more about this topic than I do. Do you think her approach is the best one?

She writes about it over at her blog, An Affair with Reason:

> The crux of the argument is this: The Qur'an affirms the inspiration, authority, and preservation of the New Testament Gospels;[2] yet the Qur'an also contradicts the Gospels on major theological and historical points. Therefore, the Qur'an cannot be reliable.
>
> According to the Qur'an, the Gospel is the trustworthy, reliable revelation of God given as a guidance for mankind (Qur'an 3:3-4). These Scriptures from God were available and trustworthy when the Qur'an was revealed in the 7th century A.D., and those who had access to them were repeatedly told to obey them, judge by them, submit to their teaching, and stand fast upon them. In other words, according to the Qur'an, the Gospels are the inspired and authoritative words of God.
>
> Qur'an 5:47 says, "And let the People of the Gospel judge by what Allah has revealed therein. And whoever does not judge by what Allah has revealed—then it is those who are the defiantly disobedient."
>
> Furthermore, Qur'an 5:68 states, "Say, 'O People of the Scripture, you are [standing] on nothing until you uphold [the law of] the Torah, the Gospel, and what has been revealed to you from your Lord'" (see also 6:114; 3:3-4).

What I like about her argument is that she's just taking the words of the Qur'an seriously, and asking the Muslims who claim to believe it what's going on here. Why say that the gospels are unreliable today, when the Qur'an said that the gospels were reliable, yesterday.

My argument about the death of Jesus requires us to ask Muslims "where is the non-Muslim historian who thinks that Jesus did not die?" There isn't one.

But my argument requires that the Muslim know something about historical scholarship, to know what non-Muslim historians think.Laura's argument has wider appeal, because it doesn't require that the Muslim have *any* knowledge about history – only knowledge about what their own holy book says.

She concludes with this:

> What we see here is that the Qur'an teaches the inspiration, authority, and

> preservation of the Gospels. The Qur’an was intended as an Arabic version of the message of truth found in the Jewish and Christian Scriptures, but this presents a huge problem for Muslims because the Qur’an contradicts the Christian Scriptures on essential doctrines. Most notably, the Qur’an teaches that Jesus was not God incarnate, he did not die on a cross, and he was not raised from the dead (Qur’an 4:157; 5:116).
>
> Here’s the dilemma for Muslims: If the Gospels *are not* trustworthy, then the Qur’an is false because it teaches that the Gospels are the inspired, perfectly preserved, authoritative words of God. But if the Gospels *are* trustworthy, then the Qur’an is false because it teaches contradictory, mutually exclusive facts about key issues. Either way, the Qur’an is false.
>
> This, of course, is a huge problem for Muslims. The validity of Islam rests upon the reliability of the Qur’an, just as Christianity rests upon the truth of the divinity, death, and resurrection of Jesus. If the Qur’an is unreliable, then Islam is a false religion.

I like that she’s comfortable having disagreements with people. That’s not very common in the church today, in my experience.

By the way, this is the same Laura who wrote that really good article about how she found a better way to discuss her Christian worldview when she moved on from sharing her testimony. I blogged about it here.

Is the new Jim Caviezel movie “Sound of Freedom” worth watching?

July 6, 2023 | by Wintery Knight | Link | Original Link

Well, Rose went to see the new Jim Caviezel movie on Wednesday night, and she reported back to me. She said it was the best movie she’s ever seen, or close to it. In this post, I wanted to go over a couple of points about the movie, then we’ll hear from the famous actor. Then I want to say something about whether society wants men to lead on moral and spiritual issues.

So, to start, something from Christian Post:

> Devout Christian actor Jim Caviezel, who stars in the upcoming film “Sound of Freedom,” is calling on 2 million people to stand with him and expose the evil of child exploitation and trafficking.
>
> Scheduled for release on July 4, “Sound of Freedom” tells the true story of one man’s journey to combat child sex trafficking. The studio behind the film, Angel Studios, unveiled the first trailer at their Illuminate event on Thursday.
>
> “God’s children are not for sale,” the actor declares in the trailer.
>
> Caviezel then delivered a call to action for anyone willing to buy a ticket to see the film and raise awareness against this prevalent form of slavery.
>
> “We know this is heartbreaking and it hurts to look at, but the first step in helping these children is hearing their story. Not enough people know this problem exists and even fewer people are willing to do anything about it,” Caviezel declared.
>
> “Our goal is to inspire 2 million people to attend the film’s opening weekend to represent the 2 million trafficked children around the world.”
>
> […]“Sound of Freedom” is based on the life of Tim Ballard, a former U.S. agent who battles human trafficking after rescuing a little boy whose sister remained captive to traffickers and was sent to Colombia.

Hollywood, which is largely dominated by secular leftist Democrats, does not like movies that are critical of pedophilia and sex-trafficking.

> The film was rejected by multiple Hollywood studios but Angel Studios acquired worldwide distribution rights earlier this year.
>
> Angel Studios is a platform for filmmakers to collaborate with the audience and bring projects to life by crowdfunding. It currently creates and distributes films and TV series worldwide and is known as the studio behind “The Chosen” and “Dry Bar Comedy.”
>
> Angel Studios CEO Neal Harmon said his company feels a responsibility to take action and answer the prayers of the 2 million children around the world who are

> crying for freedom.

You can't watch the movie on Netflix, HBO Max, Hulu, or Amazon Prime, because they apparently oppose movies that make pedophiles and sex-traffickers feel bad.

According to this video, Disney did not want the movie to come out, which is understandable, given their actions in Florida:

This interview with Caviezel is also very good, and makes the point that Hollywood is opposed to movies that are critical of pedophilia and sex-trafficking of children.

So what I wanted to comment on was this article that Rose sent me from the Daily Wire, which has some challenging words for Christians about moral evils like sex-trafficking:

> "The problem is that modern day Christianity has become so weak and useless," Caviezel told Fox News Digital in a new interview. "I mean, modern day Christians are more afraid of the devil than they are of God. God could destroy the devil without a glance, but he looks to us to make a decision."
>
> The "Person of Interest" actor went on to say that Americans mostly "don't want" God in their lives, which has led to the overall deterioration of society.

So I wanted to say something about whether Christians – especially Christian men – are allowed to make truth claims and moral claims. I think a lot of opposition to truth and morality comes from inside the church. Let me explain.

I have no problem with Christian teachings like a real, eternal Hell or the immorality of homosexuality. But when I bring up my views in Christian environments, it is not well received by emotional people in the church. And that's because the emotional people in the church are forming their views on truth and morality based on their feelings. They liked the idea of postmodernism – that things are true and false based on feelings. They liked the idea of relativism – that right and wrong are different for each person. When they hear a man claiming that something is false, or that something is wrong, they feel bad. They want everything to be equally true, and they want everything to be equally right. "Don't judge" they say.

That's what I see happening today. This emotion-dominated view of truth and morality has taken over the culture, making it hard for Christian men to lead on moral and spiritual issues. The new religion is "don't judge". So, when a man sees someone acting in reckless, irresponsible ways, he cannot be allowed to identify their action as the root cause and shame them for it. Because that would hurt their tender feelings. The answer to evils can only ever be that other people are forcing the bad behavior. "The cause is systemic, so don't judge" the emotional people say. And then the emotional people demand that you solve problems with forgiveness and redistributing wealth to equalize outcomes.

I have even had one woman tell me not to judge women who have unpaid student loans for useless degrees, because "if God forgives them, then you have no right to speak out against student loans for useless degrees". That's where we are now. "Don't judge" is

ruling and reigning our culture. We can never warn people before they make a costly mistake, by telling them the truth, or by telling them what's right and wrong. That's "judging". We have to let them follow their hearts, and then pay the costs ourselves.

Imagine that you walk into the house and find the floors covered with 2 inches of water. You go upstairs and find that all the faucets in the bathtub, shower and sinks are on, and overflowing. You say "It's wrong to flood the house" and then you take action to turn off the faucets. Right now, the emotional people are telling the truth and morality people not to turn off the faucets, but to take a bucket and throw water out. Why? Because we don't want to make the person who opened the faucets feel bad for doing reckless, irresponsible actions. Just leave the faucets on, and grab a bucket instead.

Well, I'm not going to use my time, money and effort to fix problems without addressing the root cause. Either we go back to allowing men to tell the truth and defend right and wrong – even if some people's feelings are hurt – or we can count men out of solving problems. Men are not designed to be servants who tip-toe around the feelings of other people. Men tell the truth, and men defend the moral law. We are not here to be the clowns and servants of emotional people. And we are not here to be *slowed down* in our championing of truth and morality by the emotional people.

New study: Contraceptives double risk of depression in teenage girls

July 7, 2023 | by Wintery Knight | Link | Original Link

The Sydney Morning Herald reports:

> A Danish study of a million women has found a link between the use of hormonal contraception such as the the pill and increased risk of depression.
>
> Compared with non-users, women and teenage girls aged 15 to 34 who used hormonal contraception had a 1.23 times higher risk of being diagnosed with depression, especially adolescents, according to a paper published in the journal JAMA Psychiatry.
>
> Researchers at the University of Copenhagen in Denmark analysed health registry data of one million Danish women from 2000 and followed them up after an average of six years.
>
> Of the 55 per cent of those who used hormonal contraception, there were just over 23,000 first diagnoses of depression at the time of follow up.
>
> More than 133,000 had received their first prescription of antidepressants.
>
> The highest risk of depression was among the adolescent girls, who had a 1.8-times higher risk of first use of an antidepressant.
>
> The risk varied slightly among the different types of hormonal contraception, but the risk was three times higher among those who used non-oral products, such as progestogen implants.
>
> Few studies have quantified the effect of low-dose hormonal contraception on the risk for depression, but study author Ojvind Lidegaard says their research warrants the need for further studies into the potential adverse effects of the pill.
>
> “Use of hormonal contraceptives was associated with subsequent antidepressant use and first diagnosis of depression at a psychiatric hospital among women living in Denmark.
>
> “Adolescents seemed to be more vulnerable to this risk than women 20 to 34 years old,” Lidegaard said.

Of course, one wonders where these studies were BEFORE the pill was championed by the radical feminists. We didn’t have studies before we adopted abortion, no-fault divorce, single mother welfare and gay marriage, either. Do you think that those might have unintended consequences? Shouldn’t we care about the consequences before we adopt policies that go against traditional moral values?

Anyway, let’s review some studies on birth control pills, since no one ever tells young people these things before it’s too late.

This is from the ultra-leftist Time magazine, of all places.

Excerpt:

> Dr. David Gaist, a neurologist at Odense University Hospital and the University of Southern Denmark, and his colleagues found that women taking hormonal contraceptives — those containing estrogen, progestin or a combination of both — showed higher rates of a rare brain tumor known as glioma. Their results, published Thursday in the *British Journal of Clinical Pharmacology*, raise questions about the connection between oral contraceptives and brain cancer, but shouldn't yet be interpreted as a reason to stop taking birth control, says Gaist.
>
> Using data from Denmark's national registries of health records, cancer cases and prescriptions, Gaist zeroed in on the women aged 15 years to 49 years diagnosed with glioma, and then analyzed whether they were prescribed contraceptives and for how long. **Overall, women who had used hormonal contraceptives at any point in their lives showed a 50% higher risk of developing the brain tumors compared to those who had not used them. And women who used the birth control for more than five years nearly doubled their risk of the cancer.**

Let's take a look at some previous studies on the effects of contraceptives.

From the Times of India.

Excerpt:

> Women who take oral contraceptives regularly are at a higher risk of developing breast cancer compared to others, shows a study by AIIMS doctors. Breast cancer risk was found to be 9.5 times more in women with a history of consuming such pills. Early menstruation cycle, late marriage and lower duration of breastfeeding were the other major factors responsible for the disease among Indians, according to the study published in the latest issue of the Indian Journal of Cancer.

> The study was conducted on 640 women, of which 320 were breast cancer patients. "We found long-term use of oral contraceptive pills (OCP) higher among those suffering from breast cancer-11.9%-compared to healthy individuals-1.2%," said Dr Umesh Kapil, a professor at the public health nutrition unit, AIIMS. He said breast cancer is caused by repeated exposure of breast cells to circulating ovarian hormones, and long-term use of OCPs, which contain estrogen and progesterone, may be increasing this risk by causing hormonal imbalance.

> The study mostly had women who used OCPs for birth control. Emergency contraceptives, popularly called morning-after pills, were not included.

This is not the first study, nor even the second study, to confirm this link.

Birth control pills

Many studies showed that taking birth control pills caused an increased risk of breast cancer.

Study 1: (March 2003)

> RESULTS: Among the youngest age group (<35 years, n = 545), significant predictors of risk included African-American race (RR = 2.66: 95% CI 1.4-4.9) and **recent use of oral contraceptives** (RR = 2.26; 95% CI 1.4-3.6). Although these relationships were strongest for estrogen receptor-negative (ER-) tumors (RRs of 3.30 for race and 3.56 for recent oral contraceptive use), these associations were also apparent for young women with ER+ tumors. Delayed childbearing was a risk factor for ER+ tumors among the older premenopausal women (Ptrend < 0.01), but not for women <35 years in whom early childbearing was associated with an increased risk, reflecting a short-term increase in risk immediately following a birth.

Study 2: (October 2008)

> **Oral contraceptive use ≥1 year was associated with a 2.5-fold increased risk for triple-negative breast cancer** (95% confidence interval, 1.4-4.3) and no significantly increased risk for non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.008). Furthermore, the risk among oral contraceptive users conferred by longer oral contraceptive duration and by more recent use was significantly greater for triple-negative breast cancer than non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.02 and 0.01, respectively).

When people talk about a war on women, maybe they should be thinking about this practice of promoting behaviors to women that make them sick. And eventually, we all have to pay for the increased costs of health care when we encourage people to do things that make them sick. We should not be promoting birth control to young women in order to enable them to have recreational sex. It’s not worth the harm it causes them. When you add in the psychological damage and the risk of abortion if the contraception fails, it really is not the right thing to tell a young woman.

William Lane Craig debates Austin Dacey: Does God Exist?

July 8, 2023 | by Wintery Knight | Link | Original Link

Here is the video and summary of a debate between Christian theist William Lane Craig and Austin Dacey at Purdue University in 2004 about the existence of God.

The debaters:

- William Lane Craig
- Austin Dacey

The video: (2 hours)

The video shows the speakers and powerpoint slides of their arguments. Austin Dacey is one of the top atheist debaters, and I would put him second to Peter Millican alone, with Walter Sinnott-Armstrong in third place. This is the debate to show people who are new to apologetics. The debate with Peter Millican is better for advanced students, and that's no surprise since he teaches at Oxford University and is familiar with all of Dr. Craig's work. The Craig-Dacey debate is the one that I give to my co-workers.

By the way, you can get the DVDs and CDs for the first Craig-Dacey debate and the second Craig-Dacey debate and the second Craig-Sinnott-Armstrong debate. The Peter Millican debate is not available on DVD, but the link above (Peter Millican) has the video and my summary.

Dr. Dacey's 5 arguments below are all good arguments that you find in the academic literature. He is also an effective and engaging speaker, This is a great debate to watch!

SUMMARY of the opening speeches:

Dr. Craig's opening statement:

Dr. Craig will present six reasons why God exists:

1. (Contingency argument) God is the best explanation of why something exists rather than nothing
2. (Cosmological argument) God's existence is implied by the origin of the universe
3. (Fine-tuning argument) The fine-tuning of the universe for intelligent life points to a designer of the cosmos
4. (Moral argument) God is the best explanation for the existence of objective moral values and objective moral duties
5. (Miracles argument) The historical facts surrounding the life, death and resurrection of Jesus
6. (Religious experience) God's existence is directly knowable even apart from arguments

Dr. Dacey's opening argument:

There are two ways to disprove God's existence, by showing that the concept of God is self-contradictory, or by showing that certain facts about ourselves and the world are incompatible with what we would expect to be true if God did exist. Dr. Dacey will focus on the second kind of argument.

1. The hiddenness of God
2. The success of science in explaining nature without needing a supernatural agency
3. The dependence of mind on physical processes in the brain
4. Naturalistic evolution
5. The existence of gratuitous / pointless evil and suffering

One final point:

One thing that I have to point out is that Dr. Dacey quotes Brian Greene during the debate to counter Dr. Craig's cosmological argument. Dr. Craig could not respond because he can't see the context of the quote. However, Dr. Craig had a rematch with Dr. Dacey where was able to read the context of the quote and defuse Dr. Dacey's objection. This is what he wrote in his August 2005 newsletter after the re-match:

> The following week, I was off an another three-day trip, this time to California State University at Fresno. As part of a week of campus outreach the Veritas Forum scheduled a debate on the existence of God between me and Austin Dacey, whom I had debated last spring at Purdue University. In preparation for the rematch I adopted two strategies: (1) Since Dacey had come to the Purdue debate with prepared speeches, I decided to throw him for a loop by offering a different set of arguments for God, so that his canned objections wouldn't apply. I chose to focus on the cosmological argument, giving four separate arguments for the beginning of the universe, and on the evidence for Jesus' resurrection. (2) I reviewed our previous debate carefully, preparing critiques of his five atheistic arguments. In the process I found that he had seriously misunderstood or misrepresented a statement by a scientist on the Big Bang; so I brought along the book itself in case Dacey quoted this source again. I figured he might change his arguments just as I was doing; but I wanted to be ready in case he used his old arguments again.
>
> […]The auditorium was packed that night for the debate, and I later learned that there were overflow rooms, too. To my surprise Dr. Dacey gave the very same case he had presented at Purdue; so he really got clobbered on those arguments. Because he wasn't prepared for my new arguments, he didn't even respond to two of my arguments for the beginning of the universe, though he did a credible job responding to the others. I was pleased when he attacked the Big Bang by quoting the same scientist as before, because I then held up the book, specified the page number, and proceeded to quote the context to show what the scientist really meant.

Dr. Craig is always prepared!

Does the Bible say that you should forgive someone who does not repent?

July 9, 2023 | by Wintery Knight | Link | Original Link

Kevin Lewis, a professor of Theology and Law at the conservative Biola University, was asked this question:

> Recently, I was reading Dr. Kenneth Bailey's "Jesus Through Middle Eastern Eyes" (IVP press 2008). When commenting on Matthew 6:12-13, he writes,
>
> "It is a common human assumption that the violator of the rights of others must ask for forgiveness before the wronged party can be expected to accept the apology and grant forgiveness…But Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when when there is no confession of guilt… There is a voice from the cross that echoes across history to all saying 'Father forgive them for they know not what they do.' Neither Pilate nor the high priest nor the centurion offered any apology to Jesus, yet he prayed for divine forgiveness…(p.125)"

And here's some of his response copied with permission from his Facebook note:

> First, regarding God and His forgiveness, it is undisputed in orthodox Christian theology that God does not forgive everyone. The doctrine of Hell is a sufficient proof of the lack of universal forgiveness by God.
>
> Next, it is clear that God does not forgive without repentance. This doctrine is taught in a number of texts. For example, in Luke 13:3 Jesus says, "unless you repent, you will all likewise perish." In Mark 1:15 John the Baptist commands that we must "repent and believe the Gospel." The connection between repentance and forgiveness of sins (i.e. "salvation") is seen throughout the Scriptures. For example, in Acts 2:38 repentance is directly connected as a condition for the remission of sins. For additional examples of this connection see Matthew 11:20-24; Luke 24:45-49; Acts 3:19; 8:22; 17:30-31; Romans 2:4-5; II Corinthians 7:10; II Tim. 2:25-26.
>
> So since we are to be imitators of God and forgive in the same way God forgives, we would expect the Scriptures to be consistent, stating that the condition of repentance is required to be fulfilled before believers are required to forgive each other's sins. It does.
>
> Jesus stated in Luke 17:3, "If your brother sins, rebuke him; and if he repents, forgive him." Here, the meaning is clear. The word "if" (Grk. ean) introduces the condition for a rebuke and for granting forgiveness. If (subjunctive) a person sins, we must (imperative) rebuke him, and if (subjunctive) he repents, we must (imperative) forgive him. This is as clear a statement as you will find on the subject. Forgiveness is conditioned upon repentance—and this is one of the same

criteria that God requires before He forgives sin.

This principle of permitting believers to withhold forgiveness unless the condition of repentance is satisfied is also explicitly seen in Matthew 18:15-17. Compared with the Luke 17:3 text above, the situation is the same. If a brother sins, reprove him; if he listens to you, you have won your brother. Here, the word “reprove” is used rather than “rebuke” and the word “listen” is employed rather than “repent,” but the meaning is virtually identical to Luke 17:3. What we see in Matthew 18 is an escalation of the issue and the result if the person fails to repent (i.e. “listen”). If the person fails to repent, we are to shun him in all appropriate ways (v. 17).

[…]Finally, I would make the case that it is harmful to a person to forgive him without requiring repentance. As seen above, the Bible is clear that sin requires a rebuke. Ignoring sin teaches sinners that sin does not bring consequences. This is harmful to their souls. Continuing to have the benefit of a righteous relationship with another and yet remain in sin against that person results in fostering a habituation of sinful inclinations in their soul, which God says brings about suffering and death.

Moreover, since the ultimate purpose of forgiveness is reconciliation, it is meaningless and harmful to forgive when no reconciliation may be had with the sinner. We cannot “walk together” in a biblical manner in righteous peace when the unrepentant sinner walks in unrighteousness. Necessarily, there is a conflict and a want of shalom. Their soul is headed in a different direction than the believer’s soul; they are walking away from God and we cannot have fellowship with darkness. God has no intimate fellowship with unrepentant people, and that is the model for Christians as well (See Matt. 18).

Regarding personal anger issues commonly raised by Christian psychologists, these types of psychologists unbiblically make unconditional forgiveness a part of therapy. By contrast, however, if a counselee will not forgive after the offending party has truly repented, the counselee sins, and this kind of unforgiveness may be one of the causes of his or her problems. But this is a separate issue from universal and unconditional forgiveness raised above.

Human beings in the image of God may be angry in appropriate ways (Eph.4:26, 31). There is a time to love and a time to hate (Ecclesiastes 3:8). The notion that Christians cannot ever hate, be angry, or lack forgiveness is an unbiblical concept. God Himself is eternally angry with sin, but He is certainly not a psychological basket case. He loves, hates, and is angry in appropriate ways. Our task as believers is to imitate this. Be angry with and hate sin appropriately (Rom. 12:9) and love what good appropriately. For example, righteous anger can evolve beyond the biblical limits to become malice, slander, and bitterness while, to give another example, an appropriate love of food can evolve beyond the biblical limits into gluttony.

I agree with Kevin, and I think it is a helpful tool for people to insist on seeing some sort of repentance and restitution from someone who wrongs you before you trust them again. If they are not even sorry for what they've done, and they refuse to explain why what they did is wrong, then they can't be forgiven, and you can't trust them again.

I think this is the key passage – Luke 17:3-4:

Luke 17:3-4:

3 Be on your guard! If your brother sins, rebuke him; and if he repents, forgive him.

4 And if he sins against you seven times a day, and returns to you seven times, saying, 'I repent,' forgive him."

That's Jesus speaking, there.

Also, I was having a debate with someone who disagrees with all this, and while debating with her, I thought of another example.

Luke 18:9-14:

9 And He also told this parable to some people who trusted in themselves that they were righteous, and viewed others with contempt:

10 "Two men went up into the temple to pray, one a Pharisee and the other a tax collector.

11 The Pharisee stood and was praying this to himself: 'God, I thank You that I am not like other people: swindlers, unjust, adulterers, or even like this tax collector.

12 I fast twice a week; I pay tithes of all that I get.'

13 But the tax collector,standing some distance away, was even unwilling to lift up his eyes to heaven, but was beating his breast, saying, 'God, be merciful to me, the sinner!'

14 I tell you, this man went to his house justified rather than the other; for everyone who exalts himself will be humbled, but he who humbles himself will be exalted."

So again, no forgiveness without repentance.

Forgiveness is what happens when someone who is sinned against treats the sinner as if he had never sinned. It is not on the balance sheet. It is not brought to mind. It is not held against them in the future. The forgiver trusts the sinner again as if the previous sin had never happened.

In divine (vertical) forgiveness, there is no forgiveness without repentance. There are Bible verses above to show that.

My argument is twofold. First, there is a clear teaching of Jesus explaining the sequence of sin and forgiveness. Repentance precedes forgiveness, between humans (Luke 17:3). The verses cited by the forgive without repentance crowd don't show the mechanics of how to forgive, they are making the point that if you want God to forgive you, you should forgive others. The parable in Luke 18:9-14 affirms this again – repentance always precedes forgiveness.

Second, we have an obligation to imitate God, and that means imitating the way he forgives those who sin against him. When I raise that with the unconditional forgiveness

crowd, they want to insist that there is a difference, that the word “forgive” means different things. I’m not convinced.

Finally, I do think that forgiving someone is obligatory if they sincerely repent, and even if they screw up again and again. So long as the repentance is sincere, (like if there is restitution and a genuine effort to show an understanding how the sin affected the wronged party in writing), *then forgiveness should be automatic*.

Alan E. Kurschner argues that there is serious textual doubt about the originality of Luke 23:34a, a text used by the pro-unconditional-forgiveness crowd. He has a journal article coming out on it, but a synopsis of his argument is here.

He also wrote this in a comment on this blog:

> Second, on Matt 6:15, this is what I have to say. Notice the then-clause: “neither will your Father forgive your sins.” This would require universalism on the Father’s part according to the unconditional interpretation given the first half: “But if you do not forgive others their sins.” Since everyone has wronged the Father is the Father required to forgive everyone even if they are not seeking forgiveness?

So I think the case for the forgiveness being conditional on repentance is pretty strong, especially when serious harm has been caused.

Mamas for DeSantis: Casey DeSantis champions parent's rights at the national level

July 10, 2023 | by Wintery Knight | Link | Original Link

I'm a huge fan of Moms for Liberty, a grassroots movement that defends parent's rights and protects children from woke indoctrination. It was interesting to hear some of their ideas echoed by Casey DeSantis, the wife of Ron DeSantis. She's started an organization called "Mamas for DeSantis". Given that suburban women can't stand Trump, this looks like a good plan to give them a reason to vote for a Republican candidate in 2024.

Here's a story about "Mamas for DeSantis" in the DailyWire:

> Casey DeSantis made her first solo appearance for her husband's campaign on Thursday as she launched the national version of "Mamas for DeSantis" in Iowa, where the 2024 presidential season will begin with the Iowa caucuses.
>
> Florida GOP Governor Ron DeSantis' wife first launched the statewide version of "Mamas for DeSantis" in 2022, when her husband was reelected governor in a landslide by a whopping 19 points. She signed up over 1.1 million mothers to support her husband, as he won female voters by 9%.

Before I tell you what her organization is about, you can see it for yourself in this slick 2.5 minute video:

She had a 44-minute discussion with the Governor of Iowa, Kim Reynolds. She talked about the challenges of raising children.

Sometimes, when I look at the younger women that are coming out of colleges, it's easy to get sad. But then, if you just change direction and look at the married women with kids, then everything looks a lot better. I like when women fight for their children against the secular left. You won't get that from young feminists, but married women are a lot better. Basically, married women are facing a choice right now… whether to virtue signal by embracing "don't judge", or whether they should defend their kids from ideas that are harmful to children.

I like women who have experiences that form their character. A lot of women have had experiences battling cancer, and Casey can speak to that, she's had breast cancer:

> There was a time in my life when I didn't know if I was going to see my kids graduate from kindergarten, let alone high school. And I was able to beat that back, but I had some really long, difficult battles. As a matter of fact I remember — and the governor was getting criticized for doing this with me — but I remember every single chemotherapy appointment that I went to, and there were six of them and they were very long and they were very hard, and I had to wear this dumb cold cap on my head that was like an ice cube, you're like in an igloo for six or seven hours, and he held my hand during every single one of

> them and he never left my side.
>
> And I'll tell you what: when you go through something like that, and you're in the middle of the night, scared, and you don't know what's going to happen, and you crawl into bed with your kids, and you're getting hope for tomorrow that you can have some more time with them, and then you realize that God has given you more opportunities to be able to live, when you're given that opportunity in life, what do you do with it?

I saw an interesting clip of Ron DeSantis getting heckled by a secular leftist who supported sexualizing children, to make them easier for pedophiles to abuse.

Here was his response:

He seems like a nice man, but I don't think he likes secular left pedophiles at all. He won't get their votes.

I'm keeping a close eye on DeSantis, because he is more conservative than Trump on four issues. One, I don't want corporation-driven health policy. Trump locked down the USA because Fauci said to do it. DeSantis kept Florida open. Trump made the drug companies rich, while DeSantis took away Disney's tax breaks. Second, Trump is more moderate than DeSantis on abortion. He criticized Florida's pro-life laws, and said that DeSantis was going too far. Third, Trump didn't build the wall. He had 4 years to do it, and it didn't get done. DeSantis busses illegals to blue state sanctuary cities. Fourth, Trump didn't drain the swamp. We are finding out now from about the Trump-Russia collusion, the Hunter Biden bribery scandal how badly Trump failed to drain the swamp. DeSantis has gone after Soros-funded DAs in his state. He's not afraid to make enemies. Trump had his chance. He failed. He made a lot of entertaining jokes, but he failed to get conservative wins.

Here is a short list of previous DeSantis actions:

- high tourism and low unemployment
- six-week abortion ban
- no sex-reassignment surgeries on kids
- no pronouns required in Florida schools
- no kids at drag queen shows
- pre-game prayer is allowed
- universal school choice
- making collection of union dues optional for teachers
- flying illegal immigrants to Massachusetts
- elect conservatives to school boards
- teach students about the historical record of communism
- ban grooming of young children
- protect wildlife
- banning biological males from women's sports
- punishing Big Tech social media companies for censoring conservatives

I understand that some people like Trump because of his insults, and because they want to root for a winning football team (“he’s leading in the polls! wow!”). But elections are not about insults and winning the Super Bowl. Elections are about hiring someone to get work done. So, we look at resumes.

Are you ready for marriage? 10 questions to find out how prepared you are

July 11, 2023 | by Wintery Knight | Link | Original Link

Would you like your marriage to be long-lasting and fulfilling? Well, check out the questions below and see if you are ready for life-long wedded bliss.

1. Are you opposed to no-fault divorce laws?

No-fault divorce laws allow one spouse to leave the marriage at any time, for any reason, or for no reason at all. If you support no-fault divorce, then your view of marriage is that it's something to be entered into lightly, because it can be exited easily. You'll be walking down the aisle thinking "oh well, if it doesn't work out, I can always get a divorce". If you oppose no-fault divorce laws, then your view of marriage is that there is no escape hatch. You'll probably be a lot more careful about getting married. Since you are convinced that marriage is built to last forever, you'll have a courtship of at least 6 months, and involve both sets of parents in the process. If you put commitment above happiness, you're ready for marriage.

2. Are you opposed to abortion laws?

Abortion laws basically make it easy for two people to have recreational sex, and then get rid of any complications that result quickly and easily. This way, both the people that created the effect can escape the responsibility for what they did, and keep right on pursuing their goals and dreams. If you support abortion laws, you're really saying that you can engage in recreational sex with people who are unwilling to accept responsibility for any children that result. If you are pro-life, then you're saying that people should be careful about having sex, and be ready to take responsibility for a child, should one appear. Being responsible is good preparation for marriage.

3. Are you supportive of daycare for young kids?

Daycare services are essential for couples who need both the father and the mother to be working. The advantage of both parents working is that you can afford lots of shiny new stuff – like vacations, boats, shoes and handbags. Studies show that children don't die during daycare, although if you put a child in daycare, there will be effects on the child's behavior, such as higher anxiety and aggression. If you oppose daycare, you're putting the needs of your children above your need for shiny stuff. Putting the needs of children first is a sign that you are ready for the self-sacrifice that marriage requires.

4. Are you in favor of smaller government?

If you're in favor of smaller government, then you would rather keep taxes low so that more money stays in the family. If you support bigger government, then you think that government knows how to spend your money better than you and your spouse do. Additionally, government usually likes to spend more money than they take in. For example, in Obama's 8 years, we added $10 trillion dollars to the debt, which doubled

from 10 to 20 trillion under his watch. If you oppose higher taxes and bigger government, then you want government to pass on less debt to your children. Putting your kids' financial well-being over your own is pro-marriage.

5. Are you in favor of school choice?

If you're opposed to school choice, then you think that government should decide which schools your children will attend. School choice laws allow parents to give money to the schools they think are best for the children. If a school has excellent teachers and teaches students skills that they can use in their professional lives, then parents can choose that school. Schools have to compete to provide higher quality to parents, for lower cost. If you support giving parents more choice, then you put the needs of children – especially poor, minority children – above the needs of education administrators and teacher unions. Putting kids first is pro-marriage.

6. Are you in favor of premarital sex?

Premarital sex is really fun (so I'm told). You can have sex with people who are just really attractive, even if these people have lousy character. Your friends will be impressed, and you'll feel more attractive – like you were climbing a ladder of attractiveness with each new partner. If you combine sex with being drunk, then you can't remember anything after. And you can't feel guilty if the booze made you do it, right? On the other hand, if you present yourself to your spouse as a virgin, you are telling them that you have self-control, that you take sex as communication rather than recreation, and that they can trust you to be faithful by keeping sex inside the marriage. Trust is important for a good marriage.

7. Are you in favor of welfare for single mothers?

Sometimes, women find themselves pregnant before they are married. If you think that giving taxpayer money to women who have babies before they have husbands is a good idea, then you are rewarding behavior that creates fatherless children. Raising a child without a father causes serious behavioral problems. Boys tend to become more violent, and are more likely to commit crimes. Girls tend to engage in sex at earlier ages. If you oppose encouraging fatherlessness with welfare, you want women to get married before they have kids. Taking the needs of children seriously is pro-marriage.

8. Are you in favor of same-sex marriage?

When a man and a man get married and acquire children, those children will not be raised with their birth mother. Similarly with lesbians, the children will not grow up with their birth father. Studies show that children suffer from not being raised by their biological parents. For example, children of same-sex parents have lower graduation rates than children raised by heterosexual couples. If you think that children have a right to a stable relationship with their biological mother and father, then you place a higher value on the needs of children as opposed to the needs of adults. That's a good sign you're ready for marriage.

9. Are you in favor of radical feminism?

Feminism shows that you think the purpose of marriage is to make women happy, and not to work as a team to serve God and raise good children. Indeed. Marriage doesn't work if the woman approaches it as an accessory. Marriage is about a man and a woman sacrificing their own interests and compromising in order to work together as a team. Husbands and children have needs that women should care about. Feminism teaches women that husbands and children are less important than their careers, hobbies and interests. Feminism is anti-marriage.

10. Are you responsible with earning, budgeting and saving money?

This one comes to us from Bob P. He says that marriages work better when both spouses are "committed to financial planning, budgeting and a renunciation of debt to support a lifestyle. Disagreement about financial issues is one of the greatest causes of marital stress." If you're able to choose a college major or a trade that you don't like, but that pays well, that's a positive. If you're able to string together jobs so that your resume is gap-less, that's a positive. If you're able to save money even though it means you're having less fun, that's a positive. If you're able to give away money to others to support them, that means you're able to sacrifice your interests for the benefit of others. That's pro-marriage.

Well, how did you do? Leave your ideas for more policies and points of view that are marriage-friendly in the comments.

A lesson about men for marriage-minded women from the movie “High Noon”

July 12, 2023 | by Wintery Knight | Link | Original Link

One of my favorite movies for explaining the differences between men and women is “High Noon” (1952).

Here’s the summary from IMDB:

> Former marshal Will Kane (Gary Cooper) is preparing to leave the small town of Hadleyville, New Mexico, with his new bride, Amy (Grace Kelly), when he learns that local criminal Frank Miller has been set free and is coming to seek revenge on the marshal who turned him in. When he starts recruiting deputies to fight Miller, Kane is discouraged to find that the people of Hadleyville turn cowardly when the time comes for a showdown, and he must face Miller and his cronies alone.

The main theme of the film concerns Amy’s decision to break her wedding vows the very day that she makes them. She tells her new husband that he must bow to her will, and give up his male role as protector. When he explains his reasons for standing his ground to her practically (Miller will hunt them down) and morally (he has a duty protect the town), she dismisses both. She tells him that if he doesn’t run away from Miller and his gang with her, that she will get on the train and leave town by herself.

The intro of film shows the member’s of Miller’s gang assembling, and the words of the song explain the central conflict between husband and wife:

Here’s the part of the lyrics we care about:

The noonday train will bring Frank Miller.
If I’m a man I must be brave
And I must face that deadly killer
Or lie a coward, a craven coward,
Or lie a coward in my grave.

O to be torn ‘twixt love and duty!
S’posin’ I lose my fair-haired beauty!
Look at that big hand move along
Nearin’ high noon.

He made a vow while in State’s Prison,
Vow’d it would be my life or his’n
I’m not afraid of death, but O,
What will I do if you leave me?

Do not forsake me O my darlin’
You made that promise when we wed.

Do not forsake me O my darlin'
Although you're grievin', I can't be leavin'
Until I shoot Frank Miller dead.

What's interesting is that his new wife Amy apparently does not understand the meaning of wedding vows or the natural roles of good men as protectors of the weak, and fighters against evil. Although she vowed to stick by him and help him, the minute anything threatening appears that makes her feel unhappy, she abandons her vows and abandons her man. Let's break down her mistakes now, using actual conversations from the movie.

First, she doesn't understand or respect the man she married *as a man*:

> **Kane**: *[while riding out of town]* It's no good. I've got to go back, Amy.
>
> **Amy**: Why?
>
> **Kane**: This is crazy. I haven't even got any guns.
>
> **Amy**: Then let's go on. Hurry.
>
> **Kane**: No, that's what I've been thinkin'. They're making me run. I've never run from anybody before.
>
> **Amy**: I don't understand any of this.
>
> **Kane**: *[after looking at his vest watch]* Well, I haven't got time to tell ya.
>
> **Amy**: Then don't go back, Will.
>
> **Kane**: I've got to. That's the whole thing. *[He turns the buggy around and rides back into town]*

Her feelings and her desires for the world to be a happy place for her are so strong that they cloud her judgment.

Second, she doesn't understand the threat posed by evil men:

More:

> **Kane:** I sent a man up five years ago for murder. He was supposed to hang. But up North, they commuted it to life and now he's free. I don't know how. Anyway, it looks like he's coming back.
>
> **Amy:** I still don't understand.
>
> **Kane:** He was always wild and kind of crazy. He'll probably make trouble.
>
> **Amy:** But that's no concern of yours, not anymore.
>
> **Kane:** I'm the one who sent him up.
>
> **Amy:** Well, that was part of your job. That's finished now. They've got a new marshal.
>
> **Kane:** He won't be here until tomorrow. Seems to me I've got to stay. Anyway, I'm the same man with or without this. [He pins his badge on his vest]
>
> **Amy:** Oh, that isn't so.
>
> **Kane:** I expect he'll come lookin' for me. Three of his old bunch are waiting at

> the depot.
>
> **Amy:** That's exactly why we ought to go.
>
> **Kane:** They'll just come after us, four of 'em, and we'd be all alone on the prairie.
>
> **Amy:** We've got an hour.
>
> **Kane:** What's an hour?…What's a hundred miles? We'd never be able to keep that store, Amy. They'd come after us and we'd have to run again, as long as we live.
>
> **Amy:** No we wouldn't, not if they didn't know where to find us. Oh Will! Will, I'm begging you, please let's go.
>
> **Kane:** I can't.
>
> **Amy:** Don't try to be a hero. You don't have to be a hero, not for me.
>
> **Kane:** I'm not trying to be a hero. If you think I like this, you're crazy.

Instead of recognizing how her feelings are deceiving her about the threat and trusting her husband, she tries to force him to accept her mistaken view of reality by threatening to abandon him.

One of Kane's ex-girlfriends has a talk with Amy, which helps her to understand who Kane is, and what is expected of her:

> **Amy**: That man downstairs, the clerk, he said things about you and Will. I've been trying to understand why he wouldn't go with me, and now all I can think of is that it's got to be because of you…Let him go, he still has a chance. Let him go.
>
> **Helen**: He isn't staying for me. I haven't spoken to him for a year – until today. I am leaving on the same train you are…What kind of woman are you? How can you leave him like this? Does the sound of guns frighten you that much?
>
> **Amy**: I've heard guns. My father and my brother were killed by guns. They were on the right side but that didn't help them any when the shooting started. My brother was nineteen. I watched him die. That's when I became a Quaker. I don't care who's right or who's wrong. There's got to be some better way for people to live. Will knows how I feel about it.
>
> **Helen**: I hate this town. I always hated it – to be a Mexican woman in a town like this.
>
> **Amy**: I understand.
>
> **Helen**: You do? That's good. I don't understand you. No matter what you say. If Kane was my man, I'd never leave him like this. I'd get a gun. I'd fight.
>
> **Amy**: Why don't you?
>
> **Helen**: He is not my man. He's yours.

Helen understands the need for a wife to stand by her man. But Amy's response to evil is to shut her eyes and focus on feeling good and being happy. Notice that her "better way"

is unspecified – it's just a feeling she has that pacificism and no-violence will somehow "work" to stop evil. But in reality, pacifism is not a "better way" of dealing with evil – it does not work. Her pacifist response not only does not make evil go away, it actually encourages more evil. Weakness emboldens evildoers, and laying down your arms provokes them to do more evil. Will Kane knows this, but she won't listen to him.

You can watch the final gunfight here, as well as Amy's final decision:

So, this is why I really recommend this movie as a discussion-starter when you like a girl and are thinking of marrying her. It clarifies the essential problem with many young women today not being ready for marriage. To be fair, most women come around to respect their husbands and his different roles after they get married. However, the risk of divorce is so dangerous that it makes sense to bring it up for discussion before the marriage happens. Marriage is supposed to be an engine to serve God, and the success of that enterprise cannot be left to chance. You can't just rely on the fact that she says the words of the vow, you have to check to see if she has a habit of keeping her promises when it goes against her own self-interest.

Ask yourself: Who are you, as a man? And does your woman accept that you have obligations to stand up to evil and do good ? Will she support you in your battle against evil, or will the marriage just be about her feelings and desires? I would especially beware of women who think that God is speaking to them through their feelings and desires. Look at her friends: are they practical and successful? Or are they irresponsible, unaccountable and reckless? Look at her father: does he have a plan for her, and does he lead her to be practical, frugal and hard-working? If you are not going to get an ally and a supporter in a wife, then you will not be able to serve God well, as a married man. Think about it.

What Christopher Wray – Trump's nominee for FBI Director – told House Republicans

July 13, 2023 | by Wintery Knight | Link | Original Link

If I had to pick two of the worst people who served in the Trump administration, I would pick Anthony Fauci, who locked America down and destroyed the economy, and Christopher Wray, who weaponized the FBI to punish Christians and conservatives. Well, the Republicans finally got a chance to question Wray, and this is what they found out.

First, let's start with a list of 19 times the Democrats politicized the FBI, compiled by Tristan Justice, over at The Federalist. This is from April 2023. Here are a few of them:

1. Infiltration of Catholic Parishes
2. Targeting Parents for Domestic Terrorism
3. Campaign to frame Trump for Russia collusion
4. Covering up Hillary Clinton's private e-mail server
5. Pressuring Twitter to censor Hunter Biden laptop scandal
6. Pressuring Facebook to censor Hunter Biden laptop scandal
7. Pressuring FBI employees to slow walk Hunter Biden investigation
8. Persecuting peaceful pro-life protestors
9. Minimizing actual terrorist attacks by left-wing terrorists
10. Orchestrating a fake plot to kidnap Michigan governor
11. Providing biased evidence to Rittenhouse prosecutors

So with that in mind, let's look at what Republicans asked the director of the FBI, from another article from The Federalist.

FBI involvement in orchestrating January 6th riot:

> Wray dismissed allegations of undercover FBI involvement in the Jan. 6 Capitol riot as "ludicrous" and then refused to answer questions about the scale of the agency's confirmed involvement.
>
> […]California Republican Darrell Issa immediately pressed Wray for answers on FBI operations that day wherein undercover informants wherein the Justice Department deployed "national" forces out of the FBI installation at Quantico with "shoot to kill" authority.
>
> "How many individuals were either FBI employees or people that the FBI had made contact with, were in the January 6th entry of the Capitol and surrounding area?" Issa asked.
>
> "I really need to be careful here [when] talking about where we have or have not used confidential human sources," Wray said.

Pipe bombs:

> Kentucky Republican Rep. Thomas Massie stepped up the pressure on Wray to give Congress answers over the agency's effort to track down the suspected pipe bomber who left devices at both the RNC and DNC on Jan. 6.
>
> In May, Reps. Massie and Jim Jordan, R-Ohio, demanded an FBI briefing on the pipe bomb cases after a whistleblower revealed the agency identified the car used by the prime suspect but refused to track the vehicle down. Both bombs were reportedly inoperable, according to the whistleblower.
>
> Wray sought to hide behind longstanding departmental policy not to comment on active investigations.
>
> Massie reminded Wray that it's been 900 days since the bombs were discovered.

Censoring social media posts critical of the Biden administration policies:

> Wray defended the FBI's relationship with the Russian-infiltrated intelligence agency in Ukraine to censor American speech. The Security Service of Ukraine, Wray said, which has been notoriously compromised by the Kremlin, is a "longstanding good partner" of the FBI.
>
> A new interim report from the House Judiciary's Select Subcommittee on the Weaponization of the Federal Government out Monday revealed the FBI colluded with the Ukrainian agency to flag social media posts to Silicon Valley tech giants for censorship.

FBI agents armed with assault rifles arrest peaceful pro-lifer in pre-dawn raid, in front of his wife and children:

> Texas Republican Rep. Chip Roy pressed the FBI director over the agency's armed raid and arrest of a Christian pro-life activist named Mark Houck last fall.
>
> "I'm not going to second-guess the judgment of the career agents on the ground who made the determination," Wray said.
>
> "But your job is to second guess and look at what they're doing," Roy said.
>
> Houck was ultimately acquitted of all charges in January.

Protecting the Biden crime family:

> Florida Republican Rep. Matt Gaetz accused the FBI of engaging in double standards of justice by protecting the Biden family. According to whistleblowers within the Internal Revenue Service (IRS), the FBI concealed critical records from federal tax investigators, including an unclassified FD-1023 form implicating the president and Hunter Biden in a multi-million-dollar bribery scheme with foreign actors.

Targeting parents concerned about public schools indoctrinating their kids in secular leftist propaganda:

> California Republican Congressman Kevin Kiley asked Wray whether the FBI director believed the Justice Department should rescind a memo directing staff to surveil concerned parents who show up at school board meetings.
>
> In March, House Republicans on the Judiciary Committee published an interim staff report that concluded the Biden administration had “no legitimate basis” for deploying counterterrorism resources on parents.
>
> “It appears, from these documents and the information received previously,” the report read, “that the Administration’s actions were a political offensive meant to quell swelling discord over controversial education curricula and unpopular school board decisions.”
>
> “Should Attorney General Garland rescind that memo?” Kiley asked.
>
> Wray deferred the question to the attorney general.
>
> “I think the FBI conducted itself the way it should here,” Wray said.

I don’t know about you, but I’m sure that Trump could have nominated someone better than Wray. We can do better in 2024. But we have to pick for results.

Should men marry women who think relationship boundaries are “emotional abuse”?

July 14, 2023 | by Wintery Knight | Link | Original Link

One of the reasons that I am not married today is because I tried to set spiritual and moral boundaries with women I wanted marry, but those boundaries were rejected. The purpose of the boundaries was to get the woman to be suitable for a marriage designed to serve God. In every case, the relationships ended. And this is actually becoming more common, under the influence of feminism.

Here is an article from The Federalist, written by Kylee Griswold.

She writes:

> Who would have thought perpetual adolescent Jonah Hill would be good at grown-up relationships? Well, he is, judging by some apparent texts his surfer ex-girlfriend Sarah Brady shared to Instagram over the weekend — despite the out-of-control media screeching to the contrary.
>
> […]According to Brady and the TikTokkers, self-proclaimed therapists, media, and fellow thirst-trappers who came to her defense, Hill is a controlling narcissist and misogynist — all for the crime of allegedly asking his then-girlfriend to please put on some clothes.

So, a man told a woman that he was interested in that he proposed certain rules in the relationship, rules that would allow him to get serious, and point the relationship towards commitment (as you’ll see). But the woman, and all of her supportive allies, from the secular left to the religious right, all agreed with her that a man setting boundaries on a woman to make her safe for a marriage commitment is “emotional abuse”.

More:

> Specifically, Hill laid down some boundaries for his partner:
>
> […]Plain and simple: If you need: Surfing with men[,] Boundaryless inappropriate friendships with men[,] to model[,] to post pictures of yourself in a bathing suit[,] to post sexual pictures[,] friendships with women who are in unstable places and from your wild recent past beyond getting a lunch or coffee or something respectful[,] I am not the right partner for you. If these things bring you to a place of happiness I support it and there will be no hard feelings. These are my boundaries for romantic partnership.
>
> Hill’s detractors say this is “emotional abuse.” But can something really be described as “abuse” if the alleged perpetrator tells you “no hard feelings” if you’d rather walk away than agree to the terms?

Feminism has made it a lot harder for men to set boundaries that will orient women towards marriage. No matter how wise the man, and how good the advice, it must all be

rejected. But the demands for men to get married to rebels remain. Especially when the feminists are hitting 35, and their friends are all getting married. They feel entitled to marriage, and how dare men tell them no? Many women today don't want to hear a man *talk about the Bible* or hear a man *talk about right and wrong*, they just want weddings, wedding rings, vacations, and things to be fixed around the house. It would be better if men were just walking ATMs that didn't talk at all.

More:

> To protect the health and integrity of his relationship, Hill established reasonable and respectable parameters for how his girlfriend was to behave toward him through how she acted toward other men. Don't sexualize yourself for other guys or engage in other relationship-compromising behaviors. And he made clear how he would respond if she didn't respect those limits. I'm not the right man for you.

In my cases, my boundaries were always things that were clearly good for the women, and also good for commitment. For example, I might say "stop spending money on travel, get a private sector job in your field, and pay off your student loans". But these conditions were rejected. Later on, when the woman reached her early 30s, I would get e-mails about wanting to get back together. But the student loans had only increased, and the resumes now had huge gaps. I can only assume that the body counts had also increased from all the "traveling". No thanks, I said. No thank you. I can do something more productive than bail women out. I especially don't want to bail women out *who have no respect for men who know how to lead*.

This behavior of calling moral and spiritual leadership "emotional abuse" and "controlling" is common – even in Christian circles – because of feminism. In general, the only acceptable male roles are "protect and provide". Men are supposed to take on all the accountability, but with none of the authority to defend the truth, or to defend morality. On any topic. For example, if you try to tell a single woman in her late 20s about infertility, it's "emotional abuse". No amount of evidence can ever beat "follow your heart". And she has legions of supporters who will shame you for trying to argue from scientific studies.

If you think I am mean, then read Kylee:

> Enter feminism, which loves female autonomy and sold women lots of lies about it. Feminism said love yourself. If that means wreaking all kinds of havoc, your second "X" chromosome trumps the consequences. Unrestrained sex and unintended pregnancy? Abort the baby. Not happy in your marriage? Divorce him. Unfulfilled at home? Leave the kids with an underpaid immigrant and climb that corporate ladder. No boundaries. No bonds. No bras.
>
> But news flash: Relationships take two. And sadly, thanks to that third-wave wrecking ball, some dating women need to be told some obvious things when it comes to romantic fidelity, even if those things have to come from their partners: Seeking the approval of other men for how you look is a bad idea. Worse, it

> communicates lots of bad things about your priorities and desires.
>
> Frankly, a man who's willing to say that tough thing is probably a man worth holding onto. Thanks in part to "toxic masculinity" messaging and the militant feminization of America, a man who shoots for commitment and faithfulness, and communicates those aims in a straightforward way while proposing an amicable split as the alternative, is a rarity.

Oh, how I love those words.

Sadly, Kylee's view is in the minority today, thanks to feminism. And if men are not allowed to lead a relationship, then the marriage rate will continue to decline. Neither shaming of men nor blaming of men will cause men to accept marriage without leadership.

For more on this topic, I recommend this excellent article by Mark McDonald, M.D., entitled "Why American Women Are Undatable" The subtitle is "No One Wants to Play with a Porcupine". Indeed not.

Robert Gagnon debates gay activist Jayne Ozanne on Bible vs homosexuality

July 15, 2023 | by Wintery Knight | Link | Original Link

I am tempted to say that this is the best podcast I have ever heard on the Unbelievable show. Do anything you have to do in order to listen to this podcast.

Details:

> Prof Robert Gagnon has become a well-known voice advocating the traditional biblical view on sexuality. In a highly charged show he debates the scriptural issues on sexuality with Jayne Ozanne, the director of Accepting Evangelicals who came out as gay earlier this year.

You can listen to the debate here.

If you can only listen for 15 minutes, then start at 49 minutes in and listen from there.

The following summary is rated MUP for made-up paraphrase. Reader discretion is advised.

Summary:
Intro:

- Speaker introductions
- Gagnon: scholars who support gay marriage agree that the Bible doesn't support it
- Gagnon: scholars who support gay marriage agree Jesus taught male-female marriage
- Ozanne: I went to the hospital because I was sick from trying to suppress my gay desires
- Ozanne: Doctors told me that I would die if I didn't act on my gay desires
- Ozanne: I decided to reinterpret the Bible to fit with my gay desires
- Ozanne: According to my new interpretation, Jesus actually supports my gay desires

Segment 1: Genesis

- Ozanne: In Genesis the Bible says that Adam needs a woman to complete him
- Ozanne: I reinterpret this to mean that Adam needed a "complementarian human being"
- Ozanne: Genesis doesn't say whether Eve was complemented by Adam in that chapter
- Ozanne: It's not critical that men are complemented by women, a man could complement a man
- Ozanne: Genesis 2 doesn't talk about children, it's all about adult needs from a relationship
- Gagnon: Genesis 2 has never been interpreted that way in all of history

- Gagnon: Genesis 2 language specifically implies a human being who is opposite/different
- Gagnon: Genesis 2 language translates to complement or counterpart
- Gagnon: Genesis as a whole teaches that the sexuality is for male and female natures
- Gagnon: The extraction of something from the man that is given to the woman is complementarian
- Ozanne: I think that people can be complementary outside of male-female Genesis language
- Ozanne: I don't want to discuss specific words and texts and Greek meanings
- Gagnon: the text has always been read and interpreted to support male/female complementarity
- Gagnon: the male-female nature argument is made because the two natures are complementary
- Ozanne: the text was interpreted by patriarchal males who treated women like property, it's biased
- Ozanne: what is important to me is how Christ interprets Genesis (?? how does she know that?)
- Ozanne: I am passionate about my interpretation of Scripture which supports my gay desires
- Gagnon: just because a person is passionate about their interpretation it doesn't make it right
- Gagnon: I am not arguing for the male-female view based on passion, but on scholarship, evidence and history
- Ozanne: both sides are equally passionate about their interpretations (?? so both are equally warranted?)
- Ozanne: the real question is why God "allowed" two different interpretations of Scripture

Segment 2: Is homosexuality a sin?

- Gagnon: Jesus affirmed traditional sexual morality, which forbids homosexuality
- Gagnon: Jesus teaches that marriage is male-female, and limited to two people
- Gagnon: No one in history has interpreted the Bible to say that homosexuality was not immoral
- Ozanne: Jesus came to bring life, and that means he supports homosexuality
- Ozanne: I was dying, and embracing my gay desires allowed me to live, so Jesus approves of me
- Ozanne: God says "I am who I am" and that means he approves of me doing whatever I want
- Ozanne: There is an imperative to be who I am, and that means embracing my gay desires
- Gagnon: Jesus argued that the twoness of the sexual bond is based on the twoness

of the sexes
- Gagnon: Jesus did not come to gratify people's innate desires, he called people to repent of sin
- Gagnon: Jesus did reach out to sinners but he never condoned the sins they committed
- Gagnon: Jesus' outreach to tax collectors collecting too much and sexual sinners is the same: STOP SINNING
- Ozanne: I don't think that Romans 1 is talking about homosexuality
- Ozanne: I think it's talking about sexual addiction, not loving, committed gay relationships
- Ozanne: Paul was condemning pederasty in Romans 1, not loving, long-term, consensual sexual relationships between gay adults
- Gagnon: nothing in the passage limits the condemnation to pederasty
- Gagnon: the passage was never interpreted to be limited to pederasty in history
- Gagnon: rabbis and church fathers knew about committed two-adult same-sex relationships, and said they were wrong
- Gagnon: the argument for marriage is based on the broad two-nature argument, with no exceptions
- Gagnon: the condemnation is not limited to exploitative / coercive / lustful / uncommitted relationships
- Gagnon: even pro-gay scholars agree the passage cannot be interpreted Ozanne's way (he names two)

Segment 3: The showdown (49:00)

- Ozanne: I don't care how many pages people have written on this
- Ozanne: God says that "the wisdom of the wise I will frustrate" so you can't use scholars, even pro-gay scholars, to argue against my passionate interpretation
- Ozanne: I am not interested in the text or history or scholarship or even pro-gay scholars who agree with you
- Ozanne: what decides the issue for me is my mystical feelings about God's love which makes my sexual desires moral
- Ozanne: you are certain that this is wrong, but your view does not "give life" to people
- Ozanne: your scholarship and historical analysis is "a message of death" that causes teenagers to commit suicide (= you are evil and a meany, Robert)
- Ozanne: "I pray for you and your soul" (= opposing me will land you in Hell) and "I hope that listeners will listen with their hearts" (?? instead of their minds?)
- Ozanne: you can prove anything you want with research, even two mutually exclusive conclusions, so you shouldn't rely on scholarship and research since it could be used to prove my view as well
- Ozanne: instead of relying on research, you should rely on your heart and your feelings about God's love to decide what the Bible teaches about sexual morality

- Gagnon: you are distorting the gospel in order to make your case
- Gagnon: attacking my “certainty” is an ad hominem attack to cover your dismissmal of the scholarship and history
- Gagnon: you distort the gospel to make it seem like Christ just wants us to get what we want, when we want it, with who we want it with
- Gagnon: Christ calls us to take up our cross, to lose our lives and to deny ourselves
- Gagnon: you have a notion of what “fullness of life” is, but it’s not reflective of the gospel
- Gagnon: Paul’s life was much more troubling than yours, mine or anyone else around here
- Gagnon: Paul was beaten, whipped, stoned, poorly sheltered, poorly clothed, poorly fed, shipwrecked, and anxious for his churches
- Gagnon: on your view, he should have been miserable and angry with God all the time
- Gagnon: but instead Paul was constantly thankful and rejoicing to be able to suffer with Jesus and look forward to the resurrection
- Gagnon: I have suffered too, but the suffering we go through never provides us with a license to violate the commandments of God
- Ozanne: “the ultimate thing is what people feel God has called them to”
- Ozanne: My goal right now is to tell young people that homosexuality is fine so they don’t commit suicide
- Ozanne: the view that homosexuality is wrong is “evil and misguided”
- Gagnon: the greater rates of harm in the gay community are intrinsic to homosexual unions, not caused by external disapproval of homosexuality

Segment 4: Concluding statements

- Gagnon: gay male relationships on average have more sex partners and more STDs
- Gagnon: female relationships on average have shorter-length relationships and more mental issues
- Gagnon: the greater rates of harm are because there is no complementarity / balance in the relationships
- Gagnon: everyone has some disappointment or suffering in their lives that hurts them, and that they are tempted to break the rules to fix, but we should not break the rules in order to be happy
- Ozanne: both sides are passionate, so no one can be right, and evidence proves nothing
- Ozanne: only feelings about “what God is doing” can allow us to decide what counts as sin or not
- Ozanne: the main thing that is at stake here is to make people like us, not to decide what the Bible says about sin
- Ozanne: my message to people is to do whatever you want, and ignore mean people who don’t affirm you

- Ozanne: we should be more opposed to mean people who make non-Christians feel unloved than about doing what the Bible says

Greg Koukl debates Michael Shermer on God, atheism, meaning and morality

July 16, 2023 | by Wintery Knight | Link | Original Link

The full transcript of a debate between Michael Shermer, editor of Skeptic magazine, and Greg Koukl, president of Stand to Reason. This debate occurred on Hugh Hewitt's radio show, and was moderated by Hugh Hewitt.

HH = Hugh Hewitt
GK = Greg Koukl
MS = Michael Shermer

Here is the full debate transcript.

And here's an excerpt:

GK: Right. Actually, the big question here, Hugh, is whether it's possible to be good without God. Now I'm not talking about whether it's possible to be good without a belief in God. I certainly think that's possible, but be good without God. And the answer to that question hinges entirely on precisely what you mean by good. And so I was going to give an illustration. So a man drags a young girl into the alley, he sexually abuses her, strangles here, and tosses her into the dustbin. Is that act wrong? Now I think everybody listening is going to admit it is wrong. But here is the real question. What do we mean when we say that that act of rape and abuse and murder is wrong? Are we describing the action itself, the object? Are we saying that the object, the rape, the murder, has a quality of being wrong, and therefore, wherever that rape goes, the wrongness follows it, just like your height, 6' 2", or whatever it is, is an objective quality of you. Wherever you go, your height follows you in the same way. Does the wrongness follow the rape? Well, if it's a quality of the rape, if it's an objective quality of the rape, then it does. And it doesn't matter what people think about it, or what cultures decides, or what your evolutionary conditioning is. The rape is still wrong. The other alternative is that you're not talking about the rape. You're talking about yourself. You're talking about your genetic conditioning. You're talking about your culture's decision about that kind of thing. And if that's the case, then the truth of the wrongness of the rape is simply in the individual or the subject. And this is why philosophers distinguish between ethical objectivism and ethical subjectivism. Now there's lots of different subjectivisms in ethics. But simply put, if you're an ethical subjectivist, you're a relativist. And actual ethics don't exist. Ethics are an illusion. If you conclude that ethics are an illusion, there's lots of different ways to explain it. Michael's written a really great book, I think, called The Science Of Good And Evil. I've read most of it, and it's well written, and it's very compelling. But it's a description about how the illusion of ethics has taken place. If you want to go that route, you're welcome to go that route. But what you can't do is you can't then talk about morality as if it's objective when your explanations are subjective. So this is a problem that I think all atheists, including Michael, have to solve. Are ethics objective or relative?

And if they're relative, then how can we make moral judgments that are meaningful on other people?

HH: Michael Shermer?

MS: Wow, let's just get right into it. Well, I don't think it's quite so black and white. That is to say I think there are provisional moral truths that exist whether there's a God or not. In other words, it's wrong, morally, absolutely morally wrong to rape and murder. And that would be true whether there was a God or not. In other words, if…is God saying that it's wrong because it's really wrong, and He's instructing us in his Holy Scripture that it's wrong? Or is it only wrong because He said so? And if it turned out there wasn't a God, would that make it okay? And my answer is no, it really is wrong, whether God says it's wrong or not. That is to say I think it really exists, a real, moral standard like that. Why? Well, because first, you could ask the person who is being affected, we should always ask the moral recipient of the act, how do you feel about being raped or murdered or stolen from or lied to. And the moral actor will tell you, it doesn't matter whether, if I could use a current example, I haven't any idea if Tiger Woods and his wife are religious or not. But you can just ask his wife whether it was morally right or wrong, and she'll tell you. It doesn't matter whether there's a God or not. It's wrong. And so that's the first principle. Just ask. Ask the moral recipient of whether it's right or wrong. But I think Greg's after something deeper, that is to say is there something even deeper still behind the moral actor's feelings about how they're treated. And the answer is yes, I think so. We're a social species. We don't live in isolation. We live as members of a group. And as such, there's no possible way our group could survive, be cohesive, be a unit of any kind of solidarity against other groups, or against a harsh environment. If there were too much violations of social norms, that is if there were constant lying and cheating and raping and murdering, there's no way a social group could hang together. And as such, as we all know, we're very tribal. We're tribal against other groups, but within our groups, we're very pro-social, altruistic, cooperative. We have a good and evil in our nature. So to this extent, I find myself interesting often in agreement with my conservative friends on most of the things they consider morally, moral truths. That is, we share the same moral values, even though I come at it from a different perspective.

HH: Greg?

GK: Yeah, I'm actually not after something deeper here, Michael. At least to start out the discussion, I'm trying to be as simple and clear and precise as possible, because it's very easy to weave together a bunch of things that sound persuasive, but turn out to be different things. Like for example, Darwinian evolution, which is a materialistic process, and here I mean the blind watchmaker thesis, the neo-Darwinian synthesis, natural selection working on mutations, and a kind of a cultural evolution that Michael has just referred to as we work together as a group to survive as a group. Those are two entirely different things. One is materialistic, Darwinian, the other one is intelligent design, quite frankly, where the group gets together and makes some determinations to encourage some behavior and discourage others. What I'm trying to do is to be able to answer the question that came up initially, is God necessary for morality, which Michael denies. It's

to say well, what is it that morality, that we're trying to describe? It is either objective, and therefore an immaterial obligation that applies to certain behaviors, or it is subjective. The things that Michael described were variously subjective, evolutionary elements, subjective cultural elements, but then he affirmed that we all have good and evil in our nature, or an awareness of that. I agree with that entirely. We all are aware of those things. That's why even if we don't believe in God, we can still know morality and follow it. The question is what accounts for real, genuine objective morality?

HH: One minute to the break, Michael Shermer.

MS: I'm not arguing for cultural evolution. I'm actually arguing as part of our, what you described as materialistic, natural selection, Darwinian evolution, that it's not enough to just pretend or fake being a good group member. You actually have to believe it, feel it, and live it. So what I'm arguing is that natural selected certain moral sentiments, as Adam Smith called them, moral feelings, an actual empathy, Adam Smith talked about, we actually empathize with somebody else, we can put ourselves into their shoes and feel their pain, I'm arguing that's very real. It's every bit as real a part of our evolutionary heritage as our eyes and our hands.

– – – –

HH: Michael Shermer, when we went to break, you were saying that evolutionary biology has produced a real morality.

MS: Yeah, I think really, Adam Smith had it right in his very first book, The Theory Of Moral Sentiments, long before Darwin, that we actually have in our biological nature, our human nature, the capacity to feel other people's pain. He called it empathy, we think of it often either as empathy or sympathy. That is, we really do connect to other people. A lot of good research on this now, brain scans, you can show somebody a little video of somebody they know, or have feelings for, getting pricked with a pin, and the same areas of their brain light up, the pain receptors, as in the person getting the pin prick. In other words, we have an evolved tendency to really be deeply, emotionally connected to our fellow group members. And that's why I say groups like World Vision, where you want to adopt a child, it doesn't help to show a picture of 10,000 starving African kids. What does affect us is one child, a picture of one child with a little biography. That's how you get people to adopt a child to donate. The reason for that is because essentially they're tricking the brain, our brains into making that stranger an honorary family member, an honorary within group member, which is why I argue that free trade is one of the best ways of defusing normal tribal tensions between people. It makes them honorary friends, honorary members. Well, what's going on there is we're tricking the brain into sort of this evolutionary rule of thumb – be nice to people that are like you and that are related to you, and that you know, and that are fellow group members, and don't do what our natural tendency is, is to be tribal and xenophobic against those other guys. And free trade is one of the best things you can do for that. So I'm arguing that's actually tapping something deep within us.

HH: Greg Koukl?

GK: Yeah, basically, I agree with Mike completely here. We do have this tendency, and it seems to be universal among humankind. The question is, what is that tendency, actually? And what is the best way to explain it? And I see like a handful of significant problems with using evolution to explain morality. The first one is that evolution is a materialistic process. And here, I'm going back to an original point, and I don't want people to lose it. There is no way that you can take molecules, and reorganize them in any fashion, over any length of time, and have pop out of the mixture an objective moral principle that's immaterial, and that applies to human beings. All you're going to get is a reorganization of the molecules. And what they can produce, and this is what Mike has done in his book, and he mentioned just s few moments ago, they can produce sentiments. They can produce feelings. They can produce behavior. But this leads us to the second problem of using evolution to explain morality, is that morality is more than sentiments, feelings and behavior. Morality entails things like motive and intention. I mean, you could have a guy walk into a garage, walk out with a hose, and is that wrong? Well, it depends. Is it his hose or somebody else's hose? Did he intend to take the other person's hose? Is he borrowing the hose? So we can see here are elements that are part of the moral thing that needs to be explained, that are immaterial, and therefore the Darwinian explanation can't even in principle go there. It can't do that job. But here's the worst problem. Regardless of what our sentiments happen to be regarding moral actions, we can feel good or feel bad or whatever, the problem is that morality is prescriptive, not merely descriptive. That is it tells us not just what we did, but what we ought to have done in the past, and what we ought to do in the future. That is not something that any Darwinian mechanism can describe, because nothing about my biology can inveigh upon me to act a certain way for moral reasons in the future. It doesn't tell me why I should be good tomorrow. This is a huge difference between these two views, the descriptive and the prescriptive. Prescriptive is part of morality, and can't even, in principle, be explained by an evolutionary materialistic system.

HH: Michael Shermer, I'll give you a start on that. We have about 45 seconds to the break, so you may want to…we'll come back after the break and pick up. But what's your start to that?

MS: Well, the start would be that again, let's not think of evolution just as nature red and tooth and claw, and it's nasty, brutish and short, but that in fact, we have this whole other social evolution. And I'm not talking about cultural evolution where we consciously make decisions, but subconsciously, because it's in part of our nature to actually, seriously, deeply feel for other people and their actions, and the consequences of our actions, so that we actually have a sense of right and wrong that we're born with, but then culture taps into and tweaks, one way or the other.

– – – –

HH: Michael Shermer, when we went to break, Greg had made the argument that the Darwinian model simply cannot explain immaterial concepts like morality, that there's just no way you can rearrange the molecules to get there. You're saying well, yes you

can.

MS: Yeah, I think so, because if we think of morality as another suite of emotions that are involved with other people's behaviors, the consequences of our actions, how we feel about them, how people feel about us when we do these things, that's as every bit as important a biological part of our nature as anything else we talk about. So let's take a real simple emotion. When you're hungry, nobody does any calculations about the caloric input/output ratios of eating an apple versus an ice cream, although now it's posted on the walls for us to see. But we just feel hungry, and we feel hungry for certain kinds of foods. The feeling of hunger is a proxy for something else. Evolution's done the calculating for us. You need food, so we're going to, your hypothalamus is going to secrete these certain chemicals that causes your stomach to rumble and so on. When you're attracted to somebody else, a member of the opposite sex, nobody does the calculation by, let's say, a man finds a woman attractive who has a .67 hip to waist ratio, and an hourglass figure, although that is pretty much universal. Nobody walks about with calipers taking measurements of who they're going to want to date or ask out. You just look around, and you just go wow, I really find this woman attractive. It's a feeling you have, okay? So those are kind of simple emotions, but sliding up the scale, the moral emotions are really no different. When I lie to somebody, I've violated a social norm, and they respond in a very angry, hostile way. So those emotions that we both share, guilt, shame, anger, disgust, involved a social relationship that whether it was a norm violation, those are the kinds of emotions that are just like hunger and sexual attraction that are built into us by nature, by evolution. Or, if you wish, this is how God created the moral sentiments, just like He created everything else in the universe, through a process of nature. I think that's equally reasonable to argue. So I don't see that it has to be an atheistic viewpoint versus a theistic viewpoint to get to our moral sentiments. Why couldn't God have used evolution to create the moral sentiments as I've described them?

GK: Yeah, well, you don't actually believe that, I know, Mike, so this is kind of like adding God to the soup, you know, if it makes people feel better. But the basic argument is that evolution all by itself can do the trick. And I think if your listeners are listening carefully, what they're going to hear is Mike has just described, and if I'm being unfair to your assessment here, let me know, Mike, that moral feelings are simply that. They are sophisticated emotions that do some work for us for survival, and even on a group level. Now there's a name for this. It's called emotivism. A.J. Ayer, the famous atheist, offered this description of morality. It's a relativistic scheme of morality. Morality doesn't actually exist, Ayer argued. There is no objective right or wrong. Rape isn't wrong itself. What happens is, we have feelings about it, and we express it in moral language, but rape isn't really wrong. So your listeners are going to have to ask themselves the questions. When they just survey their own moral senses, and we all have access to this, do we want to believe that scientists have figured out that really what we're doing is feeling sophisticated, complicated emotions, and that the emotions are in us, and we are not seeing anything about the action? Or does it seem like rape is wrong? Look, when I say rape is wrong, I'm talking about the rape. When I say liver is awful, I'm talking about me.

I'm talking about my own tastes and preferences. It's interesting, as Michael has given his explanation, though, that he's doing, and I don't know if you are aware of this, Michael, but you're doing the very thing that I kind of warned against. You give a description of the foundations of morality that turn out to be relativistic, but then there's a smuggling of a more objectivistic morality in the back door, like when Michael says you don't have to do what your nature tells you to do, in other words, what you've been programmed by evolution to do. You can kind of rise above that. Well, now we're talking about a morality that isn't dictated by evolution, but a morality that we can employ through our acts of will, to rise above this kind of brutish evolutionary morality. And that sounds suspiciously like the very thing that I'm talking about here.

MS: But I don't mean, there's nothing to rise above by itself. Yes, we have to say rise above our tribal instincts to be xenophobic when we meet somebody who's a stranger, who's different from us. We all struggle against that, particularly in a black and white America, where there's always been this underlying tension. Indeed, so culture helps us do that – education, travel, diversity of exposure to different people. That makes you a little more tolerant. Okay, but I'm not talking about that. What I'm talking about is tapping into the good part of our nature, the fact that in addition to that xenophobic tribalism we have, we also have this other side that almost never gets discussed in evolutionary…even in evolutionary circles, you'll still hear evolutionary biologists talking about, in a way that Huxley did, and Herbert Spencer did in Darwin's own time, that we have to somehow struggle mightily against our genes to overcome that nasty tendency we have to want to rape, kill, pillage and destroy. Well no, actually, we have this whole other side that's just as genetically programmed into our nature. And the point of culture – education, politics, economics and so on, is to tap into the better angels of our nature as Lincoln said.

GK: Okay, here's the question I have for you, Michael, then. You've identified that really, we have good and we have bad. That's part of, under your terms, that's part of our genetic nature, and we can choose to tap into what you call the good side. Why ever should we do such a thing if there is not a higher standard that directs our action to the better side, your words, than the bad side, your words, if really, ultimately, they are both the result of a genetic evolution, and from outside terms, neither is better than the other. Why should we do that, Michael?

Why is Andrew Tate popular with young men? What does he know?

July 17, 2023 | by Wintery Knight | Link | Original Link

I don't know anything about it except that I have seen memes where he seems to be selling self-help kits to young men, on the basis of his owning luxury cars and having muscles. I also heard that he recently converted to Islam. So, it was interested to read an article from one of the lady writers at The Federalist, and ask: what is the church's strategy for giving young men a decent value proposition?

The article is by Evita Duffy-Alfonso, and she writes:

> Andrew Tate is public enemy No. 1, and not because of the seriously flawed human trafficking charges he's facing in Romania. Tate is hated because he speaks to disaffected men, and not just any disaffected men — he speaks to *young* disaffected men. Despite his moral pitfalls, which I have already identified and rebuked, Tate has a unique ability to comprehensively explain the stakes behind the West's war against masculinity in a highly engaging manner to middle- and high-school boys.

There are some links in there that I removed, specifically where she talks about the charges he's facing, and his moral pitfalls.

But the part that's interesting is his appeal to young men:

> For adolescent males in 2023, life has never been more dissatisfying and confusing. As Tucker Carlson put it in his viral interview with Tate this week, our culture's message to young boys today is: "Stop being yourself. Sit still. Stop joking. Suppress your aggression. Share your feelings. Obey. Female qualities are virtuous, masculine qualities are oppressive."
>
> Tate speaks to young boys. He helps them pinpoint all their frustrations in our hyper-feminized society and gives them concrete ways to resist "the matrix" and embrace their masculinity. Tate might not be a perfect figure, but his larger argument that our elite's version of masculinity is poisonous is something boys desperately need to hear.

I'm really suspicious of people who have majored in muscles and self-defense. To me, if you are putting time into meathead behaviors, then you don't really know anything about how the universe works, or how to solve problems. I would rather listen to a scientist or a doctor or an economist or a garage mechanic talk. I value men who have real knowledge, and who earn money by doing work for other people in the competitive private sector. I like men who save and invest money, not men who display wealth for vanity. Especially when that vanity involves wasting money on depreciating assets like cars. I'll take a T-bill over a Bugati any day, yes I will. But apparently, people prefer to listen to muscled,

tattooed men.

But maybe there's more to Andrew Tate than meets the eye, according to Evita. I can see why young men would resonate with thoughts like this:

> One example of something people have found wildly offensive is Tate's insistence that "depression isn't real." Tate explains that most cases of "depression" are natural human emotions irresponsibly treated with prescription drugs. "I don't believe in depression, I believe in feeling depressed," said Tate. "If you have to install software, in your own mind … why not adopt a mindset that makes me as competent and as fearsome as possible?"

I certainly agree that much of what passes for "mental illness" today is just a broken worldview. People who don't know the truth tend to look inward at their own feelings and desires. They worry about comparing themselves to other people. Christianity has a lot to say about what our purpose is, but in the absence of a true worldview that teaches people to focus on telling the truth and self-sacrificially doing good to others, we are seeing a lot of navel-gazing narcissism, that leads to unnecessary mental illness and drug use.

More:

> "If you feel a degree of uncomfortableness inside of your mind, I think it's just your mind telling you that something about your life needs to change," Tate told Carlson, emphasizing mental toughness and conditioning your mind to train, study, and go to work, even when you're feeling unhappy. "I was in a Romanian jail cell, with cockroaches crawling all over me as I slept," said Tate. "I never missed a day of training. I wouldn't say I was particularly happy, but push-ups must be done, so they got done."
>
> Tate also stresses the importance of overall physical health for one's mental health. He instructs men to boost their testosterone by working out, eating foods high in protein, and quitting porn. "Happiness and strength go hand in hand," said Tate. "If you're weak, you're going to be miserable."

Again, why would anyone think that physical training is a sign of competence? What knowledge do you gain doing push-ups? Do push-ups allow you to solve problems? Do you know how to write code or fix a car or do surgery after doing push-ups? What about getting a tattoo? Seems to me that this man is really a confused, unintelligent, low-value man. Not the kind of person I trust to do anything of value in the free market. Does this guy have a good marriage and intelligent, moral children who have good jobs, and serve others? I would be impressed if he did. I'm not impressed by men who can attract women with their looks and money. I don't see the honor in getting women to like you for appearances. Would Tate's women read a book for him, in order to learn about the moral issues that we're facing in the world? I don't think so. He's not a leader of women. He doesn't lead women to fight evil.

But this part I like:

> He described the hypocrisy of the globalist, climate activists who galavant across the world in private jets and own beach homes that, according to their own calculations, will be underwater in a few years.
>
> […]Ultimately, Tate tells his young audience that everything comes down to authoritarianism. “Every government on earth — all of them … they all want to be as controlling as possible over their citizens.” He theorizes that things like the radical transgender movement are a “deliberate attack on … our senses” and serve the government by conditioning us to “ignore our eyes.” He says depression “is a fantastic way to subdue a population” because “if everybody’s depressed, it’s hard to have a revolution.”
>
> “The reason men died on the Titanic was for self-respect and dignity. They went into the icy cold water and died because they would feel honorless if they jumped on the boat and left the women to die,” said Tate. “When you have self-respect and dignity … you’ll do things which are deemed crazy or insane, because you believe in them, and you stick up for yourself.” Authoritarian governments fear that level of agency and personal conviction.

That’s not wrong, but again, why listen to one man’s opinions? The reason I listen to someone like Stephen C. Meyer or Thomas Sowell is because their opinions are based on research and evidence. If we’re looking for an example of strength in the Christian community, I would pick William Lane Craig, who, with his 2 PhDs and loads of academic publications, has had great success debating and defeating enemies of the faith on university campuses in front of thousands of people. So I’m still not seeing why young men would be interested in the words of a meathead, however nice they may be, rather than finding out the truth about big questions. Maybe one reason why so many young men are interested in a meathead’s thoughts and opinions is because the church has done such a poor job of promoting dangerous, effective men like William Lane Craig.

Also, he can’t be very intelligent if he is a Muslim. I’m not saying that to be mean, but he didn’t adopt that view because he knows that it is true. It’s a very obviously false religion, when you look at it historically. Andrew Tate did not do any intellectual work in order to choose a true religion. So why think that he has done any intellectual work to arrive at his other beliefs? I don’t think you can find the history books in a gym, in a tattoo parlor, or in a luxury car. You don’t expect someone who majors in muscles and tattoos and (fast-depreciating) luxury cars to have a true worldview. He might be able to attract attention, but he doesn’t have the answers to life.

Video and outline: Tucker Carlson interviews Ron DeSantis on Blaze TV

July 18, 2023 | by Wintery Knight | Link | Original Link

Below, I've posted the video of Tucker Carlson interviewing Ron DeSantis, with a list of the topics / questions. The interview goes 25 minutes, then there is a discussion between the Blaze TV hosts for another 15 minutes. What I like about DeSantis is that when he talks about what he would do as President, it's just a continuation of what he's already done in Florida as governor.

Video: (from Blaze Media)

Topics / Questions:

- DeSantis signed a ban on abortion after 6 weeks as governor, would he do the same as President?
- How would you convince someone pro-abortion to change their mind on abortion?
- Explain the difference between concerns about climate change and concerns about other environment, and what has Florida done to address environmental concerns.
- How is Florida handling the massive influx of refugees from failing blue states like California and New York?
- How is Florida handling wokeness in women's sports?
- What would a Ron DeSantis foreign policy look like, specifically on the war in Ukraine?
- How would Ron DeSantis be different from Joe Biden on the issue of border security and drug cartels?
- What is the exit strategy from Ukraine?
- Who is the bigger threat, Russia or China?
- What has Florida done to limit China's power in Florida?
- What can we do to encourage other European countries to defend themselves from aggression?
- How is our energy policy related to foreign policy, and specifically to regional conflicts in Europe and the Middle East?
- Tell us how Florida derecognized Central Bank Digital Currency. Would you do the same as President?
- What would you address the weaponization of the federal government against Christians and conservatives, as President? Specifically FBI vs pro-lifers, FBI colluding with Big Tech, and Anthony Fauci.
- How would you deal with people who censored dissenting evidence during the COVID crisis?
- What will you do to prevent surveillance of American citizens by the federal government?
- Do you think Joe Biden will be the Democrat nominee?

American father loses parental rights after ex-wife announces their child is transgender

July 19, 2023 | by Wintery Knight | Link | Original Link

A while back, I blogged about a case in Canada, where a father was imprisoned for objecting to the forced transgendering of his child by the schools, hospitals, lawyers and judges. The people pushing for the transgendering were all feminists and LGBT activists. That case was quite disturbing, and I was wondering when this would come to America. Then I found an article by Abigail Shrier in City Journal.

The father, Ted, is a senior software engineer with Apple. He is comfortable living in San Francisco. His wife Christine is an executive at BlackRock, the firm that is always buying up people's houses and then renting them out. They also champion ESG, which is a social credit system for businesses, that leads to socialism.

Things started to go wrong for Ted when his wife moved to the East coast with the two boys for family reasons:

> Ted was then fully preoccupied with a grueling six-week project for Apple… On a Saturday in August 2019, shortly after returning from upstate New York with the boys, Christine walked into Ted's home office and announced both that she was leaving and that their son Drew was transgender… Christine walked out, taking the kids to stay with her at a neighbor's house.

Most women who go along with transgendering do so because they want their children to like them, and they want to be seen as compassionate and tolerant by their peers.

But the father did research on the risks to his child:

> While trying to keep an open mind about Drew's gender, Ted was adamant to the judge that he did not want Drew to begin medical transition. In the 312 days since he had last seen his boy, Ted had done a lot of research on medical transition and gender dysphoria. He begged the court to consider research that suggested puberty blockers could impair cognition and diminish bone density. He knew that Drew, if administered puberty blockers along with estrogen, would be at high risk of permanent infertility. He wasn't even sure that his son had gender dysphoria. He wanted to see his son—and he wanted this bullet train to slow down.

The San Francisco judge awarded full custody of Drew to his wife:

> On June 24, 2020… Judge Joni Hiramoto granted Christine sole legal custody of Drew on a temporary basis and approved the shared legal and physical custody arrangement of their younger son. She assured Ted that her order was not yet permanent. Judge Hiramoto had decided to order the appointment of a minor's counsel to investigate how the boys were faring before making any permanent

> decisions. She already had the perfect person in mind. “I actually know of one who was previously appointed by the court, by a different judge, on a case involving children that were allegedly transgender,” she said. That minor’s counsel was attorney Daniel Harkins.

Harkins decided that Ted’s hesitance to drug therapy and sex change surgery was a sign that Ted was not a fit parent:

> Based on the lengthy minor’s counsel report, Harkins gave Ted’s parenting a failing grade: “Father has not been accepting of [Drew’s] status as transgender. He has been quite clear that he does not accept that [Drew] is in fact transgender.”
>
> […]Harkins’s judgment was swift and ironclad: mom should retain full legal custody on a permanent basis and provide Ted updates, at her discretion, regarding matters that affect Drew’s health, education, and welfare. Drew would commence hormone therapy, as directed by USCF. Judge Hiramoto made all this official. The only right that Ted seems to have retained is the power to prevent Drew from undergoing “any gender identity related surgery” before he turns 18, absent agreement of both parties.

Without Ted’s knowledge or permission, Drew got a puberty-blocking implant, and Ted had to pay:

> In October 2021, Ted was stunned by a $209,820.34 charge on his insurance statement. When he wrote to Christine, she confirmed that a puberty-blocking implant had been inserted in Drew’s arm months earlier and that Drew had begun a course of cross-sex hormones. The combination—if not soon stopped—would likely sterilize Drew. No one had asked Ted’s permission for the procedure or even informed Ted of what had been done.

This part is interesting, especially for men who are considering marriage and having children today.

Read it carefully:

> Ted responded to this news with a flurry of e-mails to Christine’s attorney. He told Christine’s lawyer that the medical procedure was in violation of a court order, and Christine was risking being held in contempt of court. A day later, Christine’s lawyer filed a request for a Domestic Violence Restraining Order against Ted, alleging that he had spoken to his ex-wife “menacingly” at their younger son’s football games. Ted was served with the temporary restraining order; California law now required him to relinquish all his firearms within 24 hours or potentially face felony charges. He quickly complied.

Ted was informed about the long-term consequences of the decision, because he had looked at evidence. But how did his ex-wife respond to his evidence? By charging him

with domestic violence. Not actual violence, but just words of disagreement which caused her to feel unhappy.

Ted made the decision to let people at his Silicon Valley company know what was happening in a company Slack channel. Slack is software used to allow employees to communicate with each other in a chat format. People in the channel were offended, and reported him to Human Resources:

> Ted joined the Apple Slack channel devoted to "trans kid parenting" and shared his outrage and concern about his son's medical transition and the risks involved. The other members chastised him and reported Ted to "Employee Relations," known everywhere else as "HR." Ted now worries for his job.

The details of Ted's divorce were not revealed in the article, but if he is supposed to pay child support and alimony to his wife, and he lost his job, he probably would still have come up with the same amount of money, or go to prison for not paying his debts. That's how the divorce courts work.

And here is how the story ended for with Harkins:

> Within just a few months, the court would definitively end Ted's parental relationship. He would have no right to see Drew, no right to talk to him, no right to demand that Drew attend therapy with him, and absolutely no right to stop a medical transition already planned by the Child and Adolescent Gender Center of UCSF Benioff Children's Hospital.

And now I want to say something about what this means to me as a Christian man, who is frequently urged to go to church and get married and have children by church-attending women and pastors.

The denial of male headship

The overriding of male leadership of the home that you saw from the judge and the attorney is universal… even among conservative evangelical Christian women who claim to be social conservatives. One evangelical Christian social conservative woman told me that "Masculinity means that men use their strength to protect and provide for women". Another one told me that male headship does not exist in the Bible, and that men have no authority in marriages – only responsibilities. She also said that when women divorce, it is ALWAYS the fault of their husbands for not meeting the wife's emotional needs.

Even many evangelical Christian socially conservative women don't think that men have a distinct role to confront evil, protect their children, or lead their homes. They would side with the divorcing wife and the female judge against the mean, excluding, judgmental, father Ted. They would say that men's role in marriage is to be compassionate, tolerant, and to make their wives happy.

Marriage and child-bearing exposes you to the state

To Christian men who are considering marriage and child-raising, you need to choose women who form their views on morality, policy, etc. through reason and evidence. If she

isn’t interested in truth, then understand that her views will be formed by her feelings and peer-approval. You will not be able to change her mind by appealing to reason and evidence. Look for women who have the demonstrated ability to defend their theological and moral views against the secular left culture. For example, the issue of male headship in marriage. Otherwise, you can expect the treatment that Ted got at the hands of his ex-wife, the judge, etc. Divorce is a nightmare for men. The feminist state will overpower you. You will lose your freedom, your savings and your children. You will become a slave.

Read 2 Tim 2:4 and consider whether you want to use your freedom and finances to serve God, or whether you want to be controlled by the secular left state. As a Christian man, you already have a Boss. A woman’s role is to help you serve your Boss. Beware of women who want to take the place of your Boss. Beware of women who think that marriage is about you making them happy. Beware of women who scorn your moral leadership. Beware of women who demand that you show compassion, tolerance and approval for whatever is popular in the secular left culture.

First transgender lawmaker (a Democrat) charged with sexual exploitation of children

July 20, 2023 | by Wintery Knight | Link | Original Link

There's a battle going on between the patriarchal forces of this world, which focus on truth and virtue, and the emotional forces of this world, which focus on "follow your heart" and "don't judge". The patriarchal forces know that evil is afoot, and they want to confront it. The emotional forces believe that judging is the root of all evil, because it makes some people *feel bad*.

Here's an article from Daily Caller that shows how the emotional forces work.

It says:

> New Hampshire's first elected transgender representative was hit with federal charges for the sexual exploitation of children Tuesday, according to the Department of Justice (DOJ).
>
> Stacie Marie Laughton was charged with aiding and abetting in addition to one count of child exploitation in relation to former intimate partner Lindsay Groves, according to a DOJ press release. Laughton and Groves allegedly had over 10,000 text messages discussing and transferring explicit photographs that Groves took while employed as a daycare worker at Creative Minds daycare, a forensic review revealed from Groves' cellphone, according to the DOJ.

At this point, I want to mention that of course this person is a Democrat. People on the secular left have enormous problems with morality. They are able to ape the moral conventions of the people around them, but when they are alone, there is simply no reason for them to control themselves. People like this lawmaker become active in politics because they want to prevent people with genuine morality from judging them or punishing them for their actions. This is why atheists are so active in politics. They are actively seeking to escape judgment and punishment for their immorality. Atheists vote overwhelmingly for the Democrat party. They want to undermine the moral laws that protect the weak and vulnerable.

More:

> Laughton was arrested on June 23 on child porn charges after Nashua police were alerted about a juvenile matter and spoke to individuals who allegedly indicated Laughton distributed explicit images of children
>
> The texts allegedly included four sexually explicit images of children who appeared to be three to five years old. Messages also discussed explicit descriptions of sex between the two partners and others, with mentions of children, according to the DOJ.

If I had to pick one place where the emotional / don't-judge forces have their

headquarters, I would pick the daycares and the public schools. In these places, emotions rule. Moral standards are all but non-existent. The religion is “don’t judge”. And people who “don’t judge” have no way to tell good from evil. When they are tempted to do something, they do it. The only calculation is “will I get caught”.

As for moral standards, they think of those as customs that are valid for a time and place. Like cooking conventions . Or clothing conventions. They don’t believe that the universe is designed by a Designer who made the moral law. They don’t actually believe that morality applies to humans like math applies to humans. And they certainly don’t believe that God will hold them accountable for their moral choices. In fact, atheism is motivated by nothing more than the retreat from accountability to God. It’s not something that people become convinced of because of evidence. It’s something that people want to be true, so that they can pursue pleasure without any constraints or accountability.

Many teachers and administrators in our daycares and schools are insulated from the real world. The are not experienced at linking causes and effects, the way that private sector workers – blue collar or white collar – regularly do. Teachers are administrators are generally not inclined accept that people who make poor decisions should be “punished” with real world consequences. They are also not responsive to customers in a competitive private sector workplace. They don’t feel any responsibility to treat children well. After all, their pay and benefits has nothing to do with the quality of their work. Private sector workers have to work hard in order to make their employers profitable, so they can keep their jobs. These two conditions: disconnection from the consequences imposed by reality, and disconnection from the need to please customers, make it easy for teachers to break the moral law. That’s why “don’t judge” comes from the public schools.

What should we do? Well, we need to pass school choice, so that parents can have their kids educated by people who are more connected to reality, and more responsible to the parents who pay them. At the very least, we should insist that people who want to be teachers have 2+ years of private sector experience. And teacher unions should be abolished. That would be the best, but at the very least, no one should have to pay union dues in order to work as a teacher. Teacher unions are one of the greatest forces for evil in this world. It’s very strange to me that people who believe in morality are sometimes confused about this. You just have to look at here the union dues go to see that what they really believe.

By the way, I noticed that one of the major gay rights groups in America took down their post celebrating the first openly transgender lawmaker. Here is the archived version. Why do you think they would do that?

Are feminists right to think that gender-neutral marriage makes women happier?

July 21, 2023 | by Wintery Knight | Link | Original Link

Male and female happiness throughout America's adoption of radical feminism

I was reading this article by a feminist fiction writer on Vox, where she explains that although feminists have gotten what they wanted (careers, contraceptives, promiscuity, abortion, no-fault-divorce, daycare, etc. it hasn't made them happier. So, what does this feminist fiction writer think would make feminists happier?

She gives two reasons why women women are still unhappy after feminism has been adopted by our society:

- men don't do enough housework
- women are not as successful as men because they are discriminated against, the so-called "glass ceiling"

I think those complaints are pretty popular among feminists. Let's take a look at some studies to see if her opinions are supported by peer-reviewed studies.

First study:

> COUPLES who share housework duties run a higher risk of divorce than couples where the woman does most of the chores, a study has found.

> The divorce rate among couples who shared housework equally was around 50 per cent higher than among those where the woman did most of the work.
>
> "The more a man does in the home, the higher the divorce rate," Thomas Hansen, co-author of the study entitled *Equality in the Home*, said.

Second study:

> Researchers at the University of Illinois examined data on nearly 1,500 men and 1,800 women, aged between 52 and 60. Their well-being was evaluated through surveys.
>
> The researchers first found that men's well-being decreased once they had exited the workforce to become home-makers.
>
> Meanwhile, the inverse was not so for women: Women's psychological well-being was not affected by leaving their jobs to become stay-at-home mothers.

Third study:

> A study called "Egalitarianism, Housework and Sexual Frequency in Marriage," which appeared in The American Sociological Review last year, surprised many, precisely because it went against the logical assumption that as marriages improve by becoming more equal, the sex in these marriages will improve, too. Instead, it found that when men did certain kinds of chores around the house, couples had less sex. Specifically, if men did all of what the researchers characterized as feminine chores like folding laundry, cooking or vacuuming — the kinds of things many women say they want their husbands to do — then couples had sex 1.5 fewer times per month than those with husbands who did what were considered masculine chores, like taking out the trash or fixing the car. It wasn't just the frequency that was affected, either — at least for the wives. The more traditional the division of labor, meaning the greater the husband's share of masculine chores compared with feminine ones, the greater his wife's reported sexual satisfaction.

Regarding the pay gap, that is entirely caused by women's own choices. E.g. – the choice to study creative writing instead of petroleum engineering, the choice to work 35 hour weeks instead of 70 hour weeks, etc.

Fourth study: (summarized by AEI economist)

> When the [Bureau of Labor Statistics] reports that women working full-time in 2018 earned 81.4% of what men earned working full-time, that is very much different from saying that women earned 81.4% of what men earned for doing exactly the same work while working the exact same number of hours in the same occupation, with exactly the same educational background and exactly the same years of continuous, uninterrupted work experience, and with exactly the same marital and family (e.g., number of children) status. As shown above, once we start controlling individually for the many relevant factors that affect earnings, e.g., hours worked, age, marital status, and having children, most of the raw earnings differential disappears.

Fifth study:

> This study leads to the unambiguous conclusion that the differences in the compensation of men and women are the result of a multitude of factors and

> that the raw wage gap should not be used as the basis to justify corrective action. Indeed, there may be nothing to correct. The differences in raw wages may be almost entirely the result of the individual choices being made by both male and female workers.

I think that women are entitled to make their own decisions, but they aren't allowed to force the rest of us to subsidize their failures and celebrate their destructive outcomes.

I could go on, but I think enough has been said to show that research is very much at odds with feminist rhetoric. They *feel* they know what will make them happy and we gave them everything they asked for. They eliminated shaming of promiscuity with sex education. They get preferential treatment in the schools in a female-dominated education system. They are hired because of affirmative action quotas. They get expensive daycare, government schools, welfare and other programs. Taxes are raised to equalize outcomes for divorced women who choose men for feelings, and then nuke their own marriage enterprise. We have been on a long experiment of giving feminists everything they *felt* they wanted, at the expense of men's rights and children's rights, and it hasn't even produced the results that feminists *felt* it would.

The social costs of feelings-based decision-making

Let's look at two examples of policies that feminists asked for in the past, which didn't work out the way they wanted.

I can understand why feminists would introduce sex education. They *felt* that "if everyone is having sex, then I won't be the only one chasing attention from hot no-commitment bad boys by giving them recreational sex before marriage". They wanted to eliminate the standards of chastity and marriage-focused dating and normalize fun-focused drunken promiscuity. And they got that. But since they didn't consult any research and evidence about how that would affect their future marriage stability and marriage happiness, they are even more unhappy than before.

How about no-fault divorce? No-fault divorce was brought in by a coalition of feminists, Marxists and trial lawyers. The Marxists want to destroy the family in order to increase dependence on the state. The trial lawyers wanted to make money. And the feminists thought that the standard approach to courting and marriage was just too much work. They didn't want to be chaste. They didn't want to be sober. They didn't want to evaluate a man for traditional husband and father roles. The no-fault divorce laws gave them an escape from the messes caused by *their own feelings-driven choices*. But divorce just makes makes men and women much poorer, and passes the costs of supporting single mothers onto taxpayers.

And the costs of the failures of feminism are passed onto taxpayers.

Consider this study:

> This paper examines the growth of government during this century as a result of giving women the right to vote. Using cross-sectional time-series data for

> 1870–1940, we examine state government expenditures and revenue as well as voting by U.S. House and Senate state delegations and the passage of a wide range of different state laws. Suffrage coincided with immediate increases in state government expenditures and revenue and more liberal voting patterns for federal representatives, and these effects continued growing over time as more women took advantage of the franchise. Contrary to many recent suggestions, the gender gap is not something that has arisen since the 1970s, and it helps explain why American government started growing when it did.

We are already $28 trillion in debt, partly because of feminism's replacement of husbands and families with higher taxes and big government. Every time we transfer money from tax-paying men to feminists to fix their mistakes, it leaves less money in the hands of the men who actually want to get married. The declining value of marriage after feminism for men explains why marriage is being delayed, and why marriage rates are plunging.

William Lane Craig and James White debate Calvinism vs Molinism

July 22, 2023 | by Wintery Knight | Link | Original Link

In a recent episode of the Unbelievable show, Calvinist pastor / theologian James White discussed middle knowledge (a.k.a. Molinism) with philosopher / theologian William Lane Craig. In this post, you'll find a link to the audio, the YouTube video, and my comments on the debate. My comments were quoted in an episode of William Lane Craig's Reasonable Faith podcast.

Here is a link to the details from Unbelievable: (with MP3 download link)

> Calvinism and Molinism are two very different ways of understanding God's sovereignty. But which one best addresses the problem of evil?
>
> James White argues that Calvinism – God foreordaining all human behaviour both good and evil – is the more Biblical and coherent view. William (Bill) Lane Craig argues that Molinism – a view which reconciles human freedom and divine sovereignty – is Biblically consistent without making God the author of evil.

And the video:

Summary:

JB: Why is there evil?

JW: Natural and moral evil are the results of God's divine decree to create the world.

WLC: God has knowledge of what individual humans would do in different circumstances prior to his divine decree to create the world. God's decree takes into account the free decisions of people in different situations. With regard to natural evil, Calvinists and Molinists do not differ much – they are permitted to achieve a greater good. But for moral evil, there is a difference. Moral evil is the result of free decisions by individual humans. They are not God's will. God permits people to perform evil actions, because those free actions will lead to him achieving his ultimate purposes. God does not override human free will. He achieves his ultimate purposes through the actions of his free creatures. On the Calvinist view, God moves the will of creatures to do evil. God is the cause of their evil acts.

JB: God sees all of the possible worlds and instantiates a world where he is able to achieve his ultimate purposes while respecting the free decisions of his creatures.

WLC: God does not see what humans WILL do, and decree based on that. He sees what they WOULD do in different circumstances, and articulates a world where the free decisions they make in the circumstances he decrees lead to his ultimate purposes being fulfilled.

JB: And this view achieves God's sovereignty (God gets the result he wants) with human freedom (God is not responsible for moral evil)

JB: James, isn't it better for God to get what he wants while respecting free will, rather than micromanaging every thought and action of the people?

JW: There's micromanaging on both sides. On Molinism, God micromanages the circumstances. On Calvinism, God micromanages everything. But how could God have that knowledge of what people would do, prior to actually creating those people? The Bible teaches Calvinism, and so we should go with that. Calvinists are concerned when Craig says that God does not determine the truth value of these subjunctive conditionals (i.e. – what free individuals would do in different circumstances) The individuals determine what they will do in different circumstances. And Calvinists would prefer that God determine (i.e. – exhaustive determinism) what individuals do in different circumstances. WLC, would you agree that the knowledge of these subjunctive conditionals are the essence of what middle knowledge is? (WK note: micromanaging circumstances doesn't violate free will, micromanaging everything does violate free will)

WLC: No, but it is an essential aspect of it. According to Molinism, God does not determine what free individuals would do in different situations in which they find themselves. The Calvinist view is that in any situation, God actually moves the will of the creature, so God is the author of moral evil. On the Molinist view, creatures are responsible for moral evil, not God.

JW: So you're saying that these subjunctive conditionals are not under God's control. How can they be under the control of the creatures, since prior to God's creative decree, the creatures do not exist yet? Where do these truth values come from.

WLC: This objection to Molinism is called the "grounding objection". The counterfactuals of creaturely freedom are true without having to be grounded by the created individuals. This objection presupposes a view of truth called "truth-maker" theory. This theory says that in addition to propositions that are true, there are things that make propositions true. There are many counterexamples to this view. For example, if you deny the existence of something that does not exist, then there is no truth maker that makes that claim true. (WK note: E.g. – a unicorn does not exist) Another example is "If WLC were rich, WLC would buy a Mercedes" but there is no truth-maker situation that makes that true, except maybe if he were rich. (WK note: I think that the created individual WLC would be the truth-maker in that case?)

JW: The decisions that I make are caused by God's decree of what gifts I have or don't have. He has freedom to decree those gifts, and then that has an effect of what I am free to do. E.g. – I am not 6'11" so I am not free to be a center in the NBA. So on the Molinist view, what is the basis for these subjunctive counterfactuals that limit what God can do?

WLC: The grounding objection presupposes the truth-maker theory, and a particular strain of that theory called truth-maker maximalism, and counterfactuals of creaturely of creaturely freedom would be prime candidates to be exceptions to the truth-maker theory.

WLC: Regarding the point about how people don't exist in a vacuum but have a whole history, background, characteristics, etc. to shape their decisions. That's right. But the

counterfactuals of creaturely freedom factor all that in. The key point that divides us is that God doesn't determine what creatures decide, he decides the circumstances. And so the creature is responsible for moral evil, not God. And so God doesn't cause people to commit moral evils, then punish them for it.

WLC: We should guide our views based on what is in the Bible. But even Calvinist theologians affirm things about God that are not taught explicitly in the Bible, such as God's spacelessness and timelessness. And Molinism makes the best sense of divine sovereignty and human freedom. On the Calvinist view, God determines how anyone would act in any situation God might place him in, so God is responsible for the moral evil committed by his creatures.

JW: (repeats) If God is limited in what he can do by counterfactuals of creaturely freedom, then we have to know where these counterfactuals come from. (WK note: the counterfactuals of creaturely freedom come from… creaturely freedom.)

JW: Genesis 50:20 says that God used the moral evil committed by some creatures to achieve the good purposes he intended. (WK note: that's exactly what the Molinist view is, God permits moral evil by his creatures, as long as it achieves his ultimate good purposes)

JW: Molinism is unknown in the church for 1500 years. (WK note: Molinism is in Acts 17:24-27, and also, Calvin and Luther were unknown in the church for 1500 years)

JB: Is Genesis 50:20 a good example of Calvinism?

WLC: (very excited) NO!!!!!! It's a great example of Molinism!!!! The text says that God didn't move the bad actors to perform sinful actions – that would make God the author of evil. But God knew that if they were in this situation, they would behave in these evil ways, but ultimately it would lead to good results that God wanted. There is a chain of people partially articulating the middle knowledge view prior to Molina.

JW: You shouldn't believe Molinism, because it comes from Jesuits. (WK Note: this is the genetic fallacy)

JW: The Bible has examples where God "hardens hearts", e.g. Pharaoh.

WLC: It's not that the Bible authors had Molinism in mind. It's that this theory is consistent with what the Bible teaches.

JW: Ephesians 1 teaches that God unilaterally determines who the elect are. Calvinism emerges from the text. But in Genesis 50:20, Molinism doesn't emerge from it.

WLC: We're both trying to make sense of the data of Scripture. Scripture doesn't teach the universal divine determinism of every human act, especially evil acts. The Bible says thate God is not evil, and cannot even be tempted with evil, but on the Calvinist view, God is causing the evil actions of his creatures, and then he punishes them for it. If it's evil to cause someone to do evil, it makes God himself evil.

JW: In Isaiah 10, God uses the Assyrians to punish Israel, then he punishes the Assyrians for the haughty attitude of their heart.

WLC: The Molinist view of Ephesians 1 is that part of God's good pleasure is to respect

human freedom, and not to unilaterally divinely determine them to sin. Regarding Isaiah 10, you're asking how God can punish the Assyrians for something he causes them to do? No, God knows that the Assyrians are going to do this moral evil and he uses that for his purposes, and he is free to punish their immoral act, because they did it of their own free will.

JW: But if you need Molinism to understand these texts, then what did the authors intend for people to think before Molinism.

WLC: People understand from Genesis 50:20 that people do evil things, but God gets a good outcome out of it.

JW: As a Calvinist, I do not believe that God respects human freedom.

JW: I don't think that individuals have control of the circumstances in which they are born or where they live that limits God's sovereignty. (WK note: he doesn't understand Molinism or Acts 17:24-27. Individuals control their own decisions. But God controls the circumstances – i.e. – everything else). There is no essence of James White that determines where I am born, my physical characteristics, my siblings, etc. God decrees everything about who I am.

WLC: "That's because you're a determinist, James, and I'm not"

JW: "Yes. Yes. OK."

WLC: There are number of possible worlds where James White could exist. Different country, different education, different language, different family. God decides the circumstances for James White. James White makes the decisions. God doesn't cause James White's moral evil. James White does. The counterfactuals of creaturely freedom must exist prior to the divine decree in order for humans to be responsible for their evil actions.

JW: You're using philosophy. But your view should come from the Bible. (WK note: look at Acts 17:24-27)

WLC: Universal divine determinism isn't taught in the Bible.

JW: Yes, in Ephesians 1.

WLC: The Molinist affirms Ephesians 1.

JW: It doesn't mention respecting free will there, it's teaching universal divine determinism.

WLC: The Bible teaches that God does have knowledge of counterfactuals of creaturely freedom, e.g. 2 Cor 2:8. So the question is whether God has this knowledge logically prior the decree (Molinism requires this), or is it logically after. If it is logically after, then it makes God the cause of human moral evil.

JW: The verses raised by Craig can be subsumed under God's natural knowledge and free knowledge.

JW: Some Molinists believe that the only people who are lost in this world are people who cannot freely respond to God's saving initiative in any circumstances (WK note: this is

called trans-world damnation (TD), and I hold this view). Does anyone in the Bible know about this idea? That changes God's expression from universal divine determinism to accepting human free will and human responsibility for sin (which Calvinism denies).

WLC: Yes, there are two different views. The one view takes human free will, and human responsibility for sin, seriously. The other view makes God the cause of human sin, and therefore makes God evil for being the author of evil.

JW: On Molinism, God knew that if he actualized this world, then he knew the evil that would result, but he didn't do it for some purpose, like revealing his own character?

WLC: No, he didn't bring the evil into the world. He actualized a set of circumstances, and a set of free creatures. And he knew that in those circumstances, he knew that the creatures would choose to do evil. His absolute will is for all his creatures to always do the right thing. But he knows that often they will do evil. He permits that to happen, but in the end he achieves the good purposes. E.g. – achieving the redemption of mankind through Jesus through the evil decisions of the rulers at that time.

WLC: I love the Westminster Confession. But without middle knowledge, that Confession is incoherent. Middle knowledge explains how things work, so that the Westminster Confession's affirmations are logically coherent.

JW: What you're saying is that God respects human free will and human responsibility.

WLC: Molinism is extremely fruitful theologically. I have applied to the problem of exclusivity of salvation, to the perseverance of the saints, to the inspiration of Scripture… but the focus of the discussion today is on moral evil. Who is the cause of human evil?

JW: Only universal divine determinism and the denial of human free will and human responsibility are consistent with Scripture.

WLC: Scripture alone is my authority, not church tradition. But Reformed theology is permeated with concepts that are not described in Scripture, but are consistent with Scripture, e.g. – timelessness, spacelessness, simplicity.

JW: I disagree, ALL the concepts in Calvinism emerge directly from the text. Isaiah 40-48 clearly teaches divine necessity, that God exists necessarily, in every possible world. (WK note: Calvinist thought emerges 1500 years after the Bible was written)

JW: Middle knowledge is a Catholic dogma, which is why even the Catholics rejected it.

WLC: (holds up 2 volumes of a 4 volume, 2144 page set of books on Reformed theology) Anyone who thinks that Reformed Dogmatics are simply read out of Scripture "doesn't know the history of Reformed theology". These volumes are permeated with theological constructs, philosophical models, philosophical principles. The necessity of God's existence, timelessness, spacelessness, etc. are all affirmed by Reformed theologians, and were inherited from medieval scholastics (Catholics).

JW: The central claim of middle knowledge, that counterfactuals of creaturely freedom are known by God, are not in the Bible. (WK note: Craig gave an example of counterfactuals of creaturely freedom in the Bible. There are lots of them.)

Four volume 2144-page book set on Reformed dogmatics

My thoughts:

I think that it was a good debate. Well worth watching. I don't promise that my summary is 100% accurate. Please leave room for a little snark, and watch the debate yourself. I like to take the spin off of people's words, when I feel that they are trying to weasel out of the conclusions of their own views. It's 2 AM on Monday morning now, and I don't want to proof-read. Please point out errors in the comments.

If I could boil down the mistake that James White makes to one sentence, it would be to say that he comes to the text with a *philosophical* presupposition (determinism), and this causes him to misinterpret the plain meaning of the text as a whole. And this misinterpretation isn't about peripheral teachings of the Bible. His embrace of God as the cause of moral evil means that he denies the goodness of God – a basic Christian doctrine. (This is compounded by his embrace of double-predestination, although that was not the topic of the debate). Christians shouldn't let a philosophy – determinism – override the plain meaning of Scripture. Determinism is *man's philosophy* – it's a Greek philosophy that existed centuries before Christ.

White also was clearly unfamiliar with the philosophy of religion of his own Reformed tradition, and especially with the history of the development of Reformed theology. Craig was able to correct him, by showing him the books on Reformed Dogmatics and explain the historical antecedents of Reformed thought.

James White is not a "hyper-Calvinist". He is a normal Calvinist. Calvinism teaches universal divine determinism. Calvinism teaches that where each individual goes after the judgment is decided unilaterally by God. Calvinism teaches that human moral evil is caused by God. Calvinism teaches that God punishes people for this moral evil. Calvinism teaches *intentional* double-predestination.

I wrote about the problems with Calvinism, citing Calvinist D.A. Carson and William Lane Craig, in a previous post. Determinism denies free will, and therefore undermines all meaning in life. That's not consistent with the Bible's clear teaching that God issues commands to his creatures, because he expects (free will) obedience. That is how we

develop our relationship with God after becoming Christians (sanctification), and those relationships have ultimate significance.

Note: I link to James White's work on this blog. He does a great job of fighting cultural and political enemies. I really appreciate his conservative perspective on issues like abortion, and his sensitivity to the totalitarian impulses of the secular left. His work on KJV-only and and debating Catholics is excellent. I don't always agree with Craig. I recently posted disagreement with Craig on his latest work on the historical Adam and evolution. I have other minor disagreements with him as well, in substance and method. The only theology books in my house are by R. C. Sproul, Wayne Grudem, D.A. Carson, Millard Erickson, John MacArthur, etc. – all Calvinists.

If you missed Craig's debate with Paul Helm, which is mentioned in the debate, I blogged about that previously, as well.

Study: 1 in 8 divorces is caused by student loan debt

July 23, 2023 | by Wintery Knight | Link | Original Link

I like to make plans in advance and calculate everything out before I try to do anything. This is the curse of being a software engineer. We're taught to take a test-first approach to design. So, when I think about marriage, I naturally think about what tests marriage is supposed to pass, and work backwards from there to requirements for each of the spouses.

Here's some research from CNBC that might help young people to avoid a divorce, if they respect the research in their choices.

Excerpt:

> When it comes to student loan debt, "for richer, for poorer" doesn't quite cut it.
>
> In general, finances are the leading cause of stress in a relationship, according to a study by SunTrust Bank, but student debt takes a particularly hard toll on a marriage.
>
> More than a third of borrowers said college loans and other money factors contributed to their divorce, according to a recent report from Student Loan Hero, a website for managing education debt.
>
> In fact, 13 percent of divorcees blame student loans specifically for ending their relationship, the report found. Student Loan Hero surveyed more than 800 divorced adults in June.

Here is a link to the full study from Student Loan Hero.

I think in general, you can't just do whatever you want before marrying and jump into it unprepared. Marriage involves specific requirements in order to work, such as being faithful to your spouse, and buying things that you need for the marriage enterprise, like a home, and baby stuff. It doesn't make any sense to say "I want to get married" and then not prepare for marriage by being careful about preparing for the behaviors marriage that requires of you. Being debt-free is one of those behaviors that marriage requires of you.

So how can we be debt-free, so that the marriage will be stable? Well, one way to be debt-free is to find a way to learn skills that will allow you to get a job without going to college, like being a self-taught software engineer. One of my friends actually did that, and now he's with a very good software company as a remote worker. But if you're going to go to college, you can avoid debt by studying something that will get you a high-paying job when you graduate.

This 2017 article from Harvard Business Review is interesting.

It says:

> Examining 46,934 resumes shared on Glassdoor by people who graduated

> between 2010 and 2017, the researchers looked at each person's college major and their post-college jobs in the five years after graduation. They then estimated the median pay for each of those jobs (also using Glassdoor data) for employees with five years of experience or less. Their key finding: "Many college majors that lead to high-paying roles in tech and engineering are male dominated, while majors that lead to lower-paying roles in social sciences and liberal arts tend to be female dominated, placing men in higher-paying career pathways, on average."

Here's the plot, and you can click it to expand it:

Median salaries by major, broken out by gender – don't study things at the bottom!

As you can see from the graph, it's especially important to share the message about choosing a major, salaries and student loan debt with WOMEN, because as the graph shows, they tend to choose the wrong majors, if the goal is to pay off student loans and avoid divorce. Everyone who wants marriage to go smoothly needs to choose majors that are near the top of the graph, like nursing, chemical engineering, computer science, or mechanical engineering. It doesn't make sense to go to college if you aren't going to graduate in one of these high-paying fields.

As you might expect from the graph, women hold the majority of student loan debt, according to the Boston Globe, and that's because women tend to choose majors that don't result in good-paying jobs. And we already saw how this becomes a risk factor for divorce.

Student loans delay marriage and children

Another interesting piece of data, reported by The Consumerist, is that people with student loans tend to delay marriage, which means the couple has fewer children:

> As consumers navigate life's financial journey, they are faced with major financial

> milestones, like buying a home. But student loans are also delaying consumers from reaching these goals.
>
> Survey respondents report delaying homeownership (23 percent), buying or leasing a car (23 percent), having children (10 percent) and getting married (9 percent) because of their student loan burdens.

So, it's not just that there is an increased risk of divorce from student loans, but there's also fewer children, which means a diminished legacy. I can't speak for how others would see this, but for myself, I want to pass on my beliefs to as many effective, influential Christian children as I can.

Anyway, I feel obligated to post a relevant Dave Ramsey video, just to remind everyone that stewardship of money is a Christian virtue, and that being forgiven by Jesus for your sins doesn't automatically make you good with money. It takes planning and stewardship.

This one from 2014: (H/T Robb)

When I was in high school, I was far more interested in becoming an English teacher than I was in becoming a software engineer. It was my Dad who overruled my choice of college major when I was still in high school. He had me take a first-year English course at a local university. When I saw how politicized and useless it was (they were studying all sorts of politically correct postmodern relativist stuff, instead of the Great Works, and they weren't trying to learn any wisdom from any of it), I chose computer science. I did what was likely to avoid divorce, and likely to support having many children.

Two reasons why Christians and conservatives should not donate to United Way

July 24, 2023 | by Wintery Knight | Link | Original Link

Well, it's that time of year again, when corporations bully their employees into donating to the United Way. I thought it might be a good idea to urge all Bible-believing Christians to avoid donating to the United Way. *Please share this post if you agree with it!*

Let's start with abortion. The United Way gives TONS of money to fund abortion providers.

In 2008, United Way affiliates send $1.9 million to Planned Parenthood:

> The national United Way does fund Planned Parenthood; their website states:
>
> United Way funded programs through Planned Parenthood include community health maintenance, e.g. communicable disease prevention; medical care service; family planning; health education; public awareness services; and family preservation and strengthening services, e.g. counseling and family life education.
>
> Nationally in 2008, local United Ways distributed an estimated $1.9 million to Planned Parenthood agencies.
>
> Any finances being donated to Planned Parenthood (even if not specifically for abortion services) will free up more of their money to be used toward abortion services.

In 2015, United Way sent $3 million to Planned Parenthood:

> Last year, on the heels of shocking videos showing the Planned Parenthood abortion business selling the body parts of aborted babies, a new expose' from a group that monitors corporations that finance the abortion giant reveals the United Way is a major donor. That expose found United Way agencies giving $2 million to the abortion giant.
>
> A new expose' released this week shows that figure has increased to $3 million.

In 2016, United Way sent $3 million to Planned Parenthood:

> Analysis of the most recent IRS Form 990 filings and other documentation found 62 United Way affiliates sent $2,756,799 to Planned Parenthood abortion organizations in tax year 2016. 2ndVote's latest findings indicate an increase of $168,806 from the $2,590,994 United Way funneled to Planned Parenthood in 2015.

We're living in a time when abortion rights involves such issues as sex-selection abortions, race-selection abortions, covering up statutory rapists, Democrat support for infanticide, attacking Supreme Court nominee Brett Kavanaugh, selling the body parts of

unborn babies, etc. I don't think we can count on United Way to come down on the right side of these issues. We're already being forced to fund abortions with our tax dollars, thanks to Democrats. I don't think we should give any more money to abortion providers and their secular leftist allies.

That's abortion. What about gay rights? We've seen a lot of pressure on traditional values coming from the secular left lately. They redefined marriage AGAIN to deprive children of their biological mothers or fathers. They're pushing for the Equality Act, which would have huge religious liberty repercussions for Christians.

Texas attorney Maria Martinez explains on the American Thinker:

> The Equality Act is more draconian that any state or city conversion therapy ban to date because it takes away the traditional constitutional exemption for religious freedom. The act specifically states that the Religious Freedom Restoration Act (RFRA) may not be invoked as a defense, marking the *first time in history that Congress has limited the reach of RFRA*. This means that it could become illegal for Christian pastors, churches, schools, and ministries to communicate a message that sexual orientation or gender identity can change. The Equality Act is unprecedented in its overreach, impacting even adults who are *willingly seeking counseling*.
>
> By contrast, therapy of any kind that pushes a person *toward* same-sex attraction or gender transition is not impacted by the law at all.
>
> Banning counseling isn't the only thing the Equality Act will do:

- Parents could lose custody of their children if they decline to assist in their gender transition. Parents in Ohio recently lost custody of their female child because they would not give her testosterone supplements to help her "transition" to look like a male.
- Doctors and hospitals could be subject to lawsuits for refusing to perform so-called "sex change" surgeries. In California and New Jersey, Catholic hospitals are already being sued for discrimination for refusing to perform these surgeries.
- Battered women's shelters could be required to admit members of the opposite sex. In Anchorage, Alaska, a male who was refused access to a shelter for abused and trafficked women sued the shelter for "gender identity discrimination."
- Faith-based adoption and foster care agencies that believe that children do best with both a mother and a father could be forced to shut down. This has already occurred in at least six states in this country.

I wonder what United Way thinks about attacks on Bible-believing Christians by LGBT activists? I posted what they shared on Facebook at the top of this post, and this is what I found on their Twitter:

United Way Twitter Gay Rights Pride Month LGBT

I don’t find that very encouraging, do you?

As a Bible-believing Christian, maybe I would be better off giving money to an organization that protects religious liberty, like Alliance Defending Freedom. I understand that many people who call themselves Christians think that the United Way’s positions are compatible with the Bible. But not everyone who calls herself a Christian actually takes the Bible seriously. Especially when it interferes with their career advancement and peer approval. This is especially true of people who work in Human Resources.

Please, don’t give money to the United Way

You don’t HAVE to give money to the United Way, just because the godless progressives in your office try to bully you into it. Instead, why not send the money to the Life Training Institute, or Ratio Christi, or Alliance Defending Freedom? These are groups do operate on Bible-based principles. I do think that Christians need to be careful about who they donate their money to. It doesn’t make sense for Christians to get up and go to work and earn money, and then give it away to anti-Christian groups who want Christianity to disappear from American life. Paul talks about how God rewards those who give gifts to partner for the gospel in Philippians. Make sure that you are not wasting your money on anything less.

Canada’s descent into tyranny: pastor persecuted for attending peaceful protest

July 25, 2023 | by Wintery Knight | Link | Original Link

I’ve been warning people about Canada on this blog for some time. Canada is interesting, because they have secular left leaders similar to our own Democrat party. But unlike America, there is no “brake” on the power of this political party, because the population is far more secular than in the United States. What does the secular left do when their power is unchecked?

Here’s the story from The Federalist:

> Canadian pastor has “exiled” his family to Kenya after his government invoked emergency war measures to punish citizens who attended a protest where he prayed and sang the national anthem.
>
> Harold Ristau, a decorated veteran and seminary professor, participated in the “trucker convoy” against lockdowns last February, when The Federalist interviewed him last. He is now party to a lawsuit arguing the government’s response to Covid that included treating dissent as terrorism violated Canadians’ fundamental rights.

What was interesting was what the secular left fascists felt comfortable doing to him:

> For peaceably assembling to petition his government for one day last year, Ristau says, he was threatened with the removal of his security clearance and government confiscation of his retirement nest egg, kids’ college funds, and other life savings. Ristau says he’s also experienced serious damage to his reputation, career, and friendships after the government used anti-terrorism measures against peaceful protesters.

Did you get that? The secular left wants to punish people who disagree with them like this: “the removal of his security clearance and government confiscation of his retirement nest egg, kids’ college funds, and other life savings”. If you disagree with things like abortion, global warming, masking, closing schools, and mandating untested vaccines, then you should be persecuted *as a terrorist*. This is why you should never – and I mean never – set foot in Canada. They have gone so far to the left that they are now a fascist country. If you disagree with their secular left dogma, they will come after you and persecute you in ways not seen since the Soviet Union. And Canadians just keep voting for unqualified, incompetent secular leftists, who blame all their failures on their enemies. Just like Hitler, Stalin and Mao did. They don’t allow anyone to challenge their rule.

The persecution wasn’t limited to the father, either. It went on down to the wife and the children:

> Besides dealing with overbearing health restrictions, their children were mocked

> at school for their family's religious and political views, Elise Ristau told The Federalist. After enduring more than two years of severe social and government repression, the Ristaus moved outside Nairobi with their five children last August.
>
> "I don't know that I can go back and be a Christian in Canada. So that's why we're here in Kenya," Harold Ristau said. There, the former chaplain with a Ph.D. in philosophy trains Kenyan pastors at the Lutheran School of Theology.

I was particularly interested in the government's "freezing" of bank accounts… essentially trying to starve their slaves into submission if they disagreed with the government's propaganda.

> Government use of "debanking" to punish dissent is growing in the West. Prime Minister Justin Trudeau's government used it on essentially every convoy participant authorities could identify, said Moore.
>
> "As soon as they knew your name if you were on the ground [protesting] in Ottawa, they froze your bank account," Moore told The Federalist. "…The federal government met with the banks, they gave the [protesters'] names to the banks, and the banks were then pushed to freeze the bank accounts of anyone with that name in their banks. It was a fascist collaboration."
>
> […]Leftist activists also filed a class-action lawsuit against every Canadian who donated to the convoy. It seeks $300 million in damages.

The closing of bank accounts is routine in the United Kingdom as well. If you are too conservative, then they just close your bank accounts. You have to be forced to comply with what the state believes. And religious liberty is no defense. Not in a secular left fascist country.

None of these methods were used against secular left criminals and terrorists, who were actually violent and dangerous.

> Canadian lockdowns kept gyms, restaurants, and liquor stores open but closed churches. Leftist protesters were allowed to yell and sing without masks, and the prime minister kneeled to them, all while provinces banned Christians from singing and chanting in church for years.
>
> […]Rev. Johannes Nieminen wasn't allowed to cross provincial borders to perform his pastoral duties, while other Canadians could do so for work, he told The Federalist. After he was denied border entry several times, he said, police finally let him through — but told him he wasn't allowed to meet with parishioners or hold church services.

Christians were especially singled out for punishment, and many of the "don't judge" Christians approved of the government for doing it:

> Police regularly showed up at churches on Sunday mornings and fined pastors whose parking lots had too many cars, he said. ARPA Canada and JCCF litigated a

> number of those cases and were often able to get pastors' fines negotiated down to charitable donations.
>
> […]So far, "none of the [legal] challenges to worship restrictions on church services have succeeded" in Canada, said John Sikkema, a lawyer at the nonprofit firm ARPA Canada.

"Culturally, people find going to the gym very important and less so going to church," Sikkema noted. "Especially when some churches don't seem to care and don't think it's necessary."

I thought this summary of the state of religious liberty in Canada was very interesting:

> In Canada, Christians are often required to lie or betray their faith to access government grants and licensing credentials, and avoid punishment in many professions, Sikkema said. Many Canadian doctors, lawyers, and teachers, for example, are required to endorse abortion and LGBT sexual acts. Canadian doctors and many other health care workers must help patients obtain an abortion or doctor-assisted suicide.
>
> In 2018, Canada's Supreme Court banned a Christian law school from opening over Christian sexual standards. The Canadian military is also working to eject chaplains over Christian sexual ethics. Just about every Canadian business sports a government-provided pride flag, Nieminen said. Churches that object to transgender mutilation of children have faced naked protesters as families arrive to worship, Sikkema said.
>
> "Canadians are very aware that we don't have freedom of religion, we don't have freedom of speech, we don't have the right to assemble if that's in disagreement with the regime," Nieminen said. "Pastors and teachers cannot speak about the morality of human sexuality. That is a reality Canadians live in, and I think that's partly why they're afraid to speak out."

It's very important for Christians in America to not capitulate to the "don't judge" emotional culture. We can't afford to capitulate to the secular left, and allow them to force their views on us. And on our children. Learn from Canada, and don't make their mistakes.

48-year-old divorced single mother seeks bailout for $430,000 of student loan debt

July 26, 2023 | by Wintery Knight | Link | Original Link

If there's one area where I feel comfortable leading a woman, it's education, career and finances. I wasn't born in the USA, so it was quite a struggle to know how to navigate education, career and finances. But I did it, and I learned how to do it. And I like to share what I learned with Christian women, so that they don't end up with a useless degree and a bunch of student loan debt.

Here's a story about a woman I didn't advise, reported by the far-left Business Insider:

> Maria had a goal to teach at a university full-time. Today, she "absolutely" regrets pursuing that goal.
>
> While Maria's undergraduate education, which she completed in 2001, was funded through scholarships and Pell grants, she knew more advanced degrees would give her a leg up in university teaching — especially as a woman in the industry. So she pursued a master's degree and a PhD, the latter of which took seven years to complete.
>
> […]Now, at 48 years old, Maria's student-loan balance is $430,000…
>
> […]As a full-time human resources representative and part-time adjunct professor in Michigan, Maria now makes a five-figure salary while supporting her 15-year-old daughter on her own, with very minimal child support from the father.
>
> […]Of her total student-debt load, more than $70,000 is interest that accumulated while her student-loan payments were on hold, during which she cashed out her 401k and lived on unemployment benefits.
>
> […]Maria even filed for bankruptcy in 2018

I don't recommend doing a degree in non-STEM fields, they don't pay. I don't recommend spending 7 years with no income for a PhD. But notice how society gives her free money to subsdize these poor decisions. She got free scholarships, Pell grants, child support, unemployment benefits. The article doesn't mention if she got alimony, too. And she filed for bankruptcy… screwing her creditors out of what she owed them. Who knows what other social programs and tax benefits she got? While other women do STEM degrees, work in the private sector, marry and stay married, she's been doing life on easy mode, passing off the costs of her poor decisions to the people around her. I don't want women to make decisions that impose costs on their neighbors.

And now, she wants to get a bailout from taxpayers:

> The Education Department recently announced reforms to PSLF, which included going back over denied applications and payments to the program. So there's a

> chance that Maria may earn a quicker route to loan forgiveness. But with her current financial outlook, she's not confident she can complete the program and wants President Joe Biden to do more to help millions of borrowers with debt burdens.

The article notes that teachers and other public sector "workers" can default on their loans and pass the costs along to taxpayers:

> Maria does not work enough hours to qualify for the Public Service Loan Forgiveness (PSLF) program, which forgives student debt for public servants, like teachers, after ten years of qualifying payments.

Just understand that if society pays women to make poor decisions with their education, careers and finances, then more women will do it. That raises the costs on the men that pay taxes for this, reducing their ability to get married and conceive children. If men are paying for this woman's mistakes, they can't pay for their own marriage and parenting plans.

Consider this other article from the far-left Business Insider:

> There are over 4 times as many scholarships restricted to females as there are restricted to males.

This is despite the fact that about 60% of college students are women. Why are we focusing on subsidizing the group that's already doing well?

By the way, the author of the first Business Insider article, is a recent journalism graduate (expensive university) living in expensive Washington, D.C.. She advocates for bailouts through her journalism. She probably has massive student loan debt, too. It seems like choosing easy non-STEM majors, going into debt, then hoping for a bailout from socialism is quite common.

According to far-left Yahoo News, women hold two thirds of the $1.4 trillion outstanding student loan debt:

> Women hold nearly two-thirds of the outstanding student debt in the U.S., according to the American Association of University Women. And, they have a harder time paying off their debt compared to men. Prior to the student loan forbearance period, 70% of men made at least their required minimum monthly loan payments, while only half (54%) of women said the same, a recent survey by D.A. Davidson found.

Young women today don't like to have to "settle" for a lower cost college in a city with a lower cost of living. Like the Business Insider reporter, they want the Sex in the City lifestyle. So they go live in an expensive city, and run up debt doing useless degrees at an expensive university. And sometimes overseas! As you can see from the chart below, women avoid hard STEM degrees. But those programs are hard for a reason – they pay more money.

MAJORS WITH HIGH MEDIAN EARNINGS FOR WOMEN*

First Field of Degree 5% code	Percent Female	Median Female Earnings
Pharmacy Pharmaceutical Sciences	42	100,000
Information Sciences	26	75,000
Chemical Engineering	23	72,000
Computer Science	22	70,000
Electrical Engineering	7	70,000
Mechanical Engineering	7	70,000
Industrial and Manufacturing Engineering	17	67,000
Computer Engineering	14	67,000
Business Economics	30	64,000
Civil Engineering	13	62,000

** Full-time, full-year workers with a terminal Bachelor's.*

The best majors for women to avoid student loan debt

My thoughts

What I wanted to do here is report to you what happens when I try to coach young women about their decisions in education, career and finances. And keep in mind, I'm doing this from a position of starting out in a foreign country, earning a BS and MS in computer science, graduating debt-free and working 22 years full-time. I had a $1.3 million net worth by age 45 (including the new construction home I bought for cash). So I have achievements here.

I run into the student loan debt problem while dating Christian women for marriage. Christian women seem to be even less likely to do hard degrees than women on average. You see a lot of art, music, English, journalism, etc. degrees there. I show them that student loans are a risk factor for divorce, and they also set back the plan to stop paying rent and start having children. I also show them which majors pay the most.

Here's what I usually get in response:

- Women think that they will be an exception to all studies and reports showing that the likely consequences of their actions.
- One woman dismissed the need to clean up her finances because God decided what degrees I would have, and how much I would earn, so I had no authority to advise her from my experience.
- Other women say that I am only doing what makes me happy, and they must do that too. (Note: I cried in second year calculus after failing the first test).
- I advised a 29-year-old woman with $25K of student loan debt and was working as a waitress to take a job I found her as an IT project manager. She said "No! Being a waitress is the easiest job I've ever had!"

- A 30-year-old woman with $23K in student loan debt wanted to do a Masters degree in Europe. I told her to pay off her loans first. She got two useless Masters degrees in Europe, and never worked again.
- I'm told that there is no rush to get out of debt to afford children, because women can have children in their 40s.
- I'm told that it will be fine for the children if she has to work to pay off her debts, because daycare and public schools work better for children than stay-at-home moms and homeschooling.
- I'm told that the $30 trillion national debt and bailouts for student loans, etc. are no big deal because the government can just print more money.
- I'm told that I can fix her financial problems by working harder and longer. One of my friends actually married a woman with $200K in student loan debt in order to get his green card, so some men take this deal.
- I'm told that too much planning feels bad, and I need to be more spontaneous and adventurous. One woman literally said "I don't want to make decisions based on fear".
- A famous Christian apologist woman (not WIA) told me that I can't judge a woman who has student loans because if God forgives a woman, then a man can't exclude her from marriage.

I'm not going to run a marriage that way. I have goals.

Men can't afford BOTH bailouts AND marriage

So, my point is that we have a real problem with figuring out how to get women to make better decisions about education, career and finance. I want to help them. I really do. Because we are $30 trillion in debt now, and we simply don't have enough money to keep bailing out people for student loans. And the problem will only get worse, as the younger generation of losers keeps making poor decisions and demanding that someone else pay for their mistakes.

Men don't marry women who are bad with money. Money is one of the biggest causes of

divorce, and divorce is a financial disaster for men because of anti-male divorce courts.

The number of men who can afford marriage and children is declining because they have to bail out all these reckless, irresponsible young women through their taxes. We need to fix this problem.

What does scientific evidence tell us about the effectiveness of same-sex parenting?

July 27, 2023 | by Wintery Knight | Link | Original Link

I saw that Katy Faust tweeted this article by Mark Regnerus, a sociologist who specializes in dating, marriage and parenting issues. In the article, Regnerus cites the conclusions from several recent research studies. Once we see what he has to say, I'll pull the data from a Canadian study that he didn't mention that also shows the effect of same-sex parenting on children.

The article appears in The Public Discourse:

> The story of "no differences" between same-sex and opposite-sex households with children hinges on a pair of repetitive themes in the published research: (1) hiding behind small and nonrepresentative samples, and (2) employing analytic strategies that all but guarantee motivated researchers can "explain away" those pesky baseline observable differences between children from same-sex and opposite-sex households.
>
> Baseline differences matter. What happens before control variables matters. Building statistical models to hide differences is called p-hacking, a common but problematic practice. A 2020 study of over 1.2 million children in the (gay-friendly) Netherlands, whose primary media message trumpeted how same-sex parents were better than opposite-sex parents, nevertheless revealed that 55 percent of children living with same-sex parents—the vast majority of which were female couples—experienced the separation of these parents, well above the 19 percent of children of opposite-sex parents who experienced the same. "Controlling" for such instability—in effect implying it doesn't matter—clears the way to proclaim the benefits of same-sex parents. It's a common statistical practice, but a deceptive one.
>
> Hence, alternative analyses are always a good idea. For example, a 2020 published reexamination of three nationally representative datasets from the United States and Canada revealed that the presence of children tended to stabilize opposite-sex couples but destabilize same-sex couples. Dissolution rates were 43 percent for same-sex couples, but only 8 percent for opposite-sex couples. Its authors agree, saying that "parental instability is an important factor through which parents' sexual orientation influences children's outcomes."

So, the problem of higher separation between partners in a lesbian relationship is well-known. Lesbian couples have the highest instability rates of any kind of couple, heterosexual or homosexual.

Family Research Council notes:

> In the past, same-sex couples who got a slice of the marriage pie immediately

> wanted their share of the divorce market. In South Africa, couples who were first to wed under a 2006 law also won the race to divorce court only a year later; two Toronto lesbians who wed in 2003 separated after only five days, petitioning successfully in 2004 for a judge to overturn Canadian law so they could divorce. Or take Los Angeles, where 2008's historic first same-sex couple divorced this summer although they had been together for 18 years! Lest we think these cases are exceptional, of the same-sex couples who did marry in Sweden, males were 35% more likely to divorce than heterosexual couples, while lesbians were up to 200% more likely.

Before same-sex marriage, the concept of marriage included the concepts of permanence and exclusivity. Natural marriage has the production and raising of children at the core. No-fault divorce damaged that core, saying that the happiness of the selfish adults was more important than the children. Then same-sex marriage damaged the core again, saying that producing children isn't even central to the concept of marriage. As the selfish adults pass more laws against natural marriage, the children suffer more from the decline of permanence and exclusivity.

I found another study related to same-sex parenting, this one out of Canada.

Here is the abstract of the study:

> Almost all studies of same-sex parenting have concluded there is "no difference" in a range of outcome measures for children who live in a household with same-sex parents compared to children living with married opposite-sex parents. Recently, some work based on the US census has suggested otherwise, but those studies have considerable drawbacks. Here, a 20% sample of the 2006 Canada census is used to identify self-reported children living with same-sex parents, and to examine the association of household type with children's high school graduation rates. This large random sample allows for control of parental marital status, distinguishes between gay and lesbian families, and is large enough to evaluate differences in gender between parents and children. Children living with gay and lesbian families in 2006 were about 65 % as likely to graduate compared to children living in opposite sex marriage families. Daughters of same-sex parents do considerably worse than sons.

The author of the study is a professor of economics at Simon Fraser University in British Columbia. His PhD in economics is from the University of Washington. A previous study had shown that gay relationships typically have far more instability (they last for more shorter times). That's not good for children either. Another study featured in the Atlantic talked about how gay relationships have much higher rates of domestic violence. That's not good for children either. So we have three reasons to think that normalizing gay relationships as "marriage" would not be good for children.

Should men prefer women who have earned STEM degrees?

July 28, 2023 | by Wintery Knight | Link | Original Link

A few people have asked me about my policy of preferring candidates for wife and mother who have earned STEM degree(s). In this post, I'll explain 5 goals for my marriage. Then I'll explain 6 reasons why a STEM degree helps me to execute that plan. Then I'll answer 3 objections to the STEM degree requirement. Then I'll explain the relevance of STEM for a woman's marriage roles.

What is STEM?

So, to start, STEM is an acronym for Science, Technology, Engineering and Math. A STEM degree is a degree in a STEM field. This includes things like petroleum engineering, bioinformatics, and computer science. But it also includes things like economics, accounting and business. Basically, anything with math that involves solving problems in the real world. Anything that encourages logical reasoning and using evidence to sustain an argument.

My goals for marriage

So, here are my goals for marriage:

- influence the church with apologetics
- influence the university campus (students and professors) with apologetics
- be involved in politics, advocate for conservative policy
- open the house to students and neighbors to teach apologetics and demonstrate a loving marriage
- raise 3-4 financially independent and influential children

Everything I want in a wife is related to this plan. I evaluate women according to these goals, because I want my marriage to make a difference for Christ and His Kingdom. I'm flexible on plans and requirements, so long as the proposed changes result in *a greater impact* for Christ and His Kingdom.

MAJORS WITH HIGH MEDIAN EARNINGS FOR WOMEN*

First Field of Degree 5% code	Percent Female	Median Female Earnings
Pharmacy Pharmaceutical Sciences	42	100,000
Information Sciences	26	75,000
Chemical Engineering	23	72,000
Computer Science	22	70,000
Electrical Engineering	7	70,000
Mechanical Engineering	7	70,000
Industrial and Manufacturing Engineering	17	67,000
Computer Engineering	14	67,000
Business Economics	30	64,000
Civil Engineering	13	62,000

The best majors for women to avoid student loan debt

How a STEM degree relates to marriage

The plan is for my wife to earn a STEM degree, marry me, and work full-time until the first child is born. Then, she stops working and becomes a stay at home mom. She could return to work after the each child reaches 5 years old. My preference is that she not return to work, but instead homeschool the children, or at least monitor their education in private evangelical Christian schools as a stay-at-home mother.

So, how does a woman's having a STEM degree help me to achieve my marriage plan goals?

Here are 6 ways:

1. STEM equips her to homeschool influential and effective children. A wife who has completed high school and college courses in math, science, engineering and/or technology will know how to either homeschool our kids, or monitor their homework and grades so they achieve good academic results. Think of how Asian families raise high-performing children. I want that.

2. STEM teaches her to produce results in the real world, e.g. – working code that solves a problem, lab results, bridges that support a load, etc. In the lab, decisions cannot be made based on feelings or peer approval. The lab doesn't respect horoscopes, devotions, romance novels, essentual oils, romantic comedies, "The Secret" or "The Law of Attraction".

3. STEM equips her to argue apologetics from her experience of using reason, evidence, reality-based testing. All Christians need to know how to defend their core beliefs (God exists, etc.) to non-Christians. That means doing what works. And what works is logical argumentation supported by evidence. The best kind of evidence is scientific evidence.

Then historical evidence. Confidence comes from competence at practical, real-world disciplines.

4. STEM degrees are a path to high paying jobs. Women who are debt-free are better to marry, because they don't delay the process of buying a house and having children. Any kind of debt has to be paid off first. I'm not looking for a big spender, I'm looking for someone who can earn and save. The more children we can afford to have, the bigger our influence will be. Also, women who choose STEM demonstrate that they can delay gratification, and not be a slave to FOMO, YOLO, "living in the moment", etc.

5. STEM equips women to find work easily, so she doesn't feel pressured to accept a bad marriage proposal. She can move out and start saving money. She can buy apologetics books, lectures and debates. She can buy books on economics, marriage and parenting. She can prepare herself to attract the right man, and she can evaluate men to see if they are prepared for marriage.

6. Both the STEM departments AND the STEM workplaces less likely to be woke than non-STEM departments and workplaces. She will be able to hold to her convictions more easily in an environment where results matter more than having the "right" (left) opinions.

Objections to preferring a wife with a STEM degree

1. A woman with a STEM degree will not want to quit her job and become a stay at home mom during the critical period from birth to age 2, or even better, age 5.

2. A woman who takes years off for child-bearing and early childhood years will not be able to resume her job at the same level of pay.

3. Even in STEM departments, a woman will be exposed to an environment with secular left indoctrination, drunkenness and promiscuity. She is unlikely to come out of college as a virgin.

Responses to objections to the STEM requirement

Points 1) and 2) apply to every kind of degree, not just STEM. Any woman who does 4 years of college in any field will be "wasting" it if she stops working. First, in my plan, her education is to equip her to educate her children, because I trust her more than any teacher or stranger to do that important job. Teachers are not paid to produce results – they are unionized, and not paid based on performance. Second, even women with STEM degrees would generally prefer to work part-time or not at all. They want to stay with their young children. Third, we don't need the money. That's why I suffered through my BS and MS to earn 6 figures and have a 7 figure net worth. We don't need her to work.

For point 3), I'm not saying that EVERY woman who graduates with a STEM degree is perfect for marriage. I'm saying that a STEM degree helps to have a marriage that is influential for Christ and His Kingdom. I'm open to other majors, *so long as they address the concerns and goals I specified.* I'm even open to a different plan. But the overriding concern is that the marriage count for something for the Boss. Even with a STEM degree, the man still has to ask the woman questions about politics and parenting. He still has to evaluate her sobriety, chastity and frugality. A STEM degree is just a starting point.

The difference STEM makes for apologetics

I think it's obvious that having a wife who has taken courses and even worked a few years before the first child arrives helps her to be able to educate her kids and / or monitor their performance. But it also allows her use apologetics more persuasively on the university campus, in the church, and if we open up the home to college students and neighbors for movies / meals / discussions.

For example, take the fine-tuning argument. A knowledge of physics and chemistry helps you to explain why changing the fundamental forces results in a universe that does not support complex, embodied life. A knowledge of probability theory (e.g. – product rule) helps you to argue for intelligent design in the origin of life. And what about logic? Even in computer science, we had to study symbolic logic, the rules of inference, conditional proofs, Bayes' Theorem, etc.

My wife's job is to make the big picture of education clear to the kids, so they know what they can do in the real-world with what they are learning. So many Christians underperformed in school because they didn't know the relevance of what they were learning for the task of defending their Christian worldviews. My wife's job is to know how the material being taught relates to real-world goals, like defending Christianity. This is how parents produce children who grow up to be William Lane Craig, Stephen C. Meyer, Luke Barnes or Michael Licona. Boldness comes from knowledge.

Conclusion

First, I hope this post convinces women to start planning for their marriages early. You need to know things that matter for two reasons: 1) to attract a quality man, 2) to evaluate men and filter out the good ones. That means you need to know things like apologetics, politics, etc. Having money helps to buy learning material.

Second, I hope this post convinces men to stop choosing women based on youth and beauty. Your choice of wife will have a huge effect on your influence. Choose a capable, competent partner who complements your strengths with different strengths. Men spend their days in the workplace, where we cannot say much about religion and politics. If you marry an intelligent conservative Christian woman, she can be your voice to the university, the church, and the public square. Not to mention raising effective children. Therefore, choose wisely.

Knight and Rose Show – Episode 35: Are All Religions the Same, Part 3

July 29, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 35 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose continue our discussion on how to choose a worldview. We discuss the predictions and prophecies of different traditions, and whether they were correct. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 35:

Episode Summary:

Wintery Knight and Desert Rose continue their discussion about whether all religions are equally valid paths to God. In this episode, we look at what different worldviews have predicted about the future. We don't just focus on the prophecies of various religious, but also look at the predictions of secular, non-religious people. We've decided to expand this series to five parts, so this episode is the third in a five-part series.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

Notes

Early on in the episode, Rose mentions how Muslims present prophecies in the Quran to non-Christians as evidence. She meant to say non-Muslims.

William Lane Craig lectures on the historical Jesus at Columbia University

July 30, 2023 | by Wintery Knight | Link | Original Link

One of the other software engineers at work is always finding interesting sermons and lectures to listen to. On Friday afternoon, things were a bit slow, so she messaged me a lecture featuring Dr. William Lane Craig, talking on "Who Was Jesus?" at Columbia University. I wanted to encourage her, so I put it on to listen as well. I liked it so much, I wrote out a summary below to go with it.

Here is the lecture:

Description:

Dr. William Lane Craig unpacks questions surrounding Jesus' resurrection and the historical accuracy of the biblical claims. Columbia University, 2009.

And my outline:

Different views of Jesus:

- Jewish view of Jesus
- Muslim view of Jesus
- skeptical historian view of Jesus
- what did Jesus think about himself?
- Jesus didn't write anything of his own
- best sources are the records of Jesus followers
- problem: how do we know these records are accurate
- maybe stories of Jesus' divinity emerged over time

New tools from the Renaissance:

- historiography
- textual criticism
- investigate Jesus as a historical figure
- same tools are used for other historical figures

Sources:

- Christian
- Jewish
- Roman
- Many more sources than other figures of antiquity

External sources:

- confirm what the gospels say, but don't say anything new

Treating the Bible as a collection of ancient documents

- not using the Bible to prove the Bible is divine
- just treating the books as historical documents

New Testament

- a collection of the earliest documents
- much later documents about Jesus not included
- later documents not written by eyewitnesses

Skeptical scholars:

- ignore the earliest sources
- focus on the later sources
- result is a more radical left-friendly Jesus

Burden of proof

- are the gospels assumed reliable until proven unreliable?
- are the gospels assumed unreliable until proven reliable?

Five reasons to assume the New Testament is reliable

1. Insufficient time for legendary influences to erase the historical core

- the gap between the events and the sources is much shorter than other comparable sources
- Greek and Roman sources are at least 1-2 generations from the events they record
- Gospels written down and circulated within first generation after the events they record
- the eyewitnesses were alive at the time they were written down

2. Gospels are not the same genre as folk tales or urban legends

- Gospels talk about real people who actually lived
- Gospels talk about real places excavated by archaeologists

3. Oral tradition in first century Jewish society

- Jewish culture valued reliable transmission of religious tradition
- Memorization of long passages and entire books

4. Restraints on the embellishment of traditions about Jesus

- The apostles and other eyewitnesses could correct embellishments

5. Gospel writers make testable statements that are found to be true

- Luke is the author of the Gospel of Luke and the Book of Acts
- In Acts, Luke accompanies with the eyewitnesses to the life of Jesus
- Acts contains many historical details accurate to the times and places he writes about
- Luke's gospel is in accord with archaeological discoveries made since

It's reasonable to accept the general reliability of the Gospels, unless they are found unreliable

Historical basis for facets of Jesus

1. Unique Son of God

- historical critics claim that the divinity of Jesus developed over time
- why would monotheistic Jews contradict their monotheism by inventing a divine Jesus?
- the only reasonsable answer is that Jesus claimed divinity for himself
- His followers accepted it because Jesus provided reasons to believe
- Mark 12:1-8
  Earliest gospel reveals Jesus' self-understanding as God's "only beloved son"
- Matthew 11:27
  "No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him." This story is also in Luke. Source is "Q", an early set of traditions common to Matthew and Luke
- Mark 13:32
  Jesus sees himself as above humans and angels, but subordinate to God the Father

Why would anyone take Jesus seriously, unless he was able to provide evidence?

2. Jesus' miracles

- Jesus' miracle stories are in all four sources
- The only reason to reject them is because of a philosophical bias against the supernatural

3. Trial and crucifixion

- Crucifixion narrative is in the Gospels, Paul's letters, Acts
- Also confirmed by Josephus and Roman historians
- Historians across the ideological spectrum affirm the crucifixion

Why was Jesus crucified?

- Doesn't fit with the skeptical view that Jesus was uncontroversial and had few followers

4. Jesus' resurrection

- Jesus resurrection is the best explanation for historical facts accepted by diverse majority of historians

1. Burial location known to friends and enemies, and corpse would refute the resurrection
2. Tomb was found empty by a group of Jesus' women followers
3. Post-mortem appearances to individuals and groups, friends, skeptics and enemies
4. Original disciples became convinced that Jesus rose from dead counter to their own interests

- The facts are accepted by a majority of scholars across the ideological spectrum
- Dr. Craig's debate with a scholar who invented an unknown, identical twin brother who was separated from Jesus at birth
- Jewish historian Pinchas Lapide affirms the resurrection of Jesus as a historical event

Then there is a period of question and answer, which I did not find useful, because the questions seemed to be more about the needs and feelings of Christians, rather than about the facts presented by Dr. Craig, or about how these facts survive in debates on university campuses. Facts don't care about your feelings.

It never hurts to listen to William Lane Craig. If you listen enough, you can remember his points when you get the opportunity. In college, all of my friends at Crusade could do his opening speech from his debates on God's existence from memory.

New study: 81% endure pain in the five years after sex-change surgeries

July 31, 2023 | by Wintery Knight | Link | Original Link

One reason why Christians are devoted to the moral law is because we think that these boundaries are in place for a reason. We think that if we just do what makes us happy, then we will end up worse off. Sadly, the secular left in America are so addicted to "don't judge" that they want to smash all those moral boundaries. What happens when harm follows? Do they offer to fix it or pay for it themselves?

Here's an article from the UK Daily Mail, about the pain you can expect if you let secular leftists cut parts of you off, in exchange for insurance company money and virtue signaling rights.

Keep in mind that the UK Daily Mail is far left, and 100% on board with transgenderism – including sex-change surgery.

It says:

> One of the first studies into the side effects of transgender surgeries has revealed alarmingly high rates of post-op pain, aching during intercourse, and bladder problems, raising troubling questions for this new frontier of medicine.
>
> A huge majority – 81 percent – of those who had gender-affirming surgery in the past five years said they endured pain simply from moving around in the weeks and months after going under the knife.
>
> Researchers from the University of Florida and Brooks Rehabilitation, a health non-profit, showed that more than half of trans surgery patients endured pain during sex, and nearly a third could not control their bladders.

Here are some details:

> UF researchers studied 21 trans and non-binary people aged between 20 and 70 who had undergone trans surgeries in the past five years — mostly mastectomies and vaginoplasties.
>
> 81 percent endured pain in their lower back, groin, pelvis, chest, or shoulders in the weeks, months, and even years after their procedures, researchers found.
>
> Another 57 percent found sexual intercourse painful.
>
> Meanwhile, 29 percent suffered urinary incontinence or a frequent and urgent need to go to the bathroom, researchers found.
>
> Likewise, many male-to-female transitioners who get a neo-vagina created are surprised to discover that they have to insert a 'dilator' into their canal for up to an hour each day after surgery.
>
> Without using a dilator, which resembles a sex toy, the neo-vagina can gradually

> shorten in depth, said Dr Hill. Some trans women must use them for the rest of their lives.
>
> 'That's something a lot of people don't realize,' she added.

Now, you might ask yourself what happens when these surgeries result in a lot of pain and suffering for the victims. Maybe it's only in heartless, cruel America where the victims have to suffer. Maybe in wonderful, tolerant Canada, the victims get free health care, to alleviate the pain of having their body parts sawed off by greedy ghouls.

Let's see, using this article from the UK Daily Mail:

> An indigenous transgender woman has slammed Canada's healthcare system for rejecting her euthanasia request despite the pain she endures from a surgically-built vagina.
>
> In social media posts, Lois Cardinal, a self-proclaimed 'sterilized First Nations post-op transsexual' said regret over her medical transition led her to apply for a lethal injection in January.
>
> Cardinal, who lives on a native reserve near St. Paul, Alberta, posted her medical records from the request online this week to draw attention to radical gender ideology.
>
> Her case underscores the perils of Canada's ultra-liberal healthcare system — one of the world's most permissive for both euthanasia and affirming an individual's chosen gender.
>
> 'I'm in constant discomfort and pain,' the 35-year-old told DailyMail.com.

So, in Canada, after the government-run public schools have brainwashed people into wanting to change genders, then they deny you treatment for the mess they caused. But you can apply for a free government-funded murder though. But you might have to wait, and re-apply.

We can do better than letting the "don't judge" secular leftists run our country. They are not authorities on what is wise. And they shouldn't be elected to government.

New survey: high school boys twice as likely to be conservative than high school girls

August 1, 2023 | by Wintery Knight | Link | Original Link

Did you know that women tend to be further to the left than men? According to surveys, women are more leftist than men on abortion, same-sex marriage, and a host of other policies. I'll show you a few surveys below. But even more interesting is that there is a link between support for leftist policies, and higher mental illness. Let's take a look at it.

First, here is an article from The Hill:

> Forty-four percent of young women counted themselves liberal in 2021, compared to 25 percent of young men, according to Gallup Poll data analyzed by the Survey Center on American Life. The gender gap is the largest recorded in 24 years of polling. The finding culminates years of rising liberalism among women ages 18 to 29, without any increase among their male peers.

That article is a bit old, here's a new one from this week in The Post Millennial:

> In annual surveys over the last few years, data pulled from Monitoring the Future has shown that about a quarter of high school seniors identify as conservative or very conservative. Only 13 percent of the 12th grade boys identify as liberal.
>
> […]The graph excludes moderate students, but of those high school seniors that do identify politically, around 65 percent of boys were conservative while only around 31 percent of girls identified that way.

According to surveys, young women are also more likely to support abortion under any circumstances (40 to 27) and more likely to support same-sex marriage than men.

I don't support abortion because I favor the rights of unborn babies over the happiness of adults. I don't support same-sex marriage because studies show children do better when they are raised by a mother and a father. And I think that's why most of these men are with me, they follow that same reasoning, and side with the children against the adults.

I thought this part of the article was interesting:

> As one Politico analyst put it, "Democrats have a masculinity problem." Citing trends among black and Latino voters, the analyst pointed out that even in minority communities that have voted majority Democrat, men have been turning to the Republican party at higher rates than women.
>
> Some conservative figures such as Jordan Peterson and Dennis Prager (through PragerU) have millions of followers on YouTube, a platform where the users are majority male.
>
> In addition, one of the more popular conservative political podcasts, The Ben Shapiro Show, has an audience that skews overwhelmingly male at 86 percent.

> The audience also skews younger, 18-44, in comparison to Fox's former show with Tucker Carlson, 25-54, which skews slightly female at 53 percent.

This is good news. Boys are finding themselves role models who they see as "strong". And those new role models are conservative. These stronger role models champion truth, and they make moral judgements. Even if it hurts other people's feelings.

Let's go on to the second point. These leftist policies are having a bad effect on young women's mental health.

Feminist web site Evie Magazine reported on the some 2020 findings by Pew Research (left-wing pollster):

> A 2020 Pew Research study reveals that over half of white, liberal women have been diagnosed with a mental health condition at some point.
>
> [T]he study, which is titled Pew American Trends Panel: Wave 64, was dated March 2020 — over a year ago.
>
> The study, which examined white liberals, moderates, and conservatives, both male and female, found that conservatives were far less likely to be diagnosed with mental health issues than those who identified as either liberal or even "very liberal."
>
> […]**White women, ages 18-29, who identified as liberal were given a mental health diagnosis from medical professionals at a rate of 56.3%, as compared to 28.4% in moderates and 27.3% in conservatives.**

I found an interesting article in the Wall Street Journal that talked about how one leftist policy concern (global warming alarmism) is tied to higher rates of mental illness.

It says:

> A study in 2021 of 16- to 25-year-olds in 10 countries including the U.S. reported that 59% were very or extremely worried about climate change, and 84% were at least moderately worried. Forty-five percent claimed they were so worried that they struggled to function on a daily basis, the definition of an anxiety disorder.

The study found that the mental illness was more common in younger people:

> Climate anxiety and dissatisfaction with government responses are widespread in children and young people in countries across the world and impact their daily functioning.

So now we are looking at a direct link between the policies of the left, and the lower mental health of the left. And we know that more women than men are on the left. And we see more mental illness among women. Interesting, isn't it?

And this has consequences. Leftist women are noticing that men are more conservative than they are, and it's affecting their dating:

The marriage rate is also declining. Could this decline in marriage be related to the increase in leftist women, and all the related mental illnesses that leftist women have? Does it make sense for a conservative man to enter a relationship where he pays all the costs and bears all the risks, but all the decisions are being made by a leftist woman? It's dangerous for a man to do that.

Consider that the divorce rate is very high right now, and divorce takes away a man's money, his access to his kids, and his freedom. Women initiate 69% of divorces. College-educated women – who are especially leftist – initiate 90% of divorces. This high divorce rate cannot be blamed on men, because the divorce rate of lesbians is the highest of all. No man to blame in that situation.

Why would a man sign up to be controlled by feminist institutions, like the divorce courts? Men are not interested in projects where they have to pay for everything, but someone else is making the decisions. Especially if they get blamed when things go wrong.

Facing all of these risks, a man would have to be crazy to even talk to a leftist woman – much less date her. Unfortunately, we aren't making enough young conservative women for these conservative young men to marry. And so, the marriage rate is declining. Young women today are not as conservative as previous generations.

I know a lot of people today are worried about young men falling under the influence of bad role models. But the surveys show that boys tend to have the right role models, and the right political views. So, we need to work on making young women more conservative.

Is the Bible's definition of faith opposed to logic and evidence?

August 2, 2023 | by Wintery Knight | Link | Original Link

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

What is faith according to the Bible?

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous

tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

What is faith according to Bible-based theologians?

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia** – This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for example, is a necessary information base that Christians must have.
2. **assensus** – This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia** – This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

How do beliefs form, according to Christian philosophers?

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

I think definition of faith is important, because atheists seemed to want to substitute their own definition of faith as blind belief for this Biblical definition, but there is no evidence for their view that faith is belief without evidence. I think this might be another case of projection by atheists. Blind faith is how they arrive at their views, so they are trying to push it onto us. But the Bible is clearly opposed to it.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines

- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds
- William Lane Craig’s case for the resurrection of Jesus

Facebook censored posts at the request of the Democrat party / Biden administration

August 3, 2023 | by Wintery Knight | Link | Original Link

I saw this article in the Wall Street Journal, and thought it was a good idea to post about it, so that if I get into a debate about Big Tech with someone, I can just find it again. I'll also link to some other social media censorship stories so we have a few of them.

Here's the article from the Wall Street Journal: (archived)

> Facebook removed content related to Covid-19 in response to pressure from the Biden administration, including posts claiming the virus was man-made, according to internal company communications viewed by The Wall Street Journal.
>
> The emails show Facebook executives discussing how they managed users' posts about the origins of a pandemic that the administration was seeking to control. "Can someone quickly remind me why we were removing—rather than demoting/labeling—claims that Covid is man made," asked Nick Clegg, the company's president of global affairs, in a July 2021 email to colleagues.
>
> "We were under pressure from the administration and others to do more," responded a Facebook vice president in charge of content policy, speaking of the Biden administration. "We shouldn't have done it."
>
> […]The email, and a number of other such internal company communications, were obtained by the Republican-led House Judiciary Committee, which has been investigating what GOP lawmakers say is the Biden administration's improper efforts to censor Americans' speech on social media about Covid and other topics.

Over at the far left The Hill, I found this related article:

> Facebook had refused to open its own files on government censorship efforts. That came to an end when the House Judiciary Committee finally moved to hold Facebook CEO Mark Zuckerberg in contempt of Congress.
>
> The resulting Facebook Files confirmed what many of us have suspected for years. Indeed, the emails proved to be a mirror image of what had occurred at Twitter — a massive effort by the government to pressure the company to censor its critics and other dissenting voices.

Not just truth, but even jokes were censored:

> There was to be no allowance for humor or even true information that did not advance the government's narrative. The House has uncovered a myriad of grants given to academic and private groups to blacklist and target those with

> opposing views, including the posting of true information.
>
> There was an array of government agencies targeting citizens and groups for censorship. In another hearing, I testified on efforts by Jen Easterly, who leads the Cybersecurity and Infrastructure Security Agency, to extend her regulatory authority by declaring that "critical infrastructure" includes "our cognitive infrastructure," in which she saw it as her role to build "resilience to misinformation and disinformation."
>
> The administration also demanded the removal of "malinformation" that is "based on fact, but used out of context to mislead, harm, or manipulate."
>
> Government-funded groups such as the Stanford Virality Project declared that even "true stories…could fuel hesitancy" over taking the vaccine or other measures. The Twitter files showed that this included "worrisome jokes."

What's a good remedy for this? Where do the people who were censored go to get justice? Maybe we should have criminal trials for the leaders of these social media companies, who seem to have violated the First Amendment rights of Americans.

One more thing that I found at Trending Politics:

> The House Judiciary Committee received a host of subpoenaed materials documenting the correspondence between the White House and Facebook. Among these materials were memos that showed the White House was pressuring the social media to change their algorithms to promote media outlets that the White House approved at the explicit expense of outlets that the White House disapproved of. The ostensible reason for this request was to discourage the spread of misinformation.
>
> One memo dated April 14, 2021, shows White House digital director Rob Flaherty requesting that Facebook "change the algorithm so that people were more likely to see NYT, WSJ, any authoritative news source over Daily Wire, Tomi Lahren, polarizing people. You wouldn't have a mechanism to check the material impact?"

Anyway, I've collected some of my previous posts about Facebook helping the Democrat party and interfering in our elections.

- Twitter and Facebook suspend LibsOfTikTok after she reported on sex-change surgery on kids
- Facebook and Twitter spread disinformation about Hunter Biden's laptop to help Biden win in 2020
- Facebook / Meta CEO Mark Zuckerberg's election meddling violated bribery laws
- Peer-reviewed medical journal blasts Facebook "fact checkers" for censorship
- Facebook has a long record of censoring speech critical of Democrats
- Facebook fact-checker caught plagiarizing 54 articles
- Facebook bans Christian professor for disagreeing with Biden's executive actions

- Facebook “non-partisan” fact-checker revealed to be a far-left Trump-hating Democrat
- Facebook “fact-checker” Politifact forced to retract “false” rating against Candace Owens
- When Facebook fact-checkers conflict with peer-reviewed studies, who is right?
- Potential violation of election law: Facebook and Twitter censor Biden scandal
- Facebook and Google removing content that harms Democrat party
- Facebook censors admit that they suppress Republican content to help Democrat Party
- Facebook censors interview with abortion survivor to help Democrats win 2020 election
- Facebook uses pro-abortion “fact checkers” to label pro-life pages “fake news”
- Facebook bans Christian apologist David Wood for posting the death threats he received
- Facebook censors criticism of Democrat Party, especially before “important elections”

Did DEI trainer Kike Ojo-Thompson harass and bully Richard Bilkszto to end himself?

August 4, 2023 | by Wintery Knight | Link | Original Link

I think most of you have had to sit through diversity training, where you were taught by an uneducated, inexperienced, incompetent failure about what morals and beliefs you should have in order to be a good person. Well, sometimes the indoctrination can get ugly. Let's talk about one case where the instructor harassed and bullied an attendee, who later took his own life.

Here's the story from the New York Post:

> A former Toronto principal has died by su1c1de after facing harassment for calling out an anti-racism instructor who allegedly claimed that Canada was more racist than the US.
>
> Richard Bilkszto, 60, had served as a fill-in principal for the Toronto District School Board until his reputation was "systematically demolished" after he was labeled a supporter of white supremacy for calling out a black instructor during anti-racism training in 2021, according to a lawsuit filed against the district earlier this year.

Naturally the school board sided with the bully against the victim:

> Bilkszto claimed that after he reported Ojo-Thompson's alleged misconduct, the school board failed to look into it, appearing to side with the instructor as one member of the board praised her for handling the principal's "discomfort."

The Toronto Sun noted that transcripts of the training sessions show that "Kike Ojo-Thompson offered up Bilkszto as an example of white supremacy".

An inquiry found the Kike Ojo-Thompson guilty of "workplace harassment and bullying":

> The Workplace Safety and Insurance Board (WSIB) eventually looked into the matter and found that Ojo-Thompson's conduct "was abusive, egregious and vexatious, and rises to the level of workplace harassment and bullying."

Do you know how employers are not supposed to "retaliate" if they are found guilty of some workplace related infraction? Well, this guy's employer (the school district) did retaliate:

> [T]he district refused to reinstate his contract, which Bilkszto claimed was a result of either his fallen reputation or as retribution for having the WSIB investigate the incident.

If there is one thing you can count on from secular left women like Kike Ojo-Thompson, it's their hatred of accountability.

> The KOJO Institute did not immediately respond to The Post's request for comment.

No accountability. No accountability for her destructive actions. Seriously, why do secular leftist women think that men would ever want to date them, much less marry them? Men don't get involved with women who show this egregious lack of accountability. That would be a huge mistake for a man to make.

Secular leftists like Kike Ojo-Thompson can't conceive that the victims of their selfishness could ever greet their harassment and bullying with anything other than worship and gratitude. The rules don't apply to secular leftists. They think that they are better than everyone, and they should be allowed to force their views on others. Even with bullying and coercion. How could they be wrong?

This article from True North explains how someone with a useless degree and no marketable skills can avoid starvation:

> A Critical Race Theory (CRT) organization chaired by the founder of controversial diversity consultancy KOJO Institute has received over a million dollars in government grants – including from Ontario's Progressive Conservative government.
>
> Parents of Black Children (PoBC), which says CRT is one of its core principles, advocates against the presence of police liaisons in schools and for "decolonized" curricula, the inserting of "Black Canadian experiences" into math and for all academic streaming to be abolished.
>
> In 2022, the organization listed that its Board of Directors was chaired by KOJO Institute founder Kike Ojo-Thompson.

This is why men need to be really careful with women who don't have STEM degrees or a trade. A without a STEM degree or a trade, to me, is a red flag that shows that she has been coasting through life, dropping math and science courses, avoiding anything challenging, but still being rewarded without ever earning anything by merit. Only choose women who have had to suffer through challenges where their ability had to produce real-world results. That's how men AND women learn to be accountable. You cannot enter a marriage with someone who has coasted through life, without having to produce results in the real world.

Scott Klusendorf defends the pro-life view on the Unbelievable radio show

August 5, 2023 | by Wintery Knight | Link | Original Link

I'm Scheming Unborn Baby, and I approve of this debate

This is a re-post of a debate on abortion.

Here are the details:

> Justin hosts a discussion between Mara Clarke of the Abortion Support Network and Scott Klusendorf of the Life Training Instititute. Mara believes women should decide whether to terminate a pregnancy, but Scott says that all depends on whether we are dealing with a human life in the womb.

MP3 of this show

My snarky paraphrase of the debate (not exact):

- Speaker introductions
- Klusendorf: no justification for abortion is necessary if the unborn are not human
- Klusendorf: we need to address the issue "what is the unborn?" Are the unborn human?
- Klusendorf: SLED: size, level of development, environment, degree of dependency
- Klusendorf: None of these things affect the value of a human being
- Klusendorf: Even if we don't KNOW whether the unborn is human
- Mara: I'm not going to debate when life begins
- Mara: Women know when life begins by feelings

- Mara: The moral decision is “whether I can take care of this child?”
- Brierley: When is an unborn being human?
- Mara: I refuse to debate that – the real question is whether women want their babies or not
- Mara: Forced pregnancy is not OK
- Brierley: Could your justification for abortion (not wanting to care for a child) work through all 9 months?
- Mara: Late term abortions are rare, so I don’t have to answer that question
- Mara: Abortion should be OK through all 9 months of pregnancy because women cannot be restricted
- Mara: Some women are poor, they need to be able to kill expensive babies at any time
- Klusendorf: although she says she won’t debate the unborn, she does take a position
- Klusendorf: she assumes the unborn is not human, because she says that insufficient funds is justification for abortion
- Klusendorf: no one argues that you can kill a two year old because they cost money, because she thinks they are human
- Klusendorf: she is begging the question by assuming the unborn are not human, but that is the issue we must resolve
- Klusendorf: I am pro-choice on many other things, e.g. women choosing their own husbands, religion, etc.
- Klusendorf: Some choices are wrong – Mara might be right, but she needs to make the case for the unborn not being human
- Brierley: What is your reason for thinking that an unborn child is different from a 2-year old?
- Mara: An unborn child is not the same as a 2-year old, in my personal opinion
- Mara: I am not a debater, so I don’t have to provide reasoning for my assertion, I just feel it
- Mara: Not everybody agrees with Scott, they don’t have to have a rational argument, they just need to feel differently
- Mara: From my experience, when a woman doesn’t want to be pregnant, then she should be able to not be pregnant
- Mara: Women shouldn’t be punished with a baby that she doesn’t want, even if she chooses to have recreational sex
- Brierley: What do you think of women who think the unborn is human and do it anyway?
- Klusendorf: It’s interesting that they never kill their toddlers for those reasons
- Klusendorf: I layed out scientific and philosophical reasons for the humanity of the unborn
- Klusendorf: Her response was “but some people disagree with you”
- Klusendorf: People disagreed about whether slavery was wrong, or whether women should be able to vote

- Klusendorf: that doesn't mean there is no right answer – the right answer depends on the arguments
- Klusendorf: if absence of agreement makes a view false, then it makes HER pro-choice view false as well
- Klusendorf: she did make an argument for the unborn child having no rights because of the location
- Klusendorf: she needs to explain to us why location matters – what about location confers value
- Mara: I'm not going to let Scott frame my debate for me!!!
- Mara: women get pregnant and they don't want their babies! should we put them in jail!!!!
- Klusendorf: I didn't just give my opinion, I had science and philosophy, the issue is "what is the unborn?"
- Mara: philosophical and scientific debates are unimportant, I am an expert in real women's lives
- Klusendorf: Which women? Women in the womb or only those outside the womb?
- Mara: Only those outside the womb
- Klusendorf: Only those outside the womb?
- Mara: Women living outside the womb have a right to kill women inside the womb – women have bodily autonomy
- Klusendorf: then does a pregnant woman with nausea have a right to take a drug for it that will harm her unborn child?
- Mara: Unborn children are only valuable if they are wanted, unborn children only deserve protection if they are wanted
- Mara: There are restrictions on abortion – you can't get an abortion through all nine months in the US
- Mara: There is a 24-week limit in the UK as well
- Klusendorf: There are no restrictions on abortion that conflict with "a woman's health" because Supreme Court said
- Mara: where are these late term abortion clinics?
- Klusendorf: (he names two)
- Mara: that's not enough!!! we need more! where is there one in Pennsylvania?
- Klusendorf: well, there used to be Gosnell's clinic in Pennsylvania, and you could even get an infanticide there….
- Brierley: What about Dawkins' view that it is moral to abort Down's Syndrome babies?
- Klusendorf: he is ignoring the scientific case and philosophical case for the pro-life
- Klusendorf: the pro-life view is a true basis for human equality

What I wanted Scott to ask was whether sex-selection abortions were OK with her. Since her reasoning is "if it's unwanted, it has no rights", then that would mean sex-selection abortions are just fine. That's what a UK abortion expert recently argued. And I also posted recently about how sex-selection abortions are not prosecuted in the UK. If you're

looking for a war on women, there it is.

Gay marriage debate: Michael Brown debates Eric Smaw on same-sex marriage

August 6, 2023 | by Wintery Knight | Link | Original Link

About the debate:

> On April 21, 2011 at 7:30pm at UCF's Health and Public Affairs Building (Room 119), Rollins College professor, Dr. Eric Smaw and author and seminary professor Dr. Michael L. Brown will debate the question "Should same sex marriage be legalized in America?" The event will be held at 4000 Central Florida Blvd and is open to the public. After the formal portion of the debate, Brown and Smaw will field questions from the audience.

About the speakers:

> **Dr. Smaw** will be responding in the affirmative. He earned his Ph.D. in Philosophy of Law from the University of Kentucky in 2005. His areas of expertise are philosophy of law, international law, human rights, ethics, and modern philosophy. He has published articles on human rights, terrorism, and cosmopolitanism. His most recent publication is "Swaying in the Balance: Civil Liberties, National Security, and Justice in Times of Emergency".
>
> **Dr. Brown** will be responding in the negative. He earned his Ph.D. in Near Eastern Languages and Literatures from New York University and is a nationally known evangelical lecturer and radio host. He is the author of numerous scholarly articles and twenty books, including the recently published study "A Queer Thing Happened to America", which is quickly being recognized as the definitive work on the history and effects of gay activism on American culture.

Here are the first two parts:

Part 1 of 10:

Part 2 of 10:

The rest of the segments are here.

Summaries of the opening speeches

Summary of Dr. Brown's opening speech:

There is no compelling reasons by the state should change the definition of marriage

The reason the state conveys benefits for marriage is because marriage is beneficial for the state

Traditional marriage is recognized by the state for several reasons:
– it domesticates men
– it protects women
– it provides a stable, nurturing environment for children

Marriage has three public purposes:
– to bind men and women together for RESPONSIBLE procreation
– to get the benefit
– to provide children with two parents who are bonded to them biologically
– to create the next generation of people to keep the society going

Normally, opposite sex couples create children

Homosexual couples can NEVER create children together

Men and women are differences that are complementary

Monogamy is the norm for opposite sex couples.

For gay men, open relationships / cheating is the norm.
This is because women have a tempering effect on sexuality.

There is no evidence that recognizing same-sex civil unions and marriages have changed this trend.

Same-sex marriage guarantees that children will either not have a father or a mother
So which of the sexes is dispensable when raising children?

For example, consider Dawn Stefanowicz, who grew up with a gay father and no mother
She never got a chance to see a man model love and protect a women within a marriage
That makes an enormous difference in a woman's life – in the way she relates to men

Even with scientific advancements, every baby has a mother and a father

If we change the definition of marriage so that it is based on consent, then why limit it to just two people
If marriage is not the union of male and female, then why have only TWO people
In Canada, you have civil liberties lawyers arguing for for polygamy
In the United States, Professor David Epstein was in a consensual relationship with his daughter
Should incestuous relationships also be celebrated as marriage? Why not?
Should polyamorous relationships also be celebrated as marriage? Why not?

Sexual orientation is not the same as race
Men are women are different in significant ways, but different races are not
You need separate bathrooms for men and women, but not for people of different races

Summary of Dr. Smaw's opening speech: (He ended his speech after only 10 minutes)

You can redefine marriage so that it no longer based on the public purposes he mentioned (controlling procreation, fusing complementary male and female natures, providing children with mothers and fathers who are biologically linked to them, providing children with a comparatively stable development environment that offers comparatively less instability, promiscuity and domestic violence rates compared to cohabitation, etc.), but is instead based on consent and feelings, and that redefinition of marriage won't open marriage up to polygamy, polyamory, etc.

If you like feminism, then you should allow same-sex marriage

If you like abortion rights, then you should allow same-sex marriage

Homosexuals participate in society by working at various jobs, so they are participating in society

Homosexuals should be given the same tax breaks as married people because they work at various jobs for money

Working at a job for money achieves the same public purpose as procreating and staying together to raise children in a stable environment

You can listen to the rest for the rebuttals, and cross-examination. Oh yes – there was cross-examination! It starts two thirds of the way through Part 5, if you want to jump to it. And sparks were flying! There is also Q&A from the audience of students.

This is such a great debate – I love to hear two passionate guys disagreeing about something. I love to hear both sides of the issues. There is always something to learn by listening to the other side. It makes me more effective and more tolerant when I stand up to defend my side of the argument.

By the way, my own secular case against same-sex marriage is right here, if you want to see how I would debate this issue. Also check out the recent studies on the effects of gay parenting on children.

Democrat mayor pleads guilty to 140 child pornography charges

August 7, 2023 | by Wintery Knight | Link | Original Link

I blogged previously about this openly gay Democrat mayor of College Park, Maryland, who had been arrested and charged with child pornography. Well, the accused decided to plead guilty to the charges, and is facing 30 years in prison. Giving how law enforcement works in the Obama administration, I expect him to get 30 days in jail. Anyway, let's take a look at the details.

Here's the story from the Washington Free Beacon:

> A Democratic former mayor pleaded guilty to 140 charges for child porn possession and distribution.
>
> Patrick Wojahn—who served for nearly eight years as mayor of College Park, Md., before his arrest and resignation in March—pleaded guilty to 60 counts of distribution of child pornography, 40 counts of possession of child pornography with the intention to distribute, and 40 counts of possession of child pornography.
>
> Wojahn, who listed his pronouns in his Twitter bio, said in his resignation letter that he was stepping down to address his "mental health."

He has ties to the Biden administration, which is supported by an overwhelming majority of atheist voters:

> The ex-mayor also has connections to the Biden administration. Wojahn in a 2019 interview called then-South Bend, Ind., mayor Pete Buttigieg (D.) his "buddy" and credited Buttigieg's "mentorship" for advancing his career, the New York Post reported. Wojahn has also posted pictures of himself and Buttigieg and said the two repeatedly spoke on the phone. Buttigieg is now President Joe Biden's transportation secretary.

Why do we have so many pedophiles and child pornographers and child molesters being elected as Democrats? Well, one reason is because atheists are very involved in politics, and they overwhelmingly support Democrats.

Breakpoint notes:

> According to political scientist Ryan Burge, the group of people in American society most likely to be highly engaged in political action are not evangelicals, as we've been led to believe. They are in fact atheists. "Let me put it plainly," Burge wrote, "atheists are the most politically active group in American politics today, and the Democrats (and some Republicans) ignore them at their own peril."
>
> In a slew of indicators—from actions as simple as putting up a yard sign, to the more proactive of attending a protest march—atheists not only outdid their

> evangelical neighbors but, in most cases, were the most likely group to put money and time toward partisan activities.

Atheists are extremely active in politics, it's almost like it is their religion. And they vote overwhelmingly for the the political party that elevates adults selfishness over protecting children.

And from Get Religion:

> The atheist vote is one of the bluest in American religion (behind only Black Protestants). Eight-two percent of atheists backed Barack Obama in both 2008 and 2012. However, Hillary Clinton didn't enjoy that level of support — she only garnered 78% of the atheist vote. That's not because atheists like Trump, by the way. The cause of this drop was a lot more third-party voters. But, then Biden did incredibly well with atheists, gathering 85% of the vote.

I have an atheist friend who is a huge proponent of "atheist morality". He insists that atheists have a firm foundation for moral behavior. And yet, when you look at his politics, he votes over and over against Christian morality, especially in areas like redefinition of marriage, no-fault divorce, premarital sex, abortion and gay rights. He sides with selfish adults against child – born and unborn. He supports "survival of the fittest". He wants to be liked by the successful, intelligent people he hangs out with. He wants to be thought of as successful and intelligent, too. It's too much of a burden to make moral judgements and to tell his sophisticated peers "No". Too bad for the kids. The adults are more important to him.

We're living at a time now when we have amazing arguments and evidence against atheism. But we really need Christians to get serious about making those arguments, and presenting that evidence. If not, we can expect a steep decline in morality. And children will be the biggest victims.

Canada, France and Japan are planning to increase their nuclear power production

August 8, 2023 | by Wintery Knight | Link | Original Link

I really, really hate wind and solar power. Most people dislike them because they are unreliable, expensive, and need taxpayer subsidies. I hate them because they are harmful to animals, especially birds. I adore birds. A lot of left-leaning countries had been going away from nuclear power towards green energy, and so I'm delighted to report that some of them are now returning to it.

Here's the most recent news about Canada, from far-left Bloomberg News: (archive)

> Nuclear energy is gaining significant momentum in Ontario, with new plans to expand an existing plant to become the world's largest and a pledge to add three small modular reactors to a site where another is already being built.
>
> The news marks a shift for an industry that has been stalled for decades amid fears about safety and cost overruns. It's also seen as a critical step in modernizing an aging power grid that needs to add capacity without boosting already-high electricity costs, or threatening emissions goals.
>
> […]The newly announced expansion at the Bruce Power facility marks the first large-scale nuclear build in Canada in over three decades, suggesting nuclear policy may finally be becoming unstuck. The province is home to all but one of the country's 19 nuclear reactors, most of which were built from the 1960s to 1980s, during which time the Candu reactor became a global favorite.

The article notes one of the problems with wind and solar – the need to meet "base-load demand":

> Once complete, the nuclear projects will… lessen the need to use wind and solar power to meet base-load demand — the minimum level of power needed from an electrical grid at any time — which contributes to a costly mismatch between supply and demand.
>
> Electricity demand typically ramps up in the morning, peaks late afternoon, and tapers off at night. But supply from intermittent renewables like wind and solar is weather-dependent, and therefore less reliable at meeting the demand of the hour. Sometimes intermittent sources generate less power than is needed, and sometimes more — in which case operators may need to pause generation at certain plants to avoid overloading the system.

Now let's see France. This article from Euractiv is from May 2023:

> A bill to speed up the construction of new nuclear reactors was approved by the French parliament on Tuesday (16 May), with the government hailing it as an environmental step forward.

> […]Once it comes into force, the new law will speed up the construction of new nuclear reactors by simplifying the required administrative procedures and planning documents. The Energy Transition Ministry expects future construction times to be reduced by at least two years.
>
> In addition, a 50% cap on nuclear power's share of France's electricity mix was removed.

And finally, Japan. This article is from July 2023, from far-left Bloomberg News. (archive)

> Japan's government is considering a plan to help subsidize required upgrades at idled nuclear power plants, in the latest move to quickly boost the nation's atomic energy.
>
> Under the proposed plan, existing nuclear plants would be able to participate in an auction next year to receive subsidies for necessary upgrades to meet the country's safety standards, according to documents from the Ministry of Economy, Trade and Industry. Projects selected would then get a subsidy for 20 years to help cover costs, the document said.
>
> […]The government is ramping up an effort to restart reactors to help cut imports of pricey fossil fuels, bolster power supplies and curb pollution.

I'm really hopeful that people will give up on wind and solar power, and turn to zero-emission fracking and nuclear for our electricity needs. That's much better for the environment and for the animals than wind and solar.

The Wintery Knight’s favorite Bible verses

August 9, 2023 | by Wintery Knight | Link | Original Link

Here are 8 of my favorite Bible verses. Leave yours in the comments below.

Psalm 27:14:

> [11] Teach me Your way, O Lord,
> And lead me in a level path
> Because of my foes.
>
> [12] Do not deliver me over to the desire of my adversaries,
> For false witnesses have risen against me,
> And such as breathe out violence.
>
> [13] *I would have despaired* unless I had believed that I would see the goodness of the Lord
> In the land of the living.
>
> **[14] Wait for the Lord;**
> **Be strong and let your heart take courage;**
> **Yes, wait for the Lord.**

1 Corinthians 4:2:

> 1 This is how one should regard us, as servants of Christ and stewards of the mysteries of God.
>
> **2 Moreover, it is required of stewards that they be found faithful.**
>
> 3 But with me it is a very small thing that I should be judged by you or by any human court. In fact, I do not even judge myself.
>
> 4 For I am not aware of anything against myself, but I am not thereby acquitted. It is the Lord who judges me.
>
> [5] Therefore do not go on passing judgment before the time, *but wait* until the Lord comes who will both bring to light the things hidden in the darkness and disclose the motives of *men’s* hearts; and then each man’s praise will come to him from God.

Matthew 5:13:

> 10 “Blessed are those who have been persecuted for the sake of righteousness, for theirs is the kingdom of heaven.
>
> 11 “Blessed are you when people insult you and persecute you, and falsely say all kinds of evil against you because of Me.
>
> 12 Rejoice and be glad, for your reward in heaven is great; for in the same way they persecuted the prophets who were before you.
>
> **13 “You are the salt of the earth; but if the salt has become tasteless,**

> **how can it be made salty again? It is no longer good for anything, except to be thrown out and trampled under foot by men.**
>
> 14 “You are the light of the world. A city set on a hill cannot be hidden;
>
> 15 nor does anyone light a lamp and put it under a basket, but on the lampstand, and it gives light to all who are in the house.

2 Timothy 2:4:

> 1 You therefore, my son, be strong in the grace that is in Christ Jesus.
>
> [2] The things which you have heard from me in the presence of many witnesses,entrust these to faithful men who will be able to teach others also.
>
> [3] Suffer hardship with *me*, as a good soldier of Christ Jesus.
>
> **[4] No soldier in active service entangles himself in the affairs of everyday life, so that he may please the one who enlisted him as a soldier.**
>
> [5] Also if anyone competes as an athlete, he does not win the prize unless he competes according to the rules.

Daniel 3:18:

> [13] Then Nebuchadnezzar in rage and anger gave orders to bring Shadrach, Meshach and Abed-nego; then these men were brought before the king.
>
> [14] Nebuchadnezzar responded and said to them, “Is it true, Shadrach, Meshach and Abed-nego, that you do not serve my gods or worship the golden image that I have set up?
>
> [15] Now if you are ready, at the moment you hear the sound of the horn, flute, lyre, trigon, psaltery and bagpipe and all kinds of music, to fall down and worship the image that I have made, *very well*. But if you do not worship, you will immediately be cast into the midst of a furnace of blazing fire; and what god is there who can deliver you out of my hands?”
>
> [16] Shadrach, Meshach and Abed-nego replied to the king, “O Nebuchadnezzar, we do not need to give you an answer concerning this matter.
>
> [17] If it be *so*, our God whom we serve is able to deliver us from the furnace of blazing fire;and He will deliver us out of your hand, O king.
>
> **[18] But *even* if *He does* not,let it be known to you, O king, that we are not going to serve your gods or worship the golden image that you have set up.”**

Esther 4:14:

> [10] Then Esther spoke to Hathach and ordered him *to reply* to Mordecai:
>
> [11] “All the king’s servants and the people of the king’s provinces know that for any man or woman who comes to the king to the inner court who is not summoned, he has but one law, that he be put to death, unless the king holds

> out to him the golden scepter so that he may live. And I have not been summoned to come to the king for these thirty days."
>
> [12] They related Esther's words to Mordecai.
>
> [13] Then Mordecai told *them* to reply to Esther, "Do not imagine that you in the king's palace can escape any more than all the Jews.
>
> **[14] For if you remain silent at this time, relief and deliverance will arise for the Jews from another place and you and your father's house will perish. And who knows whether you have not attained royalty for such a time as this?"**

Philippians 1:9:

> [3] I thank my God in all my remembrance of you,
>
> [4] always offering prayer with joy in my every prayer for you all,
>
> [5] in view of your participation in the gospel from the first day until now.
>
> [6] *For I am* confident of this very thing, that He who began a good work in you will perfect it until the day of Christ Jesus.
>
> [7] For it is only right for me to feel this way about you all, because I have you in my heart, since both in my imprisonment and in the defense and confirmation of the gospel, you all are partakers of grace with me.
>
> [8] For God is my witness, how I long for you all with the affection of Christ Jesus.
>
> **[9] And this I pray, that your love may abound still more and more in real knowledge and all discernment,**
>
> [10] so that you may approve the things that are excellent, in order to be sincere and blameless until the day of Christ;
>
> [11] having been filled with the fruit of righteousness which *comes* through Jesus Christ, to the glory and praise of God.

Numbers 13:30:

> [25] When they returned from spying out the land, at the end of forty days,
>
> [26] they proceeded to come to Moses and Aaron and to all the congregation of the sons of Israel in the wilderness of Paran, at Kadesh; and they brought back word to them and to all the congregation and showed them the fruit of the land.
>
> [27] Thus they told him, and said, "We went in to the land where you sent us; and it certainly does flow with milk and honey, and this is its fruit.
>
> [28] Nevertheless, the people who live in the land are strong, and the cities are fortified *and* very large; and moreover, we saw the descendants of Anak there.
>
> [29] Amalek is living in the land of the Negev and the Hittites and the Jebusites and the Amorites are living in the hill country, and the Canaanites are living by the sea and by the side of the Jordan."

> **30 Then Caleb quieted the people before Moses and said, “We should by all means go up and take possession of it, for we will surely overcome it.”**

If you have a favorite Bible verse or two, post them in the comments.

How good are atheist attempts to rationally ground moral values and duties?

August 10, 2023 | by Wintery Knight | Link | Original Link

One of my readers is an expert at the moral argument, and wrote a number of articles about his experiences talking to non-Christians about it. He comes from a liberal Christian background, so his views and experiences are not the result of growing up in a conservative Christian environment.

In the first article, he talks about what theists mean when we say that atheists can't rationally ground objective morality:

> They misunderstand us to be implying that they are immoral people. But this is not at all what we are saying. Since we believe that the moral law is incumbent upon every human, and is woven into the very fabric of our souls, we are not at all surprised to find even atheists dancing to its tune (to mix my metaphors). The fact that atheists very much want to be thought of as good people is only a tacit admission that they understand that there is such a thing as "good" and that it is *good* to be good. But if morality is merely a human convention, then the most that an atheist can be claiming is that they are morally fashionable.

There's no moral credit for doing that.

In the second article, he talks about whether atheists can "reason" their way to correct moral views, if their conception of reality says that the universe and humans are accidents:

> A chance ethical system cannot do the trick if it is true that there are right and wrong answers. If there are indeed objectively right answers to moral questions, then reason is certainly an ally, since it can help us to assess the conditions and marshal our intuitions, but it does not in itself *make* the answer right. Neither does an ethical system make right answers; it can only (if legitimate) help us to navigate through real passes with real reefs and currents. But you could never say that any ship of history had hit a reef unless you were first willing to admit that things such as ships and reefs actually existed. That's a very big pill to swallow for anyone committed to a purely material world, where truth and ethics extend no farther than the will and imagination of the biochemical flukes we call "humans."

In the third article, he takes on the argument by atheists that much of the moral evil in the world is due to theists:

> When asking whether a behavior is caused by a belief system it must first be determined if that behavior is consistent with the beliefs in question. For a religion like Christianity there is some hope of doing so, since it is founded upon

> certain doctrines and is in possession of a guidebook — the Bible — to which one might appeal in making a ruling. For this reason a strong case can be made that most of what is commonly credited to Christianity is actually a violation of its fundamental principles. It is not *consistent* with Christianity; it is *antithetical* to it. And if something is inconsistent with a thing it is hard to make a case that it is *caused* by that thing.

In the fourth article, he talks about how atheists misunderstand the purpose of acting morally in Christianity:

> The irony is that Christianity does not even teach that we win heaven by virtue of our good works. In fact, it may be the only religion that explicitly rejects such an idea. For example, Islam actually teaches that our good deeds must outweigh our bad, and Eastern religions teach that we must work our way to enlightenment through various moral and spiritual practices. By contrast, Christianity teaches that we must put aside our futile thoughts of measuring up to God's perfect standard and throw ourselves upon the mercy of His court. We have but to accept, as spiritual beggars, the provision He has made to cover our sin and win our righteousness in Christ.
>
> Good works come as a *result* of our love and gratitude toward our creator and redeemer; they are not the *cause* of our redemption. The Christian ideal is to be good for God's sake, not for the sake of what He can do for us. God is not to be confused with Santa Claus. To think otherwise is to make the mistake that Satan made regarding Job's motivation for righteous living (Job 1:9-11).

In the fifth article, he talks about whether atheists can rationally ground the claim that they are "good" at morality:

> As it turns out, most atheists who like to think of themselves as moral do so with a sense that they are saying something particularly meaningful. The implication is that they have access to moral knowledge that they are committed to put into practice. It is something like saying that you are a good baseball player, which refers to a particular game with known rules and objectives that you skillfully follow. If this is not true, then a moral atheist is just asserting that they follow their own desires; they are saying little more than, "I do what I feel like doing, and whatever I do I call 'good.'"

It might be a fun activity to read these posts, then find an atheist and ask them whether they are a good person, and what do they mean by "good" and "evil". Ask them whether they are making free decisions, and how can that be possible if they are just made out of matter. The moral argument is the most accessible argument to discuss with non-Christians.

Report: FBI Director Christopher Wray lied under oath about targeting Catholics

August 11, 2023 | by Wintery Knight | Link | Original Link

I'm always vigilant when the people in law enforcement target religious people. It's especially a problem when the bigotry is coming from the top of federal law enforcement. Christians pay the salaries of these people through our taxes, and what do we get in return? We get labeled as domestic terrorists. Our homes are broken into in pre-dawn raids. Assault rifles are pointed at our pets and children.

Here's the story from the Daily Signal:

> FBI Director Christopher Wray may have lied under oath concerning the FBI Richmond office's Jan. 23 memo citing the Southern Poverty Law Center in urging investigation of "radical traditional Catholic hate groups," Rep. Jim Jordan suggested in a letter sent Wednesday.

The issue is that Wray tried to minimize the scope of the FBI's investigation into Catholics:

> On July 12, Wray testified to the House Judiciary Committee that the memo represented "a single product by a single field office, which, as soon as I found out about it, I was aghast and ordered it withdrawn and removed from FBI systems."

He says it was a "single field office", but the memo reveals collaboration between *multiple* field offices. In other words, he apparently lied under oath, and the investigation was apparently much bigger than he wanted people to believe:

> Yet on July 25, 2023, the FBI produced a version of the Richmond document with fewer redactions than an earlier version the FBI had produced. "This new version shows that the FBI's actions were not just limited to 'a single field office,' as you testified to the Committee," Jordan, who chairs the House Judiciary Committee, wrote in his letter to Wray.
>
> […]The less-redacted version of the memo also "explicitly states that FBI Richmond '[c]oordinated with' FBI Portland in preparing the assessment."
>
> "Thus, it appears that both FBI Portland and FBI Los Angeles field offices were involved in or contributed to the creation of FBI's assessment of traditional Catholics as potential domestic terrorists," Jordan added.
>
> "First, they went after moms and dads at school board meetings. Now, they're going after traditional Catholics. When's it going to stop?" Jordan told The Daily Signal.

I think it's time for taxpayers – the people who pay the salaries of the FBI employees – to

ask whether we are getting good value for the money we are paying.

Remember this story from Daily Wire?

> FBI agents reportedly raided the home of a pro-life activist in Pennsylvania on Friday and arrested him.
>
> A group of between 25 and 30 FBI agents raided the Bucks County, Pennsylvania, home of pro-life activist Mark Houck early Friday morning, his family told LifeSite News. Houck is the leader of a nonprofit group that provides sidewalk counseling at abortion clinics in Philadelphia.
>
> […]"The kids were all just screaming," Houck's wife, Ryan-Marie, told LifeSite. "It was all just very scary and traumatic."
>
> Ryan-Marie Houck told the outlet that the group of agents in SWAT gear arrived in 15 vehicles outside the family home at around 7:05 a.m. Friday morning. The agents quickly surrounded the house and began pounding on the door, demanding they open up. Houck reportedly tried to get the agents to calm down, noting that his seven children were scared, but the agents kept shouting. "[T]hey had big, huge rifles pointed at Mark and pointed at me and kind of pointed throughout the house," his wife said.
>
> Houck and his wife asked the agents why they were there, to which the agents allegedly replied that they were there to arrest him. His wife asked for a warrant, but "they said that they were going to take him whether they had a warrant or not," Ryan-Marie Houck recalled.

What did he do to get his house raided by 25-30 armed FBI agents in 15 vehicles?

This:

> According to his wife, Houck was providing sidewalk counseling at abortion centers in Philadelphia last year, and had taken his then 12-year-old son. On multiple occasions over weeks, a "pro-abortion protestor" allegedly shouted vulgarities and insults at the boy. Houck repeatedly told the protestor not to speak to his son, but the protestor continued to encroach on the boy's personal space, still spewing vulgarities. Finally, Houck shoved the man away, causing him to fall down. The protestor was not injured, but tried to sue Houck. Though the case was thrown out this summer, it was somehow picked up by the DOJ, Ryan-Marie Houck said.

Why would we have people who are showing this high level of dishonor and immorality in federal law enforcement? Isn't it time to fire them all and start from scratch, hiring people who actually have some fidelity, bravery and integrity?

Knight and Rose Show – Episode 36: Are All Religions the Same, Part 4

August 12, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 36 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose continue our discussion on how to choose a worldview. We discuss a specific and early passage from the Bible about the Messiah, and whether Jesus is the best match. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 36:

Episode Summary:

Wintery Knight and Desert Rose continue their discussion about whether all religions are equally valid paths to God. In this episode, we look at a passage from the Bible that makes many specific predictions about the Messiah. We'll discuss whether Jesus is a good match for the predictions in the passage. Then we respond to objections from a well-known skeptic. This episode is the fourth in a five-part series.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

William Lane Craig debates atheist Lawrence Krauss: Does God Exist?

August 13, 2023 | by Wintery Knight | Link | Original Link

Here is the video from the third debate from Dr. William Lane Craig's speaking tour in Australia.

Format:

- William Lane Craig (15 min)
- Lawrence Krauss (15 min, but was actually 21:40)
- Moderated discussion
- Question and answer

Dr. Graham Oppy, the moderator, is a well-known atheist philosopher. He let Dr. Krauss speak for 21 minutes and 40 seconds, which is why my summary of Krauss is so long.

The video:

Summary

After careful consideration, I decided not to be snarky at all in this summary. What you read below is what happened. There may be some small mistakes, but I will fix those if people tell me about them. I also included some quotes and timestamps for the more striking things that Dr. Krauss said.

The debate itself starts at 4:50 with Dr. Craig's opening speech. He does use slides to show the structure of his arguments.

Dr. Craig's opening speech. (4:50)

1. The kalam cosmological argument:
    - God is the best explanation of the origin of the universe
    - The Borde Guth Vilenkin theorem supports the absolute beginning of the universe
    - Even if our universe is part of a multiverse, the multiverse itself would have to have an absolute beginning
    - Speculative cosmologies try to challenge the Big Bang theory, but none of them – even if true – can establish that the past is eternal
    - Only two types of things could explain the origin of spece, time, matter and energy – either abstract objects or minds
    - Abstract objects do not cause effects, but minds do cause effects (we do it ourselves)
    - A mind is the best explanation for the origin of the universe
2. The unreasonable effectiveness of mathematics:
    - The underlying structure of nature is mathematical – mathematics is *applicable* to nature

    - Mathematical objects can either be abstract objects or useful fiction
    - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
    - But a divine mind that wants humans to understand nature is a better explanation for what we see
3. The cosmic fine-tuning for the existence of intelligent life
    - There are two kinds of finely-tuned initial conditions: 1) cosmological constants and 2) quantities
    - These constants and quantities have to be set within a narrow range in order to permit intelligent life
    - There are three explanations for this observation: law, chance or design
    - Law is rejected because they are put in at the beginning or matter – they don't emerge from matter
    - Chance must be rejected, because they odds are just too long unless you appeal to a world-ensemble
    - We do not observe what the world ensemble hypothesis predicts that we should observe
    - Design is the best explanation for finely-tuned constants and quantities
4. The existence of objective moral values and duties
    - Our experience of morality (values and duties) is that it is objectively real and incumbent on us
    - When someone goes into a classroom and shoots at innocent children, that is objectively wrong
    - On naturalism, moral values and moral duties do not exist – they are conventional and variable by time and place
    - The best explanation for the existence of objective moral values and duties is that God exists
5. The historicity of the resurrection of Jesus
    - There are three widely-accepted facts that are best explained by the resurrection hypothesis
    - 1) the empty tomb, 2) the post-mortem appearances, 3) the early church's belief in the resurrection
    - Naturalistic attempts to explain these 3 boilerplate facts fail
    - The best explanation of the 3 minimal facts is that God raised Jesus from the dead
6. The immediate experience of God
    - Belief in God is a "properly basic" belief – rational even without arguments because of experience of God

Dr. Krauss' opening speech. (21:12)

Slides: (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14)

1. Religious pluralism I

    - There have been lots of different gods created by people through history
    - We've gotten rid of all of them by understanding how the universe works by doing science
    - Religion is just stories, and the stories are inconsistent with how the universe works
2. Progress of naturalistic science I
    - Newtonian physics refutes the idea that angels push planets around
    - Darwinian evolution refutes design arguments, including the one that Dr. Craig presented (24:10)
    - Biochemistry hasn't explained how life originated, but we will have the solution soon
    - Physics shows us that matter can be created and destroyed without need a God
    - Physics shows us that universes can be created and destroyed "no problem"
3. Religious pluralism II
    - Since we have been able to disprove all the gods we've invented, why hang on to the last one
    - It's unlikely that the God that Dr. Craig presented exists, because we disproved all the others he didn't present
4. Hiddenness of God
    - There is a complete lack of evidence for the other 999 gods, so how likely is it that the God Dr. Craig presented exists
5. Religious pluralism III
    - There are inconsistencies between various religions, so therefore there can be no religion that is right
6. Progress of naturalistic science II
    - Peasants had a very low level of knowledge about the world and they believed in God
    - But our level of knowledge has increased over time, so we shouldn't believe in God now
    - Peasants thought that the Earth orbited the Sun, but this is now known to be false
    - The Scriptures said that the Earth orbited the Sun, but now we know that's false from science
7. Christianity plagiarizes from other religions I
    - There is nothing new or special about Jesus
    - He's just as unpleasant as all the other gods
    - Everything particular to Jesus occurs in other religions
8. Catholics are inconsistent about what they believe
    - I'll bet most Catholics don't really believe in transubstantiation
    - I'll bet most Catholics don't really believe in the virgin birth
9. The resurrection is copied from many other religions
    - Dionysus, Osiris, etc.

10. There is no evidence for the resurrection
    - The stories about Jesus were written “decades or hundreds of years after the fact”
    - The stories are inconsistent with each other
    - Dr. Craig tells me that historical Jesus scholars all accept that the resurrection happened
    - That’s like saying that all alien abductions experts agree that alien abductions happened
    - It’s unreasonable to think that the resurrection happened because no one saw it happen
    - I accept that people reported on appearances, but hallucination theory can explain that
11. The timeline for the creation and incarnation are all wrong
    - The creation, planet formation, hominids, incarnation, etc. all take place in the wrong times
    - If God knew what he was doing, he would done everything at better times to be more efficient
12. David Hume’s argument against miracles is sound
    - Extraordinary claims require extraordinary evidence – nothing wrong with this argument
    - Miracles are really just coincidences
    - Catholic apparitions at Lourdes disprove the historical argument that Dr. Craig made for the resurrection
13. God is petty and jealous
    - God shouldn’t demand that we trust him, esteem him and consider his character when we make decisions
    - The atoning death of Jesus for the sins of the world also makes no sense
14. Belief is based on geography
    - What you believe is clearly correlated with where you are born
    - There is even an Islamic clone of Dr. Craig who “uses the exact same arguments” that he does to prove Islam
    - Belief in God is decreasing in the Internet-accessible world
15. Science can develop morals without God
    - Reason is able to guide our actions to be moral
    - Morality evolves over time, so there is no objective morality
    - Catholicism teaches things that are immoral
    - Some things are prohibited by biological revulsion, such as incest
    - But if a brother and sister have sex using condoms “is that morally wrong? I can’t say it is frankly” (37:24)
16. Dr. Craig is irrational
    - “I came here convinced based on my past interactions and his writing that Dr. Craig was a dishonest Charlatan”
    - “Any argument that validates God is reasonable to him”

    - “And any argument against it is not only unreasonable but wrong and worth distorting”
    - “Because it must be wrong – he’s decided the answer in advance”
17. Dr. Craig is immoral
    - Dr. Craig thinks it is OK for God to command that Canaanite children are killed
    - “So in fact if they were Canaanite children in that schoolroom that he talked about then it would be OK”
    - It’s not reasonable to justify genocide in that way, but Dr. Craig is willing to go to those lengths
18. The cause of the origin of the space time universe need not be God
    - Dr. Craig says that if there is an explanation for the origin or space, time, matter and energy it must be God
    - But it could just as easily be turtles or Zeus
19. Dr. Craig misrepresents the Borde Guth Vilenkin theorem
    - Alexander Vilenkin wrote me an e-mail that says that the theorem doesn’t work in all cases
    - “Dr. Craig is so convinced that these arguments must be true that he won’t listen to the fact that they’re not”
20. Darwinian evolution explains the fine-tuning
    - “Life was fine tuned – we got rid of it with Darwin”
    - Mutation and natural selection explain the cosmic fine-tuning argument that Dr. Craig presented
21. Suboptimal design disproves the fine-tuning argument
    - “We get back aches” therefore “This argument that [the universe] is fine-tuned for life is nonsense”
22. William Lane Craig can be proven to exhibit homosexual behavior using logical arguments
    - Look, you can construct arguments that are clearly wrong
    - Premise 1: “All mammals exhibit homosexual behavior”
    - Premise 2: “William Lane Craig is a mammal”
    - Seems to be saying that logical arguments can prove false things “it’s nonsense”
23. Dr. Craig distorted a podcast that some group made on pain receptors
    - Dr. Craig’s faith is so strong that it causes him to distort what this group said

Discussion: (44:35)

I will not be summarizing everything that was said, just a few main points.
The segment from 52:18 to 57:12 about the Vilenkin e-mail on the BVG theorem is a must-see. Krauss is standing up and gesticulating while Craig is calmly trying to quote a paper by Vilenkin that shows that Krauss is misrepresenting Vilenkin. Krauss constantly interrupts him. After a while, when Craig exposes him as having misrepresented Vilenkin and gets him to admit that all current eternal models of the

universe are probably wrong, he quietens down and can't even look at Craig in the face.

Cosmological argument:

- Craig: The e-mail says any universe that is expanding, on average, requires a beginning
- Craig: There are two models – Aguirre & Gratton and Carroll & Chen – where there is a period of contraction before the expansion
- Craig: The two models are the ones cited in the e-mail that Dr. Krauss showed
- Craig: In the very paper by Vilenkin that I cited, he says that both of those models don't work
- Krauss: (agitated and interrupting) Vilenkin said that they have to make an assumption about entropy that they have no rationale for
- (as Craig starts to talk Krauss makes an exaggerated, disrespectful gesture and sits down in a huff)
- Craig: Yes, an unwarranted assumption means that they don't have EVIDENCE for their theories being correct
- Krauss: (agitated and interrupting) "All the evidence suggests that the universe had a beginning but WE DON'T KNOW!!!!!!!" (raising his voice)
- Craig: I'm not saying that we know that the universe had a beginning with certainty
- Craig: I am saying that the beginning of the universe is more probably true than false based on the evidence we have
- Craig: And you agree with me about that – you think the universe had a beginning
- Krauss: (agitated and interrupting) (Unintelligible)
- Moderator: One at a time
- Craig: In your Vilenkin e-mail slide, at the end of the paragraph where the two models are mentioned that Vilenkin specifically shows…
- (I am guessing that Craig is going to ask why so much of what Vilenkin wrote has been cut out of the e-mail that Krauss showed)
- Krauss: (agitated and interrupting) Because it was technical…
- Moderator: Lawrence! Hang on a sec!
- Craig: He specifically shows that these models are not past eternal, and that they require a beginning just like the others…
- Krauss: (agitated and interrupting) We can do the math if you want
- Craig: Now wait. I couldn't help notice that there on your slide there was a series of ellipsis points indicating missing text…
- Krauss: (agitated and interrupting) "Yeah, because it was technical!"
- Craig: "I wonder what you deleted from the original letter"
- Krauss: (agitated and interrupting) "I just told you!"
- Craig: "Now wait. Could it have been something like this: (reads a quote from Vilenkin) 'You can evade the theorem by postulating that the universe was contracting prior to some time. This sounds as if there is nothing wrong with having contraction prior to expansion. But the problem is that a contracting universe is

highly unstable. Small perturbations would cause it to develop all sorts of messy singularities, so it would never make it to the expanding phase.'
- Craig: "That's Vilenkin."
- Krauss: "In this paper, that's absolutely right"
- Krauss: But it's ok for theories to assume things that we know are wrong – they are still good theories – it's unknown
- (Craig turns away and looks through his papers)
- Craig: "Isn't it true that the only viable quantum gravity models on order today involve a beginning – have a finite past?"
- Krauss: "No"
- Craig: "Well, can you give us one then"
- Krauss: (talks about a variety of possible eternal models) "In my experience in science, all of them are probably wrong"
- Krauss: "You know most theories are wrong, which is why, you know, it's hard"
- Craig: "Right"

I noticed that a huge number of atheist web sites are taking the Vilenkin quote that Krauss used out of context, like this one and this one. There are probably a lot more of them like that, which I think is interesting. That's why we have these debates, I guess. To set the record straight about who accuses people of being dishonest, and who is actually dishonest.

Fine-tuning:

- Krauss tried to argue that he had explained the fine-tuning with the Higgs particle, but Dr. Craig said that only applied to the cosmological constant, not all the other examples of fine-tuning. Krauss said that it wasn't impressive that this universe permitted life and that "It would have been much more surprising if we evolved in a universe in which we couldn't live". Krauss argued the fine-tuning was only for "Life like us". But Dr. Craig explained that the fine-tuning is what allows us to have the basics of any kind of life, like slow-burning stars, chemical diversity, etc. – things that are required for basic minimal life functions in any living system. Craig said that he was working with the current physical laws of this universe (F = ma, etc.) and that he was looking at what changed if we changed those even slightly. Krauss tried to say that if he changed things like the mass of particles then the strength of forces would change. (But the forces aren't laws!) Krauss argued that the cosmological constant would be even better for life if it was zero, and Craig said that the life permitting range did include zero, but that the range of life-permitting values was narrow.

Jesus' existence:

- Craig reponded to the mystery religions charge, the charge that the evidence for the minimal facts is too late/too weak, the charge that grief visions explained the evidence better, and Hume's argument against miracles. Craig brought up the early

creed from 1 Cor 15:3-7 and explained to Krauss that it was 5 years after the events, and that Jewish standards of oral transmission were strong enough to ensure that the creed was reliable, and most of the eyewitnesses would still have been alive.

Audience Q and A: (1:21:09)

The first topic is the grounding of morality. Krauss agrees that there is no objective morality and no objective moral oughts. He also said that that standards of behavior are arbitrary, and that they change over time and they are adopted for promoting social order. Dr. Craig pressed the point that science itself would collapse without ethical values. It assumes them, but cannot ground them.

The next topic was free will. Krauss is a determinist. Craig asked him how he could reconcile moral responsibility with determinism.

The next topic was the effectiveness of mathematics. Krauss didn't have an explanation for it and didn't think it needed one. Then they got into whether the Genesis has been verified by science and whether it is meant to be taken literally.

The next topic was whether philosophy makes any progress. Craig gave the example of verificationism being rejected as too narrow, and self-refuting. Krauss: "I'm going to come to the defense of philosophy for the first time". Craig: "That's amazing!" Krauss said that science provides new knowledge. Craig said there were some things that could be known apart from science.

Poll: few Millennials describe belief in God as “very important”

August 14, 2023 | by Wintery Knight | Link | Original Link

Beliefs of millennials and boomers

I saw a very interesting article that compared the attitudes of young people about things like patriotism, religion, freedom, etc. The numbers are very discouraging.

So, here’s the article from the Washington Examiner:

> The importance of patriotism, faith in God, and having children is significantly lower among millennials and Generation Z, compared to previous generations.
>
> In a new poll conducted by the *Wall Street Journal* and NBC News, nearly 80% of people aged 55-91 said being patriotic is important to them, while only 42% of millennials and Generation Z, or those aged 18-38, said the same. Thirty percent of millennials and Generation Z said religion was important, compared to the over 75% of baby boomers, with just over 30% of millennials and Generation Z saying it was important to have children.
>
> Areas where the younger generations had placed higher importance compared to boomers were tolerance for others and self-fulfillment, with financial security being almost tied between the two age groups.

I’m sure that everyone has seen other polls showing the decline of Christianity, especially in mainline and Catholic churches. Evangelicals are declining less, but they are still declining.

The reason I linked to this post is because I’ve noticed that some Christians don’t really think that there is anything to be concerned about. Everything is working fine, they say. Whatever we’re doing right now must be working, because there is no decline. We’re

winning, and if you think otherwise, then you're just complaining.

Well, I don't really know why there is this decline, all I can do is speak from my experiences. I've met people through my blog who did lose their faith in college, and I've met ex-Christians in my office, too. I asked them what the problem was, and it seems to be that when they were growing up, they often bullied into behaving like a Christian without being able to ask any questions about whether it was true. And then as soon as they got to college away from their parents and pastors, they just dumped the whole thing.

I remember listening to an amazing lecture a while back by Dr. Scott Waller. I think it was a lecture he gave for the Stand to Reason "Masters Series in Christian Thought" in 2003. The lecture was about Postmodernism in the University. Postmodernism is the view that there are no true or false views, especially with "soft" issues like religion and morality. In the lecture, he talked about how a father had sent his devout Christian son to university, and the son had returned an atheist after one semester. I remember Dr. Waller quoting the son telling his parents "I have come to think of my time growing up in this house as the dark period of my life". The father was very upset. So Dr. Waller told him what to do. He said, you're going to need to read a few books on the most common questions that your son has, and then work through the answers with him. And he made a little pile of books about common questions that college students ask, and pushed the pile across the table to the father. And the father pushed the books back across the table to Dr. Waller, and said "well, I don't have time for reading so many books… but could you just talk to him instead?"

Another thing that seems to cause a lot of young people to leave the faith in college is sex. Now if I were trying to convince someone to be responsible about sex, I'd try to show them studies and statistics to explain why there really are best practices to relationships and marriage. For example, I'd might show them that the number of premarital sex partners increases marital instability, or that sliding into cohabitation early tends to make marriages less stable. But this takes a bit of work, and you have to work through it with the young people. I just don't know if parents really reason with their kids like this. But in churches, I've noticed that trying to make an argument using evidence isn't very popular. To me, if I were trying to be convincing to someone about something, I would use evidence. It's just natural to me to make a case if I'm trying to be persuasive. But making a case just hasn't been a really big priority in the churches I've attended.

So, I guess if I had to give any advice to parents of children, or pastors in churches, it would be that Christianity is in decline, and we need to do more than just order people to memorize Bible verses and creeds, go to church, etc. It's hard for me to know what's really going on in everyone's home, and in everyone's church. But I don't think that whatever we're doing in our homes and churches is working to convince young people that belief in God is very important.

Antifa defense attorney warns jury: I'm Antifa and I'm memorizing your faces

August 15, 2023 | by Wintery Knight | Link | Original Link

I thought this story was very interesting. A journalist named Andy Ngo was a victim of Antifa violence, theft and property damage. So he sued them, and had to press his case in a civil trial in front of a jury. Antifa tried to dox the jury members, in order to intimidate them. And the Antifa defense attorney told the jury that she was Antifa, and that she was memorizing their faces.

Here is the full story from The Post Millennial.

> The jury has reached a verdict in the trial of investigative journalist Andy Ngo v. Rose City Antifa and its alleged affiliated members, in which they found both defendants John Colin Hacker and Elizabeth Renee Richter not liable in the civil case brought against them.
>
> Ngo filed a complaint in Portland, Oregon in 2020, claiming assault and other injuries over alleged acts of violence carried out by members of Antifa, which began in 2019. Defandants John Colin Hacker and Elizabeth Renee Richter have been accused by Senior Editor of Post Millennial Andy Ngo of assault, battery, and intentional infliction of emotional distress, which was argued before a civil jury for more than a week at the Multnomah County Courthouse.
>
> Defendants Hacker and Richter, who allegedly work as Antifa's "doxxers," which after identifying Ngo had led to a series of physical beatings on May 28, 2021, were found by the jury on Tuesday not liable for all of these claims. Evidence provided during the trial, along with testimony given by both defendants, asserts Ngo's claims in the complaint.

Just to be crystal clear, Antifa is a fascist group, that seeks to impose fascism on the United States. They are secular leftist domestic terrorists. The attacks on Andy Ngo were caught on video. So there is no doubt about the facts.

The part of this story that was concerning to me was how the defense attorney threatened the jury, and the judge allowed it to happen:

> During closing statements, defense lawyer Michelle Burrows told the jurors that not only does she self-identify as both a progressive and an "anti-fascist," she strongly declared, "I am Antifa" and insisted upon making herself an "I am Antifa" t-shirt, which she said she would wear after the trial.
>
> […]After announcing her retirement and that this would be her last trial, Burrows told the jurors that she "will remember each one of their faces."

I think the lesson here is that this sort of "justice" is now normal in blue cities and blue states. If you live in one of these cities, then you cannot expect fair treatment from the

police and the courts. The time to move to a red state is now. You cannot be paying taxes to people who use that money to persecute you.

How to explain the gospel in less than 1000 words

August 16, 2023 | by Wintery Knight | Link | Original Link

A friend sent me a draft e-mail, that he wrote to a family member, who has rejected historic Christianity for progressive Christianity. He was asked to give the basics of salvation, and his attempt to explain the gospel to her is below. My advice included taking out the Christianese terms. Do you think he did a good job? I think his emphasis on what is not the gospel (what needs to be rejected) makes this a first-class explanation of the gospel.

So, you've asked the 10,000 talent question (alluding to Matthew 18:23-35). You are basically asking me what I think the Gospel is. I'll try to answer that in a minimalistic way, using my own characterization of it rather than just making doctrinal statements.

One must accept that there is a God, who is a higher authority than themselves. How much one must first believe about that God is debatable, but candidate beliefs would be that He is personal (having a mind like, but greater than, ours), powerful, and the creator of this cosmos and everything in it — He owns it all. Our natural intuition is to see beauty, order, complexity, and "design" in nature. There is a difference in belief vs unbelief in that some think it is just the appearance of design and some acknowledge their intuition that it actually is designed.

One must acknowledge their moral intuitions, and recognize that there are actually right and wrong things in this world. It's not just whatever you want to do, or whatever society decides in a given time or culture.

Given that morality is then understood to be a transcendent thing (universal and independent of time and culture), the connection is made to God as the author of this moral law.

One must then recognize that he/she regularly fails to live up to this law, even according to just their meager understanding of it, and even by the standards of morality that they make up for other people.

One must not try to suppress this, or therapize it away. One must recognize there is a problem and real moral culpability. One must recognize that they feel guilty and have self-esteem issues because they actually do have guilt and issues.

One must make the connection between guilt and their standing before God. Being good sometimes and in some ways does not erase the bad you do, past, present, or future. One must be willing to bend the knee to God's will regarding morality.

One must also come to see the moral failure (sin) in their lives as a bad thing that they'd like to be rid of, rather than excusing it as the fault of others, or revelling in it as part of the pleasure of life, or shrugging it off as just "who I am."

One must appeal to God in these matters for both forgiveness and help in living as they

should.

Given that God has provided a champion for the problem that humanity faces (the backstory of which not all will fully know), one whose heart is truly yielded to all these things will naturally and eagerly receive Word of this as Good News. God has solved the seemingly irreconcilable demands of both justice and forgiveness in that champion.

Those with ears to hear will receive this solution — Jesus — and believe what He has done in life and on the cross for their sake — the resurrection being both confirmation of His divine authority and also the sign of the defeat of death which awaits us all, and is the only barrier between us and facing this God whom we fail at every turn. They will believe on (or upon) Jesus as Lord and their means of salvation, surrendering dependence upon their own ideas of self-righteousness and earning the favor of God.

The outward expression that we have understood and accepted these things is that we have made Jesus Lord and committed ourselves to following Him, conform our character to His, resist our sinful inclinations, and are interested in learning all about Who God is and what has been done for us in Christ.

This commitment to the Lordship of Christ naturally leads to the acceptance of subsequent beliefs. If Jesus is indeed Lord, then He holds all authority, and what He said and taught to His followers is our guide — the New Testament. And if this is the divine story, as intended by God for men, then we have reason to believe that it is comprehensible to us, and He will insure (in spite of the fallibility of men and demonic plots) that its essential message will not be lost or corrupted until all things are competed. Given that Jesus affirmed every categorical section of the Old Testament, and claimed to be its promised Messiah, then that, too, is a source of truth and understanding.

Those doctrines that are sometimes characterized as “essential” for salvation, are merely the highlights of this redemption narrative, which are those things being clear and consistent, and which indicate that someone has yielded themselves to the authority of Christ and the scriptures, and understands these things. It is not that believing them is what saves, but they are what the saved naturally come to believe. Confessing them is the tangible, verbal act of affirming the Gospel, but is not necessarily identical to a life committed to putting it into practice, which is saving faith.

Women want to complain to Human Resources because man is reserved at work

August 17, 2023 | by Wintery Knight | Link | Original Link

I have spent over 24 years in information technology, and most of the companies were large IT companies. Large IT companies tend to emphasize diversity, equity, and inclusion more than smaller companies, which have to perform in order to stay afloat. And that means making sure there is an equal balance of genders, ethnicities, etc. in every different area.

Here is a very interesting post on the relationship advice forum of Reddit:

> Hi all I'm posting this on an alt because I know a few of my friends are following me on here and I don't want this spilling out until I have some clear thoughts on what I want to do.

The author – who uses Commonwealth spelling – has a short summary of her post at the top:

> A colleague (27M) joined our firm last year and since then he has had zero issues socialising with the guys we work with but always finds an excuse or says no to hanging out with the girls after work, even if we go out together as a whole he rarely talks to us and its making some of my friends uncomfortable.

And then here is the long version:

> So early last year our firm hired Dan (27M). In the first few weeks he was really quiet and didn't talk much and that's just how we thought he was. Every conversation with him was short and to the point and never deviated from work, asides from pleasantries (Have a nice weekend etc). About 2 months in he started becoming a bit more friendly with the guys in our office and they would hang out every so often and have normal conversations. However, whenever any of the girls in the office tried to do so he would quickly change the conversation back to work or just not reply. Even now after a year of Dan working with us he straight up refuses to socialise with the girls in the office and it is making them feel uncomfortable. He avoids any discussion of himself outside of work related events and future plans and doesn't ask any of the girls either. Where as he is, what I can only assume, pretty good friends with the guys in the office.
>
> Even on work meals out to celebrate events he is only doing the bare minimum when it comes to conversation with the girls where again with the guys he talks to them like there is no problem whatsoever. I don't know if I'm overreacting but one of the girls is considering go to HR about this because she is saying its creating a hostile work environment. Dan treats us like he treats clients we work with; cordial and strictly about business and its wearing thin now.

> Any advice is appreciated.

Many young people today don't see the workplace as being about work. They see it as a time of socializing. And they get angry when people don't socialize with them. They want to be allowed into a man's personal space, even though they are the kind of people who go straight to HR whenever anyone disagrees with them, or refuses to make them happy. Many of these women are single mothers who divorced the father of their kids.

I actually left my last job and took a lower salary job, because I was being harassed by a woman who had *no college degree*. Her official title was "Software Engineer", but she didn't write code. She just supervised deployments to production. She was very attractive, and had had cosmetic surgery done – her chest was super-sized. (I heard her explaining why she did it to one of the Indian workers one day). She was also about 6-8 years older than me. She started to get very angry with me for not giving her attention at work. She would come to my desk and talk about how politically conservative she was (she must have heard that I was conservative). But I didn't want to have anything to do with her.

I blogged previously about a woman who accused a man of grooming her because he didn't want to get more serious with her. Men are getting tired of this. If you know any young women who are wondering why men don't talk to them, maybe it's because many young women are not pleasant or safe to talk to. Even if a particular young unmarried woman is safe to talk to, men will judge her based on the majority of single, unmarried women. It's just not safe for men to have non-business conversations in the workplace with young, unmarried women.

The juice isn't worth the squeeze.

38-year old unmarried model explains what she means by “a decent man” (for marriage)

August 18, 2023 | by Wintery Knight | Link | Original Link

I’ve always been suspicious of women who make a living through their physical beauty. I see a few problems with modeling as a career. First, you don’t have to produce anything useful that requires understanding the real world, like a programmer or a nurse. Second, you focus a lot on your appearance, and that’s not healthy, since it all fades out by age 35 anyway. Women who get a lot of attention for free typically don’t know how to treat men, either. They don’t learn because they don’t have to learn.

With that in mind, here’s an article by an aging 38-year-old model that illustrates the problem:

> Earlier this month I opened the door to a bouquet of flowers.
>
> They were from yet another man who wants to date me. He’s 35, tall, dark and handsome.
>
> […]And this week, as the gifts roll in from admirers for Valentine’s Day — I have already received two…
>
> […]I am 38 and have been single for four years.

So, the first thing to point out about this is that it confirms what I was saying about pretty women. Look at the way she talks about how all these men are paying attention to her. Like it or not, her worldview is going to be conditioned by this attention she’s getting from men. She isn’t having to write code to get attention. Or set a fracture. Or do anything. She just gets it because she was born with good looks. And she doesn’t see that it is her job to 1) prepare her character for attracting a man who wants to commit, or 2) choose men who are interested in commitment. Her job is just to be pretty, and then tell everyone how much attention she’s getting from men. *Men who will not commit to her*. She is mistaking the attention for intent to marry. But men who pay attention to dumb, pretty women don’t intend to marry them. They just want to pump and dump them.

But she doesn’t see her failure to prepare herself for commitment and to prefer commitment-minded men as her problem. On the contrary – her singleness at 38 is *the fault of men being worthless*:

> And I hate to break it to any other single women in their late thirties, but all the decent men in our age bracket have been taken.
>
> […]While I work out every day, these men look a decade older.
>
> Beer bellies, bad manners, little respect for single women and minimal hygiene — I’ve seen it all on the apps.
>
> Over the past four years I’ve been on almost 500 dates trying to find Mr Right.
>
> And while I have become something of an expert on dating apps — last year I got

> a congratulations from Tinder for getting 25,000 likes for my profile — unfortunately, I am still looking for The One.
>
> My theory is all the good men were snapped up when they were young. All that's left is the dregs.

Now, she doesn't think that she is the dregs for being 38 and being completely unsuited to marriage. She thinks that men are the dregs – because they don't have an attractive height and appearance. That's what she's looking for – and that's *the only thing she's looking for*. She's had relationships with men, but they just LIVED WITH HER. They never committed, because she wasn't looking for a man who would commit, she was looking for a man with appearance, height, fitness and hygiene. Someone who looked as good as her.

Doubt me? Read her own words – this is what she values in a man:

> During my 500 dates, the only guy I have seriously dated was my age and had the best hair and teeth in the world.
>
> He even had a "proper" job and took me out for fancy dinners. Alas, he wasn't ready to settle down — or something like that.
>
> Apart from that, there was the guy who looked like Superman on his dating profile but turned up with a long white Santa beard. His body had gone to pot and he was wearing unwashed clothes.
>
> Then there was the wealthy consultant who took me to his club where cocktails were thirty quid a pop. He was generous but knew the value of nothing. Plus, he continually scoffed salt and vinegar nuts on our date — the odour was revolting.
>
> […]Then there are the beer bellies. If a man has one, I know we'll have nothing in common as I'm active…

And so on. Everything is about appearance. She's looking for *exactly what she is herself*: a pretty face. That's what she knows, understands and values. And she has *no idea* that the willingness to commit is not related to external appearances. The important thing for her is the man's *appearance*. And that's why she has 5 billion dates and no commitment. Only a certain kind of man commits. It's going to be related to his personal character – religion, morality, etc. – more than it's related to what she can see with her eyes.

In order for a man to stick with a woman through childbirth and aging, he's going to have to have some reason to value her beyond youth and beauty. And not every man has such reasons. That's why it's the woman's job to do two things. 1) to develop the kinds of character traits that are likely to attract a commitment-minded man, like fitness, femininity, vulnerability, trust, kindness, etc. and 2) to evaluate men and separate the ones who have a worldview that values women for more than youth and beauty.

In the case of Christian men, we are looking for women who have self-control, sobriety, chastity, fidelity, etc. And we are especially attracted to women who take God's goals as their own, and work independently to promote the things that God thinks are valuable.

Women who can defend God’s existence and reputation are highly regarded. Women who put others above their own selfish desires, especially children and animals. Women who are content at home with a non-fiction book. Women who don’t seem to waste money on entertainment, fun and thrills. The woman has to have what commitment-ready men want, and she has to know which men are ready for commitment. SHE CAN’T READ THAT WITH HER EYES OR WITH HER FEELINGS. She’s going to have to ask questions and investigate what he demonstrates about his character with his actions and accomplishments.

New study: “social contagion” is a major factor in teen and young adult gender dysphoria

August 19, 2023 | by Wintery Knight | Link | Original Link

Previously, I had blogged about a small study published in 2018 by Brown University’s Dr. Lisa Littman. That study was controversial, because it falsified the narrative about transgenderism held by secular leftists. The new study, published in March 2023 in Archives of Sexual Behavior, confirms the Rapid Onset Gender Dysphoria theory first advanced by Littman. Let’s take a look.

The study is here, on Springer Link.

Excerpt from the Abstract:

> During the past decade there has been a dramatic increase in adolescents and young adults (AYA) complaining of gender dysphoria. One influential if controversial explanation is that the increase reflects a socially contagious syndrome: Rapid Onset Gender Dysphoria (ROGD).
>
> We report results from a survey of parents who contacted the website ParentsofROGDKids.com because they believed their AYA children had ROGD. Results focused on 1655 AYA children whose gender dysphoria reportedly began between ages 11 and 21 years, inclusive. These youths were disproportionately (75%) natal female. Natal males had later onset (by 1.9 years) than females, and they were much less likely to have taken steps toward social gender transition (65.7% for females versus 28.6% for males). Pre-existing mental health issues were common, and youths with these issues were more likely than those without them to have socially and medically transitioned.
>
> Parents reported that they had often felt pressured by clinicians to affirm their AYA child’s new gender and support their transition. According to the parents, AYA children’s mental health deteriorated considerably after social transition.

Breitbart reported about the study and noted:

> When asked if their child had friends who “came out as transgender around the same time,” 55.4 percent said “yes,” with that response being significantly higher for females, (60.9 percent) than it was for males (38.7 percent).
>
> […]The study also revealed that parents said they oftentimes felt pressured by clinicians to go along with their child’s new gender identity and support their transition. The parents added that their children’s “mental health deteriorated considerably after social transition.”
>
> […]Parents also estimated that before developing gender dysphoria, their child was spending an average of 4.5 hours per day “on the internet and social media.”

> When asked whether a stressful event in their child's life may have contributed to the onset of gender dysphoria, 72.6 percent of parents answered "yes."

One of the differences between men and women, in my experience, is that the majority of men tend to generate their worldview by making plans that are likely to achieve goals, whereas the majority of women tend to get their goals from the culture, and pursue those goals by doing what feels good "in the moment". I have been told this by women who were never like this, and by women who grew out of this once they experienced failure. That's why transgenderism is especially problematic for girls, because if it is being spread by social cues and pressures, then girls are typically going to be more susceptible to that than boys.

Let's talk about the previous study.

Here's how the study was first reported by Science Daily:

> This month, a Brown University researcher published the first study to empirically describe teens and young adults who did not have symptoms of gender dysphoria during childhood but who were observed by their parents to rapidly develop gender dysphoria symptoms over days, weeks or months during or after puberty.
>
> […]The study was published on Aug. 16 in *PLOS ONE*.

Peer pressure / The Internet:

> The pattern of clusters of teens in friend groups becoming transgender-identified, the group dynamics of these friend groups and the types of advice viewed online led her to the hypothesis that friends and online sources could spread certain beliefs.
>
> [….]"Of the parents who provided information about their child's friendship group, about a third responded that more than half of the kids in the friendship group became transgender-identified," Littman said. "A group with 50 percent of its members becoming transgender-identified represents a rate that is more 70 times the expected prevalence for young adults."

Mental disorders / traumatic events:

> Additionally, 62 percent of parents reported their teen or young adult had one or more diagnoses of a psychiatric disorder or neurodevelopmental disability before the onset of gender dysphoria. Forty-eight percent reported that their child had experienced a traumatic or stressful event prior to the onset of their gender dysphoria, including being bullied, sexually assaulted or having their parents get divorced.

This article at The Federalist had a few examples to illustrate the conclusion of the study. I'll pick two.

>

> The study includes other eye-opening information, such as case studies of several children's stories.
>
> - "A 14-year-old natal female and three of her natal female friends were taking group lessons together with a very popular coach. The coach came out as transgender, and, within one year, all four students announced they were also transgender."
> - "A 14-year-old natal female and three of her natal female friends are part of a larger friend group that spends much of their time talking about gender and sexuality. The three natal female friends all announced they were trans boys and chose similar masculine names. After spending time with these three friends, the 14-year-old natal female announced that she was also a trans boy."

I thought this quote from that article was interesting as well, given the culture's obsession with "bullying", which is a nebulous term that can mean actual bullying, or mere disagreement.

> The study also may indicate that school "anti-bullying" programs typically created by LGBT activist organizations such as the Human Rights Campaign may help accelerate children identifying as transgender by pushing peers and authority figures to profusely express their support.

Coming out as transgender means instant fame and popularity, because you're a victim, and everyone has to be nice to you… or else:

> "Great increase in popularity among the student body at large. Being trans is a gold star in the eyes of other teens," wrote one parent on the study response form. Another wrote, "not so much 'popularity' increasing as 'status' … also she became untouchable in terms of bullying in school as teachers who ignored homophobic bullying …are now all at pains to be hot on the heels of any trans bullying."

So becoming transgender has social rewards, especially for people who are being bullied. White girls are constantly being bullied for their race in public schools, so identifying as transgender is a quick and easy way for them to get out of the oppressor class and into the victim class

Is the “RNA world” hypothesis a good naturalistic explanation for the origin of life?

August 20, 2023 | by Wintery Knight | Link | Original Link

A very good book on science apologetics was published recently, called “The Comprehensive Guide to Science and Faith: Exploring the Ultimate Questions About Life and the Cosmos“. Well, there’s an ongoing series of posts about the book at Evolution News, and one of them caught my eye. They are talking about the origin of life, and what’s needed to create life from non-life.

Here is the post from Evolution News.

The article starts by explaining the what is required to show how non-living components could be organized into a living system:

- plausible biochemical paths from individual bio-building blocks like amino acids or nucleic acids to functional polymers such as proteins and DNA.
- ways to speed up chemical reactions that are naturally slow.
- the ordering of amino acids in proteins and nucleotide bases in RNA and DNA that allows them to function properly.

The leading naturalistic explanation to solve these problems is called the “RNA world” hypothesis:

> The most popular proposal for the first self-replicating molecule is RNA — where life was first based upon RNA carrying both genetic information (akin to modern DNA) and performing catalytic functions (akin to modern enyzmes), in what is termed the *RNA world*.

The article lists several problems with the RNA world hypothesis. Dr. Walter Bradley lists two of those problems.

First, the assembly of RNA requires intelligent design:

> First, RNA has not been shown to assemble in a laboratory without the help of a skilled chemist intelligently guiding the process. Origin-of-life theorist Steven Benner explained that a major obstacle to the natural production of RNA is that “RNA requires water to function, but RNA cannot emerge in water, and does not persist in water without repair” due to water’s “rapid and irreversible” corrosive effects upon RNA.[3] In this “water paradox,” Benner explains that “life seems to need a substance (water) that is inherently toxic to polymers (e.g., RNA) necessary for life.”[4]
>
> To overcome such difficulties, Benner and other chemists carefully designed experimental conditions that are favorable to the production of RNA. But Robert Shapiro explains that these experiments do not simulate natural conditions: “The

> flaw is in the logic — that this experimental control by researchers in a modern laboratory could have been available on the early Earth."[5] Reviewing attempts to construct RNA in the lab, James Tour likewise found that "[t]he conditions they used were cleverly selected," but in the natural world, "the controlled conditions required to generate" RNA are "painfully improbable."[6] Origin-of-life theorists Michael Robertson and Gerald Joyce even called the natural origin of RNA a "Prebiotic Chemist's Nightmare" because of "the intractable mixtures that are obtained in experiments designed to simulate the chemistry of the primitive Earth."[7] In the end, these experiments demonstrate one thing: RNA can only form by intelligent design.

The second problem is that the RNA world hypothesis is that it requires the existence of a self-replicating RNA molecule in order to get started. But this self-replicator contains a lot of biological information that is beyond the reach of chance to produce:

> The most fundamental problem with the RNA world hypothesis is its inability to explain the origin of information in the first self-replicating RNA molecule — which experts suggest would have had to be at least 100 nucleotides long, if not between 200 and 300 nucleotides in length.[10] How did the nucleotide bases in RNA become properly ordered to produce life? There are no known chemical or physical laws that can do this. To explain the ordering of nucleotides in the first self-replicating RNA molecule, origin-of-life theorists have no explanation other than blind chance. As noted, ID theorists call this obstacle the information sequence problem, but multiple mainstream theorists have also observed the great unlikelihood of naturally producing a precise RNA sequence required for replication.

Whenever I sit down to write some code or to write a blog post, I can start with one letter, then add another, then add another, until I have a functioning program, or a legible blog post. It might be possible for random chance to make a meaningful word out of 3 letters, like "the" or "hat". But it's not possible to make a self-replicating RNA molecule that way. The required sequence is just too long, and every letter has to be just right in order for it to function as a self-replicating system. The simplest self-replicating molecule is extremely complicated.

Anyway, check out the article, and if you want to read all about Walter Bradley (my role model), there is a new book out about him called "For a Greater Purpose: The Life and Legacy of Walter Bradley" which I finished, and it was great.

Hawaiian Electric neglected wildfire risk to focus on green energy

August 21, 2023 | by Wintery Knight | Link | Original Link

I was reading an interesting article from J. Warner Wallace last week that he wrote for Townhall. In the article, he said that the real driver behind people turning away from truth, the big questions, religion in general, etc. was because of a desire for autonomy. People have enormous confidence about their desires, believing that following their desires is the surest way to reach happiness. But is it true?

In blue states, people consistently vote for leaders who make them feel good. Voters want to feel good, and they want to look good to other people – virtue signaling. And they are sure that feeling good and looking good will produce good results.

Hawaii is one of the bluest states in the country. There, the people consistently vote for policies that are much more progressive than the policies of those terrible red states. Policies like re-making the power grid to be driven by renewable green energy sources.

Here's what happened next, as reported by Daily Wire:

> Hawaiian Electric is under scrutiny for allegedly slow-walking modernization and repairs of its electrical grid before the fire that ripped through the island of Maui last week.
>
> Hawaiian Electric is Hawaii's principle electric utility, providing power to roughly 95% of the state. Financial disclosures and reports show the company worried about the state of its electrical grid, and specifically the risk of wildfires, but devoted resources to building out the utility's green energy network with limited action to mitigate fire risk, according to The Wall Street Journal.

In 2015, the Hawaii State Legislature amended the State's Renewable Portfolio Standards to establish the nation's first goal of 100% renewable energy:

> The focus on Hawaii's energy priorities over the past decade has been dominated by its push for green energy. The state enacted a first-in-the-country law in 2015 mandating that Hawaii's grid be powered by 100% renewable energy by 2045.
>
> In 2021, regulators finished a top-to-bottom restructuring of the regulatory framework to guide that transition, offering Hawaiian Electric large bonuses for finishing green energy projects on time, and threatening the utility with fines if it missed deadlines.
>
> […]"You have to look at the scope and scale of the transformation within [Hawaiian Electric] that was occurring throughout the system," Mina Morita, the 2011-2015 chair of the state utilities commission, told WSJ. "While there was concern for wildfire risk, politically the focus was on electricity generation."

The government, which was elected by the people, mandated that the energy company

would make going green their highest priority. Politically, the focus was on global warming alarmism. Not on lowering electricity prices for consumers. And not on protecting taxpayers from wild fires.

I had a quick look on LinkedIn at the resume of the CEO of the energy company, and she had no earned degrees in science, engineering or technology. She has a bachelors degree in accounting. Good degree, but not for the top job in energy production. Why is she the CEO of an energy production company? Will she face consequences for her failure to perform?

Teacher unions telling teachers to inject gender identity into classrooms

August 22, 2023 | by Wintery Knight | Link | Original Link

I keep seeing LIbsOfTikTok in my Twitter feed, sharing videos posted by teachers who are advocating for pushing gender ideology in the classrooms. I used to wonder what was causing all of these teachers to sexualize children who aren't even old enough to drive a car. It turns out that those teachers are being coached by teacher unions.

Here's the story from ABC local news:

> A new report accuses the two largest teachers unions in the United States of training educators on how to include "gender identity politics" in their curriculums and classroom practices.
>
> The National Education Association (NEA) and the American Federation of Teachers (AFT) together represent nearly 5 million public school teachers nationwide. In a report published Wednesday by the Defense of Freedom Institute (DFI), the two unions are accused of encouraging teachers to discuss gender identity and sexual orientation with students regardless of parents' wishes.
>
> The report details a July conference where AFT allegedly "coached its members on how to inject gender identity politics" into classrooms. The conference, titled the Together Educating America's Children (TEACH) conference, was comprised of sessions on "strategies to improve teaching and learning."
>
> Two of the sessions included "Affirming LGBTQIA+ Identities in and out of the Classroom" and "The TGNCNB [transgender, gender nonconforming, nonbinary] Inclusive School and Classroom," according to DFI's report.

I've blogged before about how teacher unions are HUGE supporters of the Democrat party, and they are always getting involved in politics to undermine parental rights. They don't want children to inherit a worldview from their parents.

The article notes:

> At a rally earlier this year, NEA leaders called Florida's Parental Rights in Education Act "extremist," according to DFI's report. The Florida legislation requires, among other things, that teachers in the state refrain from discussing gender identity and sexual orientation with students in third grade and younger.
>
> […]Last month, NEA issued guidance on placing "inclusive symbols" in classrooms, encouraging teachers to challenge policies prohibiting Pride flags and Black Lives Matter imagery. The guidance followed the union's inclusion of "Gender Queer" on its summer reading list, a book that has been removed from schools nationwide due to its sexually explicit contents.

When I was a young man, still in high school, I actually wanted to become an English teacher. My Dad was pushing me to go into computer science. So he enrolled me in a university course taught during evenings, by a lesbian woman. That quickly cured me of wanting to become a teacher – English departments were absolute hotbeds of progressive politics, even 25 years ago.

Open Secrets Teacher Unions

I did some searching around and found that there was no way I was going to be able to work without paying dues to the teacher unions, too. And I knew enough to know that the teacher unions were far left. I just didn't want to get roped into a situation where my income was being taxed to pay for abortion and LGBT policies. So, I decided not to become a teacher. And that was a great decision.

Mom claims she was fired by real estate broker Compass after opposing sex education

August 23, 2023 | by Wintery Knight | Link | Original Link

Sometimes, people ask me why I have an alias, and my first answer is that I want to be able to speak my mind without becoming a victim of the secular leftist. What might they do to me? Well, aside from the obvious – threats, vandalism, violence, theft, murder – they might also like to go to my employer and ask to have me fired. And that that actually happens a lot in America.

Here's an example of it, reported by Newsweek:

> California woman says she lost her real estate job after speaking out against a new sex education curriculum at a school board meeting.
>
> Janet Roberson, a mother of three, said she had spoken out at a meeting of the Benicia Unified School District's board on April 20 to express her concerns about the program of study.

Her employer is Compass, a real estate broker:

> Roberson said that after she spoke at the meeting in April, critics launched a campaign to get her fired from real estate broker Compass, according to a video posted on her website.
>
> […]Roberson said the treasurer of the Progressive Democrats of Benicia also contacted Compass and gave a May 1 deadline for answers to questions about Roberson's conduct.
>
> "Sure enough, like clockwork, Compass informed me that I could no longer be associated with them by her deadline date," she said in her video.
>
> "How can it be that in America, a mom who speaks at a school board meeting can be targeted and canceled, losing her livelihood?"

It appears to me as though Compass made their decision based on her personal, political or social beliefs. That's not a company for Christians and conservatives to do business with.

The Benicia Unified School District doesn't seem to be open to engaging in dialogue with parents about their programs. They don't seem to want to offer a platform to parents to speak about the school curriculum. They seem to want to refuse to hear and consider all voices when making decisions about what to teach.

It's important for Christians to understand that it's not optional for us to speak our minds, and try to influence people around us. I know so many Christians who consider it a virtue to keep their mouths shut. The trick is to make a difference without letting the intolerant, bigoted fascists of the secular left come after you. Never tell them your real name, where you live, or where you work. Don't let yourself be photographed. Don't put photographs

of yourself on the Internet. It’s really important to oppose the secular left in a disciplined way.

British nurse Lucy Letby gets life in prison for murdering 7 infants

August 24, 2023 | by Wintery Knight | Link | Original Link

People on the secular left often struggle to rationally ground basic morality. Their version of "morality" starts with their own personal autonomy – and that's absolute. Then, try to paint a portrait of themselves as "moral", despite their support for abortion, infanticide, divorce, sex-trafficking children, etc. How can you claim to be moral when your morality is "survival of the fittest"?

Here's the story of a woman who didn't take the right to life seriously – reported in Daily Wire:

> A British nurse convicted last week of murdering seven infants between 2015 and 2016 and attempting to murder six more has been sentenced to life in prison.
>
> The 33-year-old nurse, who will not be named per Daily Wire policy, became the United Kingdom's worst serial killer of babies in recent times after she was convicted in 14 out of the 22 counts she faced, People Magazine reported. On Monday, she was sentenced to life in prison without the possibility of parole.
>
> […]The nurse's trial took ten months to complete at Manchester Crown Court, with the 11-person jury failing to reach verdicts on six additional counts of attempted murder. She was also found not guilty on two counts of attempted murder.
>
> The woman, who worked as a nurse in the neonatal ward of the Countess of Chester Hospital in Chester, England, would inject air into babies' blood and stomachs, overfeed them with milk, physically assault them, and poison them with insulin, CNN reported.

If there is one thing common to every person on the secular left, it's their absolute *hatred* of being held accountable. People on the secular left hate to be judged, and they oppose all punishment for moral crimes. They feel that they should be able to do what they want, and that their own personal desires should be respected by everyone as "objective morality".

> And this woman is no exception:
>
> The nurse didn't appear for sentencing, which has led some to call for changes in law to ensure that a guilty person is present for their sentencing hearing, CNN reported. During sentencing, Justice James Goss explained that the nurse deserved life in prison because her crimes were "a cruel, calculated and cynical campaign of child murder involving the smallest and most vulnerable of children."
>
> He spoke as if the nurse were in the courtroom and ordered his remarks and all

> victim impact statements to be sent to the convicted serial killer.
>
> “There was a deep malevolence bordering on sadism. During the course of this trial you have coldly denied any responsibility for your wrongdoing. You have no remorse. There are no mitigating factors,” he said, according to CNN.

Honestly, I’m surprised to hear words like this come out of a United Kingdom judge. They’re not a country that’s known for holding evil people accountable.

I thought this part was interesting:

> Text messages and social media activity also coincided with the attacks, some of which seemed to live blog the events. This activity, according to CPS, showed the nurse had an “intrusive curiosity about the parents of babies she had harmed.”

Who knows what the motives of this woman are? There is a lot of hostility towards children out there today, especially among feminists. Many of them are bitter about being childless in their 30s. Others are committed to global warming alarmism, and believe that it hurts the planet to have children. Others are concerned about “overpopulation” – especially when people of certain races have “too many” children.

This women doesn’t have to be “evil” or “crazy”. She could just be acting rationally according to standard secular leftist beliefs. She could just be lacking any of the boundaries that come from the Judeo-Christian worldview. Those boundaries are disappearing now, so we should expect to see more secular left “morality” like this happening more and more.

California man chooses to make a baby with a progressive woman, disaster ensues

August 25, 2023 | by Wintery Knight | Link | Original Link

So, there was a time when men could be less picky with women, and everything would be fine. The woman would not turn crazy, and attack the man. The government would not step in and get involved. But today, men need to accept that times have changed. And men have to be more careful about who they marry. And the government and the courts are much more likely to step in an ruin the man's life.

Here's a story Rose sent me from Daily Wire. (By the way, she is still coughing a lot, and not ready to record part 3 of Christianity and Socialism).

Excerpt:

> A San Francisco dad is fighting a nightmarish custody battle for his toddler son, who he says is being raised "non-binary" by his mother, who claims to be genderless.
>
> Harrison Tinsley, 31, is seeking full custody of his son Sawyer, 3, who currently spends half of his time with Tinsley's ex-girlfriend, the boy's mother. Sawyer's mother, 30, uses they/them pronouns for the boy and puts him in dresses and makeup, photos provided by Tinsley appear to show. Sawyer also told his dad that his mother put him in princess shoes on a trip to Disneyland, a video of the conversation shows. Sawyer's mother may have thought about raising her son "non-binary" before he was even born. In what appears to be a Facebook post during her pregnancy, she refers to Sawyer as "my sweet baby boy or girl or neither if that's what you feel."
>
> Sawyer himself rebels against his mom and insists he is a boy, his dad says.
>
> […]Gender confusion is not Tinsley's only concern for his son — he is also concerned for the child's immediate safety.
>
> Back in 2021, Sawyer's mother was arrested and booked in jail for felony child endangerment when then-1-year-old Sawyer fell off a bed during an altercation between the mother and her roommate, police body cam footage viewed by The Daily Wire shows.
>
> The San Francisco police gave custody of Sawyer to the mother's two dads for the night and put her on a psychiatric hold at the hospital. She was ultimately not convicted of a crime.

This sounds terrible, but what can single men learn from this? Well, we recently had a story where an Army vet was charged and convicted of murder for defending himself from an Antifa terrorist who was armed with an AK-47. Why? Because this happened in Austin, TX, which is incredibly liberal. So, step one would probably be to be careful where

you live. Harrison lives in California.

Second, he shouldn't be making babies with women he's not married to. The whole point of marriage is to make sure that there has been some communication and vetting before you get into the bedroom and make babies. Marriage protects babies from parents who are only interested in fun. Babies aren't fun. That's why we used to make people commit before having them.

This, look at this woman's background. I always ask women "are your parents still married?" when taking them out on dates. It's a very important question.

Now watch this:

> The mother herself now identifies as "non-binary," although she did not when she was dating Tinsley, court documents show.

Fourth, she runs an ultra-progressive non-profit:

> LGBT issues have been a major theme in her life — she was adopted and raised by two older gay men in the Bay Area, where she still lives and runs an ultra-progressive non-profit.

What a woman does for a living is a really important clue to their personality. Don't get involved with ultra-progressive women. Recent studies show that white progressive women have extremely high rates of mental illness and drug use.

Speaking of mental illness, here's number five:

> During the psychiatric hold at the hospital, Sawyer's mother told a psychiatrist that she has borderline personality disorder, a condition that can involve impulsive and risky behavior, the psychiatrist later testified in San Francisco family court.
>
> Child Protective Services investigated the police incident and concluded that Sawyer's mother was not a safety threat to her son. Her mental health was a "complicating factor, but not a safety issue," reads the CPS report, provided by Tinsley.
>
> Sawyer's mother was on five different medications for PTSD, mood stabilization, ADHD, and anxiety at the time of the CPS investigation, the CPS report said.
>
> Sawyer's mom can be heard on the police body cam footage mentioning that she drank alcohol earlier the same day.

You can't count on government and courts to do the right thing for children. They don't see women as guilty, they don't punish them as long as they punish men, and they don't think that male leadership is good for children. ("Smash the patriarchy") This is why you don't make babies with progressive women. They will do terrible things to your children (abortion, transing, let live-in boyfriends molest them, etc.) and no one will listen to you. I blogged about a case from British Columbia, Canada, and then another case from California.

Look:

> Sawyer's pediatrician, Dr. Danielle Alkov, works at a youth gender clinic that offers hormone therapy and so-called gender-affirming surgery referrals. She testified as an expert witness in court and said she has worked with children as young as 12. She also mentioned a nearby clinic that works with children as young as 3, Sawyer's current age.
>
> The court ordered that Alkov continue to be Sawyer's primary care physician.

This part reminds me of the case from California that I mentioned, where the female judge refused to let the father present scientific evidence about the harm of transing his child:

> Tinsley's lawyer said he had planned to present scientific materials demonstrating the harm of treating Sawyer as if he had no gender, but they ran out of time in court.
>
> During that trial, Sawyer's mother said in court that she has had suicidal ideations multiple times in her life.

Also, false accusations are normally taken seriously in blue cities and blue states:

> Meanwhile, she has defamed Tinsley repeatedly, he said. Sawyer's mother has called the father of her child a rapist and even claimed Sawyer is the product of rape and that Tinsley has raped other people as well, a friend told police. She began making these allegations when Tinsley started fighting for custody, he said.

This is not the way that men should be spending their life savings:

> Tinsley said he has spent all the money he ever saved on legal bills. His mother even contributed additional money, but funds are running low, he said. He recently started a fundraiser in hopes he can afford to continue fighting for custody of his son.
>
> "I will do anything to keep my son safe and happy with who he is. I hope to inspire other parents with similar situations to be brave and speak up," Tinsley told The Daily Wire.
>
> In the meantime, Tinsley says he takes off work on the days he takes care of Sawyer, reading to him, taking him to the park, and spending as much time as possible with his young son.

My advice to men is to only have children with women who are staunch conservatives who hate feminism, CPS, public schools, divorce courts, socialism, etc. Otherwise, they are going to turn on you and hurt your children.

The poll is in: Ron DeSantis won first debate, and has the highest favorable rating

August 25, 2023 | by Wintery Knight | Link | Original Link

I watched the first Republican primary debate. I have a definite opinion on who won. Below, I capture some clips from the debate. I also found a reliable poll about how each candidate did, and how their favorable and unfavorable numbers changed.

I come at politics from a very different place than most Americans, even the ones who agree with me on political parties. My experience with "voting" is limited to hiring new engineers. I'm a senior software engineer, and I get called into interviews to test whether applicants can actually do what they wrote on their resume. So, I ask questions that will test for that, such as "tell me about a time when you were on production support and had a P1 that lasted longer than an hour" or "tell me about a time when you to make changes to your application due to a vulnerability scan" or "tell me about how your re-write of the payment processing system complies with PCI standards". I don't want someone who was just present, I want the person who led the effort and learned the lessons.

So, I'm not interested in popular opinions or slogans. I'm looking for the story of how you solved the problem, especially if you had to push back against other team members in order to get the job done. We don't want someone who thinks too highly of themselves or just throws out cool-sounding opinions or insults. We want someone who can persuade or convince others and lead a team to a result. That is how change is driven in the real world. Not by commands, but by technical leadership – by persuading people to want to do what you want them to do.

So, with that in mind, check out these clips from the debate.

DeSantis opening speech:

On abortion: (notice how he has passed a very restrictive law in a purple state, which Trump thinks is too restrictive)

The only candidate with military service – focus on the mission, not office politics:

Would use lethal military force on drug cartels at the southern border:

Instead of expressing "future plans" that he has no experience implementing, he talks about what he learned from past achievements – this time in education policy:

The biggest issue of the election for me is the secular left weaponizing government against Christians and conservatives. And I'm looking for actions, not slick talk. DeSantis was the only candidate on the stage who had actions on this topic:

Concluding speech focuses on parent's rights:

All right, that's enough from the debate, let's take a look at the Ipsos / Washington Post poll numbers.

Here are the changes in support (how much voters are considering voting for the candidate) for people who WATCHED THE DEBATE:

- DeSantis: **67.5 %** (up from 63.0 %)
- Trump: **61.4 %** (down from 66.2 %)
- Haley: **46.7 %** (up from 30.2 %)
- Ramaswamy: **46.3 %** (up from 40.8 %)
- Scott: **43.1 %** (up from 41.1%)

So, Trump definitely lost the debate by not showing up, which I think is not what you see from "don't care, voting for Trump anyway" people on Twitter.

What is most interesting I think is the net favorable / unfavorable rating, among likely Republican primary voters who watched the debate:

- DeSantis: 72.4 % favorable vs 24.7% unfavorable
- Ramaswamy: 60.4 % favorable vs 31.8 % unfavorable
- Trump: 59.8 % favorable vs 35.6% unfavorable
- Haley: 65.5 % favorable vs 26.8 % unfavorable
- Scott: 65.3 % favorable vs 23.2 % unfavorable

Of the leading candidates, Trump has the highest unfavorable ratings, by far. To me, DeSantis is more conservative than Trump (based on achievements, not words), more disciplined than Trump in his speaking, and has more appeal to independents and suburban moms than Trump. I want to win the next election, not be entertained by zingers and tweets.

So, that's where we stand right now. I am hoping that they will focus on only a few debate participants next debate: the top 4 only. And that we will see longer timed speeches, with no audience interruptions. They really need to have longer-form debates, instead of 1-minute sound bites.

Knight and Rose Show – Episode 37: Are All Religions the Same, Part 5

August 26, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 37 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose continue our discussion on how to choose a worldview. We discuss a shocking example of a major world religion which is falsified by a historical fact that is widely accepted and well-supported. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 37:

Episode Summary:

Wintery Knight and Desert Rose continue their discussion about whether all religions are equally valid paths to God. Our victim this time is Islam, which denies the crucifixion of Jesus. We explain why the crucifixion is a virtually undeniable fact of history. We discuss how historians evaluate reports from ancient history. We review the evidence for the resurrection of Jesus. Finally, we respond to objections to objective truth from pluralists. This is the fifth episode in a five part series.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

New study: more sexual experience does not make you a better relationship partner

August 27, 2023 | by Wintery Knight | Link | Original Link

Today, most young people think that they are building up their relationship resumes by having casual sex. They think that they are elevating their value proposition to a marriage partner by having casual sex, and all that comes with it – the lack of emotional bond, the lack of commitment, the lack of partnership, the painful break-ups, the decline of trust, etc. But what does the research say?

Here's the report from Institute for Family Studies about the new study.

Methodology:

> Our findings are based on a new study using data from The National Couples and Pornography Study. The data sample was collected independently by Qualtrics from their existing data panel during 2020. It consists of 3,750 individuals in committed couple relationships, including 1,942 married adults, on whom we focused in this study. The demographically diverse sample was recruited from across the U.S. based on quotas for age, race, education level, and geographic region.
>
> We examined the effects of sexual experience on marriage across four married groups:

- > ***Group 1: Inexperienced*** – These are individuals who were sexually inexperienced prior to marriage and who have only had sex with their spouse (19.5% of the sample).
- > ***Group 2: Less Experienced*** – These were individuals with between 2 to 4 lifetime sexual partners before marriage, which is less sexual experience than the average adult in the sample (33.4% of the sample).
- > ***Group 3: More Experienced*** – These are individuals who reported a total number of 5 to 9 lifetime sexual partners. This is the group that captures the average person in the sample (24.4% of the sample).
- > ***Group 4: Highly Experienced*** – The final group includes those who reported 10 or more total lifetime sexual partners. This group made up 22.7% of the sample.

Now let's look at the findings, starting with relationship satisfaction:

> **Sexually inexperienced couples have the highest levels of relationship satisfaction.**

> While over 1 in 5 spouses in the Inexperienced group were likely to report a very high level of relationship satisfaction, only 1 in 7 of those in the More Experienced group were likely to report the same level of satisfaction. This dropped even further for those in the Highly Experienced group, with less than 1 in 10 of spouses reporting that they are very satisfied with their marriage. Thus, sexually inexperienced spouses are more than twice as likely to report that they are highly satisfied with their marriages than are spouses with high levels of sexual experience (*see Figure 1*).

And the findings about marital stability:

> **Having multiple sexual partners before marriage is strongly associated with lower marital stability.**
>
> Similar to other studies, we found that sexual experience prior to marriage is correlated with lower stability in marriage and a greater likelihood of divorce. Specifically, we found that inexperienced men and women who have only had sex with their spouse have a nearly 45% chance of reporting a very high level of relationship stability in their marriage, whereas only 25% of married individuals with 5 to 9 lifetime sex partners, and only 14% of married individuals with 10 or more lifetime sex partners report a similarly high level of relationship stability.

And the findings about sexual satisfaction and emotional connection:

> **Spouses who have only had sex with their current spouse have the highest levels of sexual satisfaction and emotional connection in their marriage.**
>
> Nearly 1 in 5 married men and women who have only had sex with their spouse report that they are “very satisfied” with multiple aspects of their sexual relationship. In comparison, only 1 in 10 married men and women who are “highly sexually experienced” (meaning they had 10 or more sexual partners before marriage) report similar levels of sexual satisfaction (*see Figure 3*). Also, nearly 80% of married individuals who were sexually inexperienced before marriage report the highest level of emotional closeness in their marriage, which is more than 20% higher than individuals who have had multiple sexual partners.

Now let me give my comments about this.

I follow a lot of content that features young people talking about sex in relationships. The dominant view among young people is that they are becoming better relationship partners when they engage in casual sex. They say that they are learning about their own needs, and about what to look in other people so that their needs will be met. They think that more casual sex is like more work experience on a resume, and that this is what marriage-minded people of the opposite sex will be impressed with. They think that their Sexual Revolution approach to sex is going to lead to more stability, more relationship satisfaction, more emotional connection, and more sexual satisfaction.

So the first thing is that the research falsifies this. And you can see how this works by just thinking about the break-ups. Break-ups have the effect of making people look for the exits in relationships. Instead of committing first, and then taking responsibility to build and maintain the relationship, they are looking to get out of it to avoid being hurt. And they are always trying to make sure that their needs are met, and avoiding committing too much to the other person. They neither know nor care what the other person is trying to achieve, and they aren't engaged in helping them to do that.

Also, consider that most young people are not forming their beliefs with knowledge that is likely to make them a better person. Concepts that are familiar to experienced Christians such as forgiveness and self-sacrificial love are nowhere in their worldviews. Biblical Christianity provides a rational basis for loving a spouse well, even when you don't feel like it. Which is very useful in a marriage. They have a pretty self-serving view Christianity, something like "don't judge" and "listen for the voice of God telling you his plan to make you happy".

Instead their views are being formed by radical feminism, popular culture, celebrity worship, materialism, an almost fanatical focus on judging people by appearances, being led by feelings and peer-approval, etc. They expect to have stability and quality in a relationship where skills like forgiveness, self-denial, delayed gratification, planning, achieving goals together, etc. are critical. Imagine wanting to retire early. Is someone on the path to early retirement if they are guided entirely by their feelings? If they do only what feels good "in the moment"? If none of the peers who influence them have achieved this goal? Today, relationships are just a case of the blind leading the blind. It doesn't work.

What useful things can Christians learn by studying metaphysics?

August 28, 2023 | by Wintery Knight | Link | Original Link

I have a little experience with metaphysics – just what I learned from a few lectures by the wonderful Christian professor Dr. J. P. Moreland. What I remember from those lectures is that metaphysics can be useful for defending the reality of non-physical minds, and dogmatic skepticism is self-refuting. But I found a nice, easy article by Tyson James to give us a real overview of metaphysics.

His article is on Worldview Bulletin.

He starts like this:

> One day, a close church friend asked me, "What is metaphysics?" Dr. Paul Gould notes in a previous article that local bookstores often locate the subject of metaphysics somewhere around tarot cards and astrology. It may be surprising, then, for some to learn that metaphysics is actually the name of a very important field in philosophy.
>
> So, what is metaphysics to philosophers and what in the world does it have to do with Christianity? These are actually very important questions, since metaphysics is a subject which touches on some of the most fundamental elements of the Christian faith.

So, I looked down the list and he has these:

- Is there a first cause?
- Do we have free will?
- Are there any unchanging truths?
- What are space and time?
- How do things which change maintain their identity over time?
- Is the physical universe all there is?
- Are objective morals real?

This is what he has to say about the one I remember:

> How do things which change maintain their identity over time? Christians believe that the same person who was a sinner may also accept Christ, be saved from his sins, and enjoy eternity with God. But some people say that there is no "self" which maintains identity over time, that we're just collections of atoms which change every time an atom is gained, lost, or rearranged. So, answering this question is important for showing that the same person who is lost without Jesus may be saved and restored in Jesus.

As a software engineer from an immigrant family, reading philosophy is as painful to me

as a root canal. I just keep thinking “why do I have to know this if no one will pay me to know this?” But I like to win apologetics battles more, so I have forced myself to learn a little about some of the topics in his list. Every good Christian apologist knows how to defend philosophical attacks, like the problem of evil, religious pluralism, postmodernism, physicalism of minds, the hiddenness of God, rational unbelief, animal pain, etc. And we know how to go on the attack with objective morality, mind-body dualism, persistent identity through time, free will, etc. Not to mention first cause arguments, but I try to only think about that as a scientific problem. Metaphysics is useful for many of these tasks.

Anyway, metaphysics. Let me find you something useful to teach you some metaphysics. Here is a good short essay from Dr. John Depoe, who defends the reality of the non-physical minds, which is also known as “substance dualism”, because there are two substances – your body and your mind.

He writes about the persistent identity argument for the soul:

> Another argument supporting substance dualism is that one maintains personal identity through change. Even though one is continuously going through physical changes and experiencing different mental states, a person continues to be the same person. If persons were identical with their physical parts or mental states, they would cease to be the same persons as these changes occurred. Therefore, it is necessary to postulate an immaterial, substantial self that endures through change.
>
> Suppose that someone believes that people do not maintain identity through change and concludes that the previous argument for substance dualism fails. This denial of personal identity through change, I contend, presents untenable difficulties. First, there is one’s own awareness of being the same person through change. Moreover, if one is not literally the same person through these changes, how can a person maintain long-term goals and desires?

If you are your body, and your body is always changing, then you aren’t the same person now as 5 minutes ago.

There are many other good arguments for real non-physical minds. First of all, we know about the existence of at least one non-physical mind. God. That’s who brings the physical universe into being. He’s not physical. And there is also our first-person awareness of our mental state, our experience of consciousness, our ability to think about other things (“intentionality”), and our experience of free will.

So you see, this is all very practical, even if it frightens my practical West Indian parents if I talk about it too much.

Reasonable Faith podcast: the real consequences of atheism

August 29, 2023 | by Wintery Knight | Link | Original Link

If you love to listen to the Please Convince Me podcast, as I do, then you know that in a recent episode, J. Warner Wallace mentioned a blog post on an atheistic blog that clearly delineated the implications of an atheistic worldview. He promised he was going to write about it and link to the post, and he has now done so.

The latest episode of Reasonable Faith discusses the post mentioned in the episode.

Details:

> An atheist blogger gets brutally honest about his view and tells other atheists to quit fooling themselves!

The MP3 file is here on the Reasonable Faith web site. (23 minutes)

Kevin Harris (KH) and William Lane Craig: (WLC) discuss this post on the Wintery Knight blog.

Summary:

- KH: New Atheists always try to portray themselves as having meaningful lives, and good without God
- WLC: Exactly, they would say you don't nee God to do positive things, so God makes no difference
- KH: but what happens when an atheist explains the real consequences of atheism?

KH then reads a quote by an atheist blogger:

> "[To] all my Atheist friends.
>
> Let us stop sugar coating it. I know, it's hard to come out and be blunt with the friendly Theists who frequent sites like this. However in your efforts to "play nice" and "be civil" you actually do them a great disservice.
>
> We are Atheists. We believe that the Universe is a great uncaused, random accident. All life in the Universe past and future are the results of random chance acting on itself. While we acknowledge concepts like morality, politeness, civility seem to exist, we know they do not. Our highly evolved brains imagine that these things have a cause or a use, and they have in the past, they've allowed life to continue on this planet for a short blip of time. But make no mistake: all our dreams, loves, opinions, and desires are figments of our primordial imagination. They are fleeting electrical signals that fire across our synapses for a moment in time. They served some purpose in the past. They got us here. That's it. All human achievement and plans for the future are the result of some ancient, evolved brain and accompanying chemical reactions that once served a survival

> purpose. Ex: I'll marry and nurture children because my genes demand reproduction, I'll create because creativity served a survival advantage to my ancient ape ancestors, I'll build cities and laws because this allowed my ape grandfather time and peace to reproduce and protect his genes. My only directive is to obey my genes. Eat, sleep, reproduce, die. That is our bible.
>
> We deride the Theists for having created myths and holy books. We imagine ourselves superior. But we too imagine there are reasons to obey laws, be polite, protect the weak etc. Rubbish. We are nurturing a new religion, one where we imagine that such conventions have any basis in reality. Have they allowed life to exist? Absolutely. But who cares? Outside of my greedy little gene's need to reproduce, there is nothing in my world that stops me from killing you and reproducing with your wife. Only the fear that I might be incarcerated and thus be deprived of the opportunity to do the same with the next guy's wife stops me. Some of my Atheist friends have fooled themselves into acting like the general population. They live in suburban homes, drive Toyota Camrys, attend school plays. But underneath they know the truth. They are a bag of DNA whose only purpose is to make more of themselves. So be nice if you want. Be involved, have polite conversations, be a model citizen. Just be aware that while technically an Atheist, you are an inferior one. You're just a little bit less evolved, that's all. When you are ready to join me, let me know, I'll be reproducing with your wife.
>
> I know it's not PC to speak so bluntly about the ramifications of our beliefs, but in our discussions with Theists we sometimes tip toe around what we really know to be factual. Maybe it's time we Atheists were a little more truthful and let the chips fall where they may. At least that's what my genes are telling me to say."

Back to the summary:

- WLC: this quote explains that on naturalism, moral values and duties are just the by products of biological evolution
- WLC: he is deriding other atheists who put on a civil facade, and that the superior atheist is the one who acts openly like an atheist
- KH: he wants atheists to stop acting like Christians (being outwardly nice)
- WLC: there is no evidence for atheism presented in the quote, so why should he think that morality and meaning are illusory
- WLC: he is saying that morality is not real because our beliefs form by Darwinian evolution
- WLC: even if those beliefs formed that way, that doesn't mean that our moral judgments are not true (genetic fallacy)
- KH: the moral judgments are only false if naturalism is true, and he didn't defend that
- WLC: if objective moral values and duties exist, then naturalism is false

KH quotes Richard Dawkins:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music.

More:

- WLC: yes, that's his view, but what reason is there to accept the naturalism that requires all that?
- KH: yet he pushes various moral judgments
- WLC: yes, in his book, he pushes a bunch of moral judgments in his book, all of which are invalid on naturalism?
- KH: he wants humans to choose to show pity, even though nature is pitiless
- WLC: he thinks that these altruistic behaviors can emerge because humans are sociable beings
- WLC: but this "herd morality" is just an evolved convention, there are not objective moral truths

KH quotes Will Provine:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

More:

- WLC: it's his naturalism that is causing him to say that, theistic evolution is compatible with morality
- WLC: naturalism is what conflicts with objective morality, science doesn't invalidate objective morality
- KH: atheists deny objective meaning, but atheists can invent subjective meanings and purposes
- WLC: yes, but these invented subjective meanings and purposes are illusory
- WLC: I don't think that anyone can live happily by think

KH quotes Michael Ruse:

> "The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological

> adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory."

- WLC: again, science is neutral against morality, it's the philosophy of naturalism that is inconsistent with objective morality
- KH: just because theists and atheists get along, it's still important to remind atheists of the consequences of their view
- WLC: I do that in my work on the absurdity of life without God, and in the moral argument for God's existence
- WLC: I love it when they say things like this, because it supports the first premise in Craig's moral argument
- KH: even if the evidence were 50-50, why would atheists lean towards the meaningless view
- WLC: yes, if the evidence is 50-50, then people ought to prefer life, significance and moral value
- KH: you're not saying that people ought to the believe that in theism because it's more palatable to us
- WLC: right, I am saying that naturalism should be rejected on the evidence, including our experience of moral values

Dr. Stephen C. Meyer defends belief in God using the progress of science

August 30, 2023 | by Wintery Knight | Link | Original Link

Dr. Stephen C. Meyer is my favorite defender of Christianity these days. His first book covered the origin of life. His second book covered the sudden origin of body plans in the fossil record. And his third book covered the origin of the universe and fine-tuning. In this post, we'll see a recent popular-level article he wrote for The Federalist, and 6 new short videos he made for Prager University.

Here is latest article from my favorite news source – The Federalist. He explains how scientific discoveries provide evidence for a Creator of the universe:

> From the first astronomical investigations about the early history of the universe, light, and other forms of radiant energy, have yielded the most important clues about cosmic origins. During the 1920s, astronomers discovered that the wavelengths of light coming from distant galaxies were stretched out, or "red-shifted," as if the galaxies were moving away from us. Just as sound coming from a train whistle drops in pitch as the result of the sound waves being stretched out as the train recedes, light coming from a distant galaxy changes color (becomes more red) as light waves are elongated as galaxies move away from Earth.
>
> Soon after the discovery of the red shift, Belgian priest-physicist Georges Lemaître and Caltech astronomer Edwin Hubble showed that galaxies farther away from Earth were receding faster than those close at hand. That suggested a spherical expansion of the universe in all directions of space like a balloon inflating from a singular explosive beginning—from a "Big Bang."
>
> Then in 1965, physicists discovered a different kind of light they thought provided further evidence of the Big Bang. While working at Bell Laboratories in New Jersey, physicists Arno Penzias and Robert Wilson inadvertently discovered an extremely low-energy radiation on their highly sensitive, large antennas. This radiant energy, now known as the Cosmic Background Radiation, is postulated to be a remnant of the earliest moments after the Big Bang when the universe was immensely hot and densely compacted.

Those are the 3 most common pieces of evidence for a cosmic beginning – and therefore, a Cosmic Beginner. And this evidence is likely to be enhanced by NASA's newest telescope, which Dr. Meyer talks about:

> [O]n December 22 NASA will launch a new satellite capable of seeing the first starlight from just after the Big Bang—a light, and an event, that tell us about the creation of the universe and, in their own ways, reveal God to the world.
>
> NASA's new James Webb Space Telescope will be carried into space this week from French Guiana on the back of an Ariane 5 rocket. The $10 billion, 21-foot

> telescope features a massive umbrella-like sun shield. It also boasts 15 times the range of motion and six times the light-gathering capability of the Hubble Space Telescope—NASA's next best instrument for peering deep into space and far back in time.
>
> The light that NASA's new telescope seeks to detect comes, not from those very earliest moments after the beginning, but from the first stars and galaxies that formed an estimated several hundred thousand years later. Detecting that light will nevertheless provide further confirmation of an expanding universe.
>
> Since the new telescope can detect infrared light—invisible light with extremely long wave-lengths—it can establish whether the most distant galaxies exhibit the amount of red shift that astronomers expect given the Big Bang.
>
> […]This additional evidence of an expanding universe would further deepen the mystery associated with the Big Bang and add weight to a growing science-based "God hypothesis." If the physical universe of matter, energy, space, and time had a beginning—as observational astronomy and theoretical physics increasingly suggest—it becomes extremely difficult to conceive of any physical or materialistic cause for the origin of the universe. After all, it was matter and energy that first came into existence at the Big Bang. Before that, no matter or energy—no physics—would have yet existed that could have caused the universe to begin.
>
> Instead, whatever caused the universe to originate must not have been material and must exist beyond space and time. It must further have been capable of initiating a great change of state, from nothing to everything that exists. Such considerations have led other scientists—former Massachusetts Institute of Technology physicist Gerald Schroeder and the late Caltech astrophysicist Allan Sandage, for example—to posit an external creator as the best explanation for the origin of the universe as revealed by modern cosmology.

This new telescope creates an interesting situation for Christians and atheists. Christians are excited about this telescope, and anxious to get back the results that will confirm a supernatural Creator. Atheists are nervous about this telescope. They are committed to an eternally existing universe. One that doesn't implicate any kind of supernatural first cause of the natural world. If the universe has a beginning, then by definition, the cause of the universe *must be* supernatural and eternal. Because it existed causally prior to the beginning of the universe. It is not material, because it created matter. It is not in time, because it created the physical universe that marks the passage of time.

Anyway, to share this information, Dr. Meyer has created six new short videos for Prager University. I've embedded the 6 videos below, and each title is a link to Prager University where you can find a transcript. These are perfect for busy people to get the big picture.

1. ARE RELIGION AND SCIENCE IN CONFLICT?

2. SCIENTIFIC EVIDENCE FOR GOD AND WHY IT MATTERS

3. HOW DID THE UNIVERSE BEGIN?

4. ALIENS, THE MULTIVERSE, OR GOD?

5. DNA AND THE EVIDENCE FOR INTELLIGENT DESIGN

6. EVOLUTION: BACTERIA TO BEETHOVEN

If you're looking for a longer lecture, delivered to an audience of students, this one from 2015 is 95 minutes long, and has over 900,000 views:

What I'd like to see is parents and pastors stop worrying about how Christians feel,and whether we are like. Step one of being a Christian is knowing and showing that God exists. It's not about feelings, community or peer approval. This is not Disney. This is not romance novels. What we need is young Christians who can have productive conversations about Christianity. And those conversations are easy – if we are trained in the mainstream science that confirms the existence of the supernatural Creator / Designer.

Stephen C Meyer books

American Library Association president wants libraries to stock LGBT porn

August 31, 2023 | by Wintery Knight | Link | Original Link

A useful thing about getting older is learning which groups in America are conservative and which ones are leftist. For example, lawyers, teachers, school boards tend to be leftist. Certainly teacher unions are leftist, judging from their political donations to Democrats. Librarians also tend to be leftist. They tend to champion secular left values to kids, against the wishes of parents.

Here's an article from The Federalist that discusses a new report about the goals of the American Library Association's president, Emily Drabinski:

> The American Accountability Foundation, a conservative nonprofit, published a video and memo this month compiling radical quotes from Emily Drabinski, the president of the powerful American Library Association (ALA), a nonprofit that receives some of its money from member libraries, many of which are taxpayer-funded. The ALA, the oldest and biggest library association boasting nearly 50,000 members, coordinates programs at local libraries across America.
>
> The report documents Drabinski, a self-described lesbian Marxist, attacking conservatives and parents as "far right, white supremacist, fascist," an "angry white mob," and the "Christo-fascist right."
>
> Being a Marxist, Drabinski said, is "very much who I am and shapes a lot of how I think about social change." She has criticized the idea of "gender as a binary system with only two acceptable gender markers" and championed LGBT books in children's sections. Drabinski, who supports drag queen story hours, also whined in a 2013 academic paper that religious books under the Dewey Decimal System are "overwhelmingly Christian" and present heterosexuality as "normative."
>
> […]Libraries are "good places that do all kinds of things that people on the right don't like," Drabinski said on the "Citations Needed" podcast in March, according to the report.

Anyone who wants to disagree with Drabinski about using libraries to do things that people on the right don't like is typically called a "book banner" – someone who likes to ban books. That's what people on the secular left like to when parents express their desire for their children to learn computer science, instead of women's studies, gay studies, Marxist studies, etc. I prefer that libraries stock "Code Complete, Second Edition" by Steve McConnell, instead of "Why your feelings determine your gender". And that makes me a book banner, according to the secular left.

It's too bad that Drabinski never studied anything useful, like computer science. Computer science is harder than "library science", but it would probably have thought her

how to think critically, how to solve problems in the real world, and how to think through her beliefs rationally. As it stands, we just need to understand that secular leftists like her are opposed to parents, and they should be kept away from children. They are dangerous to children.

Personally, I would just just privatize all the libraries, and force them to appeal to customers if they want to get paid. As long as they are getting taxpayer money, they can do as they please. No more student loans for non-STEM degrees. No more public sector unions. No more taxpayer-funding of the secular left. Instead, we need to privatize everything, give parents more control of their children's education, and people who want to work in schools should have to complete 5 years in the private sector, first.

Testing drug decriminalization policies in Oregon and Portugal

September 1, 2023 | by Wintery Knight | Link | Original Link

Libertarians generally favor relaxing criminal laws. They want to eliminate capital punishment (which deters violent crime). They are pro-choice on abortion. They want to decriminalize sex work of all kinds. And they want to decriminalize highly-addictive hard drugs. Let's take a look at that last one and see if it's produced results.

Here's Reason magazine writing in August 2021. They are far left / libertarian on social issues:

> In 1973, Oregon became the first state to decriminalize marijuana use, setting in motion a movement that has unraveled much of the disastrous U.S. drug war—with far-reaching consequences.
>
> Today, Oregon is once again at the vanguard of reform: In February, it enacted Measure 110, a law ending prison and jail sentences for all types of drug use and possession, whether it be cocaine, meth, heroin, or psychedelics.
>
> […]Haven Wheelock, who runs a needle exchange in Portland called Outside In, says delaying decriminalization would have been morally unacceptable.
>
> […]Wheelock says that even if Oregon's decriminalization gets off to a bumpy start, in no small part because the pandemic has exacerbated substance abuse problems nationwide, that Oregon voters have made the right choice.
>
> "I think we're going to see systems improve. I think we're going to see people have access to care that they currently don't have access to. I think we're going to see less people getting saddled with convictions that harm them for the rest of their lives. And to me, all of that is a win," says Wheelock.

And, here is the Cato Institute, a libertarian advocacy group, crowing happily about legalizing hard drugs:

> In November 2020, Oregon voters passed Measure 110, which decriminalized the possession for personal use of small amounts of all drugs, including cocaine, heroin, LSD, methamphetamine, and oxycodone. Oregon is the only U.S. state to have implemented this policy.
>
> […]The problem, however, is that 110 did not go far enough.
>
> While 110 eliminated serious penalties for personal use, it did not legalize production and sale of drugs.

When you make something legal, more people use it. And that's exactly what happened.

Libertarians seem to think that when you legalize something addictive, then no one will commit any crimes to feed their addictions. Of course people will be able to keep their

jobs with a cocaine addiction. And OF COURSE cocaine addicts will be able to make enough money legally from that job to support their habit. Libertarians think that crime will go down, because people with addictions can just work at their white collar jobs, and pay for their cocaine. No problem.

So, what happened next? Something that was a great surprise to libertarians.

The far-left The Atlantic noted:

> But three years later, with rising overdoses and delays in treatment funding, even some of the measure's supporters now believe that the policy needs to be changed. In a nonpartisan statewide poll earlier this year, more than 60 percent of respondents blamed Measure 110 for making drug addiction, homelessness, and crime worse. A majority, including a majority of Democrats, said they supported bringing back criminal penalties for drug possession.

Libertarians like to point to Portugal as a model for successful drug decriminalization, but again it's just wishing and hoping.

The far-left Washington Post explains:

> Portugal decriminalized all drug use, including marijuana, cocaine and heroin, in an experiment that inspired similar efforts elsewhere, but now police are blaming a spike in the number of people who use drugs for a rise in crime. In one neighborhood, state-issued paraphernalia — powder-blue syringe caps, packets of citric acid for diluting heroin — litters sidewalks outside an elementary school.
>
> […]A newly released national survey suggests the percent of adults who have used illicit drugs increased to 12.8 percent in 2022, up from 7.8 in 2001, though still below European averages. Portugal's prevalence of high-risk opioid use is higher than Germany's, but lower than that of France and Italy. But even proponents of decriminalization here admit that something is going wrong.
>
> Overdose rates have hit 12-year highs and almost doubled in Lisbon from 2019 to 2023. Sewage samples in Lisbon show cocaine and ketamine detection is now among the highest in Europe, with elevated weekend rates suggesting party-heavy usage. In Porto, the collection of drug-related debris from city streets surged 24 percent between 2021 and 2022, with this year on track to far outpace the last. Crime — including robbery in public spaces — spiked 14 percent from 2021 to 2022, a rise police blame partly on increased drug use.

Going back to Oregon, the article also notes that "overdoses this year in Portland, the state's largest city, have surged 46 percent."

I think that libertarians are great on fiscal policy. But I don't think we need to listen to them on social policy. Or on foreign policy, but that's for another post.

William Lane Craig debates Daniel Came: Does God exist?

September 2, 2023 | by Wintery Knight | Link | Original Link

Dr. Craig's opening speech summary slide

The video of the debate was posted by ReasonableFaith.org – Dr. Craig's organization. This debate occurred in March 2017 at the University of Dublin, in Ireland.

The video: (91 minutes)

My non-snarky summary is below.

Dr. Craig's opening speech

Two claims:

1. There are good reasons to think that theism is true.
2. There are not comparably good reasons to think that atheism is true.

Five reasons for God's existence:

1. The beginning of the universe
– actual infinite past is mathematically impossible
– BGV theorem: any universe that is on balance expanding in its history (like ours) cannot be past eternal

2. Fine-tuning of cosmic quantities and constants
– slight changes to quantities and constants prevent a universe from supporting complex embodied life
– the multiverse response of atheists conflicts with observations, e.g. the Boltzmann Brains problem

3. Objective moral values
– God's existence is required to ground objective moral values and duties

4. Minimal facts case for the resurrection of Jesus

– there are good reasons to accept the most widely accepted facts about the historical Jesus (empty tomb, appearances, early widespread belief in the resurrection)
– the best explanation of these minimal facts is that God raised Jesus from the dead

5. Experience God directly
– in the absence of any defeaters to belief in God, a person can experience God directly

Dr. Daniel Came's opening speech

1. The hiddenness of God
– if God wants a personal relationship with us, and a relationship with God would be the greatest good for us
– God ought to reveal himself to us, but he does not reveal himself to many people, the "non-resistant non-believers"

2. The inductive problem of evil
– many evil events occur that are pointless – there is no morally sufficient reason why God would allow them to occur
– examples: animal suffering, children born with disease, tsunamis
– the theistic response to this is that humans are not in a position to know whether there are morally sufficient reasons, due to our limitations of knowing the consequences
– but this ripple effect defense has 4 possible outcomes, 3 of which don't do the job of justifying

Dr. Craig's first rebuttal

1. The hiddenness of God
– God's goal is not to make his existence known, but to draw them into a love relationship
– it's speculative that overt displays of God's existence would draw people to him in a love relationship, they might resent his bullying
– atheist would have to prove that God could draw more people into a love relationship with him by revealing himself more overtly

2. The inductive problem of evil
– as humans, we are not in a position to know for certain that any apparently pointless evil really is pointless
– William Alston article: 6 limitations of human knowing make it impossible to judge that an evil is actually "pointless"
– Dr. Came says that there are 4 possibilities for the ripple effects, and since 3 are bad, it's likely that there are not morally sufficient reasons for a apparently pointless evil
– it is logically fallacious to assert probability conclusions without knowing the probabilities of those 4 options
– there is actually an argument from evil: since the problem of evil requires an objective standard of good and evil by which to measure, and God is the only possible ground of objective morality, then pressing the problem of evil actually requires the atheist to assume God, in order to ground this objective moral standard

Dr. Came's first rebuttal

3. Objective moral values

– there are naturalistic theories of moral realism where objective moral duties and objective moral values exist in a naturalistic universe
– I'm not saying that any of them are correct, but there are many theories about object morality in a naturalistic universe

There are naturalistic theories for all of the 5 arguments that Dr. Craig presented. It is Dr. Craig's responsibility to present those naturalistic theories and prove that they are not as good as his explanations. I'm not going to defend (or even name!) a single naturalistic theory for any of these 5 arguments by Dr. Craig.

Dr. Craig's explanations for the 5 evidences he gave can't be admitted, because we have to know how God did something *in naturalistic terms* before we can know that God did it supernaturally. Explanations are only valid if they are naturalistic.

1. The beginning of the universe
– naturalism explains how the universe expands after it came into being, so that explains how it came into being
– the God explanation, that God created the universe out of nothing, is not admissible, because it is not naturalistic
– how does God, as an unembodied mind interact with the physical world?
– the only agency that we know about is human agents, and we have bodies, so how could God perform actions without having a body?

The theistic hypothesis does not make any predictions, but naturalism makes lots of testable predictions. God could do anything, so he is not constrained and is therefore untestable. We can't infer God as an explanation in principle because we can't predict what is more probable if God exists than if he does not.

2. Fine-tuning of cosmic quantities and constants
– the university was not set up to make embodied intelligence plausible, because the vast majority of the universe is hostile to life
– there are models of the multiverse that escape the Boltzmann Brains problem that Dr. Craig raised

Dr. Craig's second rebuttal

Some of Dr. Craig's arguments are deductive (e.g. – the beginning of the universe, objective moral values), so that the conclusion follows from the premises if the premises are true. The resurrection passes the standard tests for historical explanations.

1. The beginning of the universe
– the whole point of the argument is that there is no naturalistic explanation for an ultimate beginning of the universe

2. Fine-tuning of cosmic quantities and constants
– the whole point of the argument is that there is no naturalistic explanation for a design of the universe to support life
– he has to prove that intelligences has to be attached to bodies
– human beings are non-physical minds united to physical bodies
– naturalistic attempts to explain mental operations fail

– the arguments *prove* that unembodied minds exist
– the vast expanse of the universe is required in order to form the galaxies, stars and heavy elements needed for complex life
– why expect that the entire universe should be small, or that life would be everywhere?
– a non-fine-tuned world is more likely in the multiverse, and in a multiverse, we are more likely to have a Boltzmann brain world than a world with complex, embodied life
– Dr. Came has not advanced any naturalistic explanation for the fine-tuning

3. Objective moral values
– non-theistic ethical theories cannot account for the ontological foundations of objective moral values and duties
– atheistic theories of moral realism simply assume objective moral values out of thin air
– it is especially hard to find any basis for objective moral duties in the absence of God

Dr. Came's second rebuttal

5. Religious experience
– Dr. Craig should not bring up religious experience in a debate where arguments and evidence are central
– people who have dreams, hallucinations and psychotic delusions could appeal to religious experience
– religious experience is by no means universal, and it is possible to doubt it

3. Objective moral values
– there are lots of atheists who hold to objective moral values
– Dr. Craig has to explain how God grounds objective moral values and duties
– Dr. Craig has to explain why atheist moral realist theories don't work to ground objective moral values and duties

1. The beginning of the universe
– Dr. Craig claims that something can't come from nothing, that's not an argument
– there are numerous models that don't require an absolute beginning of the universe
– Dr. Craig cites the BGV theorem, but Guth (one of the authors) says that only the inflation has a beginning, not the whole universe

Dr. Craig's conclusion

1. The beginning of the universe
– on theism, there is an efficient cause, but no material cause, for the origin of the universe
– on atheism, there is neither an efficient cause nor a material cause, for the origin of the universe: that's worse!
– if he thinks that there are models of the universe that don't require a beginning, then let him name a viable eternal model of the universe
– he never refuted the mathematical argues against an infinite past

2. Fine-tuning of cosmic quantities and constants
– nothing to refute

3. Objective moral values

– God is a better ground for morality than humans, because he is ultimate, and not contingent and arbitrary
– God is a being who is worthy of worship, and therefore command his creatures with moral duties

4. Minimal facts case for the resurrection of Jesus
– nothing to refute

5. Religious experience
– only justified because there are no defeaters to it

1. The hiddenness of God
– atheist has to show that if God's existence were more obvious, that it would result in more people being drawn to him

2. The inductive problem of evil
– Dr. Came's argument was logically fallacious, and makes errors in probability theory

Dr. Came's conclusion

Sometimes, people can't prove something, but lack of evidence is a justification for doubting it, e.g. – werewolves.

If none of Craig's arguments work, then it follows that it is not rational to believe that God exists, and it is rational to believe that God does not exist.

Atheists shouldn't have a burden of proof for what they know, only theists have a burden of proof for what they know.

My thoughts

One quick point. If life were common everywhere then atheists would infer that God wasn't involved in it. Period. "Life is everywhere, so it's common, why do we need a designer?" they'd say. I agree with Dr. Came about denouncing religious experience in a formal debate. I don't like when Dr. Craig brings this up, but I see why he does it – he's an evangelist, and that's a good thing, too. I just worry about how it looks to atheists, although it's good for sincere seekers. I'm not the one on the stage, though, Dr. Craig is.

I think the point about more overt revealing by God would annoy people and make them turn away. Think of how gay people respond to the suggestion that there is anything wrong with them, with rage, vandalism, threats, coercion, attempts to get you to lose your job and business, and using government as a weapon to fine and imprison you. It's really obvious to me that more God does not mean more *love* of God. For those who don't want God, the hiddenness is respect for their choice to put pleasure above the search for truth. (I mean the gay activists – I have great sympathy for people who struggle with same-sex unwanted attractions because they were impacted by a failed bond with their parent of the same sex as they are).

Whenever I meet people like Dr. Came, I always urge them to keep investigating and pursuing truth, because they will find it if they are sincerely seeking after God. Some atheists do sincerely seek God, but I don't know any who haven't found him. I'm not sure if that's because those atheists who claim to be non-resistant and rational are in fact

resistant and non-rational, or what the real reason is. If you believe the Bible, *all* unbelief is non-rational and resistant (see Romans 1). Regarding the werewolves, we don't have any good arguments for werewolves, we do have good arguments for God. Dr. Came didn't refute the arguments that Craig raised, nor did his own arguments for atheism work. And there are many, many more arguments (origin of life, Cambrian explosion, habitability-discoverability, molecular machines) that Craig did not raise, too.

How the presence and quality of fathers affects belief in God

September 3, 2023 | by Wintery Knight | Link | Original Link

Here's an article by Paul Copan which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.* It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own* rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of François-Marie Arouet.
> - *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
> - *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
> - *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
> - Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.
> - *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
> - *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
> - *Bertrand Russell*(1872–1970): His father died when he was 4.
> - *Albert Camus*(1913–60): His father died when he was 1 year old, and in his

> autobiographical novel The First Man, his father is the central figure preoccupation of his work.
> - *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
> - *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
> - We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:
> - *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
> - *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]
> - *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]
>
> Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Not only is there that anecdotal evidence, but there is also statistical evidence. Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is

> regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an more difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary. It is therefore very important to children to be shepherded by a man who studied moral issues (including evidence from outside the Bible) in order to know how to be persuasive to others. If you want your child to be religious and moral, you have to pick a man who is religious and moral. And it can't just be a faith commitment that he makes, he can just lie about that. Women ought to check whether men are bound to what they believe by checking what they've read. A man usually acts consistently with what he believes, and beliefs only get formed when a man informs himself through things like reading.

My advice to Christian women is this. When you are picking a man, be sure and choose one who is already invested in Christian things and producing results. It's very unlikely that he's going to start from nothing after you marry him. If you value your kids, make a man's interest in developing and acting on a Christian worldview the main thing you are looking for.

Federal judge appointed by George W. Bush blocks TN child protection law

September 4, 2023 | by Wintery Knight | Link | Original Link

Tennessee passed a law to protect children from anti-child predators a while back, but sadly, federal judges keep preventing them from enforcing the law. First, it was a federal judge in Memphis. But now, it's a federal judge in East Tennessee, which is far more conservative than West Tennessee.

Here's the article from Daily Wire:

> A federal judge blocked a Tennessee district attorney from enforcing the state's law shielding children from sexually explicit performances ahead of a "Pride" event after he was sued by the American Civil Liberties Union.
>
> The judge's ruling comes after the ACLU filed a lawsuit this week against Blount County DA Ryan Desmond, who sent a letter to Blount County Pride saying that any explicit performances in front of children would not be allowed at a "Pride" event on September 2 just south of Knoxville.
>
> Video has emerged from "Pride" events across the country of explicit drag performances with children present and looking on.

Got that? The goal of the law is to prevent children from seeing explicit performances. Tennessee does not want adults exposing children to sex at young ages. Tennessee opposes grooming children for sex. Tennessee is against pedophilia and child pornography.

More:

> "It is certainly possible that the event in question will not violate any of the criminal statutes," Desmond said. "However if sufficient evidence is presented to this office that these referenced criminal statutes have been violated, our office will ethically and justly prosecute these cases in the interest of justice."
>
> Desmond had a temporary restraining order placed on him by U.S. District Judge Ronnie Greer meaning that he is blocked from enforcing Tennessee's Adult Entertainment Act.

The same thing happened before in West Tennessee:

> The law has previously been blocked before by a federal judge in Memphis, but could be enforced outside of Shelby County. In late June, U.S. District Judge Thomas Parker in the U.S. District Court for the Western District of Tennessee blocked the law after Friends of George's, a self-described "LGBTQ theatre company" based in Memphis, filed a suit challenging the law.

It looks like there is a battle between the attorneys general of red states, who are battling

against the ACLU and federal judges. I’m a legal immigrant to the USA, so it’s strange for me that federal judges have power over state laws. It will be interesting to see which states fight these battles. I wonder if Tennessee can just block the ACLU from operating in Tennessee. Or maybe we can just decline to be ruled by federal judges?

The worst mistake you can make when defending the Christian worldview

September 5, 2023 | by Wintery Knight | Link | Original Link

So, this is just an advice post for doing apologetics.

Here are three situations I've run into while doing apologetics in the last month.

First situation. I was talking with a lady who is an atheist. I had a copy of "God's Crime Scene" in my hand, and she asked me about it. I told her that it was a book written by the guy who solved the homicide case that I asked her to watch on Dateline. She remembered – it was the two-hour special on the woman who was killed with a garrotte. She pointed at the book and said "what's in it?" I said, it has 8 pieces of evidence that fit better with a theistic worldview than with an atheistic one, and some of them scientific. Her reply to me was – literally – "which denomination do you want me to join?"

Second situation. I was talking with a friend of mine who teaches in a Catholic school. She was telling that she got the opportunity to talk to her students about God, and found out that some of them were not even theists, and many of them had questions. So she asked them for questions and got a list. The list included many hard cases, like "what about the Bible and slavery" and "why do Christians oppose gay marriage?" and so on.

Third situation. Talking to a grad student about God's existence. I'm laying out my scientific arguments for her, holding up the peer-reviewed papers for each discovery. I get to the Doug Axe paper on protein folding probabilities, and she holds up her hand. One question: "Am I going to Hell?"

So think about those three situations. In each case, the opponent is trying to reject Christianity by jumping way, way ahead to the very end of the process. When you do Christian apologetics, you do not take the bait and jump to the end of the process dealing with nitty gritty details until you have made your case for the core of the Christian worldview using your strongest evidence. Let me explain.

So, your strongest evidence as a Christian are the scientific arguments, along with the moral argument. Those would include (for starters) the following:

1. kalam cosmological argument
2. cosmic fine-tuning
3. galactic and stellar habitability
4. origin of life / DNA
5. molecular machines / irreducible complexity
6. the moral argument

The problem I am seeing today is that atheists are rejecting discussions about evidence because they think that all we are interested in is getting them to become Christians. Well, yes. I want you to become a Christian. But I know perfectly well what that entails – it

entails a change of life priorities. Both of the women I spoke to are living with their boyfriends, and the kids in the Catholic school just want to have fun. None of them wants to believe in a God who will require self-denial, self-control, and self-sacrifice. Nobody wants God to be in that leader position in their lives. Christianity is 100% reversed from today's me-first, fun-seeking, thrill-seeking, fear-of-missing-out travel spirit of the age.

So, how to answer all these late-game questions? The answer is simple. You don't answer any late-game questions until the person you are talking with accounts for the widely-accepted data in your list. These are things that have got to be accepted before any discussion about minor issues like one angel vs two angels at the empty tomb can occur. When we discuss all the basic issues where the evidence is the strongest, then we can go on to discuss issues where the evidence is debatable, then finally, in the last bits before the end, we can discuss these other kinds of questions.

How to explain why this process must be followed to the person who asks specific questions about minor issues? Simple. You explain that your goal is *not* to get them to become a Christian right now. That you want to let them believe *anything thing they want.* That's right. They can believe *anything they want to believe.* As long as what they believe is *consistent with the evidence.* And what I am going to do is give them the evidence, and then they can believe whatever they want – so long as it's consistent with the evidence.

So, for example, I'm going to tell them 3 pieces of evidence for a cosmic beginning of the universe: the expanding universe (redshift), the cosmic microwave background radiation, and the light element abundances. That's mainstream science that shows that the universe came into being out of nothing, a finite time in the past. And I will charge them not to believe in any religion that assumes that the universe has always been here. For example, Mormonism is ruled out, they believe in eternally existing matter. See how that works? Hey, Ms. Atheist. You can believe anything you want. *As long as what you believe is consistent with the evidence.*

I think this approach of not letting them rush you to the end at the beginning is important for two reasons. First, we can get our foot in the door to talk about things that are interesting to everyone, in a non-stressed environment. Everyone can talk about evidence comfortably. Second, we show that we hold our beliefs because we are simply letting evidence set boundaries for us on what we are allowed to believe. We can't believe not-Christianity, because not-Christianity is not consistent with the evidence. And you start with the most well-supported evidence, and eliminate worldviews that are falsified by the most well-supported evidence. Atheism actually gets falsified pretty quickly, because of the scientific evidence.

So, that's my advice. Had a friend of mine named William try this out about a week ago. It went down like this:

William to me:

> This guy I know messaged me and bragged for a while about how easy he can dismantle Christianity. He said: "present the gospel to me as you understand it.

> I'll simply ask questions to demonstrate it is not worth your belief."

WK to William:

> First of all, he isn't allowed to just sit there and poke holes in your case, he has to present a positive case for atheism. Second, don't discuss Christianity with him at all until you first discuss the evidence for theism – start with the good scientific evidence.

And William wrote this to his friend:

> The way I'm wired is that I process all competing theories and go with the best one. By doing a comparative analysis of worldviews I find that Christian theology easily explains the most about the world I find myself living in.
>
> I'm pretty sure that a God of some sort exists because of the scientific evidence for the origin of the universe and the fine tuning in physics. From there I find it quite intuitive that if a God went through the trouble of creating and tuning a universe for life that this God likely has some sort of interest in it and has revealed Himself to humanity in some way.
>
> From there I can look at the major world religions and compare them to see which one explains the past and the present the best. Christianity easily comes out on top.

And then a few days later, I got this from William:

> I finally got the agnostic to tell me what he thinks about origin and fine tuning. When I started pointing out that his views were unscientific, he blew a gasket, called me dishonest and told me he didn't want to discuss anything further.

And that's where you want to be. Cut off all discussions where the challenger tries to jump to the end and get you to debate the very last steps of your case. Present the strongest evidence for your core claims, and get him to account for this evidence within his own worldview. Lead the discussion with public, testable evidence. All warfare depends on picking the terrain, weapons and tactics that allow you to match your strength against your opponent's weakness.

Biden-appointed judge rules that parents can't opt their kids out of LGBT

September 6, 2023 | by Wintery Knight | Link | Original Link

On Monday, I blogged about how a federal judge had ruled that a county in Tennessee could not protect children from being exposed to sexually-oriented performances. The same thing just happened in Texas. A federal judge blocked a Texas law that protected children from sexually-oriented performances. But now there is something even worse – banning parents from protecting their own kids.

Here's the story from The Federalist:

> On Aug. 24, the U.S. District Court judge denied a requested injunction from a group of Muslim, Catholic, and Orthodox parents to opt their children out of LGBT storybook lessons.
>
> […]A stone's throw from Washington, D.C., Montgomery County Public Schools is one of the largest public school systems in the country, with roughly 70,000 students attending elementary school. Last fall, the Montgomery County Board of Education announced it was adopting a collection of more than 20 "LGBTQ+ inclusive" books for use in pre-K through eighth-grade classrooms.
>
> […]When parents initially raised objections to the books, the school board said they could opt their children out of instruction involving the books, as parents can for other parts of the curriculum. By the spring, however, the school board announced parents would not only no longer be notified in advance when the books would be read, they also couldn't opt their children out of instruction involving the books.

Some of the parents who pay the taxes for the salaries of these education bureaucrats didn't like this, and they sued. They argued that in America, parents have Constitutional freedoms. And they wanted to be allowed to opt their children out of LGBT indoctrination.

But a Biden-appointed judge, who is also paid by the taxpayers, disagreed with the taxpayers:

> Biden-appointed Judge Deborah Boardman denied the requested injunction, just days after oral argument. "[T]he plaintiffs have not shown that the no-opt-out policy likely will result in the indoctrination of their children," she wrote. But what about the parents' rights to direct the religious upbringing of the children? Boardman's take is that "[e]ven if their children's exposure to religiously offensive ideas makes the parents' efforts less likely to succeed, that does not amount to a government-imposed burden on their religious exercise."

It's fine for atheists to tell Christian parents what to do with their kids. And it doesn't matter when those Christian parents are paying the salaries of those atheists. Parents

must pay, and they should be grateful to the atheists who turn their children against God. Parents have no right to direct the religious upbringing of their children. Parents are just there to work, to pay *better people* to raise their children for them. Atheists are *better people*. They should be making the decisions about what your children learn. You just pay for it.

Remember, if you don't like what the taxpayer-funded schools are teaching your children, then you're a "domestic terrorist". And since you're a "domestic terrorist", then maybe the FBI needs to park 6 SUVs outside your house and break down your door and point loaded assault rifles at your wife and children. The FBI is also paid by taxpayer dollars. You pay them to pre-dawn raid your house.

New video series on intelligent design starts off discussing the Cambrian explosion

September 7, 2023 | by Wintery Knight | Link | Original Link

I am always on the lookout for good resources on science and Christianity. And I found some. Well, Uncommon Descent found them, and I read their blog, so I found them too. The first four episodes are out, and the topics are: 1) introducing the Cambrian explosion, 2) pre-Cambrian fossils, 3) punctuated equilibrium, and 4) Darwin's "tree of life". Each video is 12-20 minutes long.

So, before we see the videos, I feel I should explain the outline for arguing for a creator / designer of the universe from scratch. There are six main arguments. 1) the origin of the universe from nothing, 2) fine-tuning of the creation event, 3) fine-tuning for habitability in the galaxy, solar system, and planet, 4) the origin of the first living self-replicating organism, 5) irreducible / minimal complexity in molecular machines, 6) the sudden origin of basic body plans in the Cambrian explosion (a geological period a long time ago).

These four videos introduce you to the sixth argument in that list, the Cambrian explosion.

First video: Introducing the Cambrian explosion

Description:

> When Charles Darwin published "On the Origin of Species" in 1859, he was painstakingly aware of the fact that the fossil record diametrically opposed his theory. Ever since Darwin's time, paleontologists have put their finger on the Cambrian explosion, where most of the major animal phyla appear abruptly in the fossil record suddenly and without any evidence of intermediate forms preceding them in Precambrian strata.

Second video: evaluating precursors to the Cambrian explosion

Description:

> Are there transitional forms and Precambrian fossils which reveal the evolution of the diverse animal phyla that appear in the Cambrian explosion? The history of paleontology shows the answer is no! As paleontologists have learned more about the fossil and geological record, the challenge of the Cambrian explosion to Darwinian theory has only increased.

Third video: evaluating punctuated equilibrium

Description:

> In the 1970s, paleontologists Stephen Jay Gould and Niles Eldredge proposed a model of evolution called punctuated equilibrium, intended to resolve the lack of transitional forms in the fossil record. Can "Punk Eek," as it's often called, resolve

> the abrupt appearance of new animal phyla in the Cambrian explosion? This video explains why the answer is No—among many other problems, Punk Eek requires too much evolutionary change too quickly and lacks a biological mechanism to account for the rapid origin of anatomical novelty we see in the Cambrian period.

Fourth video: evaluating homology and phylogenetics

Description:

> As more scientists have realized that the fossil record poses serious challenges to Darwin's theory of evolution, many have turned to molecular homologies and phylogenetic trees to defend Darwin's tree of life. But do these approaches really support Darwin's tree? Nope.

If you like these videos, you can read a much longer, more detailed book about it by Dr. Stephen C. Meyer, called "Darwin's Doubt". Or, you can do what I'm doing and just read a chapter about it in the new book "The Comprehensive Guide to Science and Faith". That book covers all 6 of the arguments I mentioned before. You can see the table of contents on the Discovery Institute web site. The chapter by Dr. Gunter Bechly entitled "Does the Fossil Record Demonstrate Darwinian Evolution?" covers the fossil record, and the Cambrian explosion in particular. I like Gunter a LOT, because he had a recent debate on the Unbelievable show on this topic, and he really cleaned the clock of his opponent, a slippery theistic evolutionist named Joshua Swamidass. It was beautiful. He cut through all the theistic evolution garbage and got straight into the science.

I'm reading the book right now. Or rather, I'm having it read to me, because I got the audio book version. If you remember reading books like "Mere Creation" (1998) and "The

Creation Hypothesis” (1994) as a young man like I do, then you will love this book.

I like to know a little about every interesting topic, and then watch lots of university lectures and formal debates about them, so I can debate these topics in the places where I live and work. The new book has a lot of different authors from a lot of different perspectives writing on a lot of different topics. You could find a way to talk about these topics in pretty much any environment.

So far, I like Dr. Fazale Rana’s chapter on Adam and Eve the best, but I’m still in Section I. I’m just starting on Jay Richards chapter next.

Proof that federal law enforcement treats Republicans and Democrats differently

September 8, 2023 | by Wintery Knight | Link | Original Link

My concern about federal law enforcement exchanging morality for political expediency is getting worse by the day. I keep finding stories in the news showing that the secular left has no shame at all about using the power of government as a weapon against their enemies in the Republican party. Today, let's look at a 19-minute video and article from Matt Walsh of the Daily Wire.

First, the video, which is exact same thing as the article below:

And here is the article. It's behind a paywall, so I only want to quote a little bit.

Here is what happens to Democrat domestic terrorists:

> Here's one example that went totally unreported by the mainstream press. Kevin Benjamin Weier is a California man in his mid-30's. During the canonization of Saint George Floyd three years ago, Weier took it upon himself to light a federal courthouse in Portland on fire. There's no dispute about that. Weier pleaded guilty to, "repositioning a piece of lit wood" against the walls of the courthouse.
>
> After Weier pleaded guilty, Joe Biden's DOJ made a point to issue a press release about the many years in jail that this domestic terrorist was facing. Specifically, the DOJ's press release stated that Weier's intentional destruction of federal courthouses was, "punishable by up to 10 years in prison."
>
> […]As it happens, Weier ultimately received a sentence that was nowhere near the 10-year term the Biden DOJ suggested he might serve. Instead, on the recommendation of federal prosecutors, Weier received a sentence of two years' probation. For trying to set fire to a federal courthouse. And indeed, Kevin Weier never served a day in prison. He did have to pay a $200 fine, though. So there's that.

Two year's probation, that means no prison time at all. Because he's a Democrat.

But here's what happens to Republicans:

> If you're a former GOP congressional candidate by the name of Enrique Tarrio, this is all very confusing.
>
> […]Enrique Tarrio was just sentenced to 22 years in prison for "orchestrating" a riot that he didn't even attend. There's no discussion whatsoever about what Tarrio might have done, or how exactly he facilitated what happened on January 6th. No one cares.
>
> […]According to the government, Tarrio told his followers… to organize a big crowd in Washington to storm government buildings.

As we know from Tucker Carlson's video, the most violent thing that happened in the Capitol is that a Capitol Hill policeman murdered an unarmed Republican woman who was trying to push her way through a closed door with her hand. His identity was hidden from the public, and he was later promoted. Promoted.

And another example:

> Consider the case of Joseph Biggs, a man with no criminal record whatsoever. Biggs is an Army veteran who didn't hurt anyone on January 6th. But he did walk around the Capitol building and he did help pull down a fence on the periphery of the building. And for that, judge Tim Kelly — the same judge who sentenced Tarrio — decided that Joseph Biggs needs to spend 17 years in prison.

Matt Walsh did post a video of people "storming government buildings", though. Except these people were Democrats:

An actual insurrection:

Did they get 22 years in prison? Nope:

> And their punishment is — absolutely nothing. They get zip-tied, at most, and let go immediately. Their explicit purpose was to derail a government proceeding. In fact, some of these activists barged into the Senate chambers. None of them suffered any real consequences.

Because they're Democrats, and the law is ever only applied against Republicans – and Christians. It doesn't apply to the secular left. This is fine with federal law enforcement and federal judges. They think that they are doing a great job of serving the people who pay their salaries through mandatory taxes. Why think that our secular left law enforcement is capable of anything different to law enforcement under Stalin, Mao and Hitler?

Now we are seeing real violence:

> So does the Biden DOJ's handling of the raid on Craig Robertson a month ago. Robertson was the elderly invalid Trump supporter in Utah who shared threatening memes about Joe Biden on social media for months. Weeks later, instead of picking up Robertson while he was on his motorized scooter at Walgreens, the FBI decided to surprise Robertson with a 6 AM raid at his home.

Robertson was shot and killed by the FBI, and no bodycam video has been released. What happened? We don't know, and they are *refusing* to release the video. Just like they are refusing to release the manifesto of the Nashville anti-Christian mass murderer.

Members of Antifa and BLM also get light sentences:

> Consider the case of the BLM arsonist back in 2020 who lit a pawn shop on fire, in the name of civil rights. Three days after Saint George Floyd overdosed, Montez T. Lee decided to commit an act of arson that killed Oscar Lee Stewart. Stewart's

> body wasn’t found in the rubble for nearly two months. What was Montez Lee’s sentence? He got less than ten years in prison. That’s less than half the sentence that Enrique Tarrio will face, for sending some naughty text messages.
>
> […]We see relatively light or non-existent sentences like this all the time. A serial child rapist in Ohio just got ten years in prison. A drunk driver in Phoenix — at four times the legal B.A.C. — just got 12 years in prison for driving 135 miles per hour and killing someone. A terrorist train engineer in Los Angeles who tried to run his locomotive into a U.S. Navy hospital ship during COVID received just three years in prison. A man who burned down a Minneapolis police station, live on national television, during the George Floyd riots received just four years in prison. Another man who lit a molotov cocktail and threw it at the police station got just three years in prison.

How can we get federal law enforcement to treat people fairly, regardless of political party and religion? Well, make sure that you vote in the next elections, and make sure you’re telling all your friends and family about stories like this. We have to get 2 Republicans to the polls for every Democrat who votes.

Knight and Rose Show – Episode 38: Former Muslim Hatun Tash, Part 1

September 9, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 38 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss how to debate Islam with a famous former Muslim, Hatun Tash. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 38:

Episode Summary:

Wintery Knight and Desert Rose welcome our first guest onto the show. Hatun Tash is a former Muslim who was born in Turkey. We discuss the importance of perfect preservation of the Qur'an in Islam, and compare different translations to see if they all agree. We discuss Hatun's experiences discussing her Christian faith with Muslims in different countries. This is the first episode in a two part series.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

Hatun Tash is is a well-known Christian preacher who regularly debates Islam and the Koran. An ex-Muslim and convert to Christianity, she is director of the ministry Defend Christ Critique Islam. She has faced threats to her life on multiple occasions and was attacked and stabbed on 25 July 2021 while preaching at Speakers' Corner in Hyde Park. You can find her collection of very popular and entertaining videos on YouTube in the Hatun Tash DCCI Ministries channel.

Information Enigma: 21-minute video explains intelligent design

September 10, 2023 | by Wintery Knight | Link | Original Link

---

The video is here:

I have read and listened and watched a lot of material on intelligent design, but I have never seen so much value packed into such a short lecture. I really hope you'll watch this and that it's helpful to you.

Summary:

- the big question when discussing the origin of life: where did the information in living systems come from?
- Until 530 million years ago, the oceans were largely devoid of life
- In a 10 million year period, many new forms of animal life emerged
- New biological forms of life require new information
- the discovery of DNA shows that living systems work because cells have information that allows them to build the components of molecular machines: cell types, proteins, etc.
- can random mutation and natural selection create new functional information?
- normally, random mutations tend to degrade the functionality of information, e.g. – randomly changing symbols in an applications code does not usually introduce useful new functions, it usually renders what is there non-functional
- the majority of possible sequences will NOT have functions, so random mutations will more likely give you non-functional code, rather than functional code
- example: a bicycle lock with 4 numbers has many possible sequences for the 4 numbers, and only one of them has unlock functionality, the rest have no functionality
- if you have lots of time, then you might be able to guess the combination, but if the lock as has 10 billion numbers, and only one combination that unlocks, you can spend your whole life trying to unlock it and won't succeed
- how likely is it to arrive at a functional protein or gene by chance? Is it more like the 4-dial lock (can be done with lots of time) or the 10 billion dial lock (amount of time required exceeds the time available)?
- the probability is LOW because there is only one sequence of numbers that has unlock function
- consider a short protein of 150 amino acids has 10 to the 195th power possible sequences
- if many of these sequences of amino acides had biological function, then it might be easier to get to one by random mutation and selection than it is with a lock that only unlocks for ONE sequence
- how many of the possible sequences have biological function?

- Thanks to research done by Douglas Axe, we now know that the number of functional amino acid sequences for even a short protein is incredibly small…
- Axe found that the odds of getting a functional sequence of amino acids that will fold and have biological function is 1 in 10 to the 77th power
- Is that number too improbable to reach by chance? well, there are 10 to 65th atoms in the entire Milky Way galaxy… so yes, this is a very improbable outcome
- can random genetic mutations search through all the sequences in order to find the one in 10 to the 77th power one that has biological function? It depends on how much guessers we have and how many guesses we get in the time available
- even with the entire 3.5 billion year history of life on Earth, only about 10 to the 40th organisms have ever lived, which far smaller fraction of the 10 to the 77th total sequences
- even with a very fast mutation rate, you would not be able to reach a functional protein even with all that time, and even with all those organisms

I was once having a discussion with a woman about the research that Axe did at the Cambridge University lab. He published four articles in the Journal of Molecular Biology. I held out one of the papers to her and showed her the numbers. She said over and over "I hate the Discovery Institute! I hate the Discovery Institute!" Well, yeah, but you can't make the Journal of Molecular Biology go away with hating the Discovery Institute. JMB is peer-reviewed, and this was experimental evidence – not a theory, not a hypothesis.

We have been blessed by the Creator and Designer of the universe in this time and place with *overwhelming evidence* – an abundance of riches. For those who have an open mind, this is what you've been waiting for to make your decision. For the naturalists who struggle so mightily to block out the progress of experimental science, they'll need to shout louder and shut their eyes tighter and push harder to block their ears. Maybe if they keep screaming "Star Trek" and "Star Wars" over and over to themselves, they will be able to ignore the real science a little longer.

Is our society discriminating against women, or against men?

September 11, 2023 | by Wintery Knight | Link | Original Link

---

I love to read long essays in City Journal, the journal of the center-right Manhattan Institute. One of the biggest problems we're facing as a society right now is the decline of marriage, and the resulting crisis of fatherlessness. The correct diagnosis is very unpopular, because it attacks feminism. Even traditional conservatives don't want to see the truth. But City Journal gets it right.

Excerpt:

> Smug misandry has been box-office gold for Barbie, which delights in writing off men as hapless romantic partners, leering jerks, violent buffoons, and dimwitted tyrants who ought to let women run the world.
>
> Numerous studies have shown that both sexes care more about harms to women than to men. Men get punished more severely than women for the same crime, and crimes against women are punished more severely than crimes against men. Institutions openly discriminate against men in hiring and promotion policies—and a majority of men as well as women favor affirmative-action programs for women.

I went through kindergarten and public schools before going on to university and grad school. University was OK, but most of my teachers in public schools were women. It was pretty obvious that male students were being treated differently than female students:

> The education establishment has obsessed for decades about the shortage of women in some science and tech disciplines, but few worry about males badly trailing by just about every other academic measure from kindergarten through graduate school. By the time boys finish high school (if they do), they're so far behind that many colleges lower admissions standards for males—a rare instance of pro-male discrimination, though it's not motivated by a desire to help men. Admissions directors do it because many women are loath to attend a college if the gender ratio is too skewed.
>
> Gender disparities generally matter only if they work against women. In computing its Global Gender Gap, the much-quoted annual report, the World Economic Forum has explicitly ignored male disadvantages: if men fare worse on a particular dimension, a country still gets a perfect score for equality on that measure. Prodded by the federal Title IX law banning sexual discrimination in schools, educators have concentrated on eliminating disparities in athletics but not in other extracurricular programs, which mostly skew female. The fact that there are now three female college students for every two males is of no concern to the White House Gender Policy Council. Its "National Strategy on Gender

> Equity and Equality" doesn't even mention boys' struggles in school, instead focusing exclusively on new ways to help female students get further ahead.
>
> Women have been a majority of college graduates since 1982 and dominate by many other key measures.

I knew that the majority of health care spending is for women, but they have other advantages over men:

> [Women] not only live longer than men but also benefit from a higher share of federal funding for medical research. They're much less likely to be fatally injured on the job or commit suicide. They receive the lion's share of Social Security and other entitlement payments (while men pay the lion's share of taxes). They decide how to spend most of the family income. Women initiate most divorces and are much likelier to win custody of the children. While men are ahead in some ways—politicians love to denounce the "gender pay gap" and the "glass ceiling" supposedly limiting women—these disparities have been shown to be largely, if not entirely, due to personal preferences and choices, not discrimination.

Whenever I bring up women initiating most of the divorces, and the most common reason being "unhappiness", the universal response I get from Christian traditional women is that women are forced to do this, because the men they freely chose have not changed into what the women wanted them to be. Also, I am told, women only divorce in order to save the children from having an unhappy mother. I wonder if these women have ever looked at the research about what fatherlessness does to children.

I talk to Christians about these issues, and the most common response is ignorance or disbelief. "How could men be victims of discrimination? If they were, I would have heard about it".

> Yet most people still believe in the "myth of pervasive misogyny," as the social psychologists Cory Clark and Bo Winegard concluded in Quillette after surveying the research literature on gender bias. Noting that a Google Scholar search for "misogyny" yielded 114,000 results, while a search for "misandry" yielded only 2,340, they write: "We suspect this difference in interest in misogyny over misandry reflects not the relative prevalence of each type of prejudice, but rather greater concern for the well-being of women than men. All of the arguments, anecdotes, and data forwarded to support the narrative that we live in an implacably misogynistic society, in fact, may be evidence of precisely the opposite."

What's the workplace like for men?

> In 2016, the Australian national government launched a rigorous quest to combat its own misogyny. As part of its "Gender Equality Strategy," it brought in Harvard

> economist Michael J. Hiscox to address a disparity in the government workforce: women held 59 percent of the jobs but only 49 percent of the executive positions.
>
> […]The experiment produced an "unintended consequence," as the researchers ruefully noted in their report, "Going Blind to See More Clearly." When managers evaluated a résumé with a female name like Wendy Richards, they were more likely to shortlist it than if they saw that same résumé with no name. And they were less likely to shortlist it if the name was Gary Richards. Australia's public servants were clearly guilty of bias against men—and that was just fine with the architects of the Gender Equality Strategy.

But what about the so-called "gender pay gap"? Aren't women earning less than men because of discrimination?

> In the real world, a full-time female worker over 25 in America earns 84 cents for every dollar a male earns, but even equalitarian researchers acknowledge that this gap is not due to overt sexual discrimination (illegal since the Equal Pay Act of 1963). It's due mainly to men choosing higher-paying professions, like coding, instead of, say, teaching, and to the "motherhood penalty." There's no significant gender gap between childless singles in their twenties, but once they become parents, mothers tend to reduce their hours, switch to a lower-paying job with more flexibility, or drop out of the workforce. To equalitarians, these differences are the result of systemic sexism: gender stereotypes that discourage girls from seeking high-paying jobs and saddle them with an unfair share of child-care responsibilities.
>
> […]On average, women care more about "work-life balance" and finding a job that seems personally and socially meaningful—typically, one in a comfortable environment that involves working with people rather than things. Men prioritize making money, so they're willing to take less appealing jobs—work that's tedious, outdoors, dirty, dangerous—with longer, less predictable hours. The gender pay gap among graduates of elite business schools is due in significant part to their job choices. The male MBAs are likelier to take jobs in finance and consulting, whereas the women tend to choose lower-paying industries that are less competitive and less risky.

What about in the dating world? Well, what we are seeing today when we look at data from different dating apps is that 80% of the women are focused on pursuing men with the top 20% best appearances. The best height, the best handsomeness, the best displayed wealth. Although women complain that men treat them poorly, what they mean is that *the men they are attracted to* treat them poorly. The men in the bottom 80% (of appearance) are invisible to them.

More:

> Women still prefer winners. They're the pickier sex—on Tinder, they're

> much likelier to swipe left—and they're especially picky when it comes to a partner's income, education, and professional accomplishments, as researchers have found in analyses of mate preferences, activity on dating websites, and patterns of marriage and divorce. Most American women still want a man who makes at least as much as they do—and wealthier women are more determined than less affluent women to find someone with a successful career.
>
> While some traditional attitudes about wives' roles have shifted, husbands are still typically expected to be breadwinners. An American couple is more likely to divorce if the husband lacks a full-time job, but the wife's employment status doesn't affect the odds. Studies of divorce rates in dozens of other countries have confirmed this peril to unemployed men, which comedian Chris Rock has also observed: "Fellows, if you lose your job, you're going to lose your woman. That's right. She may not leave the day you lose it, but the countdown has begun."

When I've raised concerns that I've read about in books like Warren Farrell's "The Myth of Male Power" and Christina Hoff Sommers's "The War Against Boys", Stephen Baskerville's "Taken Into Custody" and Helen Reynolds "Men on Strike", the response from pastors, parents and "traditional" Christian women has been almost universal. They don't know, and they don't care. (The lone exception was my Scottish friend Dina, who sadly passed away).

What about the decline in the marriage rate? Surely men are the cause of that, and women are the victims, right?

> Both sexes have also been hurt by the misandrist excesses of the #MeToo movement. With a few exceptions—like the actress Amber Heard, successfully sued by her husband, Johnny Depp—women who wreck men's reputations and careers with false accusations suffer few consequences in the media or the courts. Police and prosecutors have routinely refused to act, even in clear cases of perjury, as Bettina Arndt has documented. These injustices, along with the draconian punishments and policies imposed by the (mainly female) managers of human resources, have instilled fear in workplaces, stifling office romances (which, in the past, frequently led to marriage) as well as valuable professional relationships. Most women still want men to make the first move in courtship, but who wants to risk being reported to HR for subjecting a colleague to "unwanted attention"? Even a purely professional meeting in private is risky if something innocent gets misconstrued—or falsely described by a hostile colleague exploiting the believe-all-women bias.

There were a lot more interested studies quoted in the article. If you are male, or you know one, it's worth checking out those studies. That way, you can talk about them, and maybe understand why men are making some of the decisions that we're making.

What will happen to parents in California if they dissent from child “transitions”?

September 12, 2023 | by Wintery Knight | Link | Original Link

---

When I was deciding what state to live in, I made a big spreadsheet with columns for all the things that would affect my life plan. I had tax rates, abortion bans, fiscal stability, right to work, pension debt for public employees, infrastructure, energy sources, concealed carry laws, voting trends, etc. The state that came out dead last was California. I’m sure glad that I didn’t move there.

Here’s the latest from the Daily Signal:

> The California State Assembly passed a bill Friday that would require judges in child custody cases to consider whether a parent has affirmed a child’s “gender transition” by making “gender affirmation” an equal part of a child’s “health, safety, and welfare” under state law.
>
> Democratic lawmakers’ bill, AB 957, passed the Assembly by a vote of 57-16 along party lines.
>
> The California Senate passed the bill Wednesday, 30-9, also along party lines.
>
> Gov. Gavin Newsom, a Democrat, is expected to sign the bill into law. Under it, parents who refuse to participate in transgenderism by pretending that their child is a different gender could be guilty of failing to provide for the “health, safety, and welfare” of their child—therefore losing custody to another parent or the state.

It’s a very broad measure:

> Susannah Luthi, who covers California for The Washington Free Beacon, pointed out: “The bill makes no distinctions regarding the age of a child, how long a child has identified as transgender, or affirmation of social transition versus medical sex-change treatments.”

Republicans are telling parents that they need to leave the state immediately if this bill is signed into law:

> In a California Senate Judiciary Committee hearing June 13, state Sen. Scott Wilk, R-Santa Clarita, warned parents to leave California if such legislation were to pass.
>
> “In recent years, we have put government bureaucrats between parents, children, and doctors when it comes to medical care—and now we have this where if a parent does not support the ideology of the government, [children] are going to be taken away from the home,” Wilk said, adding: “If you love your children, you need to flee California.”

Another article from Monday in the Daily Signal says that this is just one of the laws being passed by California Democrats:

> One of them would train teachers to profile these hated "anti-LGBTQ" parents, another would train psychotherapists to prepare to hide gender "treatments" from parents at a minor's request, a third would prevent school districts from removing sexually explicit books if they contain transgender themes, a fourth would prevent Californians from becoming foster parents if they dissent from gender ideology, and the fifth would expand the definition of child abuse to include "non-affirmation" of a child's claimed transgender identity.

And he talks about the bills – train teachers to profile parents who don't support LGBT:

> AB-5, called the Safe and Supportive Schools Act, passed the California State Assembly in May by a vote of 64-4 and on Thursday passed the California State Senate, 32-3. The bill would mandate an "online delivery platform and an online training curriculum to support LGBTQ cultural competency training for teachers and other certified employees."
>
> Not only does this training enforce transgender ideology among educators, but it also trains educators to profile those despicable "anti-LGBTQ" parents.

Hide LGBT transitioning from parents:

> [AB-655] focused on minors' consent to mental health services, first passed the state Assembly in April. An amended version on Wednesday passed the state Senate, 31-8, and the Assembly again, 60-16, on Thursday.
>
> […]AB-655 states that "mental health treatment" shall involve a minor's parent or guardian "unless the professional person who is treating or counseling the minor, after consultation with the minor, determines that the involvement would be inappropriate." In doing so, the legislation intentionally carves out an exception to hide "gender-affirming counseling" from parents on the suspicion that parents who want to save their kids from later experimental interventions actually pose a threat to their own children.

LGBT books in the libraries:

> AB-1078 bills itself as protecting "instructional materials and curriculum" that address "diversity." On Thursday, it passed both the California Senate, 31-9, and the Assembly, 61-17.
>
> The bill aims to prohibit a public school board or a charter school governing body from "refusing to approve or prohibiting the use of any textbook, instructional material, or other curriculum or any book or other resource in a school library on the basis that it includes a study of the role and contributions of any individual or group" as laid out in requirements to "accurately portray the cultural and racial diversity of our society."

Foster families:

> SB-407, which cleared the California Senate in May by a vote of 31-5, advanced Sept. 1 through an Assembly committee. Although the bill has yet to pass the state's lower house, it represents an extension of the transgender measures that the Assembly has passed repeatedly in recent days.
>
> The bill would require a "resource family" in the foster care system to "demonstrate … an ability and willingness to meet the needs of a child regardless of the child's sexual orientation, gender identity, or gender expression, and that, should difficulties around these issues arise, a willingness to obtain resources offered by the county or foster family agency or other available resources to meet those needs."

Meanwhile, in Virginia, the Republican governor who is being targeted by secular left domestic terrorists just pardoned the parent who was being persecuted by the Biden administration:

> Virginia Gov. Glenn Youngkin on Sunday granted an "absolute pardon" to the father who was arrested at a school board meeting after the superintendent lied about his daughter's rape by a skirt-wearing boy.
>
> […]Democrat prosecutor Buta Biberaj bucked her typical soft-on-crime stances and personally argued to put Smith in jail for misdemeanor disorderly conduct. Smith was denied a jury because it was a misdemeanor in General District Court, and a judge quickly convicted him.
>
> […]As Smith's legal saga dragged on, the same system that prosecuted Smith acquitted Loudoun County Public Schools spokesman Wayde Byard for perjury charges. The day Smith's daughter was raped, Byard wrote an email to parents that falsely blamed Smith for police presence and falsely said that no students were in danger, even as the rapist remained on the loose.
>
> The rapist was eventually convicted in juvenile court, but due to a mistake by Biberaj, will not be placed on the sex offenders registry.
>
> […]The media plastered around the world a picture of Smith being dragged away by police, and used him as a symbol of how angry conservative parents were supposedly disrupting school board meetings out of bigotry and ignorance. The National School Boards Association likened him to a domestic terrorist in a letter that the Biden administration used to mobilize anti-terrorism forces against parents.
>
> Only The Daily Wire bothered to ask Smith whether he had a good reason to be mad at the school board. It turned out that not only had his daughter been raped, and the superintendent lied about it, but that the school system kept the rapist in school, where he sexually assaulted a second girl.
>
> "They villainized me and my family from the minute my daughter reported that

> she was sexually assaulted, pretty much until present time," he said.
>
> Biberaj wanted "to make an example out of me to scare people from speaking out. And quite frankly, it worked," Smith said, noting that far fewer parents have turned out to school board meetings and spoken out since his arrest.
>
> He said his next legal step will be to sue the prosecutor for misconduct, and possibly the National School Boards Association.

This part is interesting:

> The pardon from Youngkin, who enjoys high favorability ratings in what was previously considered a blue state, continues a fulfillment of his campaign promise to focus on parental rights in education. On Tuesday, he will hold a "Parents Matter" conversation in Loudoun–at Cornerstone Chapel, a church that was placed on an enemies list by a group of liberal activists called the Loudoun Love Warriors.

It's very interesting to see how Muslims in Canada and other countries are suddenly starting to realize that the progressive parties they had ben supporting are coming for their children. Maybe parents from groups that traditionally vote Democrat will come to their senses. It would help if Republicans, like Glenn Youngkin, can carve out a "pro-parent" brand. We need more bold actions from Republican governors, so voters in the middle get the picture.

Did an increase in oxygen levels trigger the Cambrian explosion?

September 13, 2023 | by Wintery Knight | Link | Original Link

---

The Cambrian explosion is the name given to the sudden origin of basically all of the major body plans in nature. It happened in a 3-5 million year period about 540 million years ago. It's a problem for naturalists, because of the enormous amount of information needed to make these new (and different) body plans. The best explanation they had was that rising oxygen levels did it. Is that right?

Here's an excellent post by Günter Bechly, writing for Evolution News.

Here's the naturalistic scenario:

> For more than seventy years it was the scientific consensus and undisputed textbook wisdom that the origin of multicellular life in the late Precambrian was triggered by increased oxygen levels (Fike et al. 2006, Sahoo et al. 2012, Lyons et al. 2014, Reinhard et al. 2016, Anonymous 2023, Harrison 2023, Ralls 2023, UCPH 2023). For example, McFadden et al. (2008) identified two pulses of oxidation in the Precambrian and found that "following this second oxidation event, between 550 and 542 million years ago, there was a worldwide increase of Ediacaran organisms, complex macroscopic life forms, an event recently dubbed the Avalon Explosion" (Virginia Tech 2008). Similarily, the study by Pogge von Strandmann et al. (2015) was promoted in a press release as demonstrating that "oxygen provided breath of life that allowed animals to evolve" (Hickey et al. 2015).

This was all a lot of theorizing in order to save naturalism from scientific evidence. But science makes progress, and the smoke gets cleared:

> Now a new study (Ostrander et al. 2023) by group of researchers from Denmark has overturned decades of evolutionary dogma and claims the exact opposite: "oxygen didn't trigger multicellular organisms" (Anonymous 2023, UCPH 2023). What this study found was instead clear evidence of a lower oxygen content correlated with the Avalon Explosion of the Ediacaran biota. The authors summarize their surprising findings as: "Contrary to a classical hypothesis, our interpretations place the Shuram excursion, and any coeval animal evolutionary events, in a predominantly anoxic global ocean." Co-author Christian Bjerrum commented "Specifically, it means that we need to rethink a lot of the things that we believed to be true from our childhood learning. And textbooks need to be revised and rewritten. So, if not extra oxygen, what triggered the era's explosion of life? Perhaps the exact opposite" (Anonymous 2023, UCPH 2023). Some even went further and suggested to "forget everything you thought you knew about how life evolved on Earth" (Ralls 2023) because it "turns out we might be very

> wrong about how life arose on Earth" (Harrison 2023).

Prior to the "increase in oxygen" hypothesis, naturalists used to explain away the Cambrian explosion by saying that we had not studied the fossil record for long enough. "Eventually, we will have a better picture of the fossil record, and that will show that we started with a few simple life forms, and then branched out into more and more complex life forms, over an hundreds of millions of years".

But that's not what they are saying now, because the evidence is in:

> Here is what Professor Derek Briggs, a world-renowned expert on Cambrian fossils, has to say on this issue: "We now know that the sudden appearance of fossils in the Cambrian (541–485 million years ago) is real and not an artefact of an imperfect fossil record" (Briggs 2015). Likewise, Zhang & Shu (2021) admitted that "multiple sources of evidence are strongly suggestive of a real evolutionary event being recorded rather than an artifact of an imperfect fossil record." Cabej (2020) put it even more clearly: "Nevertheless, now, 150 years after The Origin, when an incomparably larger stock of animal fossils has been collected, Darwin's gap remains, the abrupt appearance of Cambrian fossils is a reality, and we are still wondering about the forces and mechanisms that drove it.

How many times does this have to happen, before naturalists admit that they are committing the "atheism-of-the-gaps" fallacy?

Before science, atheists told us that the universe was eternal. Then science progressed, and we now know that the universe – space, time, matter and energy – all came into being out of nothing about 14 billion years ago. What could cause that? Well, the cause of all of nature must be *supernatural.*

Before science, atheists told us that any old universe would support life. If gravity was a little different, then people would just have pointy ears, like you see on Star Trek. But then science progressed, and we now have a long list of dozens of constants and quantities in nature that must be finely-tuned to an incredibly high degree in order for complex life of any kind to exist. Fine-tuning requires an intelligent agent – that's the only explanation that we have experience with.

Before science, atheists told us that the origin of life was easy. Life is just a clump of jello, very boring and simple. No need for a cosmic engineer. But then science progressed, and we discovered biological information, such as DNA, inside the cell. Naturalists tried to say that most (or all) of that information was "junk DNA", but more science happened proving them wrong again.

I could go on and on with example after example. Naturalism is about faith. They start with the desire for personal autonomy. Autonomy from the moral law. They speculate about how nature can be explained without a Creator and Designer. They take refuge in gaps in our scientific understanding. But then science progresses, the gaps close, and everyone knows for certain.

J. Warner Wallace: I am not a Christian because it works for me

September 14, 2023 | by Wintery Knight | Link | Original Link

---

Some of my favorite Christians are the ones that start out as atheists, and do very well at life, but just change direction because they investigate the evidence. One person who had a fabulous career in law enforcement switched sides because of the evidence: J. Warner Wallace. And in a must-read post from Cold-Case Christianity, he explains his motive.

Excerpt:

> Life on this side of my decision hasn't always been easy. It's been nearly seventeen years since I first trusted Jesus as Lord and Savior. I still struggle to submit my prideful will to what God would call me to do. Christianity is not easy. It doesn't always "work" for me. There are times when I think it would be easier to do it the old way; easier to cut a corner or take a short cut. There are many times when doing the right thing means doing the most difficult thing possible. There are also times when it seems like non-Christians have it easier, or seem to be "winning". It's in times like these that I have to remind myself that I'm not a Christian because it serves my own selfish purposes. I'm not a Christian because it "works" for me. I had a life prior to Christianity that seemed to be working just fine, and my life as a Christian hasn't always been easy.
>
> I'm a Christian because it is true. I'm a Christian because I want to live in a way that reflects the truth. I'm a Christian because my high regard for the truth leaves me no alternative.

I think this is important. There are people who I know who claim to be Christian, but they are clearly believing that God is a mystical force who arranges everything in their lives in order to make them happy. They are not Christians because it's true, but because of things like comfort and community. But people ought to become Christians because they think it's true.

Truth doesn't necessarily make you happy, though. Truth can impose intellectual obligations and moral obligations on you. Seeing God as he really is doesn't help us to "win" at life, as the culture defines winning. But it does offer the opportunity for us to walk a similar path to the one Jesus walked. And that is very appealing for real Christians.

The Bible doesn't promise that people who become Christians will be happier. Actually, it promises that Christians will suffer for doing the right things. Their autonomy will suffer, as they sacrifice their own interests and happiness in order to make God happy, by serving his interests.

Christianity isn't something you add on to your before-God life in order to achieve your before-God goals. When you become a Christian, you get a new set of goals, based on

God’s character and his design for you. And although you might be very successful in the world as part of serving God, there is no guarantee of that. Christianity is not life enhancement. I do think that Christians do well at not hurting themselves though, but because they eliminate selfish desires, not because God gives them stuff.

By the way, if you’re looking for a great speaker to invite to your university campus, J. Warner Wallace is the best, then Frank Turek is my number two choice. Wallace has the homicide detective background, and Turek is a former naval aviator. Two tough guys who are tough-minded about the Christian faith.

How does church appear to someone raised in a non-Christian home?

September 15, 2023 | by Wintery Knight | Link | Original Link

---

My friend Wes posted an article about how communication is set up in the church, and why it's not effective at equipping Christians to defend their worldview in hostile environments. The article describes what I encountered in church, after I was raised in a non-Christian home and become a Christian on my own by reading the New Testament. The view presented in the essay is how I viewed the church, and is probably how most outsiders view church. I think it explains why young people leave the church in droves once they move out of their parents' houses.

The author writes:

> On the Internet, one soon discovers that many respected church leaders are quite unable to deal directly with opposing viewpoints. In fact, many of them can't even manage meaningful engagement with *other voices*. Their tweets may be entirely one-way conversations. They talk *at* their audiences. They can talk *about* other voices, but fail to talk *to* them, let alone *with* them. Their representations of opposing viewpoints reveal little direct exposure to the viewpoints in question.
>
> […]Around this point, it can start to dawn on one that many church leaders have only been trained in forms of discourse such as the sermon and, to a much lesser extent, the essay. Both forms privilege a single voice—their voice—and don't provide a natural space for response, questioning, and challenge. Their opinions have been assumed to be superior to opposing viewpoints, but have never been demonstrated to be so. While they may have spoken or written about opposing voices, they are quite unaccustomed to speaking or writing to them (not to mention listening to or being cross-examined by them). There are benefits to the fact that the sermon is a form of discourse that doesn't invite interruption or talking back, but not when this is the *only* form of discourse its practitioners are adept in.
>
> Many church leaders have been raised and trained in ideologically homogenous cultures or contexts that discouraged oppositional discourse. Many have been protected from hostile perspectives that might unsettle their faith. Throughout, their theological opinions and voices have been given a privileged status, immune from challenge. Nominal challenges could be brushed off by a reassertion of the monologue. They were safe to speak about and habitually misrepresent other voices to their hearers and readers, without needing to worry about those voices ever enjoying the power to answer them back. Many of the more widely read members of their congregations may have had an inkling of the weakness of their positions in the past: the Internet just makes it more apparent.

One of my friends who comments here as “Wintery’s Friend” actually did his M. Div, and I think it was he who told me that his seminary had dropped the lone course in apologetics that had been part of the curriculum. Now seminary grads don’t learn any opposing views. They just pre-suppose that the Bible is true in the same way that Mormons pre-suppose their Bible is true, or Muslims pre-suppose their Bible is true, etc.

More:

> If one’s opinion has never been subjected to and tried by rigorous cross-examination, it probably isn’t worth much. If one lacks the capacity to keep a level head when one’s views are challenged, one’s voice will be of limited use in most real world situations, where dialogue and dispute is the norm and where we have to think in conversation with people who disagree with us.
>
> The teachers of the Church provide the members of the Church with a model for their own thinking. The teacher of the Church does not just teach others *what* to believe, but also *how* to believe, and the process by which one arrives at a theological position. This is one reason why it is crucial that teachers ‘show their working’ on a regular basis. When teaching from a biblical text, for instance, the teacher isn’t just teaching the meaning of that particular text, but how Scripture should be approached and interpreted more generally. An essential part of the teaching that the members of any church need is that of dealing with opposing viewpoints. One way or another, every church provides such teaching. However, the lesson conveyed in all too many churches is that opposing voices are to be dismissed, ignored, or ‘answered’ with a reactive reassertion of the dogmatic line, rather than a reasoned response.

You can imagine that the first questions that you’ll be asked by a non-Christian co-worker would be things like “why think God exists?” and “why think the Bible is history rather than legend?”. In order to answer those questions, you would have to know how to counter what a non-Christian believes. You would have to show them the reasons for your view.

Unfortunately, many of the conservative Christian leaders we trust think that the best way to be convincing is not to show your work, but just to speak Bible verses at people who don’t accept the Bible as an authority. Some people attend church for 20 years, and they never meet a single person who didn’t just assume that the Bible is trustworthy without doing an investigation first.

What’s most surprising is that this fideistic view of Christianity is not even Biblical. The Biblical view of faith is that faith is trust in God, based on evidence. This is why Jesus offered his own resurrection as evidence to a generation of unbelievers. His miracles were also evidence offered to unbelievers. And the Old Testament is filled with examples of people like Isaiah presenting evidence to unbelievers. The fideist view sounds more like the Mormon “burning of the bosom” view. We can do better than that!

Look:

That debate has over 6 million views on YouTube. That’s a debate with Christopher Hitchens, one of the most famous atheists of the last 100 years. In the post-debate comments, the atheist admitted he lost. Watch it. You won’t find it in most churches, so you’re going to have to learn it on your own. Without anyone’s help. Don’t be a spectator. Don’t settle for youth pastor Christianity.

William Lane Craig debates Walter Sinnott-Armstrong: evil, suffering and God

September 16, 2023 | by Wintery Knight | Link | Original Link

---

This is one of the top 4 best debates that William Lane Craig has ever done in my opinion. (The other three are Craig-Millican debate and the first and second Craig-Dacey debates). If you've never seen Dr. Craig in a debate with a non-Christian, this one is probably the best introductory one out there. Dr. Craig is the foremost defender of Christian theism on the planet, and probably of all time.

Sinnott-Armstrong is very courteous, respectful and intelligent scholar and he is very good at defending his side. This is a very cordial and engaging debate, and because it was held in front of a church audience, it was targeted to laymen and not academics. So if you are looking for a good first debate to watch, this is it! Normally, Dr. Craig debates at major universities in front of students and faculty.

There is also a book based on this debate, published by Oxford University Press. I was actually able to find a PDF of it online. I should also remind people that you can get the wonderful Craig-Hitchens debate DVD from Amazon.com if you are looking for a debate to watch, or show in your church, this is the one to start with.

The debaters:

- William Lane Craig
- Walter Sinnott-Armstrong

The format:

- WSA: 15 minutes
- WLC: 15 minutes
- Debaters discussion: 6 minutes
- Moderated discussion: 10 minutes
- Audience Q&A: 18 minutes
- WSA: 5 minutes
- WLC: 5 minutes

SUMMARY:

WSA opening speech:

Evil is incompatible with the concept of God (three features all-powerful, all-god, all-knowing)

God's additional attributes: eternal, effective and personal (a person)

He will be debating against the Christian God in this debate, specifically

Contention: no being has *all* of the three features of the concept of God

His argument: is not a deductive argument, but an inductive/probabilistic argument

Examples of pointless, unjustified suffering: a sick child who dies, earthquakes, famines

The inductive argument from evil:

1. If there were an all-powerful and all-good God, then there would not be any evil in the world unless that evil is logically necessary for some adequately compensating good.
2. There is evil in the world.
3. Some of that evil is not logically necessary for some adequately compensating good.
4. Therefore, there can't be a God who is all-powerful and all-good.

Defining terms:

- Evil: anything that all rational people avoid for themselves, unless they have some adequate reason to want that evil for themselves (e.g. – pain, disability, death)
- Adequate reason: some evils do have an adequate reason, like going to the dentist – you avoid a worse evil by having a filling

God could prevent tooth decay with no pain

God can even change the laws of physics in order to make people not suffer

Responses by Christians:

- Evil as a punishment for sin: but evil is not distributed in accordance with sin, like babies
- Children who suffer will go straight to Heaven: but it would be better to go to Heaven and not suffer
- Free will: this response doesn't account for natural evil, like disease, earthquakes, lightning
- Character formation theodicy: there are other ways for God to form character, by showing movies
- Character formation theodicy: it's not fair to let X suffer so that Y will know God
- God allows evil to turn people towards him: God would be an egomaniac to do that
- We are not in a position to know that any particular evil is pointless: if we don't see a reason then there is no reason
- Inductive evil is minor compared to the evidences for God: arguments for a Creator do not prove that God is good

WLC opening speech:

Summarizing Walter's argument

1. If God exists, gratuitous evil does not exist.
2. Gratuitous evil exists.

3. Therefore, God does not exist.

Gratuitous evil means evil that God has no morally sufficient reason to permit. WSA doesn't think that all evil is incompatible with God's existence, just gratuitous evil.

Everyone admits that there are instances of evil and suffering such that we cannot see the morally sufficient reason why God would allow it to occur.

The claim of the atheist is that if they cannot see that there is a moral justification for allowing some instance evil, then there is no moral justification for that instance of evil.

Here are three reasons why we should not expect to know the morally sufficient reasons why God permits apparently pointless evil.

1. the ripple effect: the morally sufficient reason for allowing some instance of evil may only be seen in another place or another time
2. Three Christian doctrines undermine the claim that specific evils really are gratuitous
3. Walter's own premise 1 allows us to argue for God's existence, which means that evil is not gratuitous

Christian doctrines from 2.:

- The purpose of life is not happiness, and it is not God's job to make us happy – we are here to know God. Many evils are gratuitous if we are concerned about being happy, but they are not gratuitous for producing the knowledge of God. What WSA has to show is that God could reduce the amount of suffering in the world while still retaining the same amount of knowledge of God's existence and character.
- Man is in rebellion, and many of the evils we see are caused by humans misusing their free will to harm others and cause suffering
- For those who accept Christ, suffering is redeemed by eternal life with God, which is a benefit that far outweighs any sufferings and evils we experience in our earthly lives

Arguing for God in 3.

1. If God exists, gratuitous evil does not exist.
2. *God exists*
3. Therefore, gratuitous evil does not exist.

Four reasons to think that God exists (premise 2 from above):

- the kalam cosmological argument
- the fine-tuning argument
- the moral argument
- the argument *from* evil

CIA offered to pay analysts to change their minds on lab-leak theory

September 17, 2023 | by Wintery Knight | Link | Original Link

---

I was listening to the Bryan Dean Wright podcast this past week, and found an excellent news story that I thought everyone should know about. I think we all have concerns at this point about whether people in government can be trusted to do anything except help Democrats and punish Republicans. This story makes it clear that the CIA is one of those departments lacking integrity.

New York Post:

> The Central Intelligence Agency offered to pay off analysts in order to bury their findings that COVID-19 most likely leaked from a lab in Wuhan, China, new whistleblower testimony to Congress alleges.
>
> A senior-level CIA officer told House committee leaders that his agency tried to pay off six analysts who found SARS-CoV-2 likely originated in a Wuhan lab if they changed their position and said the virus jumped from animals to humans, according to a letter sent Tuesday to CIA Director William Burns.
>
> Select Subcommittee on the Coronavirus Pandemic Chairman Brad Wenstrup (R-Ohio) and Permanent Select Committee on Intelligence Chairman Mike Turner (R-Ohio) requested all documents, communications and pay info from the CIA's COVID Discovery Team by Sept. 26.
>
> "According to the whistleblower, at the end of its review, six of the seven members of the Team believed the intelligence and science were sufficient to make a low confidence assessment that COVID-19 originated from a laboratory in Wuhan, China," the House panel chairmen wrote.

The most senior analyst was the one most willing to cover up for the Chinese:

> "The seventh member of the Team, who also happened to be the most senior, was the lone officer to believe COVID-19 originated through zoonosis."

How were the CIA analysts paid? "a significant monetary incentive":

> "The whistleblower further contends that to come to the eventual public determination of uncertainty, the other six members were given a significant monetary incentive to change their position," they said, noting that the analysts were "experienced officers with significant scientific expertise."

Always remember that people in government are being paid by the money they grab from taxpayers. They ought to be serving the taxpayers who pay their salaries. But often, these are people who are on the secular left. They think the universe is an accident, that human beings are machines made out of meat, and that there is no accountability from a

Moral Lawgiver. What sort of integrity would you expect from a secular leftist? They do what is best for themselves.

After causing food prices to skyrocket, Trudeau demands tax on food retailers

September 18, 2023 | by Wintery Knight | Link | Original Link

According to election results in Canada, the majority of Canadian voters support left-wing economic policies. In the last election, the majority of voters supported Justin Trudeau, former part-time drama teacher, and former part-time snowboard instructor. He chose people with no earned degrees or private sector work experience to run the Canadian economy. What happened next?

Rebel News explains:

> Food prices in Canada skyrocketed in 2022 owing to runaway inflation. Record numbers have accessed food banks to feed their families, with many forced to cut back — a pervasive trend that has continued midway through the year.
>
> Canada's Food Price Report 2023 predicted a 5% to 7% food price increase in 2023 following 10% increases last year, with vegetables, dairy and meat becoming more expensive.
>
> As of July 2023, inflation has overtaken the Canada Food Guide, according to Health Canada. Since last updating the Food Guide in 2019, prices for the most recommended foods have sharply risen.
>
> "Not only are some nutritious foods more difficult to find, but they can also be more expensive," said the report Evaluation Of The Office Of Nutrition Policy And Promotion.
>
> Only 30% of Canadians are eating the recommended minimum of five servings of fruits and vegetables daily, reported Blacklock's Reporter.
>
> Higher prices for basic groceries like cabbage and spaghetti are running at three and four times the rate of general inflation, showed new Statistics Canada figures.
>
> […][T]he average family of four is expected to spend up to $16,288.41 annually on food this year — up an additional $1,065.60 from 2022.

So what did Justin do? Well, like any other stupid communist dictator, he decided to pick someone to blame for the logical consequences of his own actions. He decided to blame the private businesses who supply people with food. He wants to tax them to punish them for the food inflation that his own spending spree caused.

Rebel News explains:

> Prime Minister Justin Trudeau has threatened to tax Canadian grocers in a bid to lower grocery costs for families nationwide.
>
> […]While at the Liberal caucus retreat in London, Ontario, Trudeau demanded that grocers devise a plan to stabilize prices by Thanksgiving. Otherwise, tax

> measures may be on the way for Loblaw, Metro, Empire, Walmart and Costco.
>
> […]Trudeau did not rule anything out on what those consequences could be, "including tax measures."
>
> […]The call for relief comes as grocery prices rose 8.5% in July — nearly three times the overall inflation rate.
>
> However, the Canadian Taxpayers Federation (CTF) believes another tax will not improve affordability when Canadians go to checkouts across the country.
>
> "The last thing Canadians need is a grocery tax," said Franco Terrazzano, CTF Federal Director. "Instead of hammering Canadians with a grocery tax, Trudeau should scrap his carbon tax, making food prices more expensive."

Canada has one of the highest carbon taxes in the industrialized world. I wonder if Canadian voters realized that they would have to starve, in order to save the planet from global warming?

How did this happen? Well, Justin Trudeau doesn't have any education or experience in finance. Instead, his policies are based on his experience of growing up with a silver spoon in his mouth, thanks to his famous, rich father. All he knows how to do is to spend money to try to buy votes. And this massive spending spree has caused inflation in Canada to skyrocket. His anti-business taxes have caused businesses to raise prices just to stay open. But that's not enough. Justin also decided to import millions of unskilled people from other countries, regardless of their ability to speak English, or work. So Canadian taxpayers have to pay more housing, education, police, and basically everything, because the demand has gone up while the supply is diminishing.

Justin thought this would make people like him. And for a while, it did. But now voters are realizing that there is a bill to pay for all of Justin's "generosity". And that bill has been passed on to the young people who overwhelmingly voted for him. Young people and Canada thought that they were voting for global warming, gay rights and abortion on demand through all 9 months of pregnancy. Actually, what they got was average home prices of $500,000 and starvation. I hope they are learning their lesson: don't trust school teachers to give you an accurate view of how the world works.

Biden administration charges two 70-year-old pro-life women

September 19, 2023 | by Wintery Knight | Link | Original Link

---

These days it seems like normal people with morals are the primary targets of Biden administration law enforcement. Concerned parent? Then you're a domestic terrorist. Pro-life? Then we need to pre-dawn raid your house and point assault rifles at your wife and kids. Whistleblower against Hunter Biden? Then maybe you need to be punished for that.

Here's the latest story from Fox News:

> Three pro-lifers who protested at, and blocked access to a Washington, D.C. reproductive health care services clinic in October 2020 were found guilty of federal charges by a jury on Monday.
>
> The Department of Justice said in a press release that 41-year-old Jonathan Darnel of Arlington, Virginia; 73-year-old Jean Marshall of Kingston, Massachusetts; and 74-year-old Joan Bell of Montague, New Jersey were each convicted of federal civil rights conspiracy and freedom of access to clinic entrances (FACE) act offenses.
>
> The DOJ said Marshall and Bell traveled to D.C. to meet with Darnel and to participate in a clinic blockade that was coordinated and streamed live by another co-conspirator on Facebook.
>
> During the blockade on Oct. 22, 2020, the defendants are accused of creating a blockade at the clinic, which prevented the clinic from providing reproductive health services.

Well, that is certainly a crime. It's not as bad as what BLM and Antifa did during their rioting, though. And many of them got off Scot-free, because the Biden administration law enforcement agreed with what they were doing. So what do you think is a fair sentence for creating a blockade at an abortion clinic?

The Biden administration wants "UP TO ELEVEN YEARS IN PRISON":

> U.S. District Court Judge Colleen Kollar-Kotelly, who presided over the trial of Marshall, Bell and Darnel, ordered all three defendants immediately detained as required by statute.
>
> Sentencing for the trio will be scheduled at a later date, and each faces up to 11 years in prison, three years of probation and a fine of up to $350,000.

It really does seem like there is a two-tiered justice system in this country. One for Democrats, and one for their opponents.

The Federalist has an especially shocking example:

> On Friday, President Joe Biden's allegedly "non-binary" nuclear waste expert,

> Sam Brinton, was sentenced in a grand larceny case over stealing women's luggage from U.S. airports. Police say Brinton stole a bag from Harry Reid International Airport in Las Vegas with an estimated worth of around $3,670. Authorities also charged Brinton with stealing luggage at a second airport in Minnesota.
>
> The former Energy Department official took a plea deal over the Las Vegas bag theft Friday, agreeing to pay a $3,670 fine to the victim and a $500 criminal fee — no jail time required. The Minnesota theft remains an open case, with the next hearing scheduled for Monday, according to Fox News.
>
> Contrast Brinton's slap on the wrist to a pro-Trump meme creator convicted of illegal election influencing last month, and it's no wonder Americans see a two-tiered justice system.
>
> Douglass Mackey faces 10 years behind bars over a 2016 post mocking how low Democrats want to set barriers to the ballot box.

Federal prosecutors didn't even want to give Hunter Biden any jail time, and he is accused of serious tax crimes and gun crimes. I guess tax crimes and gun crimes are only serious if you're a Republican. If you're the President's son, then it's all OK.

How is any of this fair? The only way to get the people in the government to have integrity and honor is to vote the secular leftists out of the government. We have a chance to do that in 2024.

Soros-backed “Defund The Police” DA celebrates banning cash bail in Illinois

September 20, 2023 | by Wintery Knight | Link | Original Link

---

I live in a red state and I am constantly running into people who moved here from blue states like California and Illinois. I ask people why they left, and the most common answer is that taxpayer-funded law enforcement is not protecting the public from illegal immigrants and other criminals. Why is that? Well, a big part of the problem is far-left district attorneys backed by George Soros.

Here’s the latest from Daily Wire:

> On Monday, Illinois became the first state to eliminate cash bail in a move celebrated by Democratic officials and criticized by law enforcement.
>
> After a lengthy legal battle, Illinois’ Safety, Accountability, Fairness, and Equity-Today Act (SAFE-T Act) went into effect on Monday, meaning that meeting cash bail can no longer be a condition for release.

The bill was praised by Cook County District Attorney Kim Foxx, “a George Soros-backed prosecutor who has faced criticism over her approach to law enforcement in the Chicago area”.

Ending cash bail means that people arrested for a crime don’t have to pay their bail amount with cash in order to be released. They get their money back when they appear for trial. So, people who are accused of crimes can get released without actually paying any immediate penalty. It’s not even clear to me why they would appear in court, since they have paid nothing that they need to get back.

The police don’t like it:

> The cash bail provision of the SAFE-T Act was first put on hold by the Illinois Supreme Court before it upheld the law in July, a decision criticized by the Illinois Fraternal Order of Police.
>
> “The court ignored the pleas of nearly every prosecutor in the state of Illinois, Democrat and Republican, that the elimination of cash bail will put dangerous criminals back on the street, instead of keeping them in jail or forcing them to post cash bail as they await trial. Many of those offenders will commit crimes again within hours of their release,” Illinois FOP State Lodge President Chris Southwood said after the decision was released.
>
> “And who will have to arrest those offenders again and again? The police officers whose jobs have been made immeasurably more difficult by all of the new anti-law enforcement measures that are in place,” he added.

How well has George Soros / Defund the Police policies been working out in Illinois? They’ve been soft on crime for years, but hard on legal gun owners and self-defense

against criminals. Is that a good way to make crime rates go down?

Illinois Policy explains:

> Crime in Chicago overall has increased during the past five years by nearly 20%, according to an official report by the Chicago Police Department. The year-over-year change in crime was even greater last year. Between 2021 and 2022, overall crime in Chicago increased by 41%, after overall crime had decreased each year in 2019 and 2020 and slightly increased in 2021.
>
> Theft is driving the overall increase in crime. Car theft is up 114% since 2018, and other thefts increased by 32% since 2018. Just last year, motor vehicle theft increased by 102% and theft by 56%.

I did see an interesting related story coming out of Florida. Apparently, these Soros-backed Defund-the-Police district attorneys were also in Florida. But something different happened in Florida – Ron DeSantis fired those soft-on-crime people. And he appointed new people.

Florida's Voice reported this:

> Newly appointed State Attorney for Orange and Osceola Counties Andrew Bain provided an update following his first month in office on Thursday.
>
> Bain outlined changes such as the reinstitution of mandatory minimum sentencing for the possession of firearms by felons, bringing back former prosecutors, and sending use of force cases to a grand jury.
>
> In August, Gov. Ron DeSantis appointed Bain to replace State Attorney Monique Worrell from the ninth Judicial Circuit, following her immediate suspension.
>
> Bain is taking action to reinstitute mandatory minimum sentencing for the possession of firearms by felons.
>
> DeSantis previously said Worrell's practices or policies of avoiding minimum mandatory sentences for gun crimes "not only defies the expressed will of the Florida Legislature, it also subjects the residents to increased risk of harm as violent criminals in the community are too often left on the streets or prematurely returned to the streets to cause, further violence and mischief."
>
> "The decision to restore this law and practice is driven by State Attorney Bain's unwavering dedication to public safety and accountability," a press release said.

Right now, we are deciding who we should pick for the Republican candidate for President. I like DeSantis because he has all the achievements. And he had to fight for them, and fight through getting called names by the news media. Something to think about.

New study: same-sex attraction isn’t fixed

September 21, 2023 | by Wintery Knight | Link | Original Link

The Federalist reports on what researchers have found about the nature of same-sex attraction. Is it fixed? Or does it change over time? I think that gay activists would like everyone to believe that same-sex attraction is fixed, but to learn the truth, we should look at what the scientific research says.

Excerpt:

> There is not only no scientific evidence that sexual orientation is immutable, there is conclusive scientific evidence that most people who experience exclusive same-sex attraction end up developing an interest in the opposite sex over time.
>
> This is so well established by now that scholars are busy publishing methods to measure frequency of sexual orientation change in massive longitudinal studies of youth and young adults. (I.e., How many times in nine years can we expect a homosexual sexual orientation to change? Is the change associated with lifestyle habits? Who changes more frequently: males or females?)
>
> That basic fact was already settled science when Obergefell came before the Supreme Court. Half a dozen rigorous studies could be cited from the late 1990s and early 2000s, but the most noteworthy probably remains a Cornell-led study published in 2007.
>
> In this study, Dr. Rich Savin-Williams examined a representative sample of more than 12,000 American youth, following each from the age of 16 to 22. Rather than rely on an individual’s reconstruction of his or her past based on current identity, researchers met with subjects three times throughout the six-year period. Each time, they asked individuals (via a computer, to protect privacy)

> whether they had had a romantic attraction to a member of the opposite or same sex since their last interview.
>
> For instance, 17-year-old males were asked if, in the past year, they had had a romantic attraction to another male or female. About 1.5 percent reported only having a romantic attraction to other males. Five years later, when that 1.5 percent were asked about their romantic attractions since last interview, the overwhelming majority (70 percent) reported a 180-degree flip in their sexual orientation—they only had romantic feelings for women.
>
> Similarly, among females, about 40 percent switched from exclusive same-sex attraction to exclusive opposite-sex attraction. Most of the rest (45 percent of the total) reported they had feelings for both men and women. Only 1 percent of women who, at 17, reported a full year of exclusive same-sex attraction reported a similar experience in the five years that followed.

This research is in agreement with previous research on identical twin studies reported by the prestigious science journal Nature:

> When one identical twin is gay, there is about a 20% chance that the other will be as well. But because this rate is not 100%, it is thought that environmental factors play a role as well. One of the best characterized is the 'older brother effect': the chance of a man being gay increases by 33% for each older brother he has. The reason is not clear, although one hypothesis holds that the mother's immune system begins to react against male antigens and alter the fetus's development.

So, it turns out that homosexual behavior is a lot more related to free choices than it is to innate, fixed dispositions. That's what the science says. It's not what the politicians say. It's not what the Supreme Court says. It's not what Hollywood says. It's not what journalists say. But it is what science has found to be true about the universe. We are in control of our behaviors, and we have to choose things that are likely to work out in the long-term – not just what feels good to us in the moment.

Whenever I hear gay activists complaining that they have no choice but to give in to their "innate, fixed, biological" sexual attractions, I always think about how I've never been married and have had to deal with sexual attraction to the opposite sex. As a Christian, there is simply no Biblical support for sex outside of marriage. So, that means that I've had to just live with not being allowed to act on my desires. In fact, this is the normal Christian life. There was a time when people had more skepticism about their feelings and desires, and they knew that self-control was a good thing. But now it seems as if everyone is so desperate to be liked that we tell everyone yes to everything that they feel like doing. We now consider every moral viewpoint as equal to any other – all the better to do what makes us feel happy. The important goal is that we all feel good right now, and who cares about the damage that our selfishness will cause down the road? We can just act surprised when that happens and pretend that there is no such thing as cause

and effect. I can remember a time when Christians in particular had some suspicion about following your heart, because the heart was deceitful and selfish. I guess those days are over, and suddenly feelings are ruling over reason and self-control.

It's pretty clear that not everything that a person feels like doing is good for them. A lot of decisions that people make to feel good right now lead to outcomes where they or the people who are depending on them will be harmed. For example, lots of people feel like staying home from a school exam, or staying home from their jobs, or drinking alcohol all night, or taking drugs. We used to have more confidence about telling people that not everything they wanted was good for them, and to have more self-control, and to think of how their decisions would harm others. Today, society has drifted away from objective moral boundaries and self-control toward subjective feelings and moral relativism, we are all finding it more difficult to tell people that they should choose to adhere to moral standards. We always seem to be looking to big government to make our irresponsible, reckless choices to be happy in the moment "work out" somehow.

Today, when people make poor decisions that wreck their families, hurt their kids, damage their health, etc. we are more likely to tax the people who haven't been selfish and reckless in order to pay for government programs that "fix" the outcomes of the selfish, reckless people. In some countries, you can get free single mother welfare, free taxpayer-funded abortions, free sex-changes, free treatment for sexually-transmitted diseases, free rounds of IVF, and so on. Just do whatever you want and someone else who had more self-control than you did will pay for it for you. That's why we have a twenty-trillion dollar debt, which we never had during the time when we still had the courage to tell people not to do things that were risky, and would be expensive to fix when they blew up.

When did it become normal to think that cause and effect were so unpredictable that people shouldn't be blamed and held accountable for making bad decisions? When did it become normal to think that doing what feels good for ourselves should be rewarded with other people's money, through big government programs? When did it become normal to take people to court to force them to celebrate your self-centeredness, just because their disagreement with what you were doing made you feel bad?

54-year-old feminist angry at dating agency for not finding her a rich husband

September 22, 2023 | by Wintery Knight | Link | Original Link

Kate Mulvey at age 53 expects that rich men will want to marry her

A little while ago, I blogged about a 47-year-old mother of three who sued a dating agency for failing to find her a rich husband. That was pretty bad, but I found something even worse. A 54-year-old woman who spend all her savings on a dating agency. She expected them to find her loads of rich men who want to marry her – despite her never having invested anything in them.

The UK Telegraph reports:

> Glass of wine in hand, the man sitting opposite me in the restaurant was in full flow. While he was droning on about his work commitments, I zoned in and out trying to work out how on earth I was going to get to through this first date. I had expected to meet an eligible bachelor, but he had turned out to be so boring that he made me want to stick asparagus up my nostrils.
>
> This memory came flooding back when I read about, Tereza Burki, a City financier who, last week, successfully sued a Knightsbridge-based elite matchmaking service, for the return of her £12,600 annual fee after they failed to find her the man of her dreams.
>
> A couple of years ago, I too joined an expensive matchmaking agency. I had just come out of a seven year relationship, and was on the wrong side of 50.
>
> I soon tired of online dating and receiving messages from over weight baldies

> who peppered their emails with childish emojis. I hankered to find Mr Right-for-me, a man who was suitably educated and a successful professional.
>
> And so this is how I found myself, throwing money (my entire savings to be precise) to an upmarket matchmaking agency in central London. The agency claimed to filter out the undesirables, the mediocre and give clients the personal touch, so I handed over the hefty sum of £6,000.
>
> As I waited to be matched with someone from their 'extensive database', I idly imagined my handsome date, cashmere polo neck, a bit academic and kind. We'd eat steak tartare and swap notes on our latest clever box-set find and favourite novels.
>
> The first indication that all was not as I had expected came when I met personal matchmaker at a Park Lane hotel for 'tea and an interview'… told her how I loved folk music, my favourite film was The Deer Hunter, and enjoyed weekends in the countryside.
>
> […]A few days later she emailed me with the details of W, "a successful entrepreneur who had travelled extensively and also liked folk music". When I met him at a pub in Richmond, I was shocked. I was expecting a cultured and dynamic man, instead I got a man in a pair of jeans, a moth eaten jumper and the table manners of a modern day Baldrick.
>
> And therein lies the rub. These agencies trade on their exclusivity, yet the men I met were far from the international super elite they promised.

Isn't this terrible? Clearly the dating agency is to blame. It should be easy for a penniless, feminist hedonist to find rich men who want to spend all their money taking care of a 54-year-old woman who had *literally nothing to do with the process by which they earned all that money*.

One thing we know about her for sure is that she is impractical. She is 54 years old and has just spent her last savings on a *dating agency*. From her other comments about the type of men she is looking for, we can infer that she wasted a lot of money on travel, fine dining, and other frivolous experiences designed to produce feelings of sophistication without any practical plan for preparing for the financial demands of old age. What's the point of having fun "in the moment" if you don't have any plan to allow sustainable recreation in the future, when you're too old to work?

I spent some time reading articles by Kate Mulvey, and here is what I was able to determine:

- she has no useful degrees – she paid for useless degrees in Italian and French, instead of studying something useful, like computer science or nursing or petroleum engineering. Her "writing" is all about fashion, dating and "lifestyles"
- her opinion on children: "uppity children take your time, emotions and energy" – she sees children as a detriment to her highest priority (her career). She says "I, however, have lived a life of unfettered freedom to take on projects, write books and

travel”
- she had loads of entertaining men “beating a path to [her] door” when she was younger
- she spend thousands of pounds on plastic surgery
- she blames her lack of marriage success on her being “brainier” than men
- she turned down men who wanted to marry her, as late as age 33
- her book is called “Accidental Singleton” because she thinks that her approach to life – anti-marriage hedonism – has “accidentally” left her single and penniless at age 54 (as if it wasn’t her fault!)

Although she talks a lot about being intelligent, it seems to me that an intelligent woman would have practical degrees, savings and an awareness of what men actually want from a woman – and WHEN they want it. Men want a woman to support them in their most difficult period, just after they graduate and hit the job market. Starting out in a career is hard because the man doesn’t have savings or a resume or references. The support of a young, attractive, virtuous woman means everything during those difficult years. This is when a wife has the most impact on her husband’s ability to earn and save, on his mental health, on his physical health, etc.

Somehow, this narcissist thinks that she can just show up in a man’s life, after he has done all his earning alone, and grab hold of the things that she never helped build. She wasted all her youth and beauty chasing experiences with attractive bad boys, but she thinks that it’s reasonable for a man to invest all his wealth in her. A woman has value to a man at the time when he is attempting to do difficult things, but lacks support.

What exactly is it that a woman like Kate has to offer a man, given her life choices? Does anyone think that this woman has marriage-character? Does anyone think that her life of selfishness and hedonism has prepared her to be a good wife? What kind of conversation about moral obligations could you have with someone who has only ever done what felt good to her in the moment? Has her string of failed relationships with hot bad boys prepared her to be trusting and unselfish? How about to be faithful? Or even to be content? What is it that she thinks that she is offering that would justify the heavy investment that she is asking for, especially in an age of no-fault-divorce and anti-male divorce courts?

I think people really underestimate how much goes into making a good wife. The character she has to develop. The skills that she has to develop. The way she treats her husband, which often comes from carefully cultivating virtues like chastity and sobriety. Her worldview, which affects whether she has practical abilities like love, forgiveness and self-control. Her ability to be good with money. Her ability to nurture others and make social connections consistent with marriage and homemaking. Her ability to bear children, and then nurture them during the critical first 5 years after – not to mention homeschooling, which is increasingly valuable in a time when underperforming government-run schools seek to indoctrinate, rather than educate, children.

Nothing about this woman makes me think that she has any marriage-related character

traits or abilities. Any idiot can spend someone else’s money on their own feelings, fun and thrills. But it takes a carefully crafted woman to really do the work of a wife. Marriage isn’t there so that women can be happy. Marriage is an enterprise. Being selfish – doing what is easy, and what feels good moment by moment – doesn’t prepare a woman for the enterprise.

Knight and Rose Show – Episode 39: Former Muslim Hatun Tash, Part 2

September 23, 2023 | by Wintery Knight | Link | Original Link

---

Welcome to episode 39 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose continue discussing how to debate Islam with famous former Muslim, Hatun Tash. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 39:

Episode Summary:

Wintery Knight and Desert Rose continue our discussion with former Muslim Hatun Tash. We talk about whether deception is permitted in Islam. We discuss what the Qur'an says about women, and what women can expect in the afterlife. We discuss Andrew Tate and whether he is a real Muslim. Finally, we ask Hatun about persevering through challenges to her ministry. This is the second episode in a two part series.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

Hatun Tash is is a well-known Christian preacher who regularly debates Islam and the Koran. An ex-Muslim and convert to Christianity, she is director of the ministry Defend Christ Critique Islam. She has faced threats to her life on multiple occasions and was attacked and stabbed on 25 July 2021 while preaching at Speakers' Corner in Hyde Park. You can find her collection of very popular and entertaining videos on YouTube in the Hatun Tash DCCI Ministries channel.

William Lane Craig lectures on failure in the Christian life

September 24, 2023 | by Wintery Knight | Link | Original Link

---

Here is the video:

Intro:

- the topic of failure is not one that is often discussed by Christians
- failure #1: failure in the Christian life which is the result of sin
- failure #2: when a Christian is defeated while trying to serve God
- the consequences for failure #1 can be worse for the Christian
- the consequences for failure #2 can be worse for the world as whole
- how is it possible for a person to fail when they are obeying God? (#2)
- how can it be that God can call someone to a task then let them fail?
- failure is not persecution – persecution is normal for Christians
- failure is not trials – testing is normal for Christians to grow

Bill's failure:

- Bill had submitted all the coursework for his second doctoral degree
- but he had to pass a comprehensive oral examination
- he failed to pass the comprehensive exam
- Bill and Jan and his supporters had all prayed for him to pass
- how could God allow this to happen?

Solution to the problem:

- God's will for us may be that we fail at the things we try in life
- there are things that God may teach us through failure
- Bill learned that human relationships are more important than careers
- we need to realize that "success" in life is not worldly success
- true success is getting to know God well during your life
- and failure may be the best way to get to know God well
- it may even be possible to fail to know God while achieving a lot
- the real measure of a man is loving God and loving your fellow man

Practical:

- give thanks to God regardless of your circumstances
- try to learn from your failure
- never give up

The ending of Bill's story:

- Bill spent an entire year preparing for a re-take of his exam
- Bill was awarded his second doctorate “magna cum laude” (with great distinction)
- Bill learned that American students are not well prepared for exams
- the year of studying remedied his inadequate American education
- in retrospect, he is thankful for the failure – he learned more

If you like this, you should pick up Craig’s book “Hard Questions, Real Answers“, which has a chapter on this problem.

New study: there is no gay gene that causes homosexuality

September 25, 2023 | by Wintery Knight | Link | Original Link

---

I heard one of the authors of this new study commenting on how he was a gay man, and the purpose of his research was to show a genetic basis for homosexuality, in order to make it equal to race. His goal was to make it impossible to disagree with homosexual behavior, because homosexual behavior would be seen as natural and normal. Let's see if his new study helps him out.

The blog of the peer-reviewed journal PLOS One reported on the new study, which was published in the prestigious journal Science.

Excerpt:

> The once-prevailing concept of a "gay gene" dictating sexual orientation has been put to rest in a powerhouse study published today in *Science*. The work brilliantly illustrates the very nature of science: evolving with the input of new data, especially the large-scale contributions of bioinformatics and crowd-sourcing.
>
> "We formed a large international consortium and collected data for more than 500,000 people, comparing DNA and self-reported sexual behavior. This is approximately 100 times bigger than any previous study on this topic," said lead author Andrea Ganna, of the Institute of Molecular Medicine in Finland and an instructor at Massachusetts General Hospital and Harvard Medical School, opening a news conference earlier this week.
>
> […]The investigation estimates a genetic contribution to same-sex sexual behavior as under 1 percent, thanks to analysis of a trove of data from the UK Biobank and the consumer genetic testing company 23andme.

So, there you have it, there is no gay gene. But this is of course something we've known for decades, as all the previous studies had found the same thing.

The normal way that people do these studies is to analyze identical twins, and see how often both identical twins are gay.

> Eight major studies of identical twins in Australia, the U.S., and Scandinavia during the last two decades all arrive at the same conclusion: gays were not born that way.
>
> "At best genetics is a minor factor," says Dr. Neil Whitehead, PhD. Whitehead worked for the New Zealand government as a scientific researcher for 24 years, then spent four years working for the United Nations and International Atomic Energy Agency. Most recently, he serves as a consultant to Japanese universities about the effects of radiation exposure. His PhD is in biochemistry and statistics.

> Identical twins have the same genes or DNA. They are nurtured in equal prenatal conditions. If homosexuality is caused by genetics or prenatal conditions and one twin is gay, the co-twin should also be gay.
>
> "Because they have identical DNA, it ought to be 100%," Dr. Whitehead notes. But the studies reveal something else. "If an identical twin has same-sex attraction the chances the co-twin has it are only about 11% for men and 14% for women."
>
> Because identical twins are always genetically identical, homosexuality cannot be genetically dictated. "No-one is born gay," he notes. "The predominant things that create homosexuality in one identical twin and not in the other have to be post-birth factors."
>
> Dr. Whitehead believes same-sex attraction (SSA) is caused by "non-shared factors," things happening to one twin but not the other, or a personal response to an event by one of the twins and not the other.

By the way, a previous study also found that transgender behavior was not genetic, but was clearly linked to environmental factors such as peer approval and social media.

Here is the report from Science Daily:

> This month, a Brown University researcher published the first study to empirically describe teens and young adults who did not have symptoms of gender dysphoria during childhood but who were observed by their parents to rapidly develop gender dysphoria symptoms over days, weeks or months during or after puberty.
>
> […]The study was published on Aug. 16 in *PLOS ONE*.
>
> Littman surveyed more than 250 parents of children who suddenly developed gender dysphoria symptoms during or after puberty.
>
> […]"Of the parents who provided information about their child's friendship group, about a third responded that more than half of the kids in the friendship group became transgender-identified," Littman said. "A group with 50 percent of its members becoming transgender-identified represents a rate that is more 70 times the expected prevalence for young adults."

A previous study also found that children are more likely to be gay if they are raised by gay adults. It was reported in AOL News.

Excerpt:

> Walter Schumm knows what he's about to do is unpopular: publish a study arguing that gay parents are more likely to raise gay children than straight parents. But the Kansas State University family studies professor has a detailed analysis that past almost aggressively ideological researchers never had.
>
> […]His study on sexual orientation, out next month, says that gay and lesbian parents are far more likely to have children who become gay. "I'm trying to prove

> that it’s not 100 percent genetic,” Schumm tells AOL News.
>
> His study is a meta-analysis of existing work. First, Schumm extrapolated data from 10 books on gay parenting… [and] skewed his data so that only self-identified gay and lesbian children would be labeled as such.
>
> […]Schumm concluded that children of lesbian parents identified themselves as gay 31 percent of the time; children of gay men had gay children 19 percent of the time, and children of a lesbian mother and gay father had at least one gay child 25 percent of the time.
>
> […]Finally, Schumm looked at the existing academic studies… In all there are 26 such studies. Schumm ran the numbers from them and concluded that, surprisingly, 20 percent of the kids of gay parents were gay themselves. When children only 17 or older were included in the analysis, 28 percent were gay.

It’s very important for people to understand that there is a trend in society to make every behavior traditionally seen as sinful into something caused by genetics. The twin goals of this effort are to insulate the behaviors from criticism, and to minimize evaluation of the effects of these behaviors on society as a whole. The genetic argument was used extensively to normalize same-sex marriage and transgenderism. I have seen the genetic argument used to defend other behaviors like pedophilia and incest. But the scientific research does nothing to support any of these arguments. What’s amazing is how a majority of people in the United States have such false beliefs about the scientific research. They vastly overestimate the number of gay people, and also the influence of genetics.

Biden administration opens border to illegals, but wants to deport homeschoolers

September 26, 2023 | by Wintery Knight | Link | Original Link

---

Everyone knows that the border is in a crisis right now. Tons of unskilled immigrants are being admitted, and most of them cannot even speak English, much less find employment. The Biden administration is actively making it easier for this sort of lawlessness. But, if you come into legally and work to pay your own bills, then the Biden administration wants to get rid of you.

Here's the first story from the Washington Examiner:

> More than 300,000 immigrants attempted to enter the United States unlawfully or were paroled during August, surpassing all national records and spelling a catastrophe for the Biden administration that claimed its sweeping policy reforms were working.
>
> […]Since President Joe Biden took office, Border Patrol agents have apprehended more than 7 million people who illegally entered the country between ports of entry nationwide.

The Biden administration thinks that people who just cross the border illegally are the "good" kind of immigrants.

The bad kind of immigrants are the ones who are fleeing persecution, who are married with kids, and who work to pay their own way. They have to go!

Here's an article from NBC local news:

> For 15 years, the Romeike family has lived in Morristown. Uwe Romeike, the father of the seven Romeike children, works as a piano accompanist at Carson-Newman University. Now, they say, the U.S. government is trying to deport them.
>
> The family moved to the U.S. from Germany in 2008. Their application for asylum said they were fined by the German government roughly $9,000 after homeschooling their children, court documents show.
>
> An immigration judge initially granted the family's application for asylum. The U.S. Department of Justice appealed the decision, and the U.S. Board of Immigration Appeals revoked the family's asylum status, documents show.
>
> The family, with the help of the U.S. Home School Defense Association, appealed to the 6th Circuit Court of Appeals. A three-judge panel unanimously ruled against the family.

They're paying their own way, that's not the sort of immigrant Biden wants. He wants people who will impose costs on other taxpayers. Biden doesn't want Western immigrants who believe in the free market system, school choice and Christianity. He wants people who come from communist countries who vote for big government, and pass their bills to

people who are here legally.

Disgusting.

Is the definition of atheism “a lack of belief in God”?

September 27, 2023 | by Wintery Knight | Link | Original Link

---

First, let’s see check with the Stanford University Encyclopedia of Philosophy:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God.
> What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God. Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.” If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars. There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).” Logically where you place the negation makes a world of difference.
>
> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There’s a history behind this. Certain atheists in the mid-twentieth century were promoting the so-called “presumption of atheism.” At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist. Atheism is a sort of default position, and the theist bears a special burden of proof with regard to his belief that God

exists.

So understood, such an alleged presumption is clearly mistaken. **For the assertion that "There is no God" is just as much a claim to knowledge as is the assertion that "There is a God." Therefore, the former assertion requires justification just as the latter does. It is the agnostic who makes no knowledge claim at all with respect to God's existence. He confesses that he doesn't know whether there is a God or whether there is no God.**

But when you look more closely at how protagonists of the presumption of atheism used the term "atheist," you discover that they were defining the word in a non-standard way, synonymous with "non-theist." So understood the term would encompass agnostics and traditional atheists, along with those who think the question meaningless (verificationists). As Antony Flew confesses,

the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)

Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.

One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.

So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of atheism without shouldering its responsibilities.

> This is disingenuous and still leaves us asking, “So is there a God or not?”

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know.* We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these “subjective atheists”?

Dealing with subjective atheists

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says “I lack a belief in the gravitational force!”. When you engage in serious discussions with people about God’s existence, you only care about what people know and what they can show to be true. We don’t care about a person’s psychology.

Why aren't men marrying? nearly 70% of unmarried women voted for Democrats

September 28, 2023 | by Wintery Knight | Link | Original Link

---

Because I'm still unmarried and have done well in my career and finances, and I sometimes approached by people who think that it is a good time for me to get serious about marriage. Although the previous generation of women was very good at marriage, the current generation of younger women is terrible at marriage. And you can see how terrible by looking at how they voted.

Here's an article from Breitbart News to explain:

> Sixty-eight percent of unmarried women favored Democrats in the U.S. House midterm elections compared to 31 percent who favored Republicans, according to exit poll data.
>
> […]A majority of women (67 percent) also said they were either angry or dissatisfied with Roe v. Wade being overturned, with 72 percent of women who supported Democrat candidates agreeing, compared to 27 percent who supported Republicans. On the other hand, 30 percent of women were either enthusiastic or satisfied with Roe being overturned, with a majority supporting Republicans (84 percent) compared to Democrats (15 percent).

Daily Wire adds:

> Studies suggest single women vote Democrat more often than married women because they depend on a single income, have feminist attitudes towards social issues like abortion and pre-marital sexual behavior, and agree with ideologies that redefine gender roles and family responsibilities.
>
> […]Other notable figures from CNN's exit poll data show that 72% of women between 18 and 29 voted Democrat.

Are women who vote Democrat a good match for a man who is interested in marriage? Let's see.

1. Democrats support no-fault divorce laws, and that's dangerous for men, because we get financially ruined by divorce courts. Divorce courts regularly disregard pre-nups, even if you have one. Men only marry women who hate divorce. Women who hate divorce think that it is their responsibility to evaluate a husband candidate, and then commit to him, no matter what happens. Society just isn't making women who want the responsibility of choosing a good man, and making a life-long commitment to him.

2. Democrats support abortion, and that's horrifying for marriage-minded men. Good men value the needs of children above the needs of selfish adults (it's our protective nature). Pro-abortion women think that they need to be free to "have fun" with attractive men who won't commit to them before sex. And then if they happen to get pregnant, they can

just stop their new baby from living. Unborn babies have their own DNA, distinct from the parents. They are human beings, distinct from their parents. Marriage-minded men don't want to marry women who are willing to kill other people in order to escape from responsibilities.

3. Democrat women typically value careers over children. They want to put their kids in daycare, and go back to work. But marriage-minded men want someone trustworthy to stay home with very young children for the first 5 years. Research indicates that children benefit from having mom in the home for at least the first 2 years. Marriage-minded men don't want to get married to women who are going to throw the kids in daycare and go back to work.

4. Democrat women prefer higher taxes and more government spending. When husband earns money, they think that government knows how to spend it better. And they think that teachers, judges and bureaucrats (who are paid by husband) are better at leading the home than husband. Marriage-minded men aren't interested in paying government people to run his home. He wants choices in everything – especially about who will educate the children.

5. Democrat women favor subsidizing single mothers who make fatherless babies. Instead of setting moral boundaries on single motherhood by choice, Democrat women want to tax husbands to pay for single moms. Marriage-minded men know they only have enough money to pay for their own household, and their own kids. They don't have money to pay for other people's kids.

6. Democrat women are in favor of same-sex marriage. That means that they think that marriage is just an arrangement of 2 or more people based on feelings, with the goal of making the adults happy and socially respectable. "Love makes a family" they say. And they think it's fine to deprive a child of their relationships with a biological mother, or a biological father, or both. Marriage-minded men know the research on how all this affects children. And we aren't going to marry any woman who puts the selfish desires of adults above the needs of the children for their mom and dad.

If women don't understand the needs of husbands and children, then marriage-minded men will not marry them

In conclusion, I think it's important for people who expect marriage-minded men to get married to understands that most of the young women who are available would not make good wives and mothers for us. Men want marriage because they want to lead a home, and to be respected as leaders in their home. If society produces a generation of women who believe in student loan forgiveness, infanticide, gay rights, high taxes, and government regulation of fathers, then society will have to deal with declining marriage rates.

Husbands want to lead. We can't lead if we don't get to keep what we earn. We can't lead if we are overruled by teachers, judges and bureaucrats. We can't lead if we are dragged into divorce courts. Women will have to choose between voting Democrat, and having husbands.

ACLU fails to defeat Tennessee ban on for-profit child mutilation

September 29, 2023 | by Wintery Knight | Link | Original Link

---

What do secular leftists think about morality? Well, one of the most secular leftist organizations in America is the ACLU. And what do they do? They help promiscuous adults to terminate their own children. They help selfish adults separate children from their biological mothers and fathers. And they help people who mutilate children for money. But that last one is not going so well.

Here's the story from the Daily Wire:

> A federal appeals court on Thursday upheld Tennessee and Kentucky's bans on transgender treatments for children such as puberty blockers, cross-sex hormones, and gender surgeries.
>
> The 6th Circuit Court of Appeals ruled 2-1 to reject a challenge to the laws from the American Civil Liberties Union (ACLU) and families of trans-identifying children.
>
> "This is a relatively new diagnosis with ever-shifting approaches to care over the last decade or two. Under these circumstances, it is difficult for anyone to be sure about predicting the long-term consequences of abandoning age limits of any sort for these treatments," wrote Chief Judge Jeffrey Sutton.

I would imagine that the ACLU is very angry about this, because how will doctors mutilate confused, vulnerable children for money now? Those terrible conservative voters! They got up on election day in Tennessee, and they went straight to the polling location and voted against child mutilation for profit. How mean!

> Tennessee Attorney General Jonathan Skrmetti celebrated the ruling as well, posting on X, "Tennessee's law that protects children from irreversible gender-related medical interventions remains in effect."

Mean!

> Tennessee Representative Jason Zachary (R) called the ruling a "big win."

> "Protecting children is a priority in TN," Zachary said.

Mean!

> Another state congressman, Representative William Lamberth (R), said Tennessee will "continue to lead the way" when it comes to "protecting our children."

> "This is a huge win in the fight against a dangerous and extreme ideology that harms children and ruins lives," Lamberth said.

Mean!

Such terrible people in Tennessee! Don't they know that if you "don't judge" then people who are doing evil things will like you?

Gender surgeries are big business in the United States:

> The number of gender surgeries nearly tripled in the U.S. from 2016 to 2019, according to an analysis published Wednesday in JAMA Network Open. In 2016, there were about 4,550 procedures, and that number spiked to around 13,000 in 2019.
>
> Hundreds of girls in the U.S., some as young as 12, have gotten elective, gender-related double mastectomies to remove their healthy breasts over the last few years.
>
> Meanwhile, it is more popular than ever for youth to adopt new gender identities. An estimated 300,000 minors aged 13 to 17 identified as transgender as of last year.

You might remember how the Vanderbilt University Medical Center was delighted to chop up healthy kids for cash.

Here is more from Daily Wire:

> "It's a lot of money," VUMC Clinic for Transgender Health's Dr. Shayne Sebold Taylor said at one Medicine Grand Rounds lecture, video reveals. "These surgeries make a lot of money."
>
> Taylor noted that a "chest reconstruction" can bring in $40,000 per patient, and someone "just on routine hormone treatment, who I'm only seeing a few times a year, can bring in several thousand dollars … and actually makes money for the hospital."
>
> Citing the Philadelphia Center for Transgender Surgery, Taylor said vaginoplasty surgeries can generate $20,000, gushing that it "has to be an underestimate," since hospital stay, anesthesia, post-op visits, and other add-ons are not included in the total.
>
> "And the female-to-male bottom surgeries, these are huge money makers," the doctor continued, adding that such surgeries could bring in "up to $100,000" for the hospital.
>
> Some clinics are "entirely" "supported" financially by such phalloplasty surgeries, Taylor boasted.
>
> "These surgeries are labor intensive, there are a lot of follow-ups, they require a lot of our time, and they make money," she emphasized. "They make money for the hospital."

Do you live in a blue state? Why? Why would you pay taxes to people who don't protect children from predators? It should be a top priority for Christians and conservatives to

plan out their educations, careers, and savings to get to a good country, a good state, a good city. Live where you don’t have to pay evil people to rule over you.

I can guarantee you that conservatives and Christians in Tennessee are getting their money’s worth out of their government.

Knight and Rose Show #40: J. Warner Wallace: New Cold-Case Christianity

September 30, 2023 | by Wintery Knight | Link | Original Link

---

Welcome to episode 40 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose interview J. Warner Wallace about his new revised and updated edition of "Cold Case Christianity". If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 40:

Episode Summary:

Wintery Knight and Desert Rose interview Christian apologist J. Warner Wallace about the updated and expanded edition of his book "Cold-Case Christianity". Can modern people take a book seriously if it contains miracles? Are the biographies of Jesus reliable? Did the bias of the Gospel writers affect their accuracy? We also discuss the other sections, including the new afterword that responds the critics.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

J. Warner Wallace is a Dateline featured cold-case homicide detective, popular national speaker and best-selling author. He continues to consult on cold-case investigations while serving as a Senior Fellow at the Colson Center for Christian Worldview. He is also an adjunct professor of apologetics at Talbot School of Theology (Biola University), Gateway Seminary, and Southern Evangelical Seminary, and a faculty member at Summit Ministries. J. Warner became a Christ-follower at the age of thirty-five after investigating the claims of the New Testament gospels using his skill set as a detective.

The downside of the soul mate / fairy tale view of relationships

October 1, 2023 | by Wintery Knight | Link | Original Link

(Image: Husband and wife doing some woodworking together)

Astonishing article from the leftist Huffington Post, of all places. (links removed)

Excerpt:

> As millennial women, we were groomed for a white knight fantasy. From childhood favorites such as *Snow White* to adult rom-com staples such as *How to Lose a Guy in Ten Days* or *Sleepless in Seattle*, the media perpetuates a romantic storyline in which compatibility and lasting romance is something effortless, built on chance, sustained by good looks, fun dates and electric sexual chemistry. These story lines shape our expectations for romantic happiness. It is not enough to find someone with whom we are mostly compatible, who would make a good parent, with whom we could learn and grow wrinkly; now, we expect a perfect fit and an easy, instantaneous "connection." In short, we want a soul mate. But it is this desire for a soul mate that is actually the undoing of our happy ending.
>
> A "soul mate" is defined as one who is ideally suited to us, perfectly completes us, one with whom the relationship feels easy and natural. With them, a relationship is just "meant to be"… A survey of young adults conducted by the National Marriage Project found that while 84% of young adults report finding a marriage partner "very important," a full 94% of young adults say they would like to marry a soul mate, and 73% of people ages 18 – 29 believe that there is a soul mate out there for them.

Wow. That doesn't sound like a good approach to me. My approach has always been to pick the girl who was most willing to learn new things. And then to explain to her my vision for marriage and see if I could get her to work independently on that plan before I married her. I don't favor this soul mate approach at all.

Does the "soul mate" approach work?

> We heard that those who get married later and possess a college degree have fewer divorces and more stable marriages. So we spend our twenties trying to find ourselves through travel, accumulating degrees and building a career. Marriage will be the capstone of our achievements, and nothing less than tying the knot with a soul mate will suffice. But the tragic irony is that soul mate thinking makes us increasingly likely to divorce. A study of 1,400 married men and women shows that people who hold soul mate orientations are 150% more likely to end up divorced than those who do not.
>
> **The widespread cultural belief in "soul mate ideology" undermines our chances at happiness because it makes us passive receivers of idyllic romantic expectations. Further, it fosters self-centeredness; one rarely longs to be a soul mate for someone *else*, which would require effort. For this reason, believing in soul mates is one of the most dis-empowering belief systems we can adopt. As millennials, we pride ourselves on actively pursuing the life we want to live, rather than simply accepting whatever hand we are dealt. We are innovative, passionate, proactive and not afraid to take risks. Yet, there is a disconnect when it comes to our desire for lasting love. Though there are prospects around us, we forgo taking the concrete steps needed to build happy compatible relationships because we do not "feel a spark." We are passively waiting on the sidelines for love to "happen," and then wonder why it is so difficult.**

I've always felt that the soul mate approach was like the evil villain in opposition to my noble plan-based approach. My approach is to pick a woman who wants to learn and work hard. Explain your marriage plan to her, and how your marriage plan serves God. My marriage plan accomplishes four goals, for example. 1) Influence the university with apologetics, 2) influence the church with apologetics, 3) provide a model of a good marriage to people in the community, including co-workers, college students and neighbors, and 4) raise effective, influential children who will have an impact for God. Now if you are a Christian woman raised in a church that affirms the soul mate / fairy tale view of marriage with this "God has a wonderful plan for your life" stuff, then a specific, non-emotional plan from a man is the last thing you want to hear about.

Their solution is for people to work at compatibility:

> Compatibility is something co-created through intentionality and conscious choice. It involves mutual sacrifice, effort and commitment for the sake of the

> other’s benefit. A recent study found that of the couples who demonstrate above average daily generosity, 50% of them report being “very happy” in marriage; among the low generosity scores, only 14% can say the same. As studies indicate, selflessness is required to create mutual compatibility. It is not instantaneous, nor does it usually begin with true love’s kiss.
>
> We both know from experience that there are some you naturally connect with and others you do not. This is not a call towards forced attraction or companionship. But, our romantic futures should not be placed in the hands of blind chance. It is time we roll up our sleeves and shift our expectations from unattainable perfection to realistic romance, one that accounts for imperfection. We must understand that work in a relationship is a necessary key to success, rather than an indication of imminent failure. We will be letting go of a tired plot line that sets us up for disappointment and embracing an active role in our own unique story.
>
> How refreshing to know that we do not have to be perfect to be lovable, and that our romantic success is not solely dependent on finding the “right” fit, but instead built through cultivating daily moments of generosity, sacrifice and conscious coupling.

So in my case, I am looking for a woman who listens to the plan, develops the skills for the plan and then independently engages in activities to achieve the goals of the plan. In the past, I have had women listen to the plan carefully, including my motivations and experiences that caused me to choose this plan. And they have been willing to read books, listen to lectures, watch debates, to gain the skills needed to make a difference. And they have even engaged independently with activities like public speaking, teaching classes, and so forth. But none of the women who had done that accepted the soul mate / fairy tale view of marriage. They all wanted to hear a good plan, learn useful skills and then get to work. Big difference.

What happens to your worldview if you reject a Creator / moral lawgiver?

October 2, 2023 | by Wintery Knight | Link | Original Link

I noticed that there was a news story about how belief in God is declining even further in America. And it's happening the most among younger Americans. In this post, I wanted to talk about the common atheist idea that you can just remove God, and life will go on as before, with everything making perfect sense.

I don't think I've ever written a post about ALL the changes that happen when a person ejects a Creator / Moral Lawgiver from their worldview. And now I don't have to, because this blogger has done the work for us.

He introduces his post like this:

> I recently wrote an article targeted at committed atheists who claim that Christians carry all the burden of proof. There, I pointed out that atheism is not a neutral position and is justified only if it, too, can provide answers for the hard questions of science and human experience. In this article, though, I'd like to offer something similar only targeted to the agnostic, who flirts with the idea that this universe may be devoid of a God after all. My intent is to get such persons to consider the impact that true atheism would logically have on their beliefs and values, and to consider whether this package deal sounds more reasonable than theism.

Now, I've interacted with the author a little by e-mail, and it turns out that he actually spent a good part of his life living as a functional atheist. And he's got a bunch of friends and relatives who don't exactly fit in with the standard raised-in-a-Christian-home happy path. And best of all, he's a software engineer, so you know he's practical and sensible about these topics.

Here are the major areas of worldview that are affected by the rejection of God:

- Meaning
- Sovereignty
- Morality
- Rights
- Mind
- Free Will
- Science

When I talk about these things, I usually talk about the 3 Ms: Mind, Meaning, Morality. You can see he's got a lot more there. And he quotes a lot of prominent atheists that you've probably heard of: Richard Dawkins, Sam Harris, Sean Carroll, Jerry Coyne, etc.

Here's the one on Rights:

> Universal human rights presuppose that each of us has unique, intrinsic value. The Founding Fathers asserted that our rights were endowed by God, and Scripture claims it is His own image within us that makes us special. If you dispense with this idea, what standard do you use to ground human rights?
>
> We are not equal by any measure one could offer, such as fitness, talent, race, or intelligence. Even grounding it in our mere humanity is arbitrary, since there is no higher standard that would favor humans over the rest of the biological world, and some animals are more fit or intelligent than young, elderly, or disabled humans. Animal rights activists understand this and traffic in this "speciesist" notion. They point out the blight of the human race's impact on nature, and do not temper that with any belief in the special value of humanity.
>
> The loss of intrinsic human value leads to creative redefinitions for personhood and rights which traffics in things like contribution to society and a life worth living. This road leads to infanticide for the unwanted, eugenics for the unfit, and euthanasia for the elderly. We saw these ideas on display in Nazi Germany as well as, to an extent, the US and other European countries. However, they have been making a comeback in an increasingly secular western culture that has forgotten its dark past. But what principle does atheism offer you to object to any of this beyond your instinctive revulsion?

The conclusion cannot be missed:

> Embracing atheism has consequences. Removing God from your life is not like removing a piece of furniture from your house. It's more like replacing the foundation, which impacts anything that has been built upon it. I've discussed several important things that are affected, but many more could be offered, like beauty and the arts, logic, truth, and even the reliability of our senses. In fact, every area of thought and life are affected, or are at least fair game for deconstruction by the universal acid that is atheism.

He also links to a post by James Bishop in the comments, featuring TONS of interesting quotes by famous atheists, about the implications of adopting the worldview of atheism.

Here's one by former Cornell University paleontologist Will Provine:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear … There are no gods, no purposes, no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end for me. There is no ultimate foundation for ethics, no ultimate meaning to life, and no free will for humans, either.

Is Provine smarter than the average atheist? I think he is, and he's certainly thought about it more than the average Twitter atheist in his 20s.

I guess what I would say to young atheists is that you probably haven't 1) evaluated the evidence for a Creator / Designer / Moral Lawgiver at age 14, and 2) you certainly haven't

considered the implications of the decision.

Earlier this week, I wrote a post about an educated 24-year-old feminist woman who was trying to get a man to commit to her. She was choosing men and the timing of sexual activity based on her atheist worldview. As she tells her story, you can clearly see the difference that the worldview makes in the area of relationships. She doesn't have the resources in her atheism to conduct herself wisely enough to get the results she is looking for.

What kind of "Constitution" can there be for a relationship, if the universe is an accident, human beings are robots made out of meat, and the purpose of life is to be happy here and now? Relationships are stable when each person is able to execute self-sacrificial love. Can you ground a respectful, committed relationship in a worldview of "survival of the fittest"? I think not. And yet this is the approach that most young people take.

The link between single mother welfare, fatherlessness, poverty and crime

October 3, 2023 | by Wintery Knight | Link | Original Link

What is the root cause of criminal behavior? This article by feminist sociologist W. Bradford Wilcox, who points out the link between fatherlessness and crime in an article on the AEI web site.

Wilcox writes:

> From Adam Lanza, who killed 26 children and adults a year ago at Sandy Hook School in Newtown, Conn., to Karl Pierson, who shot a teenage girl and killed himself this past Friday at Arapahoe High in Centennial, Colo., one common and largely unremarked thread tying together most of the school shooters that have struck the nation in the last year is that they came from homes marked by divorce or an absent father. From shootings at MIT (i.e., theTsarnaev brothers) to the University of Central Florida to the Ronald E. McNair Discovery Learning Academy in Decatur, Ga., nearly every shooting over the last year in Wikipedia's "list of U.S. school attacks" involved a young man whose parents divorced or never married in the first place.
>
> […]The social scientific evidence about the connection between violence and broken homes could not be clearer. My own research suggests that boys living in single mother homes are almost twice as likely to end up delinquent compared to boys who enjoy good relationships with their father. Harvard sociologist Robert Sampson has written that "Family structure is one of the strongest, if not the strongest, predictor of variations in urban violence across cities in the United States." His views are echoed by the eminent criminologists Michael Gottfredson and Travis Hirschi, who have written that "such family measures as the percentage of the population divorced, the percentage of households headed by women, and the percentage of unattached individuals in the community are among the most powerful predictors of crime rates."
>
> Why is fatherlessness such a big deal for our boys (almost all of these incidents involve boys)? Putting the argument positively, sociologist David Popenoe notes that "fathers are important to their sons as role models. They are important for maintaining authority and discipline. And they are important in helping their sons to develop both self-control and feelings of empathy toward others, character traits that are found to be lacking in violent youth." Boys, then, who did not grow up with an engaged, attentive, and firm father are more vulnerable to getting swept up in the Sturm und Drang of adolescence and young adulthood, and in the worst possible way.

So where do fatherless children come from? It turns out that government programs

incentivize women to make them.

Dr. Michael Tanner of the libertarian Cato Institute explains how welfare causes fatherlessness in his testimony to Congress:

> Welfare contributes to crime in several ways. First, children from single-parent families are more likely to become involved in criminal activity. According to one study, children raised in single-parent families are one-third more likely to exhibit anti-social behavior.(3) Moreover, O'Neill found that, holding other variables constant, black children from single- parent households are twice as likely to commit crimes as black children from a family where the father is present. Nearly 70 percent of juveniles in state reform institutions come from fatherless homes, as do 43 percent of prison inmates.(4) Research indicates a direct correlation between crime rates and the number of single-parent families in a neighborhood.(5)
>
> As Barbara Dafoe Whitehead noted in her seminal article for The Atlantic Monthly:
>
> The relationship [between single-parent families and crime] is so strong that controlling for family configuration erases the relationship between race and crime and between low income and crime. This conclusion shows up time and again in the literature. The nation's mayors, as well as police officers, social workers, probation officers, and court officials, consistently point to family break up as the most important source of rising rates of crime.(6)
>
> At the same time, the evidence of a link between the availability of welfare and out-of-wedlock births is overwhelming. There have been 13 major studies of the relationship between the availability of welfare benefits and out-of-wedlock birth. Of these, 11 found a statistically significant correlation. Among the best of these studies is the work done by June O'Neill for the U.S. Department of Health and Human Services. Holding constant a wide range of variables, including income, education, and urban vs. suburban setting, the study found that a 50 percent increase in the value of AFDC and foodstamp payments led to a 43 percent increase in the number of out-of-wedlock births.(7) Likewise, research by Shelley Lundberg and Robert Plotnick of the University of Washington showed that an increase in welfare benefits of $200 per month per family increased the rate of out-of-wedlock births among teenagers by 150 percent.(8)
>
> The same results can be seen from welfare systems in other countries. For example, a recent study of the impact of Canada's social-welfare system on family structure concluded that "providing additional benefits to single parents encourages births of children to unwed women."(9)

The secular left in this country believes that fathers need to be separated away from their children, and that's why they support welfare programs that redirect money from husbands in intact families to single mothers. They believe that fathers are harmful

because they set boundaries on children, and judge them and punish them when they act immorally. To the secular left, boundaries, judgments and punishments on children are bad, and must be stopped. So how can the secular left discourage men from marrying and teaching their own children morality? Well, they can tax married men, and they can give the money to single mothers.

Not only is crime caused by fatherlessness, but poverty is. as well.

Here is Dr. Robert Rector of the Heritage Foundation to explain:

> Census data and the Fragile Families survey show that marriage can be extremely effective in reducing child poverty. But the positive effects of married fathers are not limited to income alone. Children raised by married parents have substantially better life outcomes compared to similar children raised in single-parent homes.
>
> When compared to children in intact married homes, children raised by single parents are more likely to have emotional and behavioral problems; be physically abused; smoke, drink, and use drugs; be aggressive; engage in violent, delinquent, and criminal behavior; have poor school performance; be expelled from school; and drop out of high school.[19] Many of these negative outcomes are associated with the higher poverty rates of single mothers. In many cases, however, the improvements in child well-being that are associated with marriage persist even after adjusting for differences in family income. This indicates that the father brings more to his home than just a paycheck.
>
> The effect of married fathers on child outcomes can be quite pronounced. For example, examination of families with the same race and same parental education shows that, when compared to intact married families, children from single-parent homes are:
>
> - More than twice as likely to be arrested for a juvenile crime;[20]
> - Twice as likely to be treated for emotional and behavioral problems;[21]
> - Roughly twice as likely to be suspended or expelled from school;[22] and
> - A third more likely to drop out before completing high school.[23]
>
> The effects of being raised in a single-parent home continue into adulthood. Comparing families of the same race and similar incomes, children from broken and single-parent homes are three times more likely to end up in jail by the time they reach age 30 than are children raised in intact married families. [24] Compared to girls raised in similar married families, girls from single-parent homes are more than twice as likely to have a child without being married, thereby repeating the negative cycle for another generation.[25]
>
> Finally, the decline of marriage generates poverty in future generations. Children living in single-parent homes are 50 percent more likely to experience poverty as adults when compared to children from intact married homes. This intergenerational poverty effect persists even after adjusting for the original

> differences in family income and poverty during childhood.[26]

People on the left claim that poverty causes crime, but they don’t look for the root cause of poverty. The root cause of poverty is the decline of marriage, which produces fatherless children.

Why do law-abiding Americans insist on owning guns?

October 4, 2023 | by Wintery Knight | Link | Original Link

I'm not originally from the United States, and when I go back home to visit, one of the questions that I get asked a lot is "why do Americans own so many guns?" My favorite writer on the gun ownership and self-defense issues is Amy Swearer, who writes for the Daily Signal. Below, I'll link to two articles by her from July 2023 and August 2023.

The first article is a review of 12 examples of defensive gun use from July 2023.

She writes:

> Almost every major study has found that Americans use their firearms in self-defense between 500,000 and 3 million times annually, as the Centers for Disease Control and Prevention has acknowledged. In 2021, the most comprehensive study ever conducted on the issue concluded that roughly 1.6 million defensive gun uses occur in the United States every year.
>
> For this reason, The Daily Signal publishes a monthly article highlighting some of the previous month's many news stories on defensive gun use that you may have missed—or that might not have made it to the national spotlight in the first place. (Read other accounts here from past months and years. You also may follow @DailyDGU on Twitter for daily highlights of defensive gun uses.)
>
> The examples below represent only a small portion of the news stories on defensive gun use that we found in July. You may explore more using The Heritage Foundation's interactive Defensive Gun Use Database. (The Daily Signal is Heritage's multimedia news organization.)

Here are a couple of the examples:

> - **July 16, Philadelphia:** A woman returned to her apartment to find four intruders inside, police said. She shot and wounded two of them, who were arrested and charged with burglary. The other two intruders fled.
> - **July 18, Washington, D.C.:** Police said two armed carjackers approached a man near his vehicle and demanded it at gunpoint. The victim, a concealed carry permit holder, shot one assailant. Police arrested the wounded carjacker, who faces serious criminal charges, including for felony weapons offenses. The second carjacker had not been identified or located.
> - **July 19, Neptune, Florida:** After an intruder forced his way into an elderly couple's home, he came face to face with the homeowner, who was armed and held him at gunpoint until police arrived. Police said the intruder apparently had been released from prison after doing time for attempted sexual battery in 2018. He faces felony burglary charges.

- **July 23, Carmichael, California:** Police said an apartment resident used his gun to protect himself and his family from an armed man with a violent past who, wrongly believing his ex-girlfriend was inside, fired several rounds into the unit and tried to kick in the door. The resident returned fire, wounding the attacker. The intruder "is the bad guy here, let's not hide from that," a spokesman for the county sheriff's office bluntly told reporters. "That resident is a hero."
- **July 27, Cassopolis, Michigan:** An armed customer with a valid concealed carry permit shot and wounded a knife-wielding robber who threatened a gas station clerk, police said.

The second article is a review of 12 examples of defensive gun use from August 2023.

- **Aug. 14, Centerville, Texas:** A man began aggressively approaching customers at a local smokehouse then entered the restaurant's restroom and assaulted an elderly man until he lay unconscious on the floor. When another patron tried to intervene, the assailant began assaulting him, as well. Fortunately, this patron was legally armed and was able to shoot and wound the man in self-defense. The assailant was arrested and charged with several criminal offenses.

- **Aug. 18, Seminole County, Florida:** A man was sitting on his porch with his dog when a "bear alert device" activated and he saw a black bear about 8 to 10 feet away from him. The man tried to scare the bear away by yelling, but it charged at him and his dog, so he shot it three times until it fled. State wildlife officials ultimately euthanized the injured bear and took her cubs to a rehabilitation center with plans to release them back into the wild later this year.

- **Aug. 25, Somerville, Alabama:** A man and woman were allegedly burglarizing a home when an armed neighbor confronted them and detained them at gunpoint until police arrived. The pair now face unspecified criminal charges.

- **Aug. 28, Jackson, Michigan:** A townhouse resident heard her neighbors having a loud argument, knocked on their adjoining wall, and asked them to quiet down. Instead of quieting down, a male neighbor angrily emerged from the home armed with a knife and began shattering the woman's windows. She shot and injured him as he tried to force his way into her residence.

> - **Aug. 30, Butler, Pennsylvania:** An armed resident shot and wounded an intoxicated intruder who broke into his basement. The resident initially ordered the intruder to put his hands on a nearby washing machine, but the man kept advancing toward him even after he fired a warning shot. The suspect was already wanted by local law enforcement for unspecified reasons and now faces an additional felony burglary charge.

It's especially important for people living in blue cities or blue states to arm themselves, because the police forces in these areas have had their budgets slashed by Democrats. "Defund the police" sounds so good, but it just gets a lot of peaceful, law-abiding people killed.

It's very important to ask secular leftists who want to ban law-abiding people from owning firearms "what do you expect people to do when criminals want to hurt them?" The answer I get from my atheist Democrat friend is that he expects them to call the police, and wait for them to arrive. There is a real suspicion among secular leftists of law-abiding people defend themselves – especially men. A man defending his family? Why, that's "sexist". Better to call the police and wait for them to arrive.

The peer-reviewed research

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

The book by economist John Lott, linked above, compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, which shows that the 1997 UK gun ban caused violent crime rates to MORE THAN DOUBLE in the four years following the ban. But both studies affirm the same conclusion – more legal firearm ownership means less crime.

One of the common mistakes I see anti-gun advocates making is to use the metric of all "gun-related deaths". First of all, this completely ignores the effects of hand gun ownership on violent crime, as we've seen. Take away the guns from law-abiding people and violent crime skyrockets. But using the "gun-related deaths" number is especially wrong, because it includes suicides committed with guns. This is the majority (about two thirds) of gun related deaths, even in a country like America that has a massive inner-city gun violence problem caused by the epidemic of single motherhood by choice. If you take out the gun-related SUICIDES, then the actual number of gun homicides has decreased as gun ownership has grown.

For a couple of useful graphs related to this point, check out this post over at the

American Enterprise Institute.

How is open borders immigration working out in Sweden?

October 5, 2023 | by Wintery Knight | Link | Original Link

After being elected president in 2020, Democrat Joe Biden decided to open the southern border to invaders from every country. Sweden has had an open borders immigration policy like that for years before. Democrats often praise Sweden as being a more advanced country than the United States. Let's see how things are going for them since they are further along.

Daily Wire reports:

> Sweden is turning to its military to curb violent crime that has soared alongside immigrant gang activity across the country.
>
> Swedish Prime Minister Ulf Kristersson announced on Friday that he planned to ask the country's military to step in and aid police in combatting surging shootings and bomb attacks. The prime minister also said he would look into legislation that would give the military greater authority to engage in police activities, according to the Financial Times.
>
> The prime minister's announcement followed remarks he made the day before condemning the surge in violence and saying that Sweden's immigration policies are largely to blame. Police officials in the Scandinavian country have said the security situation in Sweden is the worst it has been since World War II.
>
> "I cannot emphasize enough how serious the situation is. Sweden has never seen anything like it before. No other country in Europe sees anything like it currently," Kristersson said Thursday night, according to FT.
>
> "It is political naivete and cluelessness that has brought us here," he continued. "It is an irresponsible immigration policy and failed integration effort that has brought us here."

Here are some details:

> Earlier in the week, two explosions ripped through buildings in a suburb of Sweden's capital and Linkoping, 110 miles southwest. The bombs injured at least three people. A Swedish newspaper reported that both explosions are suspected of being connected to gang activity.

Here is another Daily Wire article showing how Biden's plan is coming along:

> A record number of illegal immigrants from Venezuela crossed the U.S. southern border in September, according to Department of Homeland Security preliminary data.
>
> Around 50,000 Venezuelans illegally entered the U.S. last month, shattering the

> monthly record of 34,000 set in September 2022, according to the DHS data that was obtained by CBS News on Wednesday. The data show that on some days, up to 3,000 Venezuelan migrants crossed the border, and illegal immigrants from the country made up roughly one-quarter of the more than 200,000 Border Patrol apprehensions in September.
>
> The spike in illegal crossings made by Venezuelan nationals came the same month that the Biden administration gave permission to hundreds of thousands of illegal immigrants from Venezuela to stay and work in the United States.
>
> […]More than seven million Venezuelans have fled the socialist regime in recent years, according to the United Nations, as the country faces economic collapse.
>
> […]Daily illegal border crossings have neared record highs as border facilities are slammed with migrants and officials are mass releasing illegal immigrants into the U.S. interior while thousands more stream into the country. The strain at the U.S. border is felt by communities from small border towns to major American cities.

A lot of people vote Democrat in order to feel like a good person, and be seen by others as good people. Bumper sticker virtue signaling.

Atheism is nothing more than a desire to escape a relationship with God, because a relationship with God causes humans to think about right and wrong. Atheists don't want to think about right and wrong. They want complete freedom to seek happiness according to their own selfish desires. As atheism rises in the society, people looking to escape guilt for disobeying the objective moral law. So, they talk loudly about how generous and compassionate they are, and they vote to be generous and compassionate. But who pays for their generosity and compassion? The most vulnerable people in society pay for it. Are Americans going to keep voting with our feelings?

How will men adapt to violence against men and false accusations?

October 6, 2023 | by Wintery Knight | Link | Original Link

A massive decline in marriage rate (per 1,000 of population in America)

A couple of women who write for the Daily Wire keep posting scary stories of men being mistreated by women. I'm going to link to a few of their stories below, from last week. Then I want to say something about why these sorts of events are happening so frequently, and what message it sends to men who might want to have a committed relationship with a woman.

The two women writers at Daily Wire are Amanda Prestigiacamo and Ashe Schow.

Here is one from May 8th, by Amanda:

> Thirty-six-year-old Kenan Basic spent weeks in jail, lost his relationship, and was repeatedly slandered after a woman falsely accused him of sexual misconduct.
>
> According to Australia-based 7NEWS, Basic was accused of "indecently assaulting and stalking" Caitlyn Gray, a 19-year-old woman, after he stopped to help her when her car broke down late last year.
>
> Basic apparently spent two hours fixing Gray's vehicle. As shown by surveillance footage, the smiling pair seem happy, hugging after the car is fixed and eventually parting ways. But according to the news station, "Gray told police Basic had allegedly propositioned her for sex in return for his help before he pursued her in the car and later indecently assaulted her at a different location." Authorities investigating the incident called Basic's behavior "predatory."

> Months later, however, the truth about the incident finally came out: Basic never assaulted the woman. The 19-year-old confessed to police during an interrogation that she fabricated evidence and made up the assault whole-cloth.

So what lesson would a man learn from this? Well, he would learn that women can't be trusted to be grateful when they are given help.

More:

> The falsely accused man noted that he's "never been jailed, never had a criminal record or anything."
>
> "I always help people, all my life," he said. "And this was the first time a snake bit me."
>
> The 36-year-old said he'll "probably never help again, ya know. I don't want that to happen again."

I don't know why this woman made this false accusation. Studies show that women generally make false accusations for attention, for an alibi, to get revenge, or to get sympathy after they've chosen to have sex with someone who ignored them after. This case doesn't fit any of these scenarios. Maybe she felt slighted because he didn't try anything with her, and that made her feel unattractive. But the message to good men who want to help women is clear: the risk is too great.

Here's another story from May 11th, by Ashe:

> Ah to be one of those poor, oppressed women who have fewer privileges than men.
>
> A woman like Jazzmin Fry, who was so oppressed that when she stabbed a complete stranger — a man — with one of her stilettos for literally no reason, she only had to pay a $250 fine as punishment. Her conviction wasn't even recorded outside of the press.
>
> […]The victim, Kyle Johns, 19, was taken to the hospital and needed two staples in his head to repair the wound.

What lesson will men learn from stories like this one? Well, they'll learn that there is a double standard in the justice system, such that men are held accountable for their choices, but women are not. That's because men are seen as responsible for their actions, and women are not seen as responsible – no matter how much harm they cause.

Ashe says:

> Women in the justice system — whether in Australia, or the U.K., or the U.S. — get off much easier than men for the same crimes. One of the biggest disparities can be found in sexual assaults against minors. When women commit these crimes — whether against a young boy or girl, or teenager — they receive much lighter sentences than men do for the same crime.
>
> As I have written previously, men who abuse children (rightly) receive harsh

> punishments. A 32-year-old man who sexually abused a young girl over the course of several years faced 366 years to life in prison. Yet a 25-year-old woman who pleaded guilty to raping young boys at a trailer park only received five years probation.
>
> […]In 2012, University of Michigan professor Sonja Starr researched the gender disparities in federal criminal cases and found that "men receive 63% longer sentences on average than women do" and that "Women are … twice as likely to avoid incarceration if convicted."

Men are very aware of disparities in the criminal justice system, but when I talk to women about it, they are rarely aware of it. But this is just one example of an area where men are at a disadvantage, and the problem only gets worse as more and more feminists take control of legislation, law enforcement and criminal courts. Almost every man knows a story of about how divorce courts treated a man badly, whether it be with unfair alimony or child support, false accusations, or even jail. And it seems like all the momentum in society is to make everything better for women, and worse for men. This is easily seen by looking at studies of how the public schools – which are dominated by female teachers and administrators – discriminate against boys.

Here's a third one from May 13th, by Amanda:

> A false accusation of sexual assault turned deadly last month in Utah when a teen girl's brother sought vengeance over the claim of sexual assault that never was.
>
> A 16-year-old girl, whose identity has not been revealed because she's a minor, told her 17-year-old brother that Michael Fife, 62, sexually assaulted her on a Cache Valley Transit District (CVTD) bus. The 17-year-old tracked down Fife and physically attacked him when he got off the bus; wounds from the altercation left him dead.
>
> According to Logan Police Department, reviewed surveillance footage from the bus revealed that the alleged assault never happened.

According to the police, "the video showed Mr. Fife walking past the girl, but no sexual assault occurred." Did she lie just to see what effect it would have on her brother?

My thoughts

Here is a fourth story about an NFL player *who refused to have sex with a woman*, and he was falsely charged with raping her, as reported on May 10th, in The College Fix.

This one is important, because this guy lost millions of dollars in salary, because he was kept out of the NFL two years, when his accuser had no evidence whatsoever. That's how unfair the system has become for men, and men with more to lose have more reason to avoid any relationships with women. Men with more money have more to lose to a false accusation. And these stories are so common in our age.

When a man measures up how much a woman adds to his life, and compares it to the risk of being cleaned out on a fact-free false accusation, it’s not a good value proposition. Women often look at things only from the woman’s point of view, and so they are mystified by how men could think like this. They just can’t seem to put themselves into men’s shoes to understand how dangerous women have become to men. And then men get told how weak and cowardly they are for refusing to ask women out, for refusing to commit, etc.

I think that the only women who are safe are women who have put in the effort to learn about these injustices towards men. If you are interested in a woman for a relationship, then ask her to name a few challenges that men face in this anti-male society. Ask her if she has a male relative who has faced a false accusation. Ask her if she has experience battling for men’s rights. If she doesn’t stand up for good men before marriage, she won’t respect you after marriage.

Women of the previous generation knew how to prepare herself for wife and mother roles, and present herself to a man in order to persuade him to marry her. Too many women in today’s generation have lost that ability to be feminine. They have lost the ability to be a real friend and support to a man. They don’t want to nurture his ability to be a masculine leader in a home.

It is rare to find a woman who is putting in the work to learn about things like abortion, divorce, and same-sex marriage. Most of them are instead focused on single motherhood by choice, delaying marriage for career, surrogacy, etc. Most women aren’t prepared to fight against anti-marriage, anti-child forces, and men sense from this that they aren’t serious about marriage as it really is: a self-sacrificial commitment requiring female *and male* natures.

Most young, unmarried women take on the priorities of the culture: animal rights, global warming, equal pay, abortion rights, gun control, higher taxes, single payer healthcare, public schools, etc. But most know very little about how to prepare themselves for a husband, or prepare themselves to provide for their children.

William Lane Craig debates James Crossley on the resurrection of Jesus

October 7, 2023 | by Wintery Knight | Link | Original Link

This is my favorite debate on the resurrection.

You can watch the debate here:

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence.

SUMMARY

William Lane Craig's opening speech

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women

    - the testimony of women of women was not normally allowed in courts of law
    - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
    - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
    - the response was that the disciples stole the body
    - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
    - this material is extremely early, withing 1-3 years after the cross
    - James, the brother of Jesus, was not a believer when he got his appearance
    - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
    - Peter: attested by Luke and Paul
    - The twelve: attested by Luke, John and Paul
    - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

James Crossley's opening speech

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

William Lane Craig's first rebuttal

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't

undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

James Crossley's first rebuttal

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

William Lane Craig's second rebuttal

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

James Crossley's second rebuttal

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling

- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for

that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

William Lane Craig's conclusion

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments
- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

James Crossley's conclusion

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

Stephen C. Meyer and Marcus Ross lecture on the Cambrian explosion

October 8, 2023 | by Wintery Knight | Link | Original Link

Cambrian Explosion

Access Research Network is a group that produces recordings of lectures and debates related to intelligent design. I noticed that on their Youtube channel they are releasing some of their older lectures and debates for FREE. So I decided to write a summary of one that I really like on the Cambrian explosion. This lecture features Dr. Stephen C. Meyer and Dr. Marcus Ross.

The lecture is about two hours. There are really nice slides with lots of illustrations to help you understand what the speakers are saying, even if you are not a scientist.

Here is a summary of the lecture from ARN:

> The Cambrian explosion is a term often heard in origins debates, but seldom completely understood by the non-specialist. This lecture by Meyer and Ross is one of the best overviews available on the topic and clearly presents in verbal and pictorial summary the latest fossil data (including the recent finds from Chengjiang China). This lecture is based on a paper recently published by Meyer, Ross, Nelson and Chien "The Cambrian Explosion: Biology's Big Bang" in *Darwinism, Design and Public Education*(2003, Michigan State University Press). This 80-page article includes 127 references and the book includes two additional appendices with 63 references documenting the current state of knowledge on the Cambrian explosion data.
>
> The term *Cambrian explosion* describes the geologically sudden appearance of animals in the fossil record during the Cambrian period of geologic time. During this event, at least nineteen, and perhaps as many as thirty-five (of forty total) phyla made their first appearance on earth. Phyla constitute the highest biological categories in the animal kingdom, with each phylum exhibiting a

> unique architecture, blueprint, or structural body plan. The word *explosion* is used to communicate that fact that these life forms appear in an exceedingly narrow window of geologic time (no more than 5 million years). If the standard earth's history is represented as a 100 yard football field, the Cambrian explosion would represent a four inch section of that field.
>
> For a majority of earth's life forms to appear so abruptly is completely contrary to the predictions of Neo-Darwinian and Punctuated Equilibrium evolutionary theory, including:
>
> - the gradual emergence of biological complexity and the existence of numerous transitional forms leading to new phylum-level body plans;
> - small-scale morphological diversity preceding the emergence of large-scale morphological disparity; and
> - a steady increase in the morphological distance between organic forms over time and, consequently, an overall steady increase in the number of phyla over time (taking into account factors such as extinction).
>
> After reviewing how the evidence is completely contrary to evolutionary predictions, Meyer and Ross address three common objections: 1) the artifact hypothesis: Is the Cambrian explosion real?; 2) The Vendian Radiation (a late pre-Cambrian multicellular organism); and 3) the deep divergence hypothesis.
>
> Finally Meyer and Ross argue why design is a better scientific explanation for the Cambrian explosion. They argue that this is not an argument from ignorance, but rather the best explanation of the evidence from our knowledge base of the world. We find in the fossil record distinctive features or hallmarks of designed systems, including:
>
> - a quantum or discontinuous increase in specified complexity or information
> - a top-down pattern of scale diversity
> - the persistence of structural (or "morphological") disparities between separate organizational systems; and
> - the discrete or novel organizational body plans
>
> When we encounter objects that manifest any of these several features and we know how they arose, we invariably find that a purposeful agent or intelligent designer played a causal role in their origin.
>
> *Recorded April 24, 2004. Approximately 2 hours including audience Q&A.*

I learned a lot by watching great lectures from Access Research Network. Their YouTube channel is here. I recommend their origin of life lectures – I have watched the ones with Dean Kenyon and Charles Thaxton probably a dozen times *each*. Speaking as an engineer, you never get tired of seeing engineering principles applied to questions like the origin of life.

If you'd like to see Dr. Meyer defend his views in a debate with someone who reviewed his book about the Cambrian explosion, you can find that in this previous post.

Further study

The Cambrian explosion lecture above is a great intermediate-level lecture and will prepare you to be able to understand Dr. Meyer's new book "Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design". The Michigan State University book that Dr. Meyer mentions is called "Darwin, Design and Public Education". That book is one of the two good collections on intelligent design published by academic university presses, the other one being from Cambridge University Press, and titled "Debating Design: From Darwin to DNA". If you think this lecture is above your level of understanding, then be sure and check out the shorter and more up-to-date DVD "Darwin's Dilemma".

New study: trans women on hormones have elevated risk of heart disease

October 9, 2023 | by Wintery Knight | Link | Original Link

I'm just adding to my store of peer-reviewed articles that argue against the goodness of transgender behaviors. This time, I found a study from the European Journal of Endocrinology. The data is from 2671 people from Denmark, which is a very transgender-affirming country. Let's take a look at the findings, as reported by the UK Telegraph.

It says:

> The new data is published in the European Journal of Endocrinology.
>
> The study revealed that all transgender people regardless of the sex they were born or the gender they were transitioning to, were at "significantly increased risk" from deadly conditions like heart attacks, strokes, high blood pressure and high blood fat and cholesterol levels.
>
> The experts looked at the health of 2,671 transgender people from Denmark over a five-year period with an average age of 22 and 26 for trans men and women respectively.
>
> They compared the incidence of cardiovascular disease with a control group of 26,700 people and presented the results to the European Association for the Study of Diabetes.
>
> People who were "assigned male at birth" and taking oestrogen as a trans woman, were 93 per cent more likely to suffer from cardiovascular disease than men and 73 per cent more likely than women.
>
> The incidence rate was around three per cent for trans women, up from around 1.5 per cent for men and 1.7 per cent for women.
>
> Trans women taking hormones are up to 95 per cent more likely to suffer heart disease, a new study has found.
>
> […]Trans men, who were "assigned female at birth", but were taking testosterone were 63 per cent more likely to have some form of heart disease than women, and more than double as likely than men.

I think that the adults who encourage young people to engage in these behaviors are so focused on feelings and peer-approval, that they don't want to consider the bad effects. They want what's good for them, and telling confused young people right and wrong is not very "cool" in this time and place. So, the adults grab what's good for them, and then act surprised later, when these behaviors don't work out. "It has to be the fault of the disapprovers" they cry. But science tells a different story.

New study: sex-reassignment surgery does not bring mental health benefits

October 10, 2023 | by Wintery Knight | Link | Original Link

Thinking about transgenderism

If you look at the actual science of sex re-assignment surgery, it doesn't make a good case that these procedures actually deliver results.

Here's the latest from Daily Signal:

> The world's largest dataset on patients who have undergone sex-reassignment procedures reveals that these procedures do not bring mental health benefits. But that's not what the authors originally claimed. Or what the media touted.
>
> In October 2019, the American Journal of Psychiatry published a paper titled, "Reduction in Mental Health Treatment Utilization Among Transgender Individuals After Gender-Affirming Surgeries: A Total Population Study." As the title suggests, the paper claimed that after having had sex-reassignment surgeries, a patient was less likely to need mental health treatment.
>
> Well, over the weekend, the editors of the journal and the authors of the paper issued a correction. In the words of the authors, "the results demonstrated no advantage of surgery in relation to subsequent mood or anxiety disorder-related health care."
>
> But it's actually worse than that. The original results already demonstrated no benefits to hormonal transition. That part didn't need a correction.
>
> So, the bottom line: The largest dataset on sex-reassignment procedures—both hormonal and surgical—reveals that such procedures do not bring the promised mental health benefits.
>
> In fact, in their correction to the original study, the authors point out that on one score—treatment for anxiety disorders—patients who had sex-reassignment surgeries did worse than those who did not:

> individuals diagnosed with gender incongruence who had received gender-affirming surgery were more likely to be treated for anxiety disorders compared with individuals diagnosed with gender incongruence who had not received gender-affirming surgery.
>
> You would think patients suffering from gender dysphoria would want to know that.

Previously, I had blogged about another study that found that the choice to go transgender was enormously susceptible to peer pressure and teacher pressure.

Here's how the study was first reported by Science Daily:

> This month, a Brown University researcher published the first study to empirically describe teens and young adults who did not have symptoms of gender dysphoria during childhood but who were observed by their parents to rapidly develop gender dysphoria symptoms over days, weeks or months during or after puberty.
>
> […]The study was published on Aug. 16 in *PLOS ONE*.

Peer pressure / The Internet:

> The pattern of clusters of teens in friend groups becoming transgender-identified, the group dynamics of these friend groups and the types of advice viewed online led her to the hypothesis that friends and online sources could spread certain beliefs.
>
> [….]"Of the parents who provided information about their child's friendship group, about a third responded that more than half of the kids in the friendship group became transgender-identified," Littman said. "A group with 50 percent of its members becoming transgender-identified represents a rate that is more 70 times the expected prevalence for young adults."

"Friends and online sources could spread certain beliefs".

Mental disorders / traumatic events:

> Additionally, 62 percent of parents reported their teen or young adult had one or more diagnoses of a psychiatric disorder or neurodevelopmental disability before the onset of gender dysphoria. Forty-eight percent reported that their child had experienced a traumatic or stressful event prior to the onset of their gender dysphoria, including being bullied, sexually assaulted or having their parents get divorced.

"experienced a traumatic or stressful event prior to the onset of their gender dysphoria" such as "having their parents get divorced".

When you read studies like this, it almost makes you think that we shouldn't be rushing children into sex-reassignment surgery, doesn't it? But then what would the adults who are desperate to feel good about themselves do to feel good about themselves? It makes

them feel good to let children do whatever they want. And it feels so bad to tell children no when they want something. The important thing for these selfish adults is to let the children do what they want right now. That’s called “compassion”.

11 Reasons Most Biologists Accept Evolutionary Theory in Spite of the Evidence

October 11, 2023 | by Wintery Knight | Link | Original Link

Below is a guest post from my friend Eric, who has an interest in origins science.

---

1. Many immediately reject creation or ID from the many embarrassingly bad "why are there still monkeys" arguments used by laymen. They assume there's nothing beyond that.

2. It's what they were taught in school and they never questioned it. "I didn't give it much thought; It wasn't my area of concern", as Michael Behe reflected of his postdoc research days as an evolutionist. "college students have not been shown the weakness of Darwinian evolution" as Joseph Kuhn wrote in 2012.

3. A lot of biologists aren't exposed to problems outside their own field. For example paleontologist and ID critic Don Prothero wrote that "Nearly all metazoans [meaning animals] show stasis, with almost no good examples of gradual evolution… the prevalence of stasis is a puzzle that has no simple answer" but lamented, "by and large the neontological [non-paleontologist] community still 'doesn't get it'… The journal Evolution continues to publish almost no contributions by paleontologists".

4. Others just don't talk about the problems. Renowned chemist James Tour (inventor of nanocars) describes his own experience: "Let me tell you what goes on in the back rooms of science – with National Academy members, with Nobel Prize winners. I have sat with them, and when I get them alone… I say, "Do you understand all of this, where all of this came from, and how this happens?" Every time that I have sat with people who are synthetic chemists, who understand this, they go 'Uh-uh. Nope.' These people are just so far off, on how to believe this stuff came together. I've sat with National Academy members, with Nobel Prize winners. Sometimes I will say, 'Do you understand this?' And if they're afraid to say 'Yes,' they say nothing. They just stare at me, because they can't sincerely do it."

5. Some see anything other than materialistic naturalism is seen as a violation of scientific professionalism. At one conference, "Chinese scientists encouraged the investigation of a variety of new hypotheses to explain the Cambrian explosion: hydrothermal eruptions, sudden seafloor changes, even intelligent design. This last was too much for one American paleontologist who stood up and shouted, 'This is not a scientific conference!'" Likewise the famed Lynn Margulis (proposed symbiogenesis theory) said, "The critics, including the creationist critics, are right about their criticism. It's just that they've got nothing to offer but intelligent design or 'God did it.'"

6. Many biologists don't have much training in engineering. Many of the patterns claimed to only arise by common descent are the same I see in the code I write or among other

objects designed by humans.

7. Some recognize insufficiencies in evolutionary theory, but hope new theories will arise to resolve them. Evolutionists Depew & Weber published in 2012: “Darwinism in its current scientific incarnation has pretty much reached the end of its rope… however, we are confident that a new and more general theory of evolution is evolving.”

8. A bias toward sensationalism in the media–which is true everywhere and not just with evolutionary biology.

9. It’s taboo to publish anything from the ID movement. As one example, Springer (a large scientific publisher) was going to publish 20-so-papers from ID proponents. They had already passed Springer’s internal peer review and Springer agreed to publish them. But a public campaign threatened to boycott Springer if they published, even though none any of the critics had even read the papers. Springer complied, but the papers were still published in World Scientific after also passing peer review there.

10. A small number of rather popular evolution “evangelists” shame anyone who dissents from the Party line. For example see Jerry Coyne’s response to Lynn Margulis claiming evolution doesn’t work (cited above). Coyne says she’s “dogmatic, willfully ignorant, and intellectually dishonest,” “wrong in the worst way a scientist can be wrong,” and “embarrasses both herself and the field.”

11. Rigged debates. Sean B. Carroll (well known biologist) wrote a critique of Michael Behe’s work in the journal Science: He cited “the tuning of color vision in animals” as a response to Michael Behe as an example of observed evolution creating through a long process of gradual steps. To support this, Carroll cites his own book where he describes (based on phylogeny) lineages would have had to evolve color vision multiple times, lose it, and then evolve it again. This would have happened among the presumed ancestors of reptiles, fish, and mammals so none of it is even observed to begin with. Behe correctly noted that Carroll’s papers show “different species have different protein binding sites” but “they demonstrate nothing about how the sites arose.” Behe submitted a brief response, only to have Science to trim the last 100 words. Science gave Carroll a far longer response chastising Behe for not addressing this very point he addressed in the 100 words that were trimmed.

Democrat contributions to Hamas-backer Iran isn't $6 billion, it's a lot more

October 12, 2023 | by Wintery Knight | Link | Original Link

I'm monitoring the news about the Hamas attack on Israel. I've gotten two questions so far. First, how could Israeli intelligence (Mossad), which is supposed to be the best, not know about this attack in advance. Second, Why didn't the Iron Dome missile defense work to stop the missiles. I'll answer those below, and see the latest about the Biden administration funding terrorism.

First, the national security / foreign policy people I follow on Twitter and listen to on podcasts are saying that national security and the military in Israel have gone hard woke in recent years, and they have stopped being able to defend Israel from real threats. Similar to how our own federal agencies are now largely engaged in attacking enemies of the Democrat party, while ignoring actual security threats like military-aged foreigners from enemy nations coming over the southern border in droves.

Second, the Iron Dome missile defense system only has a certain number of interceptors available. I think the number is 200 interceptors. (10 launchers x 20 missiles per launcher). Even with careful targeting, they were not able to shoot down all of the 2200 incoming missiles from Hamas.

One more point. Israel is a left-wing country, and has some of the toughest gun laws of any nation. Most law-abiding people are not properly armed to deter the threat of criminals or terrorists. So, the attack did a lot worse than it would have in say, Texas or Tennessee or Florida. Israeli voters thought they could "stop crime" and "stop terrorism" by banning law-abiding people from owning scary, noisy, smelly guns. It didn't work. Feelings-based policy didn't work in Israel, and it doesn't work in America, either.

But where did Hamas, a terrorist group, get all of the money for 2200 missiles? How could a group of rapists and child-murderers plan such an attack? Well, they have said that they had help from Iran. The same Iran that Obama helped with pallets of cash when he was president. And Biden is helping Iran with cash, too.

The Federalist explains:

> Many of the articles surrounding the atrocities of the Hamas attacks this past weekend have referenced the recent $6 billion "deal," in which the U.S. gave this money to Iran in exchange for five Americans. It already seemed like the worst trade in history.
>
> But it's more nefarious than simply unleashing $6 billion to Iran, a known terrorist state and the most existential threat to the free world. In reality, this one detail hyperlinked quickly in most articles is part of a larger spider web of hidden details.
>
> In a recent article, senior adviser at the Foundation for Defense of Democracies

> and former National Security Council official Richard Goldberg traces the money trail. He confirms: It is so much worse than we think.
>
> […]The revelations do not end there. U.S. officials have also quietly acknowledged that they've uncapped Iranian oil exports to China. These export levels, previously held around 775,000 barrels per day under Trump's sanctions, are now estimated to be between 1.4 and 2.2 million barrels per day. Modest estimates value this relief at $25 billion annually.

Not only that, but the Obama administration and the Biden administration want Iran to have nuclear weapon capabilities:

> We know Iran has already ejected international nuclear inspectors and are on their way to building a facility that is believed to be so deep underground that it would be impenetrable to any air strikes. Iran did not even have to stop their production of high-enriched uranium. They're merely producing it at a slower rate. But the Biden administration chose to pick up the Obama era's decision to unrestrain Iran based on a pinky promise.
>
> Most recently, we learned that top officials were influencing the U.S. government in favor of Iranian nuclear power. A series of recently leaked emails have focused on Ariane Tabatabai, the chief of staff to the secretary of defense for special operations. Messages show her involvement with the Iran Experts Initiative (IEI), a direct Iranian government initiative to allegedly "improve the country's image abroad."
>
> […]We've also come to learn of other aides who were directly corresponding with the Iranian government from their U.S. government posts, such as Ali Vaez and Dina Esfandiary.

Democrat party policy is not just about putting Israel in harm's way, it's also making sure that the American military can't do anything to save Israel once they are attacked:

> We're stopping oil production in America while allowing Iran to export more, all under the facade of "green energy." The administration has given the green light to increase oil production in the country that is the greatest existential threat to the free world. Meanwhile, Biden has choked American oil production with the fewest number of offshore oil and gas leases "in history." This is after Biden canceled all remaining leases in Alaska. But since these leases are for 2024 to 2029, he's pushed off Americans truly feeling this at the pump until, quite conveniently, after the election.
>
> Squeezing the American wallet is far from the most dire consequence of this policy. Biden has drained the Strategic Petroleum Reserves (SPR) to multi-decade lows. Despite claims that they would be replenishing the reserves, the administration has not only yet to refill the reserves, they even pulled an offer at the end of this summer because of "market conditions." Namely, oil is already

> too expensive, and we are drained of our most important backup resource.

Eventually, American voters are going to realize how electing Democrats creates problems here at home:

> At this point, America has not simply left the world stage — it is funding terror.
>
> The extent of this hidden money trail has yet to be fully realized. It isn't only Gaza. It's Lebanon. It's Syria. It's Iraq. It's Afghanistan. It will be Paris and London. It is likely pouring over the U.S. southern border.
>
> And it's coming to a neighborhood near you.

Why do so many self-described Jewish people vote for the Democrat party, when the Democrat party clearly hates them? Well, when I listen to real Jews, like Ben Shapiro and Dennis Prager, they seem to think that many self-described Jews are just secular leftists, who disagree with what the Bible teaches.

Is Christianity Today a Christian publication?

October 13, 2023 | by Wintery Knight | Link | Original Link

I like to follow the work of Megan Basham on Twitter and Daily Wire, because she takes the Bible seriously on moral and spiritual issues. So I was very interested to read her latest article evaluating Christianity Today. On the surface, Christianity Today presents itself as a Christian publication. But are their beliefs really consistent with what the Bible teaches? Let's see.

Here's the article from Daily Wire:

> The media has long framed Christianity Today, founded by Billy Graham in 1956, as America's most influential Christian news outlet. The Washington Post, for instance, regularly describes it as evangelicalism's "flagship" magazine," as does The New York Times. A review of federal election records, however, indicates that the views of the magazine's leadership and staff may be far out of step with ordinary evangelicals.
>
> Between 2015 and 2022, nine Christianity Today employees made 73 political donations. All of them went to Democrats. This tally includes President and CEO Timothy Dalrymple, who gave $300 in two separate payments to failed Georgia Senate candidate Sarah Riggs Amico.
>
> Amico's platform, which includes protecting abortion "without exception" and repealing the Hyde Amendment to allow federal tax dollars to fund abortions, contrasts sharply with the views of evangelicals who overwhelmingly say abortion should be illegal in all or most cases. She is also at odds with traditional Christian beliefs when it comes to gender, sexuality, and religious liberty.
>
> Along with declaring herself a "staunch LGBTQ ally," Amico promised to support the Equality Act, a bill that The Heritage Foundation warns would threaten parental rights over children who believe they're transgender. The conservative think tank has also said the bill would decimate conscience rights for medical workers and "cancel[s] religious freedom." Southern Baptist Theological Seminary president Albert Mohler put the Equality Act in even starker terms, saying it "represents the greatest threat to religious liberty in the United States in our lifetimes" and would "totally transform the United States as we know it."
>
> Dalrymple was not the only member of the magazine's executive ranks to donate to Democrats. Natalie Lederhouse, Vice President of Advertising and Partnerships, contributed $50 to the 2020 Biden Victory Fund. The Federal Election Commission has no records of any Christianity Today executive giving to the GOP since 1991.

You might remember the Equality Act discussed in previous posts on this blog. Basically,

the legislation would have made it impossible for Christians to advocate for Biblical positions on sexual issues. Not only individual Christians, but Christian businesses and charities. They would all have had to comply with the secular left's views on sexual issues.

Megan also found this about a former NEWS EDITOR at Christianity Today:

> Between October 2019 and November 2020, news editor Daniel Silliman made eight donations to five different pro-abortion, pro-LGBTQ candidates, among them, Massachusetts Senator Elizabeth Warren's presidential campaign. In addition to possessing a perfect voting score from Planned Parenthood and NARAL, Warren supported shutting down crisis pregnancy centers across the country, and her platform included requiring schools to admit biological men into women's sports and single-sex spaces. She also pledged to allow a gender dysphoric nine-year-old to approve anyone she appointed as education secretary.
>
> Silliman also donated to Renee Hoyos, Tennessee Democrats' nominee to the U.S. House; Moe Davis, House candidate from North Carolina; Blair Walsingham, House candidate from Tennessee; and former Senator Doug Jones (D-AL).

As news editor, he would have been in charge of all of Christianity Today's coverage of political stories.

More:

> In another article in the run-up to the 2020 election,
> Silliman spotlighted President Biden's Catholicism and quoted progressive theologian Richard Mouw opining that "[Biden] is viewed as having an authentic faith… when he talks about his faith, it rings true." Silliman then tied Mouw to conservative Christian icons, Chuck Colson and J.I. Packer.
>
> […][Silliman] also covered the Fairness for All Act, a proposal that would have granted special privileges to people who identify as LGBTQ. It was opposed by conservative legal groups like Alliance Defending Freedom for "undermin[ing] human dignity by threatening the fundamental freedoms of speech, religion, and conscience." Approximately three-quarters of Silliman's report on the bill was devoted to those who favored the legislation.

You might remember that Mouw is one of these "evangelicals for Biden". Now that we know the truth about Biden's business dealings and connections to foreign governments, it's easier to understand what sort of morality Mouw supports.

The new editor-in-chief of Christianity Today is Russell Moore, who seems more focused on promoting the Democrat party platform than with defending policies consistent with the Bible.

The root cause of the problem with these "evangelicals for Biden" is that they have never adopted Christianity on the basis of studying the evidence, and forming their own views. Progressive Christians form their views *socially* not *intellectually.* When they are young,

they put on the cloak of Christianity as a way of seeming virtuous to their parents and those around them. They didn't choose Christianity because it was the best description of reality. They were born into it. It's not a worldview to them, it's an act.

Progressive Christians don't make a case for core Christian beliefs using evidence to non-Christians. They simply don't know how to do it, because they didn't do it in order to "become" a Christian in the first place. They don't have any work to show, because they never did the work. And their policy views are the same. They don't form their views based on reason and evidence. They don't read scholars like Thomas Sowell, or John Lott, or Ryan Anderson, or Scott Atlas, or Robert George. They just believe whatever will make people like them – just like they did when they were children.

Knight and Rose Show #41: Babylon Bee CEO Seth Dillon

October 14, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 41 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose interview Seth Dillon, CEO of the Babylon Bee. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 41:

Episode Summary:

Wintery Knight and Desert Rose interview Seth Dillon, CEO of the famous website "The Babylon Bee". We discuss the effectiveness of mockery and sarcasm for opposing censorship by the secular left. We discuss what role apologetics played in building Seth's Christian worldview. We also discuss how Christians can build a view of the world that takes the Bible seriously in every area.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

Seth Dillon is the CEO of The Babylon Bee. Dillon's experience with censorship and de-platforming has placed him on the front lines of the battle for free speech in the public square. He now speaks on college campuses and at conferences across the country about the effectiveness of humor, the moral imperative of mockery, and the dangers of censorship. Dillon occasionally signs off Twitter to enjoy time with his wife and two sons in Juno Beach, Florida.

Pro-gay web site tells real story of the Matthew Shepard murder

October 15, 2023 | by Wintery Knight | Link | Original Link

A fascinating article from the pro-gay web site The Advocate.

Excerpt:

> What if nearly everything you thought you knew about Matthew Shepard's murder was wrong? What if our most fiercely held convictions about the circumstances of that fatal night of October 6, 1998, have obscured other, more critical, aspects of the case? How do people sold on one version of history react to being told that facts are slippery — that thinking of Shepard's murder as a hate crime does not mean it was a hate crime? And how does it color our understanding of such a crime if the perpetrator and victim not only knew each other but also had sex together, bought drugs from one another, and partied together?
>
> None of this is idle speculation; it's the fruit of years of dogged investigation by journalist Stephen Jimenez, himself gay. In the course of his reporting, Jimenez interviewed over 100 subjects, including friends of Shepard and of his convicted killers, Aaron McKinney and Russell Henderson, as well as the killers themselves (though by the book's end you may have more questions than answers about the extent of Henderson's complicity). In the process, he amassed enough anecdotal evidence to build a persuasive case that Shepard's sexuality was, if not incidental, certainly less central than popular consensus has lead us to believe.

And here are the details:

> But in what circumstances does someone slam a seven-inch gun barrel into their victim's head so violently as to crush his brain stem? That's not just flipping out, that's psychotic — literally psychotic, to anyone familiar with the long-term effects of methamphetamine. In court, both the prosecutor and the plaintiffs had compelling reasons to ignore this thread, but for Jimenez it is the central context for understanding not only the brutality of the crime but the milieu in which both Shepard and McKinney lived and operated.
>
> By several accounts, McKinney had been on a meth bender for five days prior to the murder, and spent much of October 6 trying to find more drugs. By the evening he was so wound up that he attacked three other men in addition to Shepard. Even Cal Rerucha, the prosecutor who had pushed for the death sentence for McKinney and Henderson, would later concede on ABC's *20/20* that "it was a murder that was driven by drugs."
> No one was talking much about meth abuse in 1998, though it was rapidly establishing itself in small-town America, as well as in metropolitan gay clubs,

where it would leave a catastrophic legacy. In Wyoming in the late 1990s, eighth graders were using meth at a higher rate than 12th graders nationwide. It's hardly surprising to learn from Jimenez that Shepard was also a routine drug user, and — according to some of his friends — an experienced dealer. (Although there is no real evidence for supposing that Shepard was using drugs himself on the night of his murder).

Despite the many interviews, Jimenez does not entirely resolve the true nature of McKinney's relationship to Shepard, partly because of his unreliable chief witness. McKinney presents himself as a "straight hustler" turning tricks for money or drugs, but others characterize him as bisexual. A former lover of Shepard's confirms that Shepard and McKinney had sex while doing drugs in the back of a limo owned by a shady Laramie figure, Doc O'Connor. Another subject, Elaine Baker, tells Jimenez that Shepard and McKinney were friends who had been in sexual threesome with O'Connor. A manager of a gay bar in Denver recalls seeing photos of McKinney and Henderson in the papers and recognizing them as patrons of his bar. He recounts his shock at realizing "these guys who killed that kid came from inside our own community."

Not everyone is interested in hearing these alternative theories.
When *20/20* engaged Jimenez to work on a segment revisiting the case in 2004, GLAAD bridled at what the organization saw as an attempt to undermine the notion that anti-gay bias was a factor; Moises Kaufman, the director and co-writer of *The Laramie Project,* denounced it as "terrible journalism," though the segment went on to win an award from the Writers Guild of America for best news analysis of the year.

There are valuable reasons for telling certain stories in a certain way at pivotal times, but that doesn't mean we have to hold on to them once they've outlived their usefulness. In his book, *Flagrant Conduct,* Dale Carpenter, a professor at the University of Minnesota Law School, similarly unpicks the notorious case of *Lawrence v. Texas,* in which the arrest of two men for having sex in their own bedroom became a vehicle for affirming the right of gay couples to have consensual sex in private. Except that the two men were not having sex, and were not even a couple. Yet this non-story, carefully edited and taken all the way to the Supreme Court, changed America.

In different ways, the Shepard story we've come to embrace was just as necessary for shaping the history of gay rights as *Lawrence v. Texas;* it galvanized a generation of LGBT youth and stung lawmakers into action. President Obama, who signed the Hate Crimes Prevention Act, named for Shepard and James Byrd Jr., into law on October 28, 2009, credited Judy Shepard for making him "passionate" about LGBT equality.

I think that it's good that The Advocate posted this correction to the story. I admire them for being willing to tell the truth about the story. However, note that the author is not sorry that a fake version of the case was used to push the gay agenda forward. Now what if the same willingness to twist the truth was shared by the gay activists who are redefining the issues in the culture as a whole? What if the people who are pushing the gay agenda in schools, in the media, in the workplace, and elsewhere, had the same willingness to twist the truth in order to advance their cause?

It's also helpful to understand the media bias angle of this story. Are they really interested in telling the truth? Or is there something else going on there? How much of a story was the attack on the Family Research Council building by a gun-wielding gay activist compared to the Matthew Shepard story? How much of a story is the persecution of Christians in the Middle East compared to the Matthew Shepard story? How much of a story is the loss of basic human rights like free speech and religious liberty here at home when compared to the Matthew Shepard story?

Breitbart has more about what really happened to Matthew Shepard.

Republicans act to prevent Biden for importing millions of Palestinian refugees

October 16, 2023 | by Wintery Knight | Link | Original Link

Sometimes, people who don't know very much about politics lazily say "both parties are the same, so it doesn't matter whether you vote or not… the system is rigged". But is this really true? Let's take a look at the issue of immigration, and see if the two parties really are the same when we look at the details.

Here's an article from Breitbart News:

> Reps. Tom Tiffany (R-WI) and Andy Ogles (R-TN) are introducing legislation that would ban President Joe Biden's administration from importing Palestinians to the United States to be resettled in American communities.
>
> The bill, exclusively shared with Breitbart News ahead of its introduction, is titled the "Guaranteeing Aggressors Zero Admission Act" or the GAZA Act. The legislation would prevent Biden's administration from issuing visas to those with Palestinian Authority passports.
>
> […]Likewise, the bill would prevent Biden's Department of Homeland Security (DHS) from funneling Palestinians into the U.S. through the agency's parole pipeline.

But what about the Democrat view of immigration?

> Following the U.S. withdrawal from Afghanistan, Biden used his administration's parole pipeline to resettle nearly 100,000 Afghans across American communities — many of whom were not interviewed in person beforehand and who were found to be linked to terrorism.
>
> As Breitbart News reported, in Fiscal Year 2022 alone, Biden's DHS gave green cards to about 63,000 legal immigrants to permanently resettle in the U.S. who arrived from countries previously included in a national travel ban list due to their involvement with terrorism.

What I am hearing is that the weapons that America abandoned fell into the hands of the Palestinians, which is why you can see photographs of them holding American military weapons. That seems to be Biden's foreign policy – arm our enemies, reward them with cash and prizes for attacking us and our allies.

Meanwhile, here's a message from Ron DeSantis, reported in Fox News:

> Florida Gov. and GOP presidential hopeful Ron DeSantis Sunday stuck to his stance that the U.S. should not accept refugees from Gaza amid the ongoing conflict with Israel.
>
> "Palestinian Arabs should go to Arab countries, the U.S. should not be absorbing

> any of those," DeSantis said during an appearance on CBS's "Face the Nation" Sunday.
>
> The Florida governor's remarks come after he sparked controversy with comments made on the campaign trail in Iowa Saturday, arguing to those in the audience that the refugees would be "antisemitic."
>
> "I don't know what Biden's going to do, but we cannot accept people from Gaza into this country as refugees," DeSantis said during the event. "If you look at how they behave, not all of them are Hamas, but they are all antisemitic. None of them believe in Israel's right to exist."

That's bold, but he's not wrong.

So there is a clear difference between the parties on issues. I think the people who say that there is no difference just don't know what the differences are, because it takes work to know.

Ryan T. Anderson lectures on marriage and why it matters

October 17, 2023 | by Wintery Knight | Link | Original Link

Here's the lecture:

About the speaker:

> Ryan T. Anderson researches and writes about marriage and religious liberty as the William E. Simon Fellow at The Heritage Foundation. He also focuses on justice and moral principles in economic thought, health care and education, and has expertise in bioethics and natural law theory.
>
> Anderson, who joined the leading Washington think tank's DeVos Center for Religion and Civil Society in 2012, also is the editor of *Public Discourse*, the online journal of the Witherspoon Institute of Princeton, N.J.
>
> Anderson's recent work at Heritage focuses on the constitutional questions surrounding same-sex "marriage." He is the co-author with Princeton's Robert P. George and Sherif Girgis of the acclaimed book "What Is Marriage? Man and Woman: A Defense" (Encounter Books, December 2012).

The lecture starts at 7:20 in. The lecture ends at 49:35. There are 32 minutes of Q&A.

Introduction:

- When talking about marriage in public, we should talk about philosophy, sociology and public policy
- Gay marriage proponents need to be pressed to define what marriage is, on their view
- Every definition of marriage is going to include some relationships, and exclude others
- It's meaningless to portray one side as nice and the other mean
- Typically, marriage redefiners view marriage as a more intense emotional relationship
- Marriage redefiners should be challenged in three ways:
- 1) Does the redefined version of marriage have a public policy reason to prefer only two people?
- 2) Does the redefined version of marriage have a reason to prefer permanence?
- 3) Does the redefined version of marriage have a reason to prefer sexual exclusivity?
- Also, if marriage is just about romance, then why is the state getting involved in recognizing it?
- The talk: 1) What marriage is, 2) Why marriage matters, 3) What are the consequences of redefining marriage?

What marriage is:

- Marriage unites spouses – hearts, minds and bodies
- Marriage unites spouses to perform a good: creating a human being and raising that human being
- Marriage is a commitment: permanent and exclusive
- Male and female natures are distinct and complementary

The public purpose of marriage:

- to attach men and women to each other
- to attach mothers and fathers to their children
- there is no such thing as parenting, there is only mothering and fathering
- the evidence shows that children benefit from mothering and fathering
- boys who grow up without fathers are more likely to commit crimes
- girls who grow up without fathers are more likely to have sex earlier
- Children benefit from having a mother and a father
- can't say that fathers are essential for children if we support gay marriage, which makes fathers optional
- without marriage: child poverty increases, crime increases, social mobility decreases, welfare spending increases
- when government encourages marriage, then government has less do to – stays smaller, spends less
- if we promote marriage as an idea, we are not excluding gay relationships or even partner benefits
- finally, gay marriage has shown itself to be hostile to religious liberty

Consequences redefining marriage:

- it undermines the norm in public like that kids deserve a mom and a dad – moms and dads are interchangeable
- it changes the institution of marriage away from the needs of children, and towards the needs of adults
- it undermines the norm of permanence
- we learned what happens when marriage is redefined before: with no-fault divorce
- no-fault divorce: after this became law, divorce rates doubled – the law changed society
- gay marriage would teach society that mothers and fathers are optional when raising children
- if marriage is what people with intense feelings do, then how can you rationally limit marriage to only two people?
- if marriage is what people with intense feelings do, then if other people cause intense feelings, there's no fidelity
- if marriage is what people with intense feelings do, then if the feelings go away,

there is no permanence
- the public policy consequences to undermining the norms of exclusivity and permanence = fatherless children and fragmented families
- a final consequences is the decline and elimination of religious liberty – e.g. – adoption agencies closing, businesses being sued

We're doing very well on abortion, but we need to get better at knowing how to discuss marriage. If you're looking for something short to read, click here. If you want to read a long paper that his book is based on.

New study: couples who cohabitate before marriage have higher risk of marital dissolution

October 18, 2023 | by Wintery Knight | Link | Original Link

When I was in college studying computer science, there was a new idea going around called “design patterns”. Basically, this was a cookbook of component arrangements that were “best practices” for solving certain problems. Depending on your problem, you might try different patterns, like Observer, Visitor, Strategy, etc. And it turns out that there are design patterns for social issues, too.

Cohabition Instability

Here’s a new report from the Institute for Family Studies:

> Fifty to 65% of Americans believe that living together before marriage will improve their odds of relationship success. Younger Americans are especially likely to believe in the beneficial effects of cohabitation, and to view living together as providing a valuable test of a relationship ahead of marriage. Yet living together before marriage has long been associated with a higher risk for divorce, contradicting the common belief that cohabitation will improve the odds of a marriage lasting.
>
> […]Using a new national sample of Americans who married for the first time in the years 2010 to 2019, we examined the stability of these marriages as of 2022 based on whether or not, and when, people had lived together prior to marriage. Consistent with prior research, couples who cohabited before marriage were more likely to see their marriages end than those who did not cohabit before marriage.

Key findings:

> - 34% of marriages ended among those who cohabited before being engaged, compared to 23% of marriages for those who lived together only

> after being either married or engaged to be married.

And this from the key takeaways was interesting:

> - Reasons for moving in together also matter: People who reported that their top reason for moving in together was either to test the relationship or because it made sense financially were more likely to see their marriages end than those who did so because they wanted to spend more time with their partner.
> - Having a greater number of prior cohabiting partners is associated with a higher likelihood of marriages ending.

I think the key point in these studies is that couples who decide to commit are moving in very different reasons than couples who just slide into cohabitation because it's convenient.

It's interesting because it shows that being cautious about commitment is more likely to cause instability. The attitude seems to be "I'll keep doing this as long as it makes me happy".

With commitment, the attitude is going to be more like "let's decide to unite, and then it will be on us to make it work". The old marriage vows were all about that commitment. I really have to wonder whether people mean it when they say those words today, they are so counter to our hedonistic culture.

I think what people should be looking for is a mate who thinks that the relationship works better if both people work at it. If you have one person who thinks that it is the other person's job to make them happy, run from that relationship. Like, if you are always doing little things to help the other person do well in their tasks and purposes, and they never do anything to help you, then that's a bad sign. You don't want to commit to someone who thinks that relationships should be effortless, that they don't have to do anything to put gas in your fuel tank in order to make you perform.

Ideally, you want someone who thinks that it's fun to put fuel in your tank, and thinks that it's their job to do that for you. Just because they like to see your engine run.

Texas Gov. Greg Abbott tells legislators: no breaks until school choice is law

October 19, 2023 | by Wintery Knight | Link | Original Link

I like to monitor all the best governors, just in case I decide to switch states. Obviously, DeSantis is up there, but what about Texas governor Greg Abbott? He likes to fight, too. And he's willing to make Democrats miserable in order to get what he wants.

Here's a story from The Federalist:

> Historically, Texas has painfully lagged in school choice programs, resembling more of a blue state than its Republican trifecta. Currently, the only avenues of school choice in Texas are within the public system: charter schools and magnet schools, as well as inter-district and intra-district enrollment avenues. School choice programs that allow students to move outside the public education system are nonexistent.
>
> But Abbott has committed to changing that. He's calling for universal education savings accounts (ESAs), which would grant K-12 students statewide access to taxpayer funding for other selected educational avenues.
>
> The Texas Legislature returned to Austin for a third special session on Oct. 9. Abbott made it clear that it is time for Texas to pass school choice. If legislators cannot get it passed this session, then he'll bring them back immediately for another session. "I can play this game longer than they can play this game," he said about the legislature.

A lot of Republicans actually are very leftist on education issues. They don't want parents having more control. They think that government knows best about what children should learn.

Look:

> Republicans who represent rural areas in the House of Representatives blocked school choice from passing in the spring legislative session.

Kim Reynolds is also doing a great job as governor of Iowa, and Abbott is stealing her ideas:

> Abbott is also prepared to utilize an effective approach that Iowa Gov. Kim Reynolds employed in 2022. When Republican legislators opposed school choice in her state, she worked to get them voted out of office. The tactic is well-timed with Texas primary elections next spring.

This is what Texas conservatives are trying to pass:

> Texas state Sen. Brandon Creighton, R-Conroe, introduced Senate Bill 1, named the Texas Education Freedom Act, on Oct. 9, the day the session kicked off. The

> bill passed through the committee on Oct. 13 with a vote of 18-13. It has now moved to the Texas House.
>
> The bill, if the state house passes it, would establish an education savings account program in Texas. Families would receive $8,000 per student in taxpayer funds that they could use on various educational expenses, including accredited private school tuition, textbooks, tutoring, transportation, and educational therapies.

School choice is really important for Christians. We need to have the ability to put our money into schools that work for us. What we don't want is to pay our money first, then hope for the best. It's amazing to me how many Christians trust a secular government to provide them with health care, education, etc. after they pay up front. Keep your money in your pocket until you find something that works for you!

Can taxpayers trust federal law enforcement to adhere to “the rule of law”?

October 20, 2023 | by Wintery Knight | Link | Original Link

I don’t know if people in federal law enforcement are familiar with the concept of the rule of law. It’s an important pillar of Western civilization, that teaches that everyone should be equal before the law. We want federal law enforcement to believe that, and defend that. But in a Democrat party administration, it doesn’t seem like they understand it. Let’s take a look at some evidence.

This article from Matt Walsh was published in Daily Wire. He’s going to contrast a Democrat meme poster with a Republican meme poster, and their punishments.

Here’s a Democrat meme maker telling Republicans to vote one day after the 2016 election day:

> November 8th, 2016 was Election Day… that morning, a Left-wing activist named Kristina Wong decided to play a practical joke on all these Election Day voters. She went on Twitter, writing, “Hey Trump Supporters! Skip poll lines at #Election2016 and TEXT in your vote! Text votes are legit. Or vote tomorrow on Super Wednesday!”
>
> Wong also uploaded this video on Twitter, telling Trump supporters once again that Election Day, in reality, was on November 9th — a day later than the actual Election Day.
>
> That video is still available on Kristina Wong’s Twitter feed.

Matt Walsh notes that “the DOJ never charged Kristina Wong with any crime”.

And here’s a Republican meme maker telling Democrats to vote one day after the 2016 election day:

> On social media, [Douglass] Mackey used the online alias of “Ricky Vaughn.” And exactly one week before Kirstina Wong posted her meme on Twitter, Douglass Mackey posted this meme…
>
> As the image reads: “Avoid the line. Vote from home.” Douglass Mackey posted this image on social media a full week before Election Day. At the time he posted this on his Twitter account, Mackey’s profile picture depicted a man in a MAGA hat wearing a Bane mask. So it was not exactly a credible announcement about the upcoming election. Nor was it trying to be.
>
> At the time, everyone recognized this. More than four years went by, and no one said a word about it.
>
> Then, in late January 2021 — just a week after Joe Biden was inaugurated, and his handlers took control of the federal government and the DOJ — everything changed. Douglass Mackey was suddenly hit with federal charges.

So, the Democrat meme maker got no charges, but the Republican meme maker got charges. And worse, the Republican meme maker got a federal prison sentence:

> The Biden DOJ put Douglass Mackey on trial, more than a half-decade after his allegedly illegal memes.
>
> [..][P]rosecutors never produced a single piece of evidence to prove that a single vote was actually lost due to Mackey's meme. The jury did not hear from a single witness who testified that they texted their vote and then didn't vote for real because of it. In other words, there was never any evidence, or any reason to believe, that any actual real world harm was caused by this meme.
>
> […]Nothing happened. There was no harm done. And yet, predictably, Mackey was convicted and the other day he was sentenced by this federal judge to seven months in prison.

Matt notes that this is not how federal law enforcement treats Democrats who commit much worse crimes:

> To put that sentence in context, seven months is longer time in prison than a BLM rioter received in 2020 for threatening to murder a police officer with an AR-15. That officer was guarding a courthouse that the rioters were setting on fire. But this rioter, named Dakota Means, was sentenced to probation, meaning no time in prison whatsoever. Dakota Means went on to murder his infant child.
>
> As horrifying as that story is, there are many more like it. Pretty much every BLM terrorist from 2020 received a lighter sentence than Douglass Mackey did for posting a meme.

Now, just this week, secular left protesters invaded the Capitol in what can only be described as a literal "insurrection". Will these literal insurrectionists be given 20-year prison sentences? They did much more than move a barrier.

Matt predicts that they won't be punished at all:

> The other day, pro-Hamas protesters stormed a Senate office building, demanding a ceasefire in the Middle East. They obstructed lawmakers on their way to work. They prevented media reports from taking place. It was an insurrection.
>
> Not a single one of those rioters will be placed in solitary confinement by Joe Biden's DOJ. They won't face 20-year prison sentences. Just like the women who stormed Capitol buildings during the Kavanaugh hearings, none of these pro-Hamas degenerates will face any consequences whatsoever.

Is Matt Walsh right? Time will tell. But just make sure that you vote in 2024, and make sure that you get all of your family and friends to vote, too. Now is the time to keep them informed about news stories like this one, so that they understand what's at stake. We've produced a generation of poorly-educated, immoral, secular left fascists who don't even

understand the meaning of “rule of law” – or any other basic legal concepts. And sadly, they’ve found their way into government, and into federal law enforcement. We’re paying them to be stupid and evil. Maybe we need better people?

Why are Christians allowed to eat shellfish but not allowed to have sex before marriage?

October 21, 2023 | by Wintery Knight | Link | Original Link

Here's a wonderful article from Peter Saunders.

The challenge:

> An argument frequently advanced by those attempting to defend homosexual practice is that Christians 'cherry pick' the commands in the Bible – that is, they chose to emphasise some commands while ignoring others.
>
> The Old Testament may forbid homosexual acts (Leviticus 18:2; 20:13) but it also forbids eating seafood without fins and scales (Leviticus 11:9-12; Deuteronomy 14:9, 10).
>
> So how can Christians then justify upholding laws on sexual morality whilst at the same time ignoring the food laws from the very same books of the Bible? Why may they eat shellfish but not be allowed to have sex outside marriage? Isn't this inconsistent and hypocritical?

The solution is that God enters into "covenants" with his people, and the terms of those covenants change.

Especially dietary laws:

> The answer to this question lies in an understanding of biblical covenants.
>
> A covenant is a binding solemn agreement made between two parties. It generally leaves each with obligations. But it holds only between the parties involved.
>
> There are a number of biblical covenants: Noahic, Abrahamic, Sinaitic (Old), Davidic and New.
>
> Under the Noahic covenant, which God made with all living human beings (Genesis 9:8-17), people were able to eat anything:
>
> *'Everything that lives and moves about will be food for you. Just as I gave you the green plants, I now give you everything' (Genesis 9:3).*
>
> But under the Sinaitic (Old) Covenant, which God made with the nation of Israel, people were able to eat certain foods, but not others.

Jesus clearly created a new covenant with his followers, where the dietary laws are lifted:

> Jesus said that he had come to fulfil the 'Law and the Prophets' (Matthew 5:17; Luke 24:44). He would establish this new covenant with new laws, with himself as high priest based on his own sacrificial death on the cross.
>
> This new covenant would completely deal with sin (Hebrews 10:1-18) and protect

> all those who put their faith in him from God's wrath and judgement…
>
> *[…]'In the same way, after the supper (Jesus) took the cup, saying, "This cup is the **new covenant** in my blood, which is poured out for you"' (Luke 22:20). '…we have been made holy through the sacrifice of the body of Jesus Christ once for all' (Hebrews 10:10)*
>
> People would come under the protection of this new covenant, not by virtue of belonging to the nation of Israel, but through faith in Christ. In fact the function of the Old Testament Law (Sinaitic covenant) was to point to Christ as its fulfilment.
>
> […]So what then did Christ say about foods? He pronounced all foods clean for his followers to eat:
>
> *' "Don't you see that nothing that enters a person from the outside can defile them? For it doesn't go into their heart but into their stomach, and then out of the body." (In saying this, Jesus declared all foods clean.) He went on: "What comes out of a person is what defiles them. For it is from within, out of a person's heart, that evil thoughts come—sexual immorality, theft, murder, adultery, greed, malice, deceit, lewdness, envy, slander, arrogance and folly. All these evils come from inside and defile a person." (Mark 7:18-23)*
>
> Jesus was making that point that under the new covenant God required purity of the heart. Internal thoughts and attitudes were as important as external actions.

Food is OK for Christians, but sexual immorality – which includes premarital sex and adultery – are NOT OK for Christians.

I think sometimes when you are talking to people whose motivation is just to get rid of any objective moral law entirely, they tend to ask questions without really wanting a good answer. This is especially true when it comes to the morality of sex. They ask the question not to get an answer, but to justify getting rid of the moral rules governing sexuality. The answers are there for people who are willing to respect God in their decision-making to find. The answers are not found only by people who have a reason to not want to find them.

In case you're wondering, I am one of those Christian men who takes chastity seriously. Marriage is about having a close connection with your spouse. Sure, I could break the rules and have a lot of fun now. A lot of Christians have a hard time turning down fun. But when I look at Jesus, I don't see a man who is pursuing fun and thrills. I see a man who sees a need and then sacrifices his own interests to rescue others from peril.

Physicist Michael Strauss discusses Christianity and science at Stanford University

October 22, 2023 | by Wintery Knight | Link | Original Link

This is one of my favorite lectures.

The lecture:

Dr. Strauss delivered this lecture at Stanford University in 1999. It is fairly easy to understand, and it even includes useful dating tips.

Here is a clip:

The full video can be watched on Vimeo:

Summary:

What does science tell us about God?
– the discoveries of Copernicus made humans less significant in the universe
– the discoveries of Darwin should that humans are an accident
– but this all pre-modern science
– what do the latest findings of science say about God?

Evidence #1: the origin of the universe
– the steady state model supports atheism, but was disproved by the latest discoveries
– the oscillating model supports atheism, but was disproved by the latest discoveries
– the big bang model supports theism, and it is supported by multiple recent discoveries
– the quantum gravity model supports atheism, but it pure theory and has never been tested or confirmed by experiment and observation

Evidence #2: the fine-tuning of physical constants for life
– there are over 100 examples of constants that must be selected within a narrow range in order for the universe to support the minimal requirements for life
– example: mass density
– example: strong nuclear force (what he studies)
– example: carbon formation

Evidence #3: the fine-tuning of our planet for habitability
– the type of galaxy and our location in it
– our solar system and our star
– our planet
– our moon

It's a good lecture explaining a couple of basic arguments for a cosmic Creator and Designer. If you add the origin of life and the Cambrian explosion (Stephen C. Meyer's arguments), then you will be solid on the basic scientific arguments for a Creator and Designer of the universe.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Six reasons why you should believe in non-physical minds
- William Lane Craig's case for the resurrection of Jesus

Alan Shlemon's very interesting review of a pro-gay "evangelical" conference

October 23, 2023 | by Wintery Knight | Link | Original Link

In this post, I want to try to convince you to read a very interesting article about Christian apologetics and moral issues. It's posted on the Stand to Reason web site. The author, Alan Shlemon, is an amazing Christian apologist, and very conservative on social issues. Striking, because that seems to be intentionally avoided by many popular apologists.

Here is his introduction:

> In 2014, I attended Matthew Vines's conference on the Bible and homosexuality. His stated goal was to "promote inclusion of LGBTQ people by reforming church teaching." The organization he started, The Reformation Project, teaches that homosexual sex and same-sex marriage are biblically permissible, and its goal to mainstream this theology into the church is overt and clear.
>
> Fast-forward to last month, when I attended the Unconditional Conference put on by Embracing the Journey (ETJ). Hosted by nationally known pastor Andy Stanley and held at his church, which boasts a weekly attendance of nearly 40,000 people, the event sought to create a theologically neutral space where parents and leaders could learn how to minister to youth who identify as LGBTQ. In other words, the stated intent was not to change anyone's theology.
>
> […][T]he conference was deeply problematic because of the false and somewhat hidden premise that permeated most of the teaching: Followers of Christ can participate in homosexual sex, same-sex marriage, or transgender "transitioning." That premise undergirds three serious concerns I have with the Unconditional Conference.

And he covers these points:

- the Unconditional Conference claimed to be theological neutral but wasn't.
- the Unconditional Conference advanced a false dichotomy of possible responses to a child who identifies as LGBTQ.
- the Unconditional Conference wrongly presumed you can divorce theology from how you minister.

Then he has his case for Biblical standards on sexual morality:

- Scripture is univocal in its positive case for sex and marriage in both the Old and New Testaments.
- Scripture is univocal in its negative case.
- Scripture warns that those who engage in ongoing sexual sin will not inherit the kingdom of God.

A PDF is available.

Here is the part I liked the best:

> [T]he hidden premise that permeated the conference was that walking with Jesus can include same-sex marriage as well as transgender "transitioning." Not only did no one say anything to the contrary, but virtually every speaker, facilitator, and volunteer spoke in a way that led one to believe those behaviors are permissible.
>
> […]What the Unconditional Conference did was tantamount to a pro-life conference inviting—as one of their speakers—a Planned Parenthood employee who not only has had an abortion but also teaches as if it were a good, moral, and God-honoring decision. Attendees would reasonably conclude the "pro-life" conference believed abortion is an appropriate option.
>
> What this abortion analogy also shows is that many pro-choice arguments sound persuasive because, like the Unconditional Conference, they are based on hidden (but faulty) premises. For example, pro-choice advocates claim, "Women should have the freedom to choose," or, "Women should have the right to control their own bodies." Notice how the fundamental question, "What is the unborn?" is not addressed. Worse, the pro-choice advocate simply assumes the unborn is not a human being and carries on making their case with that hidden premise.
>
> The Unconditional Conference approached their topic in the same way. For two days, the speakers addressed how to minister to people who identify as LGBTQ but intentionally didn't address the fundamental question of whether homosexual sex or same-sex marriage is sin. Worse, they simply assumed they are not sin and carried on offering advice with that hidden premise.

I really recommend checking out this article. It's a very good article, on a very important topic. If you're finding yourself getting soft on this issue, it might be good to look to someone who isn't, and see how they manage to do that.

Why are Christian leaders so desperate to appease the secular left?

October 24, 2023 | by Wintery Knight | Link | Original Link

For this post, when I say Christian leaders who are trying to find "middle ground", avoid "heated disagreement", form "nuanced" views, and so on. I'm thinking of organizations that want to be "welcoming" and "tolerant" of the secular left, like Christianity Today, The Gospel Coalition, the ERLC, etc. Anyway, let's start with an article by Matt Walsh of the Daily Wire.

He writes:

> Recently, I told you about the major victory in the Sixth Circuit Court of Appeals, which upheld the ban on child gender mutilation in Tennessee and Kentucky. After that decision was announced, a number of prominent Christian leaders took to Twitter to celebrate the decision. But it was noted by many that most of these leaders, though they were eager to join the party celebrating the win — and to tacitly take credit for it — were nowhere in sight when the battle was raging. In fact, transgenderism and LGBT ideology seized its stranglehold on American culture while most churches, most Christian leaders, most pastors and priests — certainly not all, but most — said nothing at all. They may not have explicitly joined the other side and started waving the rainbow flag — though some of them did — but most of them hid from the fight.
>
> Which is why, of all the people who most prominently led the charge against gender ideology, precisely none of us were church leaders. Some aren't even Christian at all.
>
> Worse still — and I can say this from experience — while we went to war against this evil, many Christian leaders spent their time lecturing us for the way that we fought, the tone we took, our harshness, our meanness, our supposed lack of grace and kindness. They sat on the sidelines, afraid to get their hands dirty, while lecturing those in the trenches for fighting in a way that they found personally displeasing to watch. This is the story of Christianity in the west, at least in modern times.

Recently, I read an interesting op-ed by the leaders of the Tennessee State House and Senate, talking about how they passed legislation to protect children from LGBT predators.

They wrote:

> Tennesseans demanded swift action when, in September 2022, The Daily Wire uncovered that a Nashville hospital was actively promoting sex-changing cosmetic surgeries as "huge money makers." The reports revealed allegations of discrimination against hospital employees who expressed conscientious

> objections based on their personal ethical and religious beliefs.
>
> Amid national outcry about these disturbing revelations, Tennesseans were further shocked to learn the hospital was providing hormone and sterilization treatments to children as young as 13. These reports raised nationwide awareness and serious ethical concerns about procedures performed on minors at pediatric transgender clinics around the country.
>
> […]The absurdity of this practice led us to introduce Senate Bill 1/ House Bill 1. We committed to banning these procedures in Tennessee. Now state law, this monumental legislation bans medical interference that alters a child's hormonal balance. It prohibits any procedure that removes a child's healthy body parts for the purpose of enabling them to identify as a gender different from their biological sex. This law provides the nation's strongest protections for minors against these harmful drugs and procedures.
>
> We are tremendously proud of our Tennessee House and Senate colleagues who stood firmly against intense scrutiny from the woke Left mob this year when we first introduced Senate Bill 1/ House Bill 1.
>
> Of course, the pushback from the radical Left was swift. Liberals from all over the country falsely claimed this law would be "dangerous" and warned it would never hold up in court. The American Civil Liberties Union (ACLU) challenged the legality of the legislation, and recently the Sixth Circuit Court of Appeals wisely ruled 2-1 to reject their challenge.
>
> […]Tennessee is a leader in every sense of the word. In our 227-year history, we have accomplished remarkable things. We are a state known for low taxes, small government, prosperous business, and strong, conservative family values. We are the Volunteer State; it's not in our nature to sit idly by and watch destructive groups of people brainwash our vulnerable youth to believe they have a permanent solution to their complicated struggles. Preserving family values and advocating for the U.S. and Tennessee Constitution means never backing down.
>
> Running and defending Senate Bill 1/ House Bill 1 to protect children in our state was never a question. We knew that by taking ultimate responsibility for this movement, something good would come, and this outcome is priceless. We are hopeful more states will follow Tennessee's lead.

Those are some REAL Christian leaders. They are not interested in finding the middle ground, or avoiding the culture war, or sharing their viewpoint as "equally valid". No. They want to use their strength to protect the weak from predators. They aren't afraid to force their point of view with evidence, and then accept the consequences of being hated by the secular left.

On this blog, and on our podcast, I haven't chickened out of speaking on controversial issues, like abortion, same-sex marriage, economics, race, and so on. On these battles, I have made sure that my positions were stated and supported with evidence. That won't be convincing to the feelings-dominated people on the secular left that these

equivocating Christian leaders want to please, but I think it is important for God to know where I stand. When the Bible was under attack from the secular left, I defended the Bible. I didn't try to create a middle ground on controversial issues, in order to please the secular left. That's more than can be said for these "Christian leaders". What counts more? Popularity with the world? Or being faithful to the Boss?

Another victim of gender ideology sues the “don’t judge” predators

October 25, 2023 | by Wintery Knight | Link | Original Link

We’re seeing a lot of stories of vulnerable young people who were bullied and manipulated into taking puberty blockers and/or hormones and/or sex-mutilation surgery. I’ve got a new story about a detransitioner below, and link to a few other stories, so that we can understand who is on “the right side of history” on social issues. Is it “don’t judge” teachers? Is it the greedy doctors? Let’s see.

Here’s the first article from Daily Wire:

> A woman who was pumped with testosterone and underwent hormone therapy when she was a young teenager is suing both her doctors and the American Academy of Pediatrics, which her lawyers say has knowingly lied about the impact of the radical sex-change treatments it recommends, according to a copy of the lawsuit obtained exclusively by The Daily Wire.
>
> Isabelle Ayala, now a twenty-year-old woman, had just turned fourteen when she was committed to the hospital for suicidal thoughts, according to the lawsuit. It was during this hospital stay that she met with Dr. Jason Rafferty, who during his first brief meeting with Ayala determined that she “meets criteria to consider hormonal transition,” with the only stated obstacle being parental consent. The lawsuit states that Rafferty and other doctors sent Ayala down the “path of ‘gender-affirming’ medicalization” rather than addressing the true roots of her mental health problems — six months into her testosterone treatments, Ayala tried to commit suicide.
>
> The treatments, however, continued, until Ayala moved away from Rhode Island and decided to quit them “cold-turkey.” Now comfortable with her gender, she regrets what the doctors did to her, the lawsuit says.
>
> “Isabelle is now twenty years old and longs for what could have been and to have her healthy, female body back,” it says. “The changes the testosterone have had on her body are a constant reminder that she needed an unbiased medical expert willing to evaluate her mental health and provide her the care she needed, rather than a group of ideologues set on promoting their own agenda and furthering a broader conspiracy at her expense.”
>
> The lawsuit not only goes after the doctors who treated Ayala, but also the American Academy of Pediatrics, where Rafferty and his colleagues worked to publish a now-infamous policy statement advocating for aggressive gender treatments for children. Lawyers for Ayala say the policy statement laid the groundwork for an “entirely new model of treatment” based on “outright fraudulent representations” of scientific proof.

> "Defendants have doubled- and tripled-down on their commitment to the policy statement and its 'affirmative model' of treatment, while continuing to promote and profit off it," the lawsuit states, alleging that Ayala and other children are "victims of a conspiracy entered into and perpetuated to the present day by certain ideologically captured individuals in positions of power at the American Academy of Pediatrics."

The interesting thing about this story is that the medical body of "experts" is being targeted. This is an opportunity to start the process of impoverishing and imprisoning them all, to send a message to the secular left.

Here's another one from Daily Signal:

> Another detransitioner is suing Kaiser Foundation Hospitals, Permanente Medical Group, and the doctors who pushed her along the path to hormonal and surgical transgender procedures.
>
> In a lawsuit filed June 14 in California's San Joaquin County Superior Court, Kayla Lovdahl and her attorneys with the Center for American Liberty are accusing medical professionals of fast-tracking young Lovdahl through her gender transition, one that she now deeply regrets.
>
> It specifically names medical professionals Lisa Kristine Taylor, Winnie Mao Yiu Tong, Susanne Watson, and Mirna Escalante. Several of these individuals are similarly named in the lawsuits of detransitioners Chloe Cole and Layla Jane, also represented by the Center for American Liberty.
>
> "This case is about a team of doctors," the lawsuit begins, "who decided to perform a damaging, imitation sex-change experiment on Kayla, then a twelve-year-old vulnerable girl struggling with complex mental health comorbidities, who needed care, attention, and psychotherapy, not cross-sex hormones and mutilating surgery."

I like this one because it's going after a well health care provider, and would send a message to other smaller health care providers about what is and is not the proper function of health care providers. Interesting to note that all of the doctors named (Lisa Kristine Taylor, Winnie Mao Yiu Tong, Susanne Watson, and Mirna Escalante) are women, who, according to polls, tend to be more liberal on social issues than men. Who knew that "don't judge" would turn out to mean "make money off of being evil to confused, helpless victims"?

Another one from the New York Post:

> Camille Kiefel, 32, had her healthy breasts removed in 2020 to align with her nonbinary gender identity. She says her doctors approved the surgery after two Zoom meetings, breezing past a whole host of mental health issues.
>
> Now that Camille is in a better place mentally, she realizes her surgery was a mistake. So, two and a half years later, she's suing her social worker, therapist,

> and the gender clinics they work for — Brave Space Oregon and Quest Center for Integrative Health — seeking up to $850,000 in damages.
>
> […]the idea that she might not actually be a woman didn't occur to Camille until she enrolled at Portland State University, where she minored in gender studies and was introduced to alternative views about sex and gender.
>
> By the time she reached her mid-20s, she embraced a nonbinary label and used she/they pronouns. All the while, she was struggling with a slew of mental-health issues, including anxiety disorder, social anxiety, PTSD, major depressive disorder and ADHD.
>
> In the depths of the pandemic in 2020, Camille, then 30, was still struggling and thought gender-neutral top surgery could ease her mental-health issues. "I was so dysfunctional, and I just wanted something that was going to help me," she recalled. "I thought I would be happier."

When will this preying on children by the secular left end? It will end when we clean out their bank accounts. When there is no God, then there is no objective morality. When there is no objective morality, then all that's left is pursuing pleasure. And that usually means obtaining quick money, to fund the pursuit of pleasure. Take away the money, and the secular leftists will stop.

Do secular leftists have a lower divorce rate than Christians?

October 26, 2023 | by Wintery Knight | Link | Original Link

Do secular leftists have a lower divorce rate than Christians? Do religious people divorce at a higher or lower rate, compared to non-religious people? Let's take a look at some data from a study, so we can really see what the evidence is.

Here's something from the Institute for Family Studies:

> When trying to understand how much people value something, economists pay particular attention to the value of what people give up in order to estimate how much they value what they get in exchange. Money is a common metric for value, but time is another metric that is sometimes easier to use. When it comes to Christianity, people are often reluctant to discuss how much money they contribute to their churches but are more forthcoming when asked how much time they spend on religious activities. Economists who study religion often use the frequency of church attendance as a proxy for the strength of an individual's religious beliefs.
>
> Using this line of reasoning, we can divide the American population into two groups: 1) the "devout," or those who attend church two to three times a month or more; and 2) the "non-devout," or those who attend church once a month or less. The following analysis used data for people ages 25 to 54 from the General Social Survey (GSS).

So, the first point is that secular left feminists are unlikely to get married *at all*, and that's because marriage is moral rational in the Christian worldview than it is in the secular leftist worldview:

> Here, it is clear that marriage rates have been falling for the population as a whole. But those who attend church on a regular basis are significantly more likely to marry than their less devout peers. Breaking this analysis down further by race,[2] we see higher rates of marriage among regular church attenders in both white and black populations.
>
> There appear to be social and economic forces occurring over time that are causing decreased marriage rates for all Americans. But for both black and white Americans, marriage is falling significantly faster for people who do not attend church regularly. This is creating a growing gap in marriage rates between the devout and non-devout over time. And the widening gap in marriage may indicate a growing separation of shared culture between the devout and non-devout.

People think that they can just chop the God out of Christianity, and the same morals will

just continue as before, with no rational foundation for it. But marriage involves a loss of personal freedom to pursue pleasure, at least in the short-term. Atheism is about hedonism. That's why atheists support abortion – because when someone else gets in the way of their pleasure, they think murder is a fine way to keep the good times rolling for themselves. It's what Darwin called "survival of the fittest", and this is what atheists believe. When atheists are faced with a conflict between their own happiness, and the loss of personal freedom that marriage requires, they choose not to get married. That's why atheist states have such low marriage rates.

Marriage itself is self-sacrificial – you're making a safe place for children to have stability, at your own expense. So that's the first difference between church-attending Christians and secular left feminists – marriage rates. It's no use complaining when you are a hedonist that you can't find a good spouse to marry. You're a hedonist, and you're looking for a hedonist to marry. That's not the kind of person who enters a commitment that requires self-control and self-denial. You might as well expect two psychopaths to run a successful business together than to expect two morality-deniers to get married and stay together.

Far-left Pew Research that 64% of members of a couple of Christian denominations are married. But for atheists, it's a measly 36%. Atheists don't get married.

OK, and what did they find about the divorce rates of these different groups of people – devout and non-devout?

This:

Devout vs Non-Devout Divorce Marriage

The article says:

> The figure above shows that divorce rates are significantly lower for white Americans who attend church regularly and this difference remains significant across all decades.

A previous study out of Harvard University reached the same conclusion:

> Considerable research over the last two decades has been devoted to the relationship between religious participation and health and well-being. Our research on this topic at the Harvard T.H. Chan School of Public Health links religious service attendance to a number of better health outcomes, including longer life, lower incidence of depression, and less suicide. Our work also indicates that religious service attendance is associated with greater marital stability—or more specifically, with a lower likelihood of divorce.[1]
>
> We are not the first to study the relationship between religious service attendance and the likelihood of divorce. In fact, a number of studies have found similar results: namely, that those who attend religious services are about 30 to 50 percent less likely to divorce than those who do not.[2]

It's really important for young people to make sure that the actions they take *today* are taking them towards the goal they want to reach tomorrow. Church attendance is good for marriage. Being debt-free is good for marriage. Being a virgin is good for marriage. If a young person wants a good marriage, then they need to choose the behaviors that make marriage work. And, just as important, they need to choose a spouse who also chooses the behaviors that make marriage work. Don't rely on "feelings" and "intuitions" when you choose a spouse. Don't be mystical. Look at the research on marriage, do the marriage best practices, and choose a spouse who also does the marriage best practices.

There's no point in complaining about bad outcomes if you ignore the right way to get a good outcome.

What’s in an apologetics book? A review of “God’s Crime Scene” by J. Warner Wallace

October 27, 2023 | by Wintery Knight | Link | Original Link

One of the best introductory books on the existence of God is Detective J. Warner Wallace’s “God’s Crime Scene”. The book provides a good overview of all of the areas that suggest an intelligent agent at work in the natural world. I found a good review of the book over at Luke Nix’s “Faithful Thinkers” blog.

The book begins with an introductory chapter explaining what’s in the book, then an opening statement explaining (without taking sides) how we can investigate whether or not there is a Creator and Designer of the universe. The next 8 chapters talk about 8 areas where we can investigate:

1. the origin of the universe
2. evidence for design in the universe
3. the origin of life
4. the presence of information in the cell
5. our awareness of consciousness
6. our experience of free will
7. objective human value and objective moral duties
8. the reality of evil in the world

I’ll just grab a couple of paragraphs on a couple of those points from Luke’s review:

> ### Chapter 1: In the Beginning
>
> Wallace’s first piece of evidence that appears to not have an explanation inside the universe is the universe’s beginning. He presents a diverse set of arguments for the beginning of the universe. These include the philosophical evidence of the impossibility of infinite regresses, theoretical evidence of mathematics and physics, observational evidence from astronomy, thermal evidence provided by the second law of thermodynamics, quantitative evidence in the abundance of helium, and evidence of the cosmic background radiation. All these used together provide powerful evidence of the beginning of the universe, and since everything that begins to exist, must have a cause, the universe must have had a cause outside itself too.
>
> ### Chapter 2: Tampering with the Evidence
>
> The foundational conditions of the universe that allow for life’s existence include the physical laws governing the atom, the matter of the universe, and the creation of chemicals. The next layer (regional) moves closer to home: our galaxy and solar system. The shape, position, and size of our galaxy make it habitable

> for life; while our sun's position, age, mass, and composition allow it to to host a planet fit for life. The third layer is the planet, itself. The earth's relationship to the sun, atmosphere, terrestrial nature, and moon all play a role in making a place that is fit for life.
>
> ### Chapter 5: Our Experience of Consciousness
>
> In naturalistic worldviews it is common to believe that the brain and the mind are the same thing. Wallace explains that the only way that two things are the same is if they share all their attributes with no differences. He describes six attributes of the brain that are not shared by the mind. All of these distinctions build a powerful case for the two being completely different. He concludes that the brain is physical while the mind is non-physical and that the mind's existence can only be explained "outside the room" of the universe being the product of another mind. He examines several attempts by naturalistic philosophers to explain the mind "inside the room" of the universe, but he shows how each of them fail to offer an adequate explanation.
>
> ### Chapter 6: Free Will or Full Wiring
>
> From a naturalistic perspective (one that holds there is no distinction between the mind and the brain) free will does not exist; it is an illusion much like the mind. If free will does actually exist, it points even more powerfully towards the existence of the mind, which must derive its origin from the supernatural, since it is supernatural itself. Wallace uses the concept of responsibility and the ability to choose other than we do to build his case for free will's actual existence. Without the ability to chose something other than what we do, we cannot be held responsible, thus no one would be worthy of punishment (in the case of wrong-doing) or praise (in the case of doing right).

A while back I finished reading "God's Crime Scene", and I found something interesting in Chapter 6, on free will on p. 256:

> In 2008, researchers from the University of Minnesota and the University of British Columbia conducted experiments highlighting the relationship between a belief in determinism and immoral behavior. They found students who were exposed to deterministic literature prior to taking a test were more likely to cheat on the test than students who were not exposed to literature advocating determinism. The researchers concluded those who deny free will are more inclined to believe their efforts to act morally are futile and are, therefore, less likely to do so.
>
> In addition, a study conducted by researchers from Florida State University and the University of Kentucky found participants who were exposed to deterministic literature were more likely to act aggressively and less likely to be helpful toward others." Even determinist Michael Gazzaniga conceded: "It seems that not only

> do we believe we control our actions, but it is good for everyone to believe it.”” The existence of free will is a common characteristic of our experience, and when we deny we have this sort of free agency, there are detrimental consequences.

I decided to look up these studies.

Here’s the abstract for first study: (2008)

> Does moral behavior draw on a belief in free will? Two experiments examined whether inducing participants to believe that human behavior is predetermined would encourage cheating. In Experiment 1, participants read either text that encouraged a belief in determinism (i.e., that portrayed behavior as the consequence of environmental and genetic factors) or neutral text. Exposure to the deterministic message increased cheating on a task in which participants could passively allow a flawed computer program to reveal answers to mathematical problems that they had been instructed to solve themselves. Moreover, increased cheating behavior was mediated by decreased belief in free will. In Experiment 2, participants who read deterministic statements cheated by overpaying themselves for performance on a cognitive task; participants who read statements endorsing free will did not. These findings suggest that the debate over free will has societal, as well as scientific and theoretical, implications.

And the abstract for the second study: (2009)

> Laypersons’ belief in free will may foster a sense of thoughtful reflection and willingness to exert energy, thereby promoting helpfulness and reducing aggression, and so disbelief in free will may make behavior more reliant on selfish, automatic impulses and therefore less socially desirable. Three studies tested the hypothesis that disbelief in free will would be linked with decreased helping and increased aggression. In Experiment 1, induced disbelief in free will reduced willingness to help others. Experiment 2 showed that chronic disbelief in free will was associated with reduced helping behavior. In Experiment 3, participants induced disbelief in free will caused participants to act more aggressively than others. Although the findings do not speak to the existence of free will, the current results suggest that disbelief in free will reduces helping and increases aggression.

So what to make of this?

If you’re an atheist, then you are a physical object. And like every other physical object in the universe, your behavior is determined by genetic programming (if you’re alive) and external inputs. Material objects do not have the ability to make free choices, including moral choices.

Here’s prominent atheist Jerry Coyne’s editorial in USA Today to explain why atheists can’t ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

Atheist William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

(Source)

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible. No free will means no morality. Can you imagine trying to get into any sort of enterprise with someone who has this view of moral choices? A marriage, or a business arrangement, etc? It would be crazy to expect them to behave morally, when they don't even think that moral choices is possible. It just excuses all sorts of bad behavior, because no one is responsible for choosing to do the right thing.

Believers in materialism are going to struggle with prescriptive morality, including self-sacrificial care and concern for others. Their worldview undermines the *rationality* of the moral point of view. You might find atheists acting morally for their own purposes, but their worldview doesn't rationally ground it. This is a big problem for people who can see objective morality woven into the universe – and themselves – because they have the awareness of objective right and wrong.

Choosing to do the right thing

I think what atheists like to say is "I can be moral, too". That's not interesting. What is interesting is whether it is rational for you to be moral when doing the right thing sets you back. When I look at the adultery of Dawkins, the polyamory of Carrier, the divorces of Shermer and Atkins, etc. I am not seeing anything that really wows me about their ability

to do the right thing when it was hard for them to do it. They all deny free will of course, and think that trying to resist temptation is a waste of time.

Wallace explains how the awareness of free will and moral choices caused him to turn away from atheism, in this blog post.

He writes:

> As an atheist, I chose to cling to naturalism, in spite of the fact that I lived each day as though I was capable of using my *mind* to make *moral choices* based on more than my own opinion. In addition, I sought *meaning and purpose* beyond my own hedonistic preferences, as though meaning was to be discovered, rather than created. I called myself a naturalist while embracing three characteristics of reality that simply cannot be explained by naturalism. As a Christian, I'm now able to acknowledge the "grounding" for these features of reality.
> My *philosophical* worldview is consistent with my *practical* experience of the world.

I think atheists who want to be honest about their own experience of first-person consciousness, free will, moral realism, etc. will do well to just accept that theism rationally grounds all of these things, and so you should accept theism. Theism is real. If you like morality, and want to be a virtuous person, then you should accept theism.

William Lane Craig debates Alex Rosenberg: Does God Exist? Video, audio and summary

October 28, 2023 | by Wintery Knight | Link | Original Link

Here is the video of the debate:

Here is my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

The debaters

- William Lane Craig
- Alex Rosenberg

Below is the summary.

Dr. Craig's opening speech:

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.
4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

Dr. Rosenberg's opening speech

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates

- You didn’t need to come out on this cold night
- Craig’s arguments have all been refuted
- Dr. Craig just doesn’t listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points
- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don’t require causes

- I am going to pretend that Craig said that “every effect requires a cause”
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can’t see
- There are things we can’t see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato’s dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don’t require God

Sixth argument: Mormonism undermines Dr. Craig’s three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn't have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

Dr. Craig's first rebuttal

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It's too restrictive: There are truths that cannot be proved by natural science.
2. It's self-refuting: no scientific proof for naturalism exists.

That's why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg's own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism

6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity ("I") is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg's responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it's not that we still have silicon to make life out of. It's that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the minimal set of historical facts about Jesus agreed to by the majority of ancient historians across the ideological spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

Dr. Rosenberg's first rebuttal

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said.

Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

Dr. Craig's second rebuttal

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

Dr. Rosenberg's second rebuttal

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can’t God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus’ burial isn’t historical, like the majority of scholars across the broad spectrum of scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

Dr. Craig’s concluding speech

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New testament).

Dr. Rosenberg’s concluding speech

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig’s arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don’t look at the origin of the universe, the fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

Correcting four myths about the history of the Crusades

October 29, 2023 | by Wintery Knight | Link | Original Link

Here is an interesting article from Intercollegiate Studies Institute.

Intro:

> The verdict seems unanimous. From presidential speeches to role-playing games, the crusades are depicted as a deplorably violent episode in which thuggish Westerners trundled off, unprovoked, to murder and pillage peace-loving, sophisticated Muslims, laying down patterns of outrageous oppression that would be repeated throughout subsequent history. In many corners of the Western world today, this view is too commonplace and apparently obvious even to be challenged.
>
> But unanimity is not a guarantee of accuracy. What everyone "knows" about the crusades may not, in fact, be true. From the many popular notions about the crusades, let us pick four and see if they bear close examination.

The four myths:

- Myth #1: The crusades represented an unprovoked attack by Western Christians on the Muslim world.
- Myth #2: Western Christians went on crusade because their greed led them to plunder Muslims in order to get rich.
- Myth #3: Crusaders were a cynical lot who did not really believe their own religious propaganda; rather, they had ulterior, materialistic motives.
- Myth #4: The crusades taught Muslims to hate and attack Christians.

Here's the most obvious thing you should know. The Crusades were *defensive* actions*:*

> In a.d. 632, Egypt, Palestine, Syria, Asia Minor, North Africa, Spain, France, Italy, and the islands of Sicily, Sardinia, and Corsica were all Christian territories. Inside the boundaries of the Roman Empire, which was still fully functional in the eastern Mediterranean, orthodox Christianity was the official, and overwhelmingly majority, religion. Outside those boundaries were other large Christian communities—not necessarily orthodox and Catholic, but still Christian. Most of the Christian population of Persia, for example, was Nestorian. Certainly there were many Christian communities in Arabia.
>
> By a.d. 732, a century later, Christians had lost Egypt, Palestine, Syria, North Africa, Spain, most of Asia Minor, and southern France. Italy and her associated islands were under threat, and the islands would come under Muslim rule in the next century. The Christian communities of Arabia were entirely destroyed in or shortly after 633, when Jews and Christians alike were expelled from the

> peninsula.[6] Those in Persia were under severe pressure. Two-thirds of the formerly Roman Christian world was now ruled by Muslims.
>
> What had happened? Most people actually know the answer, if pressed—though for some reason they do not usually connect the answer with the crusades. The answer is the rise of Islam. Every one of the listed regions was taken, within the space of a hundred years, from Christian control by violence, in the course of military campaigns deliberately designed to expand Muslim territory at the expense of Islam's neighbors. Nor did this conclude Islam's program of conquest. The attacks continued, punctuated from time to time by Christian attempts to push back. Charlemagne blocked the Muslim advance in far western Europe in about a.d. 800, but Islamic forces simply shifted their focus and began to island-hop across from North Africa toward Italy and the French coast, attacking the Italian mainland by 837. A confused struggle for control of southern and central Italy continued for the rest of the ninth century and into the tenth. In the hundred years between 850 and 950, Benedictine monks were driven out of ancient monasteries, the Papal States were overrun, and Muslim pirate bases were established along the coast of northern Italy and southern France, from which attacks on the deep inland were launched. Desperate to protect victimized Christians, popes became involved in the tenth and early eleventh centuries in directing the defense of the territory around them.

If you asked me what are the two best books on the Crusades, I would answer God's Battalions: The Case for the Crusades by Baylor professor Rodney Stark and The Concise History of the Crusades by Professor Thomas F. Madden. If you get this question a lot from atheists, then I recommend you pick these up. Anything by Rodney Stark is useful for Christians, in fact.

Young people voting for Democrat policies will never be able to retire

October 30, 2023 | by Wintery Knight | Link | Original Link

My plan is to quit working and retire before age 50. That's the result of many years of living debt-free in inexpensive states, investing money, and not spending money on entertainment, travel, etc. But young people aren't going to be able to go that route. Not only are they borrowing and spending, but they are also voting for policies that will prevent them from ever being able to retire.

This story from the Committee for a Responsible Federal Budget, for example, shows the result of voting for a big spending socialist.

> According to final data from the Treasury Department, net interest costs reached $659 billion (2.5 percent of GDP) in fiscal year 2023, a $184 billion increase from the previous year. In this piece, we explain that:
>
> - Interest costs nearly doubled over the past three years, from $345 billion in 2020 to $659 billion in 2023.
> - Interest is now the fourth-largest government program, behind only Social Security, Medicare, and defense.
> - The federal government in 2023 spent more on net interest than it did all spending on children, and it also spent more on interest than most major programs or program areas including Medicaid, veterans' programs, food and nutrition programs, and education.
>
> Interest is currently the fastest growing part of the federal budget. After growing from $221 billion in 2013 to $345 billion in 2020, it has nearly doubled to $659 billion in 2023. Relative to the economy, net interest costs grew from 1.6 percent of GDP in 2020 to 2.5 percent in 2023.
>
> In the coming years, interest costs are likely to further explode. With interest rates at a 16-year high, current debt holdings originally borrowed in a low interest rate environment will increasingly be rolled over at much higher rates. Meanwhile, the federal government continues to add roughly $2 trillion per year to the national debt.

Why is this a problem? Well, it's a problem because interest on our debt is so high, that it blocks spending on other government programs. The interest on the debt is such a big part of the budget, that there is no spending space left for discretionary spending. And eventually, that will impact non-discretionary spending, too. According to far-left CNN, Medicare's trust fund will be gone by 2030, and the Social Security trust fund will be gone by 2033. That means those programs will be forced to cut spending. And those are the CBO estimates. I think those numbers are optimistic.

How will the government pay for all of this spending and debt? Why, by raising taxes on incomes, of course. And who will pay these higher taxes? Not me, I'll be retired. The young people who think socialism is a great idea will be paying for it. They ought to know that, but instead, they only worry about climate change, gay marriage, abortion and infanticide.

Another thing that young people who vote Democrat support is open borders. They love the idea of people being let into the country, even though they will use more in social services and government welfare than they pay in taxes. It sounds so generous, but young people don't realize that they are the ones who will be paying for this "generosity" for the rest of their working lives.

According to the Federation for American Immigration Reform, the Biden administration let in 9 million illegal immigrants during his term. These are not people who are here legally on work permits, these are people who crossed illegally. That means that they could not meet the legal requirements for coming into the country on a work permit – speaking English, having an education, having work experience, etc. Who is going to pay for their educations, health care, policing, etc? The young people who voted for Biden will.

Young people are going to be working just as hard as their parents did, but with much less wealth to show for it. That's the cost of the "generosity" they vote for when they vote for socialism. And if they try to vote to take that money from job creators, then those job creators will just start shipping jobs overseas, and moving their money out so they don't have to pay taxes on it here. There's no way to fix this by confiscation or redistribution.

Should Christian men consider single mothers for marriage?

October 31, 2023 | by Wintery Knight | Link | Original Link

Why do Christians object to warning men about high-risk relationships?
A while back, I explained my three concerns about attending church. One of them was that male pastors and church leaders have adopted the priorities of radical feminism, and have turned against men who want a traditional marriage in which the man leads and the wife supports. Well, I found something that really illustrates what I mean by that, so that everyone will understand it.

Above, you can see a tweet by Michael Foster, a pastor who hosts a podcast called "It's Good to be a Man". His web site states that his goal is: "Extending God's house & father-rule by helping men to establish their own houses in strength, workmanship & wisdom."

He explains in subsequent tweets that he is just urging men to ask questions to find out how the woman became a single mother.

Reactions to the tweet

Here are some reactions to the tweet:

- asking Foster where are his warnings about single dads
- calling Foster a misogynist
- insulting Foster's appearance
- using 1 counterexample to deny a mountain of evidence
- single moms who deliberately chose bad men, and then play the victim by accepting no responsibility for their actions
- claiming that Foster was expressing an irrational opinion
- accusing Foster of being a child abuser

The negative reactions are all anti-intellectual and childish, especially trying to refute statistics with "you hurt my feelings" or telling a single personal story as a

counterexample.

Here's a disclaimer. In this post, I am talking about single mothers by choice, and single mothers who initiated divorce. Widows are excluded.

The risks posed by single mothers

Now, let's improve Foster's warning, by looking at some evidence – is a marriage to a single mother really more likely to result in a bad outcome?

First of all, women initiate 70% of divorces. If you meet a woman who divorced her husband, she either had a defect in her ability to evaluate and choose a man, or she had a defect in her ability to maintain a commitment to the man she chose. Either way, a woman who divorced her previous husband has red flags. There are two possibilities. She either chose a good man or she chose a bad man. If she chose a bad man, then it shows that she didn't choose a man with good moral character and spiritual leadership. That means that those things were low priorities for her when deciding who to get naked with. Alternatively, she married a good man, and failed to maintain the commitment. Then she has different problems: problems with male leadership, problems with responsibilities, problems with commitment, problems with contentment, etc. You need to ask questions to get to the bottom of what happened, and more importantly, what she has studied and done to change her worldview. Don't take her words for it, look at her actions.

Second, the number of premarital sex partners a woman has makes her a higher risk of divorce. The more sex partners, the more risk. The problem with women who engage in sex with men who don't commit to them is that they *necessarily* don't see a man's willingness and ability to commit as valuable when choosing a man. Women who have premarital sex with men who don't commit see OTHER THINGS as more valuable. They are rewarding the man for his height, his muscles, his tattoos, his piercings, his entertainment of her, etc. A good man should be very wary when a woman who gave her best youth, beauty and sexual interest to men like that now want to "settle" for a boring, unattractive provider who they see as having lower value than the men they gave sex to without requiring a commitment. What they really wanted was bad boys, and they threw sex at those bad boys without asking for commitment. With the man they perceive as low-level, they are insisting on commitment first, because they don't want this low-level man as badly as they wanted the bad boy. They are settling for less than they feel they deserve. This is where sex-withholding, feelings of unhappiness, and frivolous divorces come from. And by the way, hollering Jesus doesn't fix that risk any more than hollering Jesus fixes student loans accumulated for a useless non-STEM degree. Jesus-hollering isn't evidence that a woman has persuaded herself to change her view of which men are the most attractive. A woman's lack of respect for men who prepare for commitment and who keep their commitments is dangerous for marital stability. The hysterical reactions to a man's judging a woman for her past mistakes don't cancel the damage and risks caused by those mistakes. They simply tell the man that this woman is unrepentant, and therefore unteachable, and likely unsuitable for goal-oriented marriage. She is not qualified for the job of wife: self-sacrificial love for her husband, respect for her husband,

and supporting her husband in what he is trying to achieve for God.

Here's what the Bible says about sex outside of heterosexual marriage and about frivolous divorce. Read the critical replies to Foster's tweet. The critical responses show the *default* position of church-attending Christian women and pastors to the Bible in this culture. First, the critics don't accept the Bible as an authority over women's choices in any area of life. Second, the critics don't believe that women should bear any responsibility for their past actions. Nobody believes that women choosing bad men is the woman's fault in this society. So you should assume that single mothers don't take responsibility for their own failures. And that means that she will have taken no steps to repent of her mistake, and change her character so that she doesn't make the same mistake again. It's up to you to look at what she has been reading, listening to, watching, etc. and to check her actions in order to find out what she really thinks about what the Bible says. You can't marry a woman who responds to any mention of the moral law and moral obligations with denial of responsibility and insults. If she hasn't become an active crusader against women who choose bad men, and women who choose premarital sex, and women who choose divorce, then you can't really believe that there's been any real repentance. The risks to you are too high to take a chance on someone who is not certain. I've only ever met one single mother (Kerri) who blamed her own divorce on her own bad decisions.

The culture opposes male leadership

Foster's warning is intended to help men to make better decisions, so that their relationships will produce results for God. But his critics aren't interested in what men are trying to achieve for God. They are only concerned that women get what they want, regardles of their past actions. In their opinion, men exists solely to serve the needs of women. Women don't have to be good enough for marriage, men just have to give them what they want regardless of the woman's suitability for wife and mother roles. The role of men in any relationship is not to lead and achieve goals for God. Their role is to let women rule over them, disposing of their earnings as they see fit, for the benefit of the woman.

When women are young and pretty, they are entitled to hot bad boys to entertain them. When they are older, have tons of sexual experience, and children from different fathers, they are entitled to a husband to financially support them. But a husband with no power to lead the home, since their past choices of man showed they have no interest in following a man who has good character. And the churches, pastors, courts, schools, hospitals, etc. are all there to enforce this view of men as clowns / slaves.

This is what women are told about the role of men in every area of society. This society, including the Christian parents, Christian pastors, Christian culture, etc. do not produce women who prefer early marriage to men who are good at moral leadership and spiritual leadership. Therefore, men who are chaste, sober, have good educations, good private sector jobs, good savings, etc. need to be extremely careful. Look at the responses to Foster's tweet, and think: do these people care about providing you with a good wife? Or

is their concern all about how to insult you and shame you, until you are submissive to her needs?

Your marriage is your enterprise for serving God

My advice to men right now is to read over every single critical tweet in that thread that Foster started. Imagine that you are trying to get these women to do something in a marriage that is part of your plan to make the marriage serve God. You're trying to get her to watch a William Lane Craig debate. You're trying to get her to stop spending money on 50 Shades of Grey and Harry Potter. You're trying to get her to stop smoking and drinking. You're trying to get her to talk about the sermon instead of essential oils. You're trying to get her to read a Thomas Sowell book. You're trying to get her to not put the kids in day care or public schools.

You need to assume that her response to male leadership like this will be the exact same as the responses that Foster is getting to his tweet. And then after you have assumed it, then you need to keep your hands off that woman. Keep your distance, and ask her questions to find out what her real views are, and whether she is interested in growing into the kind of person who is safe for you to marry. Don't forget that chastity and sobriety are important during the evaluation process, so that you aren't influenced away from your leadership role. Don't listen to her words, look at her actions.

Issues in educating children to be effective and influential Christians

November 1, 2023 | by Wintery Knight | Link | Original Link

So, in this post I'm going to briefly go over three challenges to producing effective, influential children. First, choose a better spouse. Second, Christian classical schools. Third, socialist countries make homeschooling and private Christian schools effectively illegal.

1. Choose a better spouse

So let's start with the first one. Christian parents and pastors need to educate young people to choose spouses who are equipped educate to produce effective and influential children.

So in the case of choosing a man who will be involved in producing effective, influential children, here are some tips:

- don't choose a man based on attraction to his appearance or displayed wealth
- whether homeschooling or private Christian schools, the man should have chosen a major and a career that allows him to pay to avoid public schools
- it's better to choose a man whose career allows him to work from home, so that he is available to supervise the education, and discipline the children as they grow
- he should demonstrate his ability to move people in his circle of influence to greater effectiveness and influence, for example making them try harder at school and work, or get better at defending the Christian worldview, especially on controversial issues

So in the case of choosing a woman who will be involved in producing effective, influential children, here are some tips:

- don't choose a woman based on attraction to her appearance or sexual availability
- children need their their mothers at home from birth to age 5, so if a woman has a career, then she needs to put it on hold during that time. If a woman wants to do a career to benefit the Christian community as a whole, e.g. – Supreme Court justice, then she should probably not have children between those ages
- it's better to choose a woman who has demonstrated the ability to do hard things, so that she has the ability to take responsibility and be accountable for producing results, e.g. – a degree in computer science, and two years of private sector coding experience
- she should demonstrate her ability to move people in her circle of influence to greater effectiveness and influence, for example making them try harder at school and work, or get better at defending the Christian worldview, especially on controversial issues

It’s no good to complain when the children arrive that your spouse isn’t involved in spiritual and moral education. The time to settle that was when you were training to evaluate and choose your spouse. And Christian parents and pastors have a role to play in equipping young people to make better choices.

2. Classical Christian schools

I’ve looked over the curricula of a number of these classical Christian schools, and I am not convinced that they are useful for producing effective, influential Christians.

Suppose I were trying to educate my child to be the next Jay Richards or the next Stephen C. Meyer or the next Kristen Waggoner or the next Clarence Thomas. Are classical Christian schools useful for producing results like that?

Education has two goals. 1) educating the person in valuable skills, so that they can earn a lot of money without sacrificing family engagement, and without violating their conscience. 2) it should teach young people to resist the culture on the basis of reason and evidence. If we are talking about God’s existence or origins, then we are dealing with mainstream science. If we are talking about gospel reliability or the resurrection, then we are making historical arguments using mainstream evidence. If we’re talking about religious pluralism or the problem of evil, then we’re talking about mainstream philosophical theology and philosophy of religion. Etc.

I have yet to meet anyone involved with classical Christian schools who was steering young people into careers where they would make a lot of money, working from home, and not exposing themselves to cancel culture. You would think that these classical Christian schools would be focused on careers like developing software with open-source components, but they don’t have the skills. Secondly, apologetics is poorly handled in these curricula. If there is any, it’s presuppositional – an approach that is used by none of the most effective and influential Christian scholars. The ones who actually debate non-Christians and move the ball downfield in the culture.

3. Move to a conservative state in a conservative country

Many Christian men and women often pooh-pooh my seriousness about marriage and parenting planning. They say “I was born in Washington, and it’s a fine state. The public schools are great here. And I’m sure the government, although entirely Democrat, will respect my rights as a parent and as a Christian. After all, I pay their salaries.” But this is just laziness and ignorance. The people who say this don’t want the burden of having to make plans, and execute plans in order to produce effective, influential children.

Consider this article from Daily Wire, about Germany – a secular socialist state:

> Home education has been outlawed in Germany for more than a century; four years ago, the European Court of Human Rights ruled against a family from Darmstadt, Germany, which had asserted the right to homeschool their children. Private religious schools, although legal, must follow state-mandated curricula from the area in which they are located.
>
> Tobias Riemenschneider, a pastor at Evangelical Reformed Baptist Church in

> Frankfurt, Germany, said in an interview with The Daily Wire that the nation's restrictive education laws present "great difficulty to parents who are convinced by their Christian faith that it is God's will for them to raise their children themselves in the nurture and admonition of the Lord." He noted that parents who defy government sanctions against home education risk incurring considerable fines, prison sentences, and the possibility that authorities will take their children.

The same kind of stuff is happening now, in states like Washington and California.

It's just like those Christian-owned business in SOGI states. SOGI states elevate sexual orientation and gender identity to be a protected category, like race. Christian businesses in those states think "well, I was born here, and my family is here, so I'm going to start a business here, and keep right out of politics. I'm sure God will make my laziness and ignorance work out". They are taken by surprise by being persecuted by secular left tyrants. A much better plan is to be serious about moving to a state with low taxes, high liberty, and support for the plans of Christian parents. It's better to spend your own money on educating your kids, rather than to spend it on legal defense.

Can you trust the police in Britain to enforce the law fairly?

November 2, 2023 | by Wintery Knight | Link | Original Link

On this blog, I often complain about how left-wing ideology leads to situations where taxpayers are actually paying the government to persecute them. Well, people pay the police force to protect them from criminals. And that works in a lot of small towns in America's red states. But in Britain, it's different. And I have a couple of examples to show you how it doesn't work.

First, from the UK Daily Mail:

> A furious row has broken out after Metropolitan Police officers were filmed pulling down posters of Israeli children kidnapped by Hamas during the terror group's barbaric October 7 attack.
>
> Two officers stripped the outside of Cullimore Chemist in Edgware, North London of flyers of the missing innocents after receiving calls from residents concerned about tension within the community.
>
> Some locals in the area, which is home to a sizeable Jewish community, have slammed the officers over their 'disgusting actions'.
>
> […]The controversy comes as the Met has come under fire for failing to clampdown on Islamism and extremism at pro-Palestine protests on the streets of London. Last weekend, protesters were seen carrying effigies of dead babies, and earlier this month extremists led a rally calling for 'jihad'.

So, in Britain, they have a very effeminate society. They believe in "don't judge" and that every culture is equal to every other one. I read about it the books of Theodore Dalrymple, e.g. – "Life at the Bottom", and in the works of Douglas Murray. Dalrymple (not his real name) worked in a prison as a doctor and psychiatrist. Douglas Murray wrote a book called "The Strange Death of Europe", where he explained how different European decided to import millions of unskilled men of Middle Eastern origins. In that book, Murray talked about the Jewish Minister of Immigration, Barbara Roche, who opened up the borders, arguing that restraints on immigration were "racist". She liked diversity, and wanted to see the majority-Christian population of the UK thinned out.

So now, they have this:

> It comes after the Metropolitan Police were accused of allowing Central London to become a 'no-go zone' for Jews after thousands of people marched in support of Palestine with some seen carrying effigies of dead babies and chanting 'globalise the Intifada.'
>
> Saturday's demonstrations marked the third week in a row that the capital has been consumed by the Middle East protests and was marred by several shocking

> incidents.
>
> In full view of police officers, protesters chanted for the massacre of Jews, bounced effigies of dead babies on flags and called for 'global intifadas.'
>
> […]In another shocking clip, a collection of young people from the Socialist Workers Party can be seen chanting 'From London to Gaza. Globalise the intifada.'

And the government's response is appeasement – don't make the protesters mad. By the way, they've also banned guns and self-defense in the UK, so if a criminal attacks you, then you can't do anything about it. That's more "don't judge" in action.

But wait, there's more. Here's an article from the far-left extremist UK Guardian, which talks about some more activities of Barbara Roche's friends:

> Five men from Rochdale have been sentenced to between eight and 20 years in prison after being found guilty of grooming and abusing two girls between 2004 and 2006.
>
> The longest sentence was given to the oldest defendant, Jahn Shahid Ghani, a 50-year-old care worker. He was at least 30 when he took advantage of the girls when they were 14 or 15. He would pick them up from school while they were still in uniform and ply them with drink and drugs before exploiting them.
>
> […]It was at Ghani's flat, above a butcher's shop in Rochdale, that Girl A was passed around "like a piece of meat" between Ghani younger half-brother, Mohammed Faisal Ghani, and his friends. She said she was "trapped like a prisoner" in the flat and forced to have sex with numerous men on a stained single mattress with no sheets.
>
> […]The court heard that on one occasion he persuaded Girl A to have sex with his cousin, a man in his 30s, who was visiting from Pakistan. "He's never had sex with a white girl before," he told her, urging her to "do it for the team". He then asked her to marry the cousin for £5,000 so that he could get a UK visa, but she refused.
>
> […]On one occasion, another defendant, Insar Hussain, now 38, challenged her to a drinking contest at the flat above the butcher's shop. She drank so much vodka that she passed out, the jury heard. The next day she was shown a video of one of the men sexually assaulting her with a brandy bottle as Hussain and others laughed. The bottle was on display in the bathroom "like a trophy", the court heard, and the video was distributed around Rochdale.
>
> […]A fourth defendant, Ali Razza Hussain Kazmi, 36, was described by Girl A as an "intimidating and aggressive figure" when he sexually assaulted Girl B when she was just 13. He went on to rape Girl B when she was 14 and he was 16 or 17, in an underpass near Hopwood Hall college in Rochdale.

And this was interesting – the mothers complained to the police a lot:

> Kazmi was the youngest defendant, aged 15 or 16 when he first abused Girl B, who was reported missing from home by her mother at least 83 times as a teenager.

There were many complaints, but the police didn't do anything. They were scared of being accused of "racism". Just like Barbara Roche accused people who didn't like her open borders policy of "racism".

As a non-white skilled legal immigrant, I don't think that immigration policy should introduce risks to the taxpayers who pay the salaries of these government and police people. Because this sort of "diversity" immigration and policing is not safe for taxpayers.

Does peer-reviewed research support a naturalistic origin of life?

November 3, 2023 | by Wintery Knight | Link | Original Link

There was a recent debate between Dr. James Tour and Professor Dave, an atheist with a bachelors degree who makes YouTube videos. The atheist spent his entire opening speech attacking Tour's character. When Tour asked him to show him origin of life chemistry, he refused. The atheist shuffled through papers he apparently found by Googling, and read the titles. When asked what was in them, he said that he couldn't remember.

But I was trying to decide who won the debate. There was one place where the atheist claimed that the early Earth had no molecular oxygen. He needs that to be true, in order for the chemistry that creates the building blocks of life to work. So I thought I would talk about a paper that refutes that. After my argument, I'll talk about another mistake that the atheist made in the debate. Based on those two mistakes, I concluded that the atheist was speaking errors either intentionally or unintentionally, and therefore lost the debate.

Here's a paper published in the prestigious peer-reviewed science journal *Nature*, entitled "The oxidation state of Hadean magmas and implications for early Earth's atmosphere".

Evolution News explains what the paper is about.

Excerpt:

> A recent *Nature* publication reports a new technique for measuring the oxygen levels in Earth's atmosphere some 4.4 billion years ago. The authors found that by studying cerium oxidation states in zircon, a compound formed from volcanic magma, they could ascertain the oxidation levels in the early earth. Their findings suggest that the early Earth's oxygen levels were very close to current levels.
>
> […]Miller and Urey conducted experiments to show that under certain atmospheric conditions and with the right kind of electrical charge, several amino acids could form from inorganic compounds such as methane, ammonia, and water. Several experiments have been done using various inorganic starting materials, all yielding a few amino acids; however, one key aspect of all of these experiments was the lack of oxygen.
>
> If the atmosphere has oxygen (or other oxidants) in it, then it is an oxidizing atmosphere. If the atmosphere lacks oxygen, then it is either inert or a reducing atmosphere. Think of a metal that has been left outside, maybe a piece of iron. That metal will eventually rust. Rusting is the result of the metal being oxidized. With organic reactions, such as the ones that produce amino acids, it is very important that no oxygen be present, or it will quench the reaction. Scientists, therefore, concluded that the early Earth must have been a reducing

> environment when life first formed (or the building blocks of life first formed) because that was the best environment for producing amino acids. The atmosphere eventually accumulated oxygen, but life did not form in an oxidative environment.
>
> The problem with this hypothesis is that it is based on the assumption that organic life must have formed from inorganic materials. That is why the early Earth must have been a reducing atmosphere. Research has been accumulating for more than thirty years, however, suggesting that the early Earth likely did have oxygen present.
>
> […]Their findings not only showed that oxygen was present in the early Earth atmosphere, something that has been shown in other studies, but that oxygen was present as early as 4.4 billion years ago. This takes the window of time available for life to have begun, by an origin-of-life scenario like the RNA-first world, and reduces it to an incredibly short amount of time. Several factors need to coincide in order for nucleotides or amino acids to form from purely naturalistic circumstances (chance and chemistry). The specific conditions required already made purely naturalist origin-of-life scenarios highly unlikely. Drastically reducing the amount of time available, adding that to the other conditions needing to be fulfilled, makes the RNA world hypothesis or a Miller-Urey-like synthesis of amino acids simply impossible.

If you read the paper's abstract, it finds that molecular oxygen would have been present by the end of the Hadean era. The earliest signs of life we have are from just after the end of the Hadean era. So, its undeniable that molecular oxygen was present. Did professor Dave lie, or was he just ignorant? One thing for sure, he pronounced that there was no oxygen in the same confident, insulting voice that he used for the rest of his presentation.

OK, so with that out of the way, Professor Dave also cited a paper in the journal *Science*. And there is an article on Creation.com by Johnathan Sarfati, who has a PhD in chemistry, about that very paper.

His post says:

> It's likely that the media reports you mention were referring to the paper in *Science* journal by Tracey Lincoln and Gerald Joyce.[1] Quite often, the media hype just doesn't match what was actually discovered. To be fair, Joyce, a well known chemical evolutionist, made it clear that he and his Ph.D. student Lincoln had not produced life, despite the headlines.[2] Much earlier, Joyce admitted:

> "The most reasonable assumption is that life did not start with RNA … . The transition to an RNA world, like the origins of life in general, is fraught with uncertainty and is plagued by a lack of experimental data."[3]

> Joyce and Lincoln started off with a fairly long RNA molecule. Given that nothing like RNA appears in Miller–Urey experiments, this already shows unjustified

> interference from an intelligent investigator. In fact, not even the building blocks, ribonucleotides, appear in such experiments, and they do not spontaneously form RNA. In fact, there are numerous chemical difficulties with obtaining RNA by blind undirected chemistry, the only sort allowed on the hypothetical primordial earth, as chemical evolutionist A.G. Cairns-Smith points out in his book Genetic Takeover4 (see extract at Cairns Smith: Detailed criticisms of the RNA world hypothesis). And it's a huge step from RNA to the genetic code, its major use today.

> Furthermore, this paper didn't demonstrate replication but ligation—joining two small RNA pieces, previously designed to be a match to the longer strand. So this research already assumed not just one but three RNA strands. For this to be relevant to chemical evolution, the two pieces just by chance had to have pretty close to the complementary base pairs of the first piece—natural selection could not be invoked before reproduction.
>
> Furthermore, since polymerization is unfavorable, the RNA pieces must be chemically activated in some way. Note that a catalyst merely accelerates the approach to equilibrium; it doesn't change it (see diagram and explanation in Dino proteins and blood vessels: are they a big deal?). The paper states that one of the two joining RNA strands has a triphosphate group on the end. This is very reactive, so would be an unlikely component of a primordial soup, and would not last long even if it appeared. So a supply of matching activated RNA pieces likewise shows unacceptable investigator interference.
>
> See also Does ribozyme research prove Darwinian evolution? for a critique of an earlier Joyce paper on alleged ribozyme evolution, as well as Self-replicating peptides? which has many similarities to the recent Joyce claim.

Now Tour seemed to let this problem drop in the debate. It just seems that Professor Dave was assuming from the titles of the papers that they were relevant to the problem of life. Well, scientists always sound optimistic in their papers. I know, I had to write one for my masters degree thesis, and it was published. That's why you have to look at the data and be skeptical. Sadly Dave wasn't able to be skeptical. He wanted something to be true, so he just didn't bother to interact with challenges to his view. The whole problem with the origin of life is that there are many counter-factual conditions, experimenter interferences, etc. that have to be done to make things work at all. Dave reads the titles of papers, but he just isn't aware of how the experimenters have adjusted the experiments in ways that are not true to the conditions on the early Earth.

Dr. Tour lost his temper and shouted a lot during the debate, so I don't think the debate is worth watching. However, if you want to watch a good debate on the origin of life, try this one between Dr. Fazale Rana vs Dr. Michael Ruse. And if you want to see a good explanation of the sequencing problem, check out this lecture by Dr. Stephen C. Meyer. (who has also debated atheists who didn't lie, shout or insult him – and they even had doctoral degrees)

NYT: LGBT youth have greater approval, but mental health is “significantly worse”

November 4, 2023 | by Wintery Knight | Link | Original Link

A friend shared this article with me, and cleverly archived it so I could link to it from my blog. I had a whole bunch of wonderful stories to blog about, but this one is the best. Do you know how the secular left looks at the poor mental health of LGBT youth, and asserts (without evidence) that more acceptance would make those outcomes better? Turns out the exact opposite is true.

Here’s the left-wing extremist New York Times, dated June 3rd, 2023:

> For L.G.B.T.Q. teenagers, high school is a much more accepting place than even a decade ago. They change their pronouns, go to school dances with people of the same gender, and are more likely than any previous generation to openly identify as gay, lesbian, bisexual, transgender or otherwise queer.
>
> […]Yet there is a darker side. Even as they are increasingly welcomed by peers, their mental health is significantly worse than that of heterosexual young people.
>
> […]Their experiences highlight a “paradoxical finding,” as researchers have described it: Even as social inclusion for young L.G.B.T.Q. people has grown, large health disparities between them and their non-L.G.B.T.Q. peers have not shrunk.

The article talks about the strongest reasons why young people embrace LGBT:

1. there are pro-LGBT TV shows, movies, music.
2. famous pro athletes identify as LGBT
3. the Supreme Court overturned legislation passed by elected legislators
4. “everyone knows someone who is LGBT”
5. social media supports LGBT
6. big corporations support LGBT

Growing up in the situation I was in – poverty, different skin color, two working parents, public schools run by secular leftists – I wasn’t much interested in feeling good in the moment. I wanted an accurate view of the battlefield so I could make good decisions, and get out of the mess I was born into. I read the Bible, Shakespeare and my parents’ textbooks from their night classes at the local universities.

My approach was very different from the secular left. They don’t care about truth, or making good decisions to get good results. They care about living in the moment. They want to give in to their desires now, and point fingers later. They want to borrow money and run up expenses now, and pass the bill to someone else later. They are reckless and irresponsible. And they feel entitled to the life outcomes of those detestable Christians later. But they can’t be bothered to behave like those detestable Christians right now.

People who are LGBT are facing little to no disagreement or disapproval:

> A recent survey by The New York Times and Morning Consult of 1,574 young adults found that people ages 18 to 28 — who mostly graduated from high school since 2013 — were significantly more likely to know L.G.B.T.Q. students in school than those a decade older, who were teenagers in the 2000s.
>
> The younger group was twice as likely to report knowing at least one transgender student, and three times as likely to have known three or more. Four in 10 said they knew numerous gay, lesbian or bisexual people in high school, compared with a quarter of the older group.
>
> And while both groups reported hearing the words “gay” and “queer” used negatively at similar rates — a data point reflected in interviews with teenagers, who say they still hear “that’s so gay” in school hallways — the younger graduates were significantly more likely to hear those words used in a positive light, too. They were also more likely to have a gay-straight alliance or similar club at their school.
>
> This reflects other data that has found that verbal harassment of L.G.B.T.Q. teenagers declined during the 2010s, while support for same-sex marriage became the norm among young people.

And finally:

> “You’re at the point among young adults where almost all these measures of acceptance are in the high 80s, low 90s,” said Jeff Jones, a senior editor who oversees research at Gallup. “It’s basically getting toward a consensus.”

Sounds wonderful for the secular left. They got the morality of the Bible removed from society. Young people today don’t even know what the Bible teaches are dating, relationships, marriage, sexuality, etc. All they know is TV shows, celebrities, entertainers, athletes, and what their public school teachers tell them.

Just one little problem. Secular leftists don’t get to determine what is objectively right and wrong. In a God-designed universe, God decides what works, and what doesn’t work. And no amount of community, peer-approval, propaganda, etc. is going to overrule God’s design for his creatures.

More:

> As acceptance has grown, though, the mental health of queer youth has continued to suffer. Reported rates of mental health problems among all young people have been rising for the last decade, but non-heterosexual students face far higher rates than straight students.
>
> About 70 percent of high school students who identify as gay, lesbian or bisexual reported persistent sadness, according to recent data from the Centers for Disease Control and Prevention, twice the rate of their heterosexual peers. One in five attempted suicide in the past year, nearly four times the rate of straight

> young people. (The C.D.C. does not track the mental health of transgender youth, but other data shows that roughly half had considered suicide in the past year.)

The New York Times tries to blame these numbers on being in a minority group. But Bible-believing Christians who embrace chastity, marriage, parenting and homeschooling are also a “minority group”. We don’t run the show any more. In fact, we’re the only minority that is still able to be targeted for ridicule and persecution, even by the police and government. But we also don’t have mental illnesses like the poor young people who believed the lies of the secular left, either. I wonder why that is. Could it be that chastity, marriage, parenting and homeschooling are morally right, whether anyone thinks it is or not? Could it be that these activities are self-evidently moral, and therefore just doing them makes the approval and celebration of other people completely unnecessary? For some behaviors, having an audience of One is enough.

William Lane Craig lectures on naturalism at the University of St. Andrews

November 5, 2023 | by Wintery Knight | Link | Original Link

Note: even if you have heard Dr. Craig's arguments before, I recommend jumping to the 48 minutes of Q&A time, which starts 72 minutes in.

About Dr. William Lane Craig:

> William Lane Craig (born August 23, 1949) is an American analytic philosopher, philosophical theologian, and Christian apologist. He is known for his work on the philosophy of time and the philosophy of religion, specifically the existence of God and the defense of Christian theism. He has authored or edited over 30 books including *The Kalam Cosmological Argument* (1979), *Theism, Atheism and Big Bang Cosmology*(co-authored with Quentin Smith, 1993), *Time and Eternity: Exploring God's Relationship to Time* (2001), and *Einstein, Relativity and Absolute Simultaneity* (co-edited with Quentin Smith, 2007).
>
> Craig received a Bachelor of Arts degree in communications from Wheaton College, Illinois, in 1971 and two summa cum laudemaster's degrees from Trinity Evangelical Divinity School in Deerfield, Illinois, in 1975, in philosophy of religion and ecclesiastical history. He earned a Ph.D. in philosophy under John Hick at the University of Birmingham, England in 1977 and a Th.D. underWolfhart Pannenberg at the University of Munich, Germany in 1984.

Dr. Craig was in Scotland to lecture at a physics conference, but a local church organized this public lecture at the University of St. Andrews.

Here is the full lecture with Q&A: (2 hours)

Summary:

- Naturalism defined: the physical world (matter, space and time) is all that exists
- Dr. Craig will present 7 reasons why naturalism is false
- 1) the contingency argument
- 2) the kalam cosmological argument
- 3) the fine-tuning of the universe for intelligent life
- 4) the moral argument
- 5) the ontological argument
- 6) the resurrection of Jesus
- 7) religious experience

Dr. Craig does mention an 8th argument early in the Q&A – the argument from the non-physicality of mental states (substance dualism), which is an argument that I find convincing, because a materialist conception of mind is not compatible with rationality,

consciousness and moral agency.

Questions and Answers

He gets a couple of questions on the moral argument early on – one of them tries to put forward an evolutionary explanation for “moral” behaviors. There’s another question the definition of naturalism. There is a bonehead question about the non-existence of Jesus based on a Youtube movie he saw – which Craig responds to with agnostic historian Bart Ehrman’s book on that topic. There’s a question about God as the ground for morality – does morality come from his will or nature.

Then there is a question about the multiverse, which came up at the physics conference Dr. Craig attended the day before. There is a good question about the Big Bang theory and the initial singularity at time t=0. Another good question about transfinite arithmetic, cardinality and set theory. One questioner asks about the resurrection argument. The questioner asks if we can use the origin of the disciples belief as an argument when other religions have people who are willing to die for their claims. One of the questioners asks about whether the laws of nature break down at 10^-43 after the beginning of the universe. There is a question about the religious experience argument, and Craig has the opportunity to give his testimony.

I thought that the questions from the Scottish students and faculty were a lot more thoughtful and respectful than at American colleges and universities. Highly recommended.

Interesting: big corporations relaxing the requirement for a college degree

November 6, 2023 | by Wintery Knight | Link | Original Link

I was having a conversation with a Christian university professor on the weekend, and he was explaining how woke his university had gone. Not just with DEI administrative staff, but oversight from Title IX government workers, too. So, I suggested that young Christians should focus on STEM degrees. But he warned that the woke administrators were coming for them, too. So what next?

Well, I always recommended doing STEM degrees for as cheap as you can, for this reason:

Rank	Major	Early Career Pay	Mid-Career Pay	% High Meaning
1	Petroleum Engineering	$97,500	$212,500	61%
2	Operations Research & Industrial Engineering	$98,300	$191,800	21%
3	Interaction Design	$74,700	$173,600	54%
4	Applied Economics and Management	$76,500	$164,400	54%
5	Building Science	$69,000	$163,100	47%
6	Actuarial Mathematics	$70,700	$160,000	52%
6	Operations Research	$92,200	$160,000	57%
8	Systems Engineering	$87,000	$159,100	58%
9	Optical Science & Engineering	$79,600	$158,300	73%
10	Information & Computer Science	$76,000	$157,800	63%

(Source: PayScale)

Well, after defending the STEM fields to young Christians for so long, there might be a good alternative, and that's just hitting the private sector workplace after college, and moving up the job hierarchy by giving the company more and more value.

Here's a Fox News story that explains.

> American businesses are increasingly eliminating college degrees as part of their requirements for corporate roles, which is part of a wider trend in the U.S. job market that is de-emphasizing the value of a four-year diploma, according to experts.
>
> American companies like Walmart, IBM, Accenture, Bank of America and Google have announced plans to reduce the number of jobs that require college degrees.

> […]Walmart, for example, has eliminated college degrees as a requirement for hundreds of its corporate roles, vowing to remove "unnecessary barriers" that prevent career advancement. The company also announced it would waive the university degree as a necessity if candidates can show they have gained the necessary skills based on different, prior experience.
>
> Between 2017 and 2019, 46% of "middle-skill occupations" and 31% of "high-skill occupations" saw a drop in college degree requirements which "could have major implications for how employers find talent and open up opportunities for the two-thirds of Americans without a college education," according to a report from the Burning Glass Institute. In line with the trend, the report projected the move could open up 1.4 million jobs for American workers without college degrees over the next five years.

Government jobs too:

> At the governmental level, states across the country have removed degree requirements for government jobs, according to the Brookings Institution. Virginia became the 13th state to remove such requirements in June.

What does this mean?

Well, one of my happiest days was learning that Toys 'R Us was going bankrupt. Why? Because they were HUGE advocates for abortion. They were also big leftists who opposed the normal path that people take to marriage and having kids. You might think that they would be smart enough to not murder future generations of customers, but they were not.

Similarly, the public education system and the higher education system is filled with stupid secular leftists. Rather than encourage young people to have a worldview that rationally grounds marriage and raising children, they decided to promote recreational premarital sex, abortion, delaying marriage, punitive divorce courts, and a host of other birth rate killers. That was step one in destroying their flow of customers.

As if that all wasn't enough, now that they have focused entirely on woke indoctrination, even the students that manage to reach the campus are being saddled with tens of thousands of dollars of debt for a useless, worthless indoctrination in wokeness. All these poor students learn is how to be offended, and how to demand that others fix their offendedness. That makes them a whole lot of trouble to corporations. They lack skills. They are bad at serving customers. And they are disruptive.

This news story is good news. The less money that universities have, the more they have to fire their worthless administrative staff. Let's see it happen.

An overview of no-fault divorce, and how one state is standing against it

November 7, 2023 | by Wintery Knight | Link | Original Link

Recently, I ordered an audio book that lays out pro-marriage policies, by Dr. Scott Yenor. I think I had seen his name around on Institute for Family Studies, and other family policy web sites. Anyway, today I wanted to link to his article on no-fault divorce, and then take a look at how one state is enacting policies that are designed to reduce the divorce rate.

Here's the article from the Institute for Family Studies:

> American states initially adopted a fault-based idea of divorce, where a spouse could initiate divorce proceedings only when he/she could prove the other spouse had committed some fault like adultery, abandonment, or extreme cruelty. As time went on, states expanded the grounds for fault-based claims. Thus sat America's divorce system until the early 1970s, when, following California, all states eventually adopted no-fault, at-will divorce laws. Such laws allowed one party to leave marriage for whatever reason or for no reason at all. This bold policy change, disguised as a bureaucratic adjustment, ended the idea of marriage as an enforceable contract.
>
> The number of divorces soared. Destabilizing marriage ended up making marriage less attractive—and marriage rates have plummeted from 72% before the reforms to under 50% in 2022. Commentators find it increasingly difficult to talk about the tragedy of divorce as more people divorced. Poverty and suicide increased for children of divorce, as did depression, drug use, and crime.

On this blog, I've talked about how women initiate 69% of divorces. And if you look at the number of divorces featuring a college-educated woman, the woman initiates 90% of those divorces. In most of these divorces, the reason given is "irreconcilable differences". No one is at "fault". The person who is filing just is unhappy and wants out of the commitment.

Sadly, these divorces prove very costly to the men involved. They lose access to their homes, their wealth, their future earnings, and their children. Many men end up in prison for not paying their ex-wives. Some of them end up ending themselves.

More from Dr. Yenor:

> When judges have discretion, they tend to favor women in settlements. Nationwide, men are the custodial parent only about 20% of the time, according to U.S. Census data. The numbers at the state level differ markedly. Most states have adopted a judicially-determined "best interest of the child" standard for allocating child custody. Under such laws, men generally see their children less. Both Texas and California have laws that favor joint custody of children, but in each of them, men actually see their children less than a third of the time.

> According to research by Custody Change, men see their children only 30% of the time in New York. It is even worse in Illinois (23% of the time), Washington (24%), Oklahoma (22%), and Tennessee (22%).

So, men have to pay child support, but they never see their children. And it's often the case that the woman poisons the children against their father. Although that seems like a good idea to her in the moment, it does enormous harm to the children in the long run.

Most people who follow men's rights will know that Florida recently ended their policy of "permanent alimony", which required men to pay their ex-wives for years and years until one or the other died. Feminists were furious with Ron DeSantis for doing this, but men were delighted. But there was more to that story, as Dr. Yenor explains:

> Florida has restructured the default settings for negotiations under the at-will regime. Following Kentucky, a new Florida law assumes that a 50-50 split between spouses is in the best interest of the child (though the assumption is rebuttable). The bill garnered bi-partisan support in the legislature on the principles that parents walk into the courtroom on equal footing. Presumably, this will end the silent favoritism judges have traditionally shown women in custodial proceedings.
>
> […]Florida's spousal support laws have long been based on a formula linking alimony amounts to the length of marriage, culminating in eligibility for permanent alimony for marriages lasting longer then 17 years. Under the new law, couples married less than three years are not eligible for alimony, while those married 20 years or longer are eligible to receive payments for up to 75% of the term of the marriage. Marriages lasting from three to 10 years are eligible for alimony for 50% of the term, while those lasting 10 to 20 years are eligible for 60% of the term. Generally, there are fewer payments for shorter periods of time. Under the new law, there are also more ways of ending alimony payments early, including factoring in the retirement of the person paying the alimony.
>
> […]Kentucky passed a similar law in 2017 with overwhelming bipartisan support, as did Arkansas in 2021.

Why is this important? Well, women tend to initiate fewer divorces if they have to allow their husbands to have access to his children. For one thing, she loses out on money. But she also loses the ability to poison the minds of the children against their father. That reduces the appeal of no-fault divorce. And it also causes women to be more careful before they marry. Since they know that the law doesn't give them unlimited cash and prizes, then they don't choose men based on appearance and feelings. Instead, they choose men who can actually meet their emotional needs, and perform traditional male roles. Because they know that marriage is for keeps.

And it works:

> The number of court filings for divorce proceedings in Kentucky plummeted from 22,512 in 2016 to under 20,000 only a year later. It also coincided with a

> decrease in the number of domestic violence fillings, perhaps indicating that some charges of domestic violence were designed to tip the scales in custody proceedings. Kentucky's divorce rate also sunk from 3.79 per thousand residents in 2016 to 3.3 in 2021 (the last year for which we have good statistics). Divorce rates are declining nationwide, so Kentucky's 50-50 law may not be responsible for the entire decline. Statistics about the percentage of women who file for divorce in Kentucky are not available.

Now, people will say "this is terrible! what will happen to women who marry abusive men!" And my answer to that is "women need to learn not to marry abusive men". Instead of choosing men based on appearances and feelings, women need to choose men based on moral character, worldview, and leadership ability. That's the lesson that men had to learn when they were the victims of frivolous divorce and punitive divorce courts. Men learned to be careful, and now women must also learn to be careful. That's "equality".

Big wins for the pro-abortion lobby in Ohio and Kentucky

November 8, 2023 | by Wintery Knight | Link | Original Link

The overturning of Roe v. Wade was good news, but the job of protecting unborn children from reckless, irresponsible adults didn't end there. There was still a lot of persuading to do in the individual states, in order to make sure that the laws were as pro-life as they could be. Unfortunately, pro-lifers were not able to win political contests in Ohio and Kentucky. Let's take a look.

Daily Wire reports on Ohio:

> Voters in Ohio voted Tuesday to approve a ballot initiative that places a right to an abortion into the state's constitution.
>
> Pro-life advocates say the measure will effectively make abortion legal at any point in pregnancy. The initiative brought in millions in spending with more than $18 million being spent in favor of the pro-abortion initiative, with just $7 million being spent in opposition since August 9, according to NBC News.

Pro-lifers were outspent 18 to 7! I guess it does help to have money when you want to be persuasive. It also helps to be good at making arguments. Maybe Ohio churches could teach Christians how to make an evidence-supported argument for the pro-life position? If they're already doing it, then try even harder. Practice debates.

More:

> Previously, Ohio Attorney General Dave Yost, a Republican, has said that, if passed, Issue 1 would effectively legalize all abortion in the state.
>
> "[T]he Amendment would give greater protection to abortion to be free from regulation than at any time in Ohio's history," analysis from Yost said. "That new test includes definitions and other terms that likewise make it harder for any law covering 'reproductive decisions' to survive."

Looks like it will be impossible to have any regulations at the state level in Ohio, now.

Here's a Daily Wire story about Kentucky:

> Kentucky Governor Andy Beshear, a Democrat, won a second term in the election on Tuesday in the red state.
>
> With 87% of votes counted, data showed Beshear with 654,537 votes and 52.5% support, beating out Republican candidate Daniel Cameron, who had 592,884 votes and 47.5% support.

Beshear is a racist, not surprising:

> Race shook up the contest with ads from a liberal Super PAC funded by billionaire

> George Soros suggesting that Cameron, who is black, is an "Uncle Tom."

And a pro-abortion radical:

> Beshear ran a staunchly pro-abortion campaign in a state where voters last year rejected a constitutional amendment to enshrine Kentucky's near-total ban after the Supreme Court overturned Roe v. Wade while Cameron set his focus on issues related to crime and radical gender theory.

I thought this part was funny, given Trump's criticism of DeSantis' pro-life achievements lately:

> Former President Donald Trump, who won Kentucky by double-digits in the 2020 election, endorsed Cameron, but polling indicated that Beshear was popular even among Trump voters.

Yeah, the pro-abortion radical is popular among Trump voters. They got their new instructions about abortion from Trump's criticism of DeSantis and Florida's pro-life laws.

Remember how Michigan did the same thing as Ohio, back in the 2022 mid-terms?

Daily Wire reported on it last November:

> Democrats are projected to win key races and ballot measures across the board in the Great Lakes State, led by Gov. Gretchen Whitmer's re-election victory. The party is also set to win multiple tight U.S. House races, enshrine a right to abortion in the state's constitution, and take control of the state legislature for the first time in 40 years.
>
> […]Michigan joined California and Vermont in passing ballot initiatives to add a right to abortion in their states' constitutions. The approved measure now supersedes a 1931 Michigan law that bans all abortions unless the mother's life is at risk.

And that paved the way for removing all restrictions on abortion in the state.

Daily Wire reported on last week's news:

> The Michigan legislature has advanced a legislative package eliminating various restrictions on abortions in the state.
>
> On Wednesday, the Michigan House passed a package of abortion-related bills dubbed the Reproductive Health Act (RHA). House Democrats declared in a press release that the package repealed legislation that was "medically unnecessary and harmful," as well as unfairly targeting abortion providers.

It's amazing to me that conservatives still continue to live and work in states like Michigan, Kentucky and Ohio. These are blue states now. Conservatives need to move out of those states, and give their tax money to people who agree with their values. In some ways, your whole education, career and finances is an effort to make sure that you don't subsidize the secular left's plan to control you. That's why it's so important for

conservatives to do well in school, work and finances. It makes it easier for us to find work somewhere else, if the place where we are doesn’t like us very much.

Atheist gets her PhD in astronomy and astrophysics and finds evidence for God

November 9, 2023 | by Wintery Knight | Link | Original Link

Christian apologist Terrell Clemmons tweeted this testimony by Sarah Salviander, a research scientist in astronomy and astrophysics at the prestigious University of Texas at Austin.

Dr. Salviander writes:

> I was born in the U.S., but grew up in Canada. My parents were socialists and political activists who thought British Columbia would be a better place for us to live, since it had the only socialist government in North America at the time. My parents were also atheists, though they eschewed that label in favor of "agnostic." They were kind, loving, and moral, but religion played no part in my life. Instead, my childhood revolved around education, particularly science. I remember how important it was to my parents that my brother and I did well in school.

I just want to point out that I hope that all you Christian parents are taking seriously the obligation to make your kids do well in school, because even if they start out as atheists when they are young, they can still find their way back to God through study, as Sarah did.

She had a bad start, that's for sure:

> I grew up in the 1970s and 1980s, a time when science fiction was enjoying a renaissance, thanks largely to the popularity of *Star Wars*. I remember how fascinated I was by the original *Star Wars* trilogy. It had almost nothing to do with science—it's more properly characterized as space opera—but it got me thinking about space in a big way. I also loved the original *Star Trek*, which was more science fiction. The stoic and logical character of Mr. Spock was particularly appealing to me. Popular science was also experiencing a renaissance at that time, which had a lot to do with Carl Sagan's television show, *Cosmos*, which I adored. The combination of these influences led to such an intense wonder about outer space and the universe, that by the time I was nine years old I knew I would be a space scientist someday.
>
> Canada was already post-Christian by the 1970s, so I grew up with no religion. In retrospect, it's amazing that for the first 25 years of my life, I met only three people who identified as Christian. My view of Christianity was negative from an early age, and by the time I was in my twenties, I was actively hostile toward Christianity. Looking back, I realized a lot of this was the unconscious absorption of the general hostility toward Christianity that is common in places like Canada and Europe; my hostility certainly wasn't based on actually knowing anything

> about Christianity. I had come to believe that Christianity made people weak and foolish; I thought it was philosophically trivial. I was ignorant not only of the Bible, but also of the deep philosophy of Christianity and the scientific discoveries that shed new light on the origins of the universe and life on Earth.

She documents a phase of following Ayn Rand and embracing "Objectivism", but eventually she rejects it for failing to answer the big questions of life.

More:

> I began to focus all of my energy on my studies, and became very dedicated to my physics and math courses. I joined campus clubs, started to make friends, and, for the first time in my life, I was meeting Christians. They weren't like Objectivists—they were joyous and content. And, they were smart, too. I **was astonished to find that my physics professors, whom I admired, were Christian. Their personal example began to have an influence on me, and I found myself growing less hostile to Christianity.**

This is why I think it is so important for Christian parents to raise their children to get advanced degrees… either to become professors themselves, or to finance others (e.g. – our own children) to do advanced degrees. It is so important for university students to see Christian professors on campus. And failing that, it's important that we bring Christian speakers in to debate non-Christian speakers on the important issues. This will not happen unless we recognize how important it is, and then make a plan to achieve it.

More:

> **I had joined a group in the Center for Astrophysics and Space Sciences (CASS) that was researching evidence for the big bang. The cosmic background radiation—the leftover radiation from the big bang—provides the strongest evidence for the theory, but cosmologists need other, independent lines of evidence to confirm it. My group was studying deuterium abundances in the early universe. Deuterium is an isotope of hydrogen, and its abundance in the early universe is sensitive to the amount of ordinary mass contained in the entire universe. Believe it or not, this one measurement tells us whether the big bang model is correct.**
>
> **If anyone is interested in how this works, I'll describe it, but for now I'll spare you the gruesome details. Suffice it to say that an amazing convergence of physical properties is necessary in order to study deuterium abundances in the early universe, and yet this convergence is exactly what we get. I remember being astounded by this, blown away, completely and utterly awed. It seemed incredible to me that there was a way to find the answer to this question we had about the universe. In fact, it seems that every question we have about the universe is answerable. There's no reason it has to be this way, and it**

> **made me think of Einstein's observation that the most incomprehensible thing about the world is that it's comprehensible. I started to sense an underlying order to the universe. Without knowing it, I was awakening to what Psalm 19 tells us so clearly, "The heavens declare the glory of God; the skies proclaim the work of his hands."**
>
> That summer, I'd picked up a copy of T*he Count of Monte Cristo* by Alexandre Dumas and was reading it in my off hours. Previous to this, I'd only known it as an exciting story of revenge, since that's what the countless movie and TV adaptations always focused on. But it's more than just a revenge story, it's a philosophically deep examination of forgiveness and God's role in giving justice. I was surprised by this, and was starting to realize that the concept of God and religion was not as philosophically trivial as I had thought.
>
> All of this culminated one day, as I was walking across that beautiful La Jolla campus. I stopped in my tracks when it hit me—I believed in God! I was so happy; it was like a weight had been lifted from my heart. I realized that most of the pain I'd experienced in my life was of my own making, but that God had used it to make me wiser and more compassionate. It was a great relief to discover that there was a reason for suffering, and that it was because God was loving and just. God could not be perfectly just unless I—just like everyone else—was made to suffer for the bad things I'd done.

The Count of Monte Cristo is one of my favorite, favorite books as well, and had the same impact on me as it did on her.

OK, that's enough for this post. Go read the rest, and please share it.

I spoke to her recently and she told me that she is working on several projects that are designed to get people more familiar with science and Bible issues. This woman is an expert Christian apologist and her life will have an influence. Are you going to be like her? Will you mentor others to be like her? Will you marry someone like her? Will you raise children who are like her? I think we should all have a plan to study the areas that are important and have an influence for God with what we learn.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information

- William Lane Craig’s case for the resurrection of Jesus

Why I admire people in the armed forces more than famous entertainers

November 10, 2023 | by Wintery Knight | Link | Original Link

I've noticed that many Christians can tell me a lot about famous entertainers. It doesn't matter if it's singers, musicians, actors, athletes, etc., they seem to know details of their biographies, achievements, etc. And it doesn't really matter if those people are Christians, or whether they have performed actions consistent with a Christian worldview in their private lives.

Anyway, speaking for myself, I mostly admire two kinds of people. The first kind is the kind I blog about here all the time: Christian scholars engage non-Christians intellectually using logic and evidence. The second kind, as you can tell from my reading list, is people who distinguish themselves in conflict with those who oppose the principles and policies that allow me to live out my Christian life. And I am especially interested when people who are fighting evil (imperialists, Nazis, socialists, communists, leftists, etc.) exhibit Christ-like character in risking their lives to save others, or in giving their lives to save others.

Lt. Walt Chewning charges unto burning F-6F Hellcat to save trapped pilot

I have a war story to tell you that happened on November 10th, 1943.

> Lieutenant (later Lieutenant Commander) Walter Lewis Chewning of Cynwyd, Pennsylvania, steps on the burning fuel tank of an F6F-3 Hellcat flown by Ensign (later Lieutenant) Byron Milton Johnson of Potter, Nebraska to effect a successful rescue of the pilot on November 10, 1943. Johnson had flown out to USS Enterprise from Barbers Point, Hawaii, enroute to Makin Atoll in the Gilberts to support the United States Army invasion, which occurred on November 20, 1943.

> The afternoon of November 10, Johnson took off in F6F Hellcat Number 30 for a routine training exercise. He immediately developed engine trouble and requested an emergency landing. He was waved off three times as he struggled to maintain control, but his tail hook caught the third arresting gear wire, and Johnson's Hellcat was slammed into the deck, coming to rest in the port catwalk. The plane came to rest on its external belly fuel tank, which started to leak. As the engine vibrated horribly as the propeller bent itself on the deck, sparks ignited the fuel. The hard landing had jammed Johnson's canopy closed, shearing the retaining pin; he could not exit the plane. Chewning, who had joined the ship October 2, 1943 as Enterprise new catapult officer, scrambled out of the catwalk and came through the smoke. Stepping on the burning belly tank, he forced open the canopy and pulled Johnson to safety.

He received the two highest non-combat medals available:

> Chewning was awarded the Navy and Marine Corps Medal for his actions.

He was a well-educated and accomplished person before joining the Navy:

> Chewning played soccer and Lacrosse at Cornell while studying Mechanical Engineering, breaking his rib and left ankle in one game. He graduated in 1936 and studied at the Massachusetts Institute of Technology before joining the Navy in January 1941. He was the assistant to the Chief Engineer at the Naval Aircraft Factory in Philadelphia, Pennsylvania before joining USS Enterprise. He served as Enterprise's catapult officer until December 1944, when he transferred to Dutch Harbor Naval Air Station in Alaska as ordinance officer. Chewning served in the Navy until December 1949; he also was awarded the Bronze Star. After the war he assisted research and development for various aeronautical companies, the United States Air Force, and the fledgling National Aeronautics and Space Administration. Motion picture film of the crash, taken from Enterprise's bridge, was shown as part of the television program "Victory at Sea" on January 25, 1953. Chewning and Johnson gave interviews to several newspapers about the accident after the program aired.

I found a colorized version of the picture above here:

Lt. Walt Chewning charges unto burning F-6F Hellcat to save trapped pilot
This image was colourized from the original by Paul Reynolds.

What I thought was interesting about Chewning was how he had everything going for him in terms of his education and career, but he chose to join the Navy anyway, in order to defend his country from Japanese imperialism. Those who understand how the Japanese treated prisoners and conquered peoples will know which side of that conflict was good, and which side was evil. Chewning wasn't some sort of loser who took risks for fun and thrills. It had to be a risk where the prize was worth the risk. And he had the humility to consider others better than himself, so that their life was worth the risking of his own. Many people on the secular left who like to talk about how generous, compassionate and virtuous they are are unable to make moral judgments against evils like Japanese imperialism – much less take self-sacrificial action against them.

I just think that it's important for young Christians to have the right kind of heroes. The heroes who are promoted to young Christians by the cultural elites are not usually the right role models. And there is a reason for that. The secular leftists don't want young Christians to be emulating people who excel according to the standards of the Christian worldview. We are in a religion where self-sacrificial love is the centerpiece. Taking trouble on yourself for someone else. Doing your job, when it goes against your own self-interest. Let's not allow a bunch of godless socialist celebrities to pick and choose who we hold in high regard.

Knight and Rose Show #42: Violence in the Bible

November 11, 2023 | by Wintery Knight | Link | Original Link

Welcome to episode 42 of the Knight and Rose podcast! In this episode, Wintery Knight and Desert Rose discuss the conquest of Canaan by Israel. If you like this episode, please subscribe to the podcast, and subscribe to our YouTube channel. We would appreciate it if you left us a 5-star review on Apple Podcasts or Spotify.

Podcast description:

Christian apologists Wintery Knight and Desert Rose discuss apologetics, policy, culture, relationships, and more. Each episode equips you with evidence you can use to boldly engage anyone, anywhere. We train our listeners to become Christian secret agents. Action and adventure guaranteed. 30-45 minutes per episode. New episode every week.

Episode 42:

Episode Summary:

Wintery Knight and Desert Rose discuss a common objection to Christianity – that God commanded the Israelites to commit unjustified acts of violence against innocent people. We focus on an important example of this: the Conquest of Canaan. We discuss the historical context of the war and what it says about God's character. We also discuss strategies for responding to the objection.

Speaker biographies

Wintery Knight is a black legal immigrant. He is a senior software engineer by day, and an amateur Christian apologist by night. He has been blogging at winteryknight.com since January of 2009, covering news, policy and Christian worldview issues.

Desert Rose did her undergraduate degree in public policy, and then worked for a conservative Washington lobbyist organization. She also has a graduate degree from a prestigious evangelical seminary. She is active in Christian apologetics as a speaker, author, and teacher.

Why do so many atheist historians think that 1 Corinthians 15 is reliable history?

November 12, 2023 | by Wintery Knight | Link | Original Link

Investigation in progress

Which passage of the Bible is the favorite of Christians who like to defend the Christian worldview? I don't mean which one is most inspirational… I mean "which one is the most useful for winning arguments?" Well, when it comes to the historical Jesus, the most important passage has to be 1 Corinthians 15:3-7.

The tradition in 1 Corinthians 15 is an early creed that was received from the eyewitnesses Peter and John when Paul visited them several times in Jerusalem, as documented in Galatians 1 and 2, where Paul meets the eyewitnesses. And of course, Paul records his own eyewitness experience, documented in 1 Cor 15:8.

So, is this passage accepted as historically reliable by all ancient historians? Or only by the Bible-believing ones?

Here's something posted by Dr. William Lane Craig about the 1 Corinthians 15 passage:

> The evidence that Paul is not writing in his own hand in I Cor. 15.3-5 is so powerful that all New Testament scholars recognize that Paul is here passing on a prior tradition. In addition to the fact that Paul explicitly says as much, the passage is replete with non-Pauline characteristics, including, in order of appearance: (i) the phrase "for our sins" using the genitive case and plural noun is unusual for Paul; (ii) the phrase "according to the Scriptures" is unparalleled in Paul, who introduces Scriptural citations by "as it is written"; (iii) the perfect passive verb "has been raised" appears only in this chapter and in a pre-Pauline confessional formula in II Tim. 2.8; (iv) the phrase "on the third day" with its ordinal number following the noun in Greek is non-Pauline; (v) the word

> “appeared” is found only here and in the confessional formula in I Tim. 3.16; and (vi) “the Twelve” is not Paul’s nomenclature, for he always speaks of the twelve disciples as “the apostles.”
>
> Now the visit during which Paul may have received this tradition is the visit you mention three years after his conversion on the road to Damascus (Gal. 1.18). This puts the tradition back to within the first five years after Jesus’ death in AD 30. So there’s not even an apparent inconsistency with Paul’s appropriating the language of the formula to encapsulate the Gospel he was already preaching during those first three years in Damascus.

Ancient historian Gary Habermas loves to read non-Christian scholars… and then he writes about what THEY think about Jesus in peer-reviewed articles, published in academic journals. Let’s look at this one: *Dialog: A Journal of Theology, Vol. 45; No. 3 (Fall, 2006), pp. 288-297; published by Blackwell Publishing, UK.*

He writes:

> (1) Contemporary critical scholars agree that the apostle Paul is the primary witness to the early resurrection experiences. A former opponent (1 Cor. 15:9; Gal. 1:13-14; Phil. 3:4-7), Paul states that the risen Jesus appeared personally to him (1 Cor. 9:1; 15:8; Gal. 1:16). The scholarly consensus here is attested by atheist Michael Martin, who avers: “However, we have only one contemporary eyewitness account of a postresurrection appearance of Jesus, namely Paul’s.”[3]
>
> (2) In addition to Paul’s own experience, few conclusions are more widely recognized than that, in 1 Corinthians 15:3ff., Paul records an ancient oral tradition(s). This pre-Pauline report summarizes the early Gospel content, that Christ died for human sin, was buried, rose from the dead, and then appeared to many witnesses, both individuals and groups.
>
> Paul is clear that this material was not his own but that he had passed on to others what he had received earlier, as the center of his message (15:3). There are many textual indications that the material pre-dates Paul. Most directly, the apostle employs paredoka and parelabon, the equivalent Greek terms for delivering and receiving rabbinic tradition (cf. 1 Cor. 11:23). Indirect indications of a traditional text(s) include the sentence structure and verbal parallelism, diction, and the triple sequence of kai hoti Further, several non-Pauline words, the proper names of Cephas (cf. Lk. 24:34) and James, and the possibility of an Aramaic original are all significant. Fuller attests to the unanimity of scholarship here: “It is almost universally agreed today that Paul is here citing tradition.”[4] Critical scholars agree that Paul received the material well before this book was written.[5]

This is important:

> The most popular view is that Paul received this material during his trip to Jerusalem just three years after his conversion, to visit Peter and James, the

> brother of Jesus (Gal. 1:18-19), both of whose names appear in the appearance list (1 Cor. 15:5; 7). An important hint here is Paul's use of the verb historesai (1:18), a term that indicates the investigation of a topic.[6] The immediate context both before and after reveals this subject matter: Paul was inquiring concerning the nature of the Gospel proclamation (Gal. 1:11-2:10), of which Jesus' resurrection was the center (1 Cor. 15:3-4, 14, 17; Gal. 1:11, 16).

He's an eyewitness (verse 8), and he met with the other eyewitnesses, James and Peter. 1 Corinthians is early. Galatians is early. The creed is extremely early – right after the events occurred. There was no time for legends to develop.

And atheistic / critical historians agree, the creed is reliable:

> Critical scholars generally agree that this pre-Pauline creed(s) may be the earliest in the New Testament. Ulrich Wilckens asserts that it "indubitably goes back to the oldest phase of all in the history of primitive Christianity."[7] Joachim Jeremias agrees that it is, "the earliest tradition of all."[8] Perhaps a bit too optimistically, Walter Kasper even thinks that it was possibly even "in use by the end of 30 AD . . . ."[9]
>
> Indicating the wide approval on this subject, even more skeptical scholars frequently agree. Gerd Ludemann maintains that "the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus. . . . not later than three years. . . . the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE. . . ."[10] Similarly, Michael Goulder thinks that it "goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion."[11] Thomas Sheehan agrees that this tradition "probably goes back to at least 32-34 C.E., that is, to within two to four years of the crucifixion."[12] Others clearly consent.[13]
>
> Overall, my recent overview of critical sources mentioned above indicates that those who provide a date generally opt for Paul's reception of this report relatively soon after Jesus' death, by the early to mid-30s A.D.[14] This provides an additional source that appears just a half step removed from eyewitness testimony.
>
> (3) Paul was so careful to assure the content of his Gospel message, that he made a second trip to Jerusalem (Gal. 2:1-10) specifically to be absolutely sure that he had not been mistaken (2:2). The first time he met with Peter and James (Gal. 1:18-20). On this occasion, the same two men were there, plus the apostle John (2:9). Paul was clearly doing his research by seeking out the chief apostles. As Martin Hengel notes, "Evidently the tradition of I Cor. 15.3 had been subjected to many tests" by Paul.[15]
>
> These four apostles were the chief authorities in the early church, and each is represented in the list of those who had seen the resurrected Jesus (1 Cor. 15:5-7). So their confirmation of Paul's Gospel preaching (Gal. 2:9), especially

> given the apostolic concern to insure doctrinal truth in the early church, is certainly significant. On Paul's word, we are again just a short distance from a firsthand report.
>
> (4) Not only do we have Paul's account that the other major apostles confirmed his Gospel message, but he provides the reverse testimony, too. After listing Jesus' resurrection appearances, Paul tells us he also knew what the other apostles were preaching regarding Jesus' appearances, and it was the same as his own teaching on this subject (1 Cor. 15:11). As one, they proclaimed that Jesus was raised from the dead (15:12, 15). So Paul narrates both the more indirect confirmation of his Gospel message by the apostolic leaders, plus his firsthand, direct approval of their resurrection message.

Now, some of the people he lists are really biased against the supernatural, and they really hate the idea that the claims of Christianity exclude other religions. And yet they don't deny the historical reliability of 1 Corinthians 15, or that it is based on eyewitness testimony.

That's why when you watch debates about the historical Jesus, you see skeptical historians like Bart Ehrman, Gerd Ludemann, James Crossley, Michael Goulder, etc. accepting that the disciples thought they saw Jesus after his death. They're not just being nice to Dr. Craig when they give him that. They are forced to accept it, because it passes the historical tests. Every Christian ought to be aware of which passages of the New Testament are seen by the broad spectrum of ancient historians as "historical", regardless of their various biases. You can believe everything in the Bible. But when you debate non-Christians, you have to use the historical core of Christianity which successfully passes historical analysis.

You can see the creed used as evidence in the debate between James Crossley and William Lane Craig.

Report: Biden FBI targeting religious, conservative and veteran employees

November 13, 2023 | by Wintery Knight | Link | Original Link

I read a couple of interesting news stories about the taxpayer-funded FBI. These are both by Kerry Picket, writing for the Washington Times. So far, the only response from the FBI has been to demand that she take the articles down. But she's refusing to do it. These stories add to the other stories of FBI bias and corruption that I've blogged about before.

First one, from the Washington Times:

> At least three FBI whistleblowers told lawmakers on the House Judiciary Committee on Tuesday that high-level senior officials at the bureau are revoking security clearances of personnel based on religious or politically conservative beliefs.
>
> […]The disclosure accuses FBI brass of violating the Security Executive Agent Directive 4 (SEAD 4), disseminated by the ODNI, which is its national security guideline for allowing intelligence community agencies to conduct security clearance adjudications.
>
> "Specifically, SecD Section Chief Section Matthew Nagle, Deputy Assistant Director Lawerence Buckley, and Assistant Section Chief Dena Perkins have caused security clearance investigators to adjudicate security clearances in a manner that is contrary to the SEAD IV guidelines," the disclosure said.
>
> SecD is "intentionally misinterpreting the SEAD IV guidelines so that it can deny, suspend and revoke security clearances of FBI employees because of political affiliations and beliefs."
>
> The disclosure said these security division officials have been exaggerating single incidents of alleged misconduct to be substituted for multiple incidents of misconduct while using security clearance investigations to substitute for internal misconduct investigations.
>
> When an internal investigation finds minor misconduct incidents, the penalty typically ranges from oral or written reprimands to performance counseling, according to the whistleblowers' account.
>
> "Nagle, Buckley, and Perkins have been expanding the scope of security investigations in a manner that violates ODNI's rules and policies," the disclosure states. "The basis for security revocations are specifically enumerated by ODNI."
>
> A SecD employee said Ms. Perkins, who has been in her job since 2018, retaliated against an employee who reported her to the office of Attorney General Merrick Garland. The day after the complaint was filed, Ms. Perkins suspended the employee's clearance.

Second one, also from Washington Times:

> More whistleblowers have stepped forward to tell Congress that high-ranking FBI officials are targeting agents, specifically former military members, for their political beliefs and trying to force them out of the bureau.
>
> A Marine and other military veterans at the FBI have been accused of disloyalty to the U.S. because they fit the profile of a supporter of former President Donald Trump, according to two disclosures sent to lawmakers on the House Judiciary Committee.
>
> The Washington Times obtained copies of the disclosures.
>
> The whistleblowers said Jeffrey Veltri, deputy assistant director of the bureau's security division, and Dena Perkins, assistant section chief, specifically pursued employees who served in the Marine Corps or other military branches.
>
> They stripped the agents of security clearances, which sidelined them on the job and pushed them toward the exit, according to the disclosures.
>
> The whistleblower disclosures say Mr. Veltri and Ms. Perkins either declared or attempted to declare the Marine and other veterans as "disloyal to the United States of America."
>
> "In these cases there was no indication that any of the individuals had any affiliation to a foreign power or held any belief against the United States," it said.
>
> Other signs that an employee was a "right-wing radical and disloyal to the United States," according to Ms. Perkins and Mr. Veltri, were failure to wear a face mask, refusing to take the COVID-19 vaccination and participating in religious activities.
>
> In another instance, Ms. Perkins attempted to revoke the security clearance of a bureau employee she knew was a Marine veteran, but information showed that the initial allegations against the employee were unfounded, the disclosure says.
>
> This did not stop Ms. Perkins from ordering her investigators to canvass at least 10 police departments where the employee lived for any allegations or violations of law.
>
> "During the process, Perkins was attempting to provide evidence so she could terminate this employee because he was 'Disloyal to the United States,'" the disclosure states.
>
> "An employee advised that at least two of the publicly known FBI whistleblowers were former members of the military, specifically … Kyle Seraphin and Garret[t] O'Boyle," according to one of the disclosures.
>
> Another FBI whistleblower disclosure sent to the Judiciary Committee included an accusation from a security division employee who said the security clearance investigation of Mr. Seraphin did not follow the policy guidelines of the Office of the Director of National Intelligence.

Recently, many House Republicans voted to give the FBI a new $300 million headquarters

that will be built on 61 acres. The Soviet Union’s Kremlin was 66 acres. Do you think that FBI leaders are people with integrity? Do you think that they are focused on the real threats that America is facing? Do you think they are too involved with the Democrat party? Are they doing a good job for their bosses, the American taxpayers?

Pro-life family sues DOJ for pre-dawn FBI raid that tortured their children

November 14, 2023 | by Wintery Knight | Link | Original Link

A couple more interesting stories about the FBI today. First, the pro-life family that was pre-dawn raided by the FBI is suing the DOJ. Second, the FBI and DOJ refuse to label the Nashville school shooting as an anti-white hate crime, even after the manifesto emerged (against their wishes) showing exactly that. Are taxpayers getting good value by hiring the FBI to enforce the laws?

Here's the first story, from The Federalist:

> Pennsylvania family the FBI raided last September over the father's pro-life advocacy filed two claims today for a total of $4.35 million in damages due to the FBI's unconstitutional, "malicious," and "corrupt" use of "excessive force."
>
> Mark Houck and Ryan-Marie Houck say in their legal filings obtained by The Federalist that their seven children continue to suffer as a result of the FBI raiding — with battering rams, ballistic shields, armor, and long rifles — the home of a nonviolent pro-lifer who didn't own any guns and whose seven children were just waking for breakfast.
>
> The Houcks "have lost three babies from miscarriages due to the stress of the FBI's conduct and resulting prosecution" and subsequently been diagnosed with infertility, Ryan-Marie Houck's filing says. She says she still cries for hours and the family's high anxiety provoked by the raid has caused them to install security cameras and rarely leave home.
>
> In the Sept. 23, 2022 raid, "Government agents aimed rifles and handguns at Mr. Houck from his porch and from behind vehicles in his yard and driveway," Ryan-Marie Houcks' complaint says. "They also aimed their weapons at Mrs. Houck, who slowly walked down a staircase to approach the Houcks' front door. Mrs. Houck approached after Mr. Houck had already walked peacefully outside with his hands up. Any bullet that missed Mr. Houck could have struck Mrs. Houck or her children, who were stirring throughout the house and had gathered behind her on the staircase. The entire family was located directly downrange."
>
> The sunrise raid that included approximately 20 law enforcement officers was conducted after Mark Houck's lawyer had informed the Department of Justice he would voluntarily turn himself in if requested. Mark Houck's complaint says his 9-year-old daughter was terrified to find two officers dressed in black carrying rifles looking into their home through a back window.
>
> The Houcks' lawsuits say that, as a result of the "unnecessary" raid, "The children continually come to her [Ryan-Marie] crying and suffering from nightmares." Ryan-Marie and their five oldest children, ages 7 to 13, now must

> take medication “to get a few hours of sleep” each night.
>
> “Joshua was six years old at the time he saw his father taken away at gun point,” says Ryan-Marie’s complaint. “He cried the entire time and yelled to the FBI, ‘Please don’t take him he is my best friend.’ To this day, any time someone brings up the raid or tells the story, he starts to cry as if he is reliving the day all over again. He constantly worries that he will lose his father or mother.”
>
> Their 4-year-old has started sleepwalking, the claims say. The entire family seizes up with anxiety any time they have an unannounced visitor. Once, a friend showing up unannounced gave Ryan-Marie a panic attack, her filing says.

The accused man was found not guilty by a jury.

> A Pennsylvania jury acquitted Mark Houck in January on all charges the Department of Justice brought against him. The DOJ argued Houck had violated a federal law that prohibits physically obstructing abortion facilities. Houck and his son were 100 feet away from the facility when they were accosted by a pro-abortion escort.

The laws are not being enforced impartially:

> Mark Houck’s complaint notes that, except for one single recent case, the DOJ has prosecuted only pro-lifers for alleged violations of the FACE Act used against him. The law is supposed to apply both to abortion supporters and pro-lifers, but the DOJ has almost exclusively used it against pro-lifers.

Was this FBI action political persecution of Biden’s enemies? I guess we’re going to find out.

Anyway, here’s another story of FBI failure, also reported in The Federalist:

> On March 27, 2023, Audrey Hale, a woman masquerading as a man, shot and killed three children and three staff at a Christian grade school before local police took her out.
>
> […]Metropolitan Nashville Police Chief John Drake told reporters shortly after the massacre that it was a “targeted attack.” However, MNPD, along with the Tennesse Bureau of Investigation and the FBI, repeatedly refused to release the manifesto detailing Hale’s motives.
>
> It was only this week, more than nearly eight months after the shooting, that conservative media personality Steven Crowder leaked three of the manifesto pages. The publicization of the bombshell writings put seven MNPD officers on administrative leave but exposed the reasons Hale decided to shoot up her former school.
>
> […]Hale claimed she planned to murder Covenant schoolchildren because she hated their white skin, light features, and “privilege.”
>
> […]When The Federalist asked the nation’s top federal law enforcement

> agencies, which had access to the notebook ever since March 27, if either had plans to classify the shooting as an anti-white hate crime or political violence spurred on by the proliferation of left-wing racism in schools and government, the DOJ ignored the request and the FBI claimed it did not have a comment.
>
> The DOJ and FBI's silence on the issue sharply contrasts how both department and agency have treated other race-based shootings.
>
> When a gunman in Buffalo, New York, opened fire in a grocery store, killing 10 in 2022, the DOJ used the shooter's racist social media posts as justification to deem the act "a hate crime and an act of racially-motivated violent extremism" worthy of several federal hate crime charges. The Justice Department extended the same treatment to Dylann Roof and the Texas mass shooter who killed 23 people at an El Paso Wal-Mart.
>
> Yet when it comes to investigating the Nashville shooting, which was rooted in the shooter's disdain for people based on their skin color, as a hate crime against white Christians, the DOJ and FBI refuse.

We can fix these problems with the FBI and DOJ when we have our next election. We just need to elect someone with integrity. I think Ron DeSantis would be able clean up these problems.

Is the Pope Catholic? No, I'm serious. Is the Pope Catholic?

November 15, 2023 | by Wintery Knight | Link | Original Link

I'm a proud evangelical Protestant who thought very highly of Pope Benedict. But I don't like Pope Francis at all. In this post, I will link to two recent stories that explain two of my reasons, although I have many more beside these.

First one, reported in NewsMax:

> Conservative Catholics have launched a barrage of challenges to Pope Francis before a big Vatican meeting, with five cardinals demanding clarifications on same-sex couples and other issues, and a women's group saying only men should vote at the event.
>
> The cardinals from Asia, Europe, Africa, the United States and Latin America said on Monday they had sent the pope a set of formal questions, known as "dubia" ("doubts" in Latin), about the gathering.
>
> In an open letter to Catholics, they said they had announced their challenges "so that you may not be subject to confusion, error, and discouragement but rather may pray for the universal Church."
>
> The action was the latest latest clash between the pope and minority conservatives, who have accused him of undermining a number of traditional precepts.

And I thought this was very interesting:

> Church leaders have been preparing for this week's closed-door meeting – known as a bishops synod – for the past two years, asking Catholics around the world to share their vision for the future of the Church.
>
> Topics will include the role of women, greater acceptance of LGBT Catholics, social justice and the effects of climate change on the poor.

Conservative Catholics are definitely unhappy:

> Last week, the conservative U.S.-based Catholic women's group Restore Tradition decried the fact that women were given a vote at the meeting equal to that of a cardinal or bishop, saying some of the women had advocated "heretical doctrines" against tradition.
>
> "We wish to be represented only by bishops," the group said, citing "divine law" that only men could receive sacramental ordination.
>
> The international conservative group, "Tradition, Family and Property," sent participants a 100-page booklet calling the gathering a dangerous "Pandora's Box." In the forward, Burke says he fears the synod will sow "confusion and error

> and division."

As a Protestant, I know that when denominations move away from the text of the Bible, and cater to the feelings of the "don't judge" compassion crowd, then doctrine gets watered down. That's the way it is in mainline Protestant denominations, and that's why their numbers are declining, while conservative evangelical Protestant churches are thriving.

While the Pope is very friendly to the secular left on social issues, conservative leaders in the Catholic church are getting punished.

Church Militant reports:

> Pope Francis has removed a Texas bishop from his office, a move shocking many in the Church.
>
> […]Known by some as "America's bishop," Strickland is one of the few U.S. Catholic bishops to be vocal in his support for the Church.
>
> He was the only U.S. bishop to attend the June 16 protest against the Los Angeles Dodgers for the team's support of the blasphemous Sisters of Perpetual Indulgence. It created something of an embarrassment for L.A. Abp. Jose Gómez and his auxiliary bishops.

Strickland was also outspoken against COVID mandates, which were promoted by Catholic leaders. (Where is that in the Bible?)

Strickland is not the only one:

> Pope Francis does have a record of removing bishops who claim to be merely following the Catholic faith.
>
> In March 2022, Pope Francis ousted Daniel Fernández Torres as bishop of Arecibo, Puerto Rico, because he allegedly "had not been obedient to the pope, nor had [he] had sufficient communion with [his] brother bishops of Puerto Rico."
>
> Torres refused to sign a joint statement urging the moral obligation of COVID-19 vaccinations, a stance he defended as a conscientious objection recognized by the Church. The bishop noted, "I have opposed what I consider to be using episcopal ministry to advance political agendas."

He was disobedient to the Pope, so he had to go!

I have some friends who are conservative Catholics, and I'm so curious to know how they see their commitment to that organization shaping up in light of these changes. As a Protestant, I pick the denomination that adheres most closely to the teachings of the Bible. But conservative Catholics seem to be stuck with this Pope. What will they do now?

I wrote a post previously explaining why I am not a Roman Catholic.

Is woke law enforcement worth the money that taxpayers pay for it?

November 16, 2023 | by Wintery Knight | Link | Original Link

It seems like every day now we are seeing how dangerous it is to let no-STEM-degree secular leftists run the police and federal law enforcement. In this post, I look at a couple of recent articles showing you how bad it's getting.

First one, from Daily Wire… it's Matt Walsh:

> Two years ago, a woman named Shayla Workman was driving in her car with her two children, aged 3-years-old and 1-year-old, near an apartment complex in Nashville, Tennessee. That's when a man in his 20's, Shaquille Taylor, opened fire. He shot the roof of the car at least two times as Workman drove away. The attack was not random. In fact, the motive couldn't have been clearer: Workman had recently testified against, "Someone he cared about." What was that man's crime? As Workman put it, "His brother was locked up for shooting at me initially in May." A few months later, on August 2nd, Taylor found Workman at the RiverChase apartments and also started shooting at her: "The bullet hit the top of my car and bounced off. Had I not been driving, it would've gone through the window and shot my son in his head." Authorities then arrested Taylor, and he confessed.
>
> […]Shaquille Taylor, after shooting at a moving vehicle with a mother and her children inside, apparently in retribution for that woman's testimony in a criminal proceeding, did not go to prison for the rest of his life. He didn't receive any kind of lengthy prison sentence at all, for that matter. Incredibly, Shaquille Taylor never even went to trial. Instead, in May of this year, less than two years after he started shooting at Shayla Workman's car, Shaquille Taylor was released from jail and his charges were dismissed. The judge who made that decision was Angelita Blackshear Dalton, who happens to be a Democrat and the first black woman elected to a judgeship in her county.
>
> […]It didn't take long for the consequences of the judge's decision to become very clear. A week ago, on Tuesday — just about six months after his charges were dismissed — Shaquille Taylor shot and killed an 18-year-old freshman music student at Belmont University named Jillian Ludwig.

There's a video about the woman in the article:

More:

> That report — and most reports on this case — manage to undersell Shaquille Taylor's criminal history. The shooting incident involving the mother and her children happened two years ago, but it wasn't the only serious crime that Taylor committed. According to the local news channel, WSMV-4, "Taylor's background

> also includes charges for vehicle theft, robbery, handgun possession and multiple aggravated assault charges. One affidavit … said he shoved a man to the ground .. back in 2015 before stealing money from him. Taylor's most recent aggravated assault charge was in May of this year, but the District Attorney's Office did not prosecute."
>
> […]Speaking of that career, just a few weeks ago, on September 21st, Taylor was arrested in a grocery store parking lot driving a Ford-150 that had been carjacked a couple days earlier. Prosecutors charged him with felony auto theft, but then a judge let him out of jail on just $20,000 bond. This is after he shot at the mother in her car, and after he was caught in the stolen F-150. Of course, Taylor then missed his court appearance, and went on to kill a college freshman.

Will the judge who released this career criminal face any consequences? Probably not. The judge is a woman, and a minority, and the motto of America these days is "don't judge". In fact, "don't judge" is probably how this judge got through her non-STEM degrees, and onto the bench. According to her bio, "Judge Dalton… received a Bachelor of Arts Degree in English from Lane College in 1993 and her Juris Doctor Degree from the University of Toledo College of Law in 1997." ENGLISH.

I'm a visible minority too, but my degrees are STEM degrees – in computer science. You can't get out of STEM programs by parroting the opinions of your woke professors. You have to do math. You have to write code that compiles and runs. You have to read requirements. You have to solve problems.

Here's another example from yesterday:

I guess the lesson for conservatives here is "don't live in a blue city, in a blue county, where your law enforcement is chosen by far-left billionaire George Soros." Your

education, career, and finances all have to be carefully chosen in such a way as you don't live in a place that is run by the "don't judge" people. They won't protect you from evil, even though you are paying their salaries with your taxes.

Next article. This is from the New York Post:

> The gunman who killed Texas SWAT Officer Jorge Pastore in a shootout that also left two hostages dead was wearing body armor and night vision goggles — and was on the FBI's terror watchlist, according to reports.

He was on the terror watchlist, but why was he allowed to commit a crime? Oh, maybe it's this:

> […][A] local organization called the Round Rock Area Muslims said they were all family members of a "beloved brother" who was well-known in the local community.
>
> They were mom Eman Ahmed El Nemr-Nassar and two of her sons, Ahmed Mohammed Nassar, 35, and Riad Mohamed Nassar, 32, according to a group member's since-deleted post shared by the Daily Mail.

Just like the law enforcement in Britain, our law enforcement does not want to enforce the law, if they will appear to be "racist". After all, the top priority of the Biden administration, in the wake of the Hamas terrorist attack, is cracking down on "Islamophobia". After all, according to the Biden administration, the real criminals are concerned parents and elderly pro-lifers. Those are the REAL "domestic terrorists", Democrats say. And we are paying their salaries. Is it worth it?

Be careful where you live.

Nikki Haley’s troubling record on China, Black Lives Matter, Blackrock ESG, etc.

November 17, 2023 | by Wintery Knight | Link | Original Link

Here are a few stories about Nikki Haley, and at the end, I’ll tell you who should vote for her.

First one, this is new from this week, reported in the Washington Examiner:

> Many Republicans envisioned Haley as a viable alternative to the current front-runner, former President Donald Trump, for voters in the Republican primary. Yet such hopes could be dashed after an absolute clunker of an appearance by Haley on Fox News on Tuesday. The former South Carolina governor declared her support for eliminating anonymous accounts and unverified users on social media platforms. And, without stating where such power would actually come from, Haley also announced, as one of her first acts as president, she would force all users to be verified.
>
> “When I get into office, the first thing we have to do, social media accounts, social media companies, they have to show America their algorithms. Let us see why they’re pushing what they’re pushing,” Haley said during an appearance on Fox News. “The second thing is every person on social media should be verified by their name.”
>
> […]@NikkiHaley comments on Fox News on Tuesday should raise red flags for all Republicans. One cannot be the party of freedom & all things good in the country but declare an intent to eliminate anonymous political commentary.

This one is also new, from yesterday, reported in The Daily Caller:

> Former U.N. Ambassador Nikki Haley met with several Wall Street executives in a series of events Tuesday in her bid to be the Republican nominee for president, according to the Financial Times.
>
> Haley attended a small meet-and-greet breakfast in New York where CEO of BlackRock Larry Fink was in attendance, followed by a fundraiser later in the day co-hosted by Gary Cohn, former president of Goldman Sachs, according to the FT. BlackRock has been criticized by conservatives in recent years for its adoption and promotion of Environment, Social and Corporate Governance (ESG) policies, which aim to invest in companies based on their commitment to social and environmental causes.
>
> “Let’s call ESG what it really is: corporate socialism,” Haley’s campaign said in a previous statement to The Hill. “What we need is capitalism and not businesses caving to the left. When they do, everyone loses.”
>
> Republican-led states, like Florida and Texas, in opposition to BlackRock’s use of

> “woke” ESG investment, have pulled their money from the investment firm. Altogether, Republican-led states pulled almost $4.5 billion from the company in 2022.

This one from the far-left Washington Post:

> “I saw something on the internet that said you gave China thousands of acres of land in South Carolina. Why would you do that?”
> — audience member asking a question at a Haley for President town hall in Boone, Iowa, Oct. 9
>
> “Don’t believe what you read on the internet. … We didn’t sell any land to the Chinese. But, yes, I recruited a fiberglass company.”
>
> — former South Carolina Gov. Nikki Haley (R), in response
>
> In her campaign for president, Haley has warned repeatedly about Chinese investments, including land purchases, in the United States. Yet as governor from January 2011 to January 2017, she recruited Chinese companies to her state. Chinese capital investment in South Carolina more than doubled from $308 million in 2011 to nearly $670 million in 2015.
>
> The audience member asked whether she “gave China thousands of acres of land.” She answered that “we didn’t sell any land to the Chinese,” specifically mentioning a fiberglass company.
>
> This is political sleight of hand — denying something that was not asked.
>
> The fiberglass deal did not involve the sale of land — but that’s because the company received almost 200 acres of county-owned land free of charge if promised investments were made. By our count, Chinese companies received about 1,500 acres while Haley was governor, much of it through land sales, despite her denial at the town hall.

Another one, from The Iowa Standard talks about her tweet about George Floyd, who is now known to have died from a drug overdose, and who had a long, long criminal record.

Nikki tweeted:

> “WE SPENT THE LAST COUPLE OF DAYS CELEBRATING OUR SON’S GRADUATION. TONIGHT I TURNED ON THE NEWS AND AM HEARTBROKEN. IT’S IMPORTANT TO UNDERSTAND THAT THE DEATH OF GEORGE FLOYD WAS PERSONAL AND PAINFUL FOR MANY. IN ORDER TO HEAL, IT NEEDS TO BE PERSONAL AND PAINFUL FOR EVERYONE.”

More from the article:

> Tucker took exception to Haley’s declaration that it needs to be “personal and painful for everyone” in order for healing to happen.
>
> “Really, why’s that,” Carlson said. “And of course, what happened next was personal and painful for everyone. Our cities burned down. A lot of people died.

> And I thought, 'Why should what happened between a cop and George Floyd outside a convenience store in Minneapolis be personal and painful to anybody else? What are you even talking about? Oh, you have no idea what you're talking about. You're trying to please the people whose opinions you actually care about at The New York Times.'"

Another one, from the Washington Examiner:

> […][B]ack in 2020… it was initially reported that someone had tried to racially intimidate NASCAR driver Bubba Wallace by allegedly "placing a noose" in a garage Wallace was assigned to before a race in South Carolina. Quicker than one could say, "Start your engines," Haley rushed to condemn the supposed act of hate even while the incident was under investigation before anyone had all the facts.
>
> "We should all stand with @BubbaWallace today against the cowards who secretly put the noose in his garage stall," Haley posted on Instagram. "Watch your back cowards. Bubba has a bigger army than you do. #HateWontWin #WeStandWithBubba."
>
> But there weren't any cowards. No army was needed. The story was bogus and not a hate crime. No one "secretly put the noose in his garage stall." It was just a regular garage pull that had been there long before Bubba Wallace was assigned the garage. Haley didn't have to make such a statement. She could have waited until all the facts were known.
>
> […]At a time when she could have shown the country how principled, strong, and tough she was, Haley bought the Left's narrative, caved, and rushed to do her best CNN or MSNBC anchor impression.

Who should vote for Nikki Haley? Anyone who would also vote for Hillary Clinton. She is the Hillary Clinton of the Republican party. Always putting her foot in her mouth trying to pretend to be something she's not, and never apologizing for any of it.

Judge rules that man must pay $50,000 a month to ex-girlfriend for 10 years

November 18, 2023 | by Wintery Knight | Link | Original Link

When I was younger, I used to think that having definite views on morality and theology was a bad thing. I had my share of rejections by Christian women who didn't like that I rejected universalism and annihilationism. Others didn't like that I was pro-life. And today, most Christian women tell me that supporting gay rights is a non-negotiable for them. But maybe being alone was not all bad.

The news story is from one of Canada's national newspapers, the National Post:

> A wealthy businessman will have to pay more than $50,000 a month in spousal support for 10 years to a woman with whom he had a long-term romantic relationship even though they kept separate homes and had no children together, Ontario's top court has ruled.
>
> Under Ontario law, an unmarried couple are considered common-law spouses if they have cohabited — lived together in a conjugal relationship — continuously for at least three years. But that doesn't necessarily mean living in the same home, the court found.
>
> […]When their 14-year relationship finally broke down in May 2015, Climans asked the courts to recognize her as Latner's spouse and order him to pay her support. He argued she had been a travel companion and girlfriend, nothing more. As such, he said, they were never legally spouses and he owed no support. An eight-day trial ensued.
>
> In her decision in February 2019, Superior Court Justice Sharon Shore sided with Climans. She ruled they were in fact long-time spouses, finding that despite their separate home, they lived under one roof at Latner's cottage for part of the summer, and during winter vacations in Florida. Shore ordered him to pay her $53,077 monthly indefinitely.

Superior Court Justice Sharon Shore didn't care that the man never married this woman, or lived with her, or had children with her. He had money, and she wanted it, so the judge gave it to her.

Elsewhere in the article, we learn that he had asked her to sign a pre-nuptial agreement many times, and each time she refused. (Those are not even enforced in divorce courts) It's like her plan all along was to demand that a judge awarded her all of this man's money.

Some people will say "well, these are Ontario family courts, this is normal. Haven't you heard about what happened to Dave Foley?" I think every man knows the story of what the Ontario divorce courts did to Dave Foley.

Here is a story about it from the far-left Toronto Star, otherwise known as the Toronto Red

Star.

It says:

> Dave Foley of beloved Toronto sketch troupe the Kids in the Hall is starting a new career in standup comedy, but not in Toronto — he suspects he'll be arrested if he returns to Canada.
>
> The 48-year-old faces a back child-support bill in Ontario of more than half a million dollars: the accumulation of a debt that accrues steadily at more than $17,000 per month. On the set of *Servitude,* a film shot in Toronto last year, "I told the production guys, I have a court appearance on Monday and there's a good chance I'll be in jail on Monday afternoon,'" Foley said in an interview with the *Star*.
>
> During an appearance on comic Marc Maron's *WTF* podcast last month, Foley explained that his marriage to Toronto writer Tabatha Southey ended during his run on NBC's five-year hit comedy *NewsRadio,* and he has failed in his efforts to adjust his child support downward to reflect his new life after sitcom stardom.
>
> "My income has dropped in the last 10 years, as anyone can tell from the number of s—ty movies I've been in," says Foley. "I'm not exactly picking and choosing my projects." However, four years ago, Superior Justice Nancy Backhouse denied his motion to vary his support payments.
>
> […]Foley says that Ontario's Family Responsibility Office now has an enforcement order and last year sought a six-month jail sentence for him, which was to extend indefinitely, until the overdue support was paid.
>
> Ontario family courts are notoriously anti-male, and men know this. Unfortunately, the female judges who make these rulings don't seem to understand that men know what they are doing, and then opt out of marriage. It must be so wonderful for these judges to punish the men who appear before them. But they can't punish the men who respond to what they are doing by declining to marry women, and then declining to date women, and then declining to even speak to women.

I looked up Superior Justice Nancy Backhouse, and found another article about her decisions, entitled "Judge rejects pre-nup, awards ex-wife $5.3-million". So, pre-nuptial agreements are also thrown out in Ontario divorce courts.

But it's not just Ontario. I have two Christian friends here in America who married their Christian wives as virgins, and then their wives divorced them. I heard what happened to them in divorce court. They lost custody of their kids, and they are forced to pay alimony and child support even though their ex-wives poison the children against them, and deny them communication rights and visitation rights. And men know that this is happening to other men. How can women expect men to marry when the financial risks are so high?

Forbes magazine explains:

> Of the 400,000 people in the United States receiving post-divorce spousal maintenance, just 3 percent were men, according to Census figures. Yet 40 percent of households are headed by female breadwinners — suggesting that hundreds of thousands of men are eligible for alimony, yet don't receive it.

The divorced courts are biased against men, and men are getting the message. They look at these cases, and they understand that marriage is not worth the financial risks. They don't want to have their possessions stolen by radical feminist judges.

Further reading

An excellent book to read about this issue is Dr. Stephen Baskerville's book "Taken Into Custody: The War Against Fathers, Marriage, and the Family". You can read what the book is about here. Dr. Baskerville is a Christian and a conservative. He has a PhD from London School of Economics, and teaches at Patrick Henry College, a conservative Christian college.

How should Christians redeem their regrets over past decisions?

November 19, 2023 | by Wintery Knight | Link | Original Link

Recently, I posted a dating ad from a 39-year-old never-married single mother. She explained that she was now a Christian and was looking for a man to marry her, so that she could have a second child "the right way". Some people thought we should take her conversion at face value. Others thought she was desperate and looking for a financial bailout. How can we tell if she is really sincere?

Well, I was still thinking about the comments on that post when I saw another great post from Laura, who writes at An Affair With Reason. Her post is about the feelings of regret that people have because of their past mistakes, and how Christians should deal with those regrets.

She writes:

> As I thought about what to write I became distressed, sorrowful, angry, and even despondent over some of my own decisions. As I sobbed inconsolably, I noticed that every caustic thought began with, "If only…." That's when I realized I was still carrying the burden of regret and I didn't know how to let go. It wasn't that I still needed God's forgiveness or that I had any doubts about my standing with him; I knew I was forgiven. It was the lifelong consequences that I experience to this day which embittered my soul and squelched my joy.
>
> The "if onlys" are a heavy burden to carry. They represent shattered dreams that will never be recovered in this life. They invoke feelings of discontentment, grief, and doubt. They cause us to sob with regret for what could have been, to pray for second chances that we know will not be granted.
>
> So what do we do with the regrets that we must live with for the rest of our lives? Lately, as I've reflected on conversations I've had with many women who have made regretful decisions over the years and on the direction of our culture, I've noticed two very distinct paths:
>
> 1. Attempt to assuage our own guilt and regret by convincing others to make the same foolish, and even sinful, decisions we made.
>
> OR
>
> 2. Humble ourselves, grieve our losses, and commit to teaching the younger generations to choose a better way.
>
> The first path is the wide and well-traveled one. Tragically and despicably, most people today seek to justify themselves and ease their consciences by getting others on board with their own ignorance, foolishness, and sinfulness.

She's got quite a few examples of the kinds of regrets that men and women have, and

different ways of dealing with those regrets. Some ways self-serving, others God-serving. Her examples are really interesting. It reminds me of "The Great Divorce" by C.S. Lewis, where he explains why some people don't resist God, and others do. Some people want to justify the past, and keep making decisions to benefit themselves. Others want to serve God. They want to take on the difficult work of opening up to others, and loving them by telling them the truth.

When I hear someone with a past say that they have now become a Christian, I normally ask "is this conversion just convenient for you or is it the result of some process where your mind was changed through study?" You can ask the person to show their work – how did they get to the right answer? And what has becoming a Christian cost them? How does it affect their relationships with non-Christians?

People "convert to Christianity" all the time based on need. Sometimes they're trying to get something for themselves, e.g. – wanting to not be judged for their past, so they can attract a partner to financially support them. But other people spend years reading books and changing their minds page by page, debate by debate. Then they put their knowledge into practice.

I have mentored women who did this. One girl who contacted me through the blog wasn't able to talk to her smart atheist brother about her faith. Then, she read a bunch of apologetics books about science and history, then called me and slipped the phone into her pocket and let me listen to her make a bold, informed stand for her Christian worldview for two hours. She won every point.

When people really become Christians, they don't do it in order to be happy and or to be liked. They take on work, and they take on shame, because they have a Boss now. That's how you can tell that real repentance has taken place. The letters of Paul in the New Testament are filled with advice for Christians who want to be bold, put themselves second, and advocate for their Boss. You should read them. When you read the Bible, try to put aside your feelings, your desires, and your concerns about what people will think. You'll find that putting work for the Boss ahead of what you want is worth the price of being "second". I would start with Philippians, then go on to 1 Peter.

By the way, this isn't the first time I've linked to Laura's posts. Here are some of the other times I've linked to her work on my blog: on voting, on Islam, on mentoring boys, on fighting with pastors, on learning what works when dealing with atheists. She had a 10 part series advising women how to choose a husband, which really made me feel good as a man. Today, most people see a husband as an accessory – like a handbag. He's there to provide, or to be a handyman, or to complain at if the wife is unhappy. Men should read that series, and find out what we can do in a marriage, if we are valued for our distinctive male nature.

FBI halted investigation of pedophile to target Republican voters

November 20, 2023 | by Wintery Knight | Link | Original Link

I'm sorry to keep posting about the FBI, but they just keep coming up in my news reading.

Here's the latest from Daily Wire:

> On January 6, 2021, the FBI explicitly chose to abandon a sting on a child pornographer in Virginia who was messaging with an undercover agent about having sex with a nine-year-old boy, opting instead to focus on prosecuting Donald Trump's supporters who stormed the U.S. Capitol. Less than three years later, the FBI discovered the same man living in Alaska where he appears to have been performing sex acts on a 10-year-old boy, according to court documents.
>
> On December 2, 2020, an internet user with the screen name "gayboy69freak" messaged an undercover agent with the FBI's Washington Field Office, who was posing as a father pimping out his 9-year-old son, and told him that he wanted to travel to D.C. to have sex with the boy.

Hmmm. I wonder if the FBI dropped this investigation, because they didn't want to be labeled as "homophones". In the UK, the police there regularly drop investigations against Middle Eastern sex-traffickers, because they don't want to appear to be racist. Maybe our Biden administration FBI are doing the same thing as the "don't judge" UK police?

More:

> His IP address led the FBI to Brogan Welsh of Glenn Allen, Virginia.
>
> What appears to be a slam-dunk case against a child predator was abruptly abandoned just one month later.
>
> "On January 6, 2021, FBI, Washington Field Office, [decided] this investigation was halted due to events that occurred at the United States Capitol Building that day," .

The only reason that this predator was arrested again was because of a completely different investigation:

> The man was only arrested, and the court documents only filed, because Welsh moved to Alaska and crossed the Anchorage FBI's radar in an unrelated perversion investigation. On October 24, 2023, after coming across troubling chats from Welsh on a phone they seized from a different alleged pervert, Alaska FBI agents went into his house and "located items including sex toys that are very small in size and apparently consistent with the body size of an approximate

> 10-year-old boy," as well as children's underwear.
>
> "The investigation has revealed that a 10-year-old boy was, in fact, residing at the residence belonging to Welsh," the agents wrote.
>
> In other words, because the FBI called off the dogs even after Welsh sent child porn to an FBI agent, he appears to have gone on to molest a 10-year-old.
>
> It was as FBI agents worked through the Alaska case that they realized that the bureau's Washington Field Office had slam-dunk evidence that it had never bothered to do anything with, and added it to filed November 6, 2023. The Alaska arrest of Welsh was made based on the initial child pornography crime in Virginia, not even his apparent crimes in Alaska.

So, the only reason we found out about the Washington office of the Biden FBI dropping the real criminal case was because of the Alaska case. So, we don't really know how many other criminal cases were dropped by the Washington Field Office.

What was the motive to abandon these criminal cases? Was it to benefit the Democrat party? Was it to help Joe Biden win re-election? Was it to meddle with future elections by shaming Republican voters? It's hard to measure the effect of these actions.

Here is another recent story about the FBI, also from Daily Wire:

> A Satan-worshipping cult of pedophiles is blackmailing girls into cutting themselves — but the FBI didn't seem interested in that so much as the fact that one of its members once used the n-word, a Daily Wire investigation found.
>
> For years, the group known both as 764 and Harm Nation has tortured what is believed to be hundreds or thousands of girls. But the FBI didn't put its cybercrimes or violence-against-children investigators on it. Instead, its interest appears to have piqued mainly by the fact that the group — most of whose victims are white teens — was once racist to a black girl.
>
> [..]Critics say, at best, it's an example of the FBI misclassifying cases in order to tell Congress that right-wing domestic terrorism is the greatest threat to America. At worst, they say, it's an example of the heinous torture of girls by pedophiles not being a priority — unless there was an angle making it politically appealing to Democrats.

These stories are both from last week. It just keeps happening.

Suppose that the next Republican president were to come out with a plan to just shut down the FBI completely, and fire all the employees. Would that surprise you? We are paying a lot of taxpayer money to the FBI employees, and they get a lot of benefits and pensions, too. Are they worth the money?

New study: At least 1,130 adolescents received “gender-affirming” chest surgeries between 2016 and 2019

November 21, 2023 | by Wintery Knight | Link | Original Link

I have been seeing interesting tweets about the sudden popularity of transgenderism among young people. One of them went something like this. First, they deny that sex-change surgeries are happening. Then, they say they are happening, but not many. Then, they say many are happening, but not to children. Sadly, this new study shows that many are happening to children.

Here’s the story from Daily Wire:

> A new study of nationwide hospital databases found that at least 1,130 adolescents between 2016 and 2019 received “gender-affirming” chest surgeries in the U.S.
>
> The study, published in JAMA Pediatrics, saw a 389% increase in adolescents (ages 12-17) obtaining chest surgeries from 2016 to 2019. An overwhelming majority (1,114) of the adolescents seeking this surgery were female (98.6%), and just 16 were male (1.4%).
>
> “To our knowledge, this study is the largest investigation to date of gender-affirming chest reconstruction in a pediatric population,” the paper’s authors wrote, who are each affiliated with Vanderbilt University Medical Center. “The results demonstrate substantial increases in gender-affirming chest reconstruction for adolescents.”

Here is the breakdown by age:

> The ages of the pediatric patients ranged from 12 to 17, with 42 (5.5%) of the recipients between 12 and 14, 131 (16%) aged 15, 291 (34.5%) aged 16, and 365 (44%) aged 17.

It’s an interesting situation. I would expect parents to set boundaries on their children. First, to shelter them from public schools and social media. But second, at least keep them away from the people who are profiting from “gender-affirming care”.

Speaking of profiting, there was this:

> The median total charges for chest reconstruction were $29,886 ($21,285–$45,147), a number that was adjusted for inflation, the authors note. Most of the chest surgeries (61.1%) were covered by private health insurance, 16.5% used public health insurance including Medicaid, 15.8% paid out of pocket, and 6.7% indicated “other.”

Remember what the lady from Vanderbilt said?

It was reported by Daily Wire:

> "It's a lot of money," VUMC Clinic for Transgender Health's Dr. Shayne Sebold Taylor said at one Medicine Grand Rounds lecture, video reveals. "These surgeries make a lot of money."
>
> Taylor noted that a "chest reconstruction" can bring in $40,000 per patient, and someone "just on routine hormone treatment, who I'm only seeing a few times a year, can bring in several thousand dollars … and actually makes money for the hospital."
>
> Citing the Philadelphia Center for Transgender Surgery, Taylor said vaginoplasty surgeries can generate $20,000, gushing that it "has to be an underestimate," since hospital stay, anesthesia, post-op visits, and other add-ons are not included in the total.
>
> "And the female-to-male bottom surgeries, these are huge money makers," the doctor continued, adding that such surgeries could bring in "up to $100,000" for the hospital.
>
> Some clinics are "entirely" "supported" financially by such phalloplasty surgeries, Taylor boasted.
>
> "These surgeries are labor intensive, there are a lot of follow-ups, they require a lot of our time, and they make money," she emphasized. "They make money for the hospital."

Sadly, for one reason or another, the adults have decided that it is more virtuous to go along with the agenda of the schools and social media, and inflict surgeries on their children. I could never understands why anyone would cut healthy organs off of a child with mental health issues. That would be like putting an anorexic person on a diet.

There was a previous study:

> In July, the same four authors, with the addition of two others, published a separate study on adults who received "gender-affirming" chest reconstruction surgeries. Their results, also using NASS outpatient hospital data, found that 21,293 individuals obtained chest surgeries between 2016 and 2019, a 143.2% increase. The large majority of chest surgeries were performed on female patients, with 82.1% receiving double mastectomies; 27.9% of trans-identifying males received breast augmentations.

When it comes to debating social issues, I like to have studies close at hand. For same-sex marriage, I use studies showing different outcomes for children raised in same-sex homes. For abortion, I use science textbooks showing that the embryo is fully human. It is self-directed and has distinct DNA from either parent. And for transgenderism, I like to use studies like these, showing how health care providers are profiting from the social trends being pushed by the "don't judge" compassion crowd in the public schools. The

study showing that gender-affirming care does not lower the number of suicides (in the long term) is a good one, too.

There are Roman Catholics in my family but I'm not one: why not?

November 22, 2023 | by Wintery Knight | Link | Original Link

In this post, I explain why I'm not Roman Catholic. And I also explain how Protestant Christians arrive at their beliefs. We'll start with J. Warner Wallace on Purgatory, then I'll go second.

Purgatory

Here's the first article from Cold Case Christianity, by the Master of the Evidence J. Warner Wallace. He writes about the Roman Catholic doctrine of purgatory, and his experience with studying and then rejecting it.

Here is his introduction:

> The notion of purgatory assumes many of us die with unforgiven sins that need to be purged from our account; some of us are not good enough to go to heaven, but not bad enough to go to hell. Purgatory, therefore, is a temporary, intermediate place (or state of being) where good deeds and works can be performed in order to purge our impurity prior to our final destiny with God. Although millions of Catholics believe purgatory to be a reality, the idea needs to be tested in light of the Scripture. Is purgatory something we, as Bible believing Christians, should accept as true?

He's got a stack of Bible verses to make two points against Purgatory: first, that Jesus' death on the cross is sufficient to atone for *all* our rebellion against God, and we don't need to endure any suffering or punishment to supplement it. And second, the teaching about the afterlife in the Bible says that believers are immediately ushered into the presence of God after they die (without resurrection bodies, yet), while unbelievers are separated away from God.

Here's what he says about the first point:

> **Our Salvation Isn't Based On Our Good Works**
> According to the Biblical doctrine of Salvation, forgiveness is not based on the good works of the believer. For this reason, deeds or works performed for those in purgatory are both unnecessary and ineffectual:
>
> **Romans 3:21-24, 27-28**
> But now a righteousness from God, apart from law, has been made known, to which the Law and the Prophets testify. This righteousness from God comes through faith in Jesus Christ to all who believe. There is no difference, for all have sinned and fall short of the glory of God, and are justified freely by his grace through the redemption that came by Christ Jesus… Where, then, is boasting? It is excluded. On what principle? On that of observing the law? No, but on that of faith. For we maintain that a man is justified by faith apart from observing the

> law.
>
> **Romans 8:1**
> Therefore, there is now no condemnation for those who are in Christ Jesus, because through Christ Jesus the law of the Spirit of life set me free from the law of sin and death. For what the law was powerless to do in that it was weakened by the sinful nature, God did by sending his own Son in the likeness of sinful man to be a sin offering.
>
> **Our Salvation Is Based On Jesus' Work on the Cross**
> According to the Biblical doctrine of Salvation, Jesus' work on the cross (His blood) purifies us from allsin. For this reason, there isn't a lingering sin problem requiring the existence of a place like purgatory:
>
> **Titus 2:13-14**
> …we wait for the blessed hope—the glorious appearing of our great God and Savior, Jesus Christ, who gave himself for us to redeem us from all wickedness and to purify for himself a people that are his very own, eager to do what is good.
>
> **1John 1:7b**
> …the blood of Jesus, his Son, purifies us from all sin.
>
> **1John 1:9b**
> …he is faithful and just and will forgive us our sins and purify us from all unrighteousness.
>
> **1John 2:2**
> He is the atoning sacrifice for our sins, and not only for ours but also for the sins of the whole world.
>
> **Hebrews 10:14**
> …because by one sacrifice he has made perfect forever those who are being made holy.
>
> **Our Salvation Has, Therefore, Already Been Guaranteed**
> According to the Biblical doctrine of Salvation, Jesus has already purified and purged believers of sin based on our faith in Him. For this reason, there is no need for a place like Purgatory where additional purging must be performed…
>
> […]The Biblical doctrine of Salvation clearly eliminates the need for purgatory.

I was never able to find anything in the Bible to support purgatory. It's a very very late doctrine that was unknown to the early church until the late 2nd / early 3rd century, where it is spoken about by a handful of people. But lots of weird doctrines were creeping up on the fringe around that time, so we shouldn't be surprised… the point is that they have no support from the Bible, and not in the community of believers for the first 150 years after the death of Jesus.

The bodily assumption of Mary

Anyway, my turn now. The Roman Catholic church teaches that Mary was "bodily

assumed" into Heaven. Let's see if that is in the Bible or in the early church.

Here's what I found:

1. To be a Roman Catholic, you need to believe in Papal infallibility in matters of dogma.
2. In 1950, the Pope pronounced the assumption of Mary to be infallible dogma.
3. This pronouncement was solicited by a petition featuring over 8 million signatures.
4. There is no historical record of this doctrine in the Bible.
5. No early church father mentions the assumption until 590 AD.
6. Documents dated 377 AD state that no one knows how Mary died.
7. The assumption appears for the first time in an apocryphal gospel dated about 495 AD.

Data

I only cite Roman Catholic sources for my facts.

6. "But if some think us mistaken, let them search the Scriptures. They will not find Mary's death; they will not find whether she died or did not die; they will not find whether she was buried or was not buried … Scripture is absolutely silent [on the end of Mary] … For my own part, I do not dare to speak, but I keep my own thoughts and I practice silence … The fact is, Scripture has outstripped the human mind and left [this matter] uncertain … Did she die, we do not know … Either the holy Virgin died and was buried … Or she was killed … Or she remained alive, since nothing is impossible with God and He can do whatever He desires; for her end no-one knows." (Epiphanius, Panarion, Haer. 78.10-11, 23. Cited by Juniper Carol, O.F.M. ed.,*Mariology*, Vol. II (Milwaukee: Bruce, 1957), pp. 139-40).

7. "The idea of the bodily assumption of Mary is first expressed in certain transitus–narratives of the fifth and sixth centuries. Even though these are apocryphal they bear witness to the faith of the generation in which they were written despite their legendary clothing. The first Church author to speak of the bodily ascension of Mary, in association with an apocryphal transitus B.M.V., is St. Gregory of Tours." (Ludwig Ott, *Fundamentals of Catholic Dogma*(Rockford: Tan, 1974), pp. 209–210).

It should be noted that the apocryphal gospel in which the doctrine of the assumption of Mary first appeared was condemned as heretical by two Popes in the 5th and 6th centuries. However, I was not able to find a CATHOLIC source for this fact, so I deliberately chose not to use it in my case.

Conclusion

The first thing I want to say is that the Bible is not the only place you look to decide these issues. You also look in church history, and you are looking for a clear chain of custody of the doctrine as far back as it can go. Purgatory and the perpetual virginity of Mary have some track record, but the bodily assumption of Mary is just nowhere – not in the Bible, not in the Early Church fathers. So that's the silver bullet against Roman Catholicism,

since they made it “infallible”.

This post is more directed to non-Christians to sort of show you how we do our homework. I am the first Protestant in my family. We have half the family who is Muslim, and the other half mostly Hindu, with some Catholic. I had to debate all these people growing up, and I wiped the floor with them. It was not even close. I simply settled on the beliefs that allowed me to win every argument, every time. That’s how you do religion. If you have to go against your whole family in order to be right, you do it. It’s not good to be wrong about things just because that’s what your family believes. These things were not pushed hard on me by my parents, I studied them on my own in order to win arguments. After a while of winning, I found myself acting consistently with what I was arguing for. Although that might sound really weird to you, that’s probably the right way to do this. Don’t listen to parents and church, find your own way forward by winning arguments, and believing only what the evidence supports.

Although most people think that if I had kids, I’d bully them into my beliefs, I actually would not. Because that’s not what worked on me. What really works is fighting about evidence, welcoming questions, and allowing differences of opinion. Being free to pursue truth is more important in the long run than coercing your kids to act nicely.

Three reasons why Christians should read military history

November 23, 2023 | by Wintery Knight | Link | Original Link

A while back, I finished a book called "Beyond The Call: The True Story of One World War II Pilot's Covert Mission to Rescue POWs on the Eastern Front". It's about a World War 2 heavy bomber pilot who completes 35 missions, and then goes into the Soviet Union (our allies, at the time) to rescue American POWs who were starving or being kidnapped or murdered by the Soviet secret police.

I found a very good article about it from Stripes, to just quickly introduce the story:

> Later, after making contact with POWs roaming the Polish countryside, [Capt. Robert Trimble] fully embraced his mission. He saw the desperate plight of those who had been liberated from Third Reich prison camps. Many were sick, emaciated, often clothed in rags and left to fend for themselves during a brutally harsh winter.
>
> Trimble risked his life numerous times over six weeks, helping to rescue hundreds of POWs. He came to the aid of others, too. In one daring rescue, nearly foiled by Russian agents who had become suspicious of his activities, Trimble helped 400 French women make it out of Poland and back to France.

Although he was being constantly trailed by Russian spies and informers, he would evade them, and bring food and money to the POWs, then put them on a train to Odessa, Ukraine, where they could get onto a ship going home.

Roger Trimble, standing second from the left, in front of his B-24 Liberator

Why I read military history

It is hard to develop virtues just by wishing and hoping. Something has to go into your mind that causes you to think differently, and feel differently. Everything that you watch on TV, hear on the radio, or see in the movie theater, is made by secular leftists. They aren't trying to build your moral character. They're goal is to break down your resistance to their unBiblical worldview and moral values. Instead of giving people who hate Jesus your money, just so you can be entertained, why not try to put something in front of your eyes that will make you better?

Look at this famous passage from the Bible.

Romans 12:1-2:

1Therefore I urge you, brethren, by the mercies of God, to present your bodies a living and holy sacrifice, acceptable to God, which is your spiritual service of worship.

2 And do not be conformed to this world, but be transformed by the renewing of your mind, so that you may prove what the will of God is, that which is good and acceptable and perfect.

And also this from Philippians, my favorite book of the Bible.

Philippians 4:8:

8 Finally, brethren, whatever is true, whatever is honorable, whatever is right, whatever is pure, whatever is lovely, whatever is of good repute, if there is any excellence and if anything worthy of praise, dwell on these things.

So you can see that when I am reading, my goal is to work on my character. I want to have feelings about things that are appropriate for a Christian man.

So why military history? Here are three reasons why I read these military history books.

Humility

First, **humility**. Humility used to be one of my biggest challenges. So I thought to myself "instead of seeing yourself as some heroic figure, why don't you read about some real heroes… people who willingly gave their lives for their friends, like the Bible urges, and like Jesus did by example".

Remember this from John 15:13?

13 Greater love has no one than this, that one lay down his life for his friends.

Military history is filled with stories of courage, bravery, self-sacrifice, endurance, unselfishness, and many other virtues. When you read about people who are better than you, doing more important things than what you're doing, it really helps you to be humble.

The best thing for humility is reading Medal of Honor citations. You can find a bunch of them online here. And if you want a book to read, try these books about Medal of Honor recipients:

- Heroes of World War II

- Korean War Heroes
- Vietnam Medal of Honor Heroes

Endurance

Second, **endurance**. I sometimes feel badly about not having found someone to marry and not having lots of children. I wanted a good marriage to be a model for others, and also to have an influence in the next generation through my children. However, whenever I read military history, I see a lot of young men dying in battle. And I think, they too won't know what sex is like. And, they too won't know what marriage is like. And, they too won't know what having children is like. But it's not just the ones who die, it's the hardships they have to go through, as well. Cold, hunger, imprisonment, pain, loss of their friends, etc.

I remember reading about one of my favorite battles – probably the most famous battle of the Korean War, which is our most moral war. It's about Fox Company of the 2nd Battalion, 7th Regiment, 1st Marine Division. They had to hold a hill beside a vital road against overwhelming numbers of Chinese soldiers during the freezing cold North Korean winter. I remember reading about how one soldier got up to go to the bathroom, and was nearly shot by a sniper. He fell over on his own poop, which had already frozen by the time it hit the ground. For months after, I would always think about this whenever I went into a bathroom. We have pre-warmed water in our bathrooms at work, along with soap, lysol spray, febreeze, contact lense cleaner, hand sanitizer, and other things. Just understanding what other people have to go through in war helps me to be more patient with the little tiny setbacks that I experience. I used to get very anxious when anything went wrong, because of I was raised by strict immigrant parents. That anxiety seemed to last a long time, but since I started to read military history, I've been much more patient. I know that things could be worse.

Thankfulness

The third thing that I've experienced is **thankfulness**. Not just for all the things that I have because of what our armed forces have done, e.g. – basic human rights, prosperity, liberty, security, etc. But also specifically about those who gave their lives so that I could live free in a free country, and practice my Christian faith without fear.

Here are two of my favorite Medal of Honor stories from World War 2, in the Battle of Pearl Harbor:

Congressional Medal of Honor
Awarded Posthumously
PETER TOMICH

Rank and organization: Chief Watertender, U.S. Navy.
Place and date: Pearl Harbor, 7 December 1941.
Born: 3 June 1893, Prolog, Austria.

Although realizing that the ship was capsizing as a result of enemy bombing and torpedoing, Tomich remained at his post in the engineering plant of the U.S.S. Utah, until

he saw that all boilers were secured and all fireroom personnel had left their stations, and by so doing lost his own life.

And:

Congressional Medal of Honor
Awarded Posthumously
JAMES RICHARD WARD

Rank and organization: Seaman First Class, U.S. Navy.
Place and date: Pearl Harbor, 7 December 1941.
Born: 10 September 1921, Springfield, Ohio.

When it was seen that the U.S.S. Oklahoma was going to capsize and the order was given to abandon ship, Ward remained in a turret holding a flashlight so the remainder of the turret crew could see to escape, thereby sacrificing his own life.

I do think that it's important for Christians to read these kinds of stories in order to feed their own awareness of what it must have been like for Jesus to give his life *voluntarily* for us.

There is no shortcut to gratitude. You have to constantly reflect on the sacrifices made by others for you, if you are to have any concrete reason for feeling grateful. The more you read about examples of people giving their lives for others, the more you'll appreciate what Jesus did for you. It will make you grateful.

There is a very annoying idea out there in the culture that says that people just do whatever is easy and fun for themselves, and since everyone else is always doing what makes them feel good, then there is no need to be thankful for anything. It's comforting for people to delude themselves with that belief, but it's false.

My reading list

You can check out the "What I am Reading" section of the blog to see which military history books I've been reading.

Paternity fraud case shows how pro-marriage conservatives see men as expendable

November 24, 2023 | by Wintery Knight | Link | Original Link

When terrible things happen to men in this society, you often get comments from people saying “well, it’s his fault, he chose a bad woman”. And I agree that men often make poor choices because they focus on attraction instead of on character. But what if a man is an innocent bystander, and is falsely accused by a woman he doesn’t even know? Is it still his fault then?

Here is the news story from Fox 2 Detroit.

Excerpt:

> A Metro Detroit man cleared his name after Friend of the Court sent him a letter saying he had a baby with a woman he never met.
>
> “She don’t know me, how do you just put my name down? How do you just put anybody’s name down?” DeAngelo Smith said. “I don’t know her. Never seen her. Still to this day, haven’t talked to her, and it just proves the baby has no ties to my name.”
>
> Late last year, DeAngelo received a letter from Friend of the Court in Berrien County saying that he was the father of a baby girl.

His wife was the first to see the accusation:

> His wife first spotted the letter in the mail from Friend of the Court.
>
> “Let’s just set the record, I trust my husband,” Tyahvia Smith said. “I know his character, man of integrity.”

They contacted his employer:

> While waiting for the child’s mother to take the baby for a DNA test, DeAngelo said the school where he teaches received an inquiry for possible garnishment in case the child was his.
>
> “It made it something that is not being alleged, but now it’s something that’s being taken into action and no paternity has been established,” he said.
>
> Finally, the woman had the DNA test done, and DeAngelo has since gotten a letter confirming he was not the father.

Legislation introduced by Republican Jim Runestad to prevent this from happening has been tied up for eight years… in a Republican-led legislature:

> “It’s very unfortunate, but paternity fraud is not a unique, unusual situation in Michigan,” Sen. Jim Runestad (R-White Lake) said.
>
> Runestad said he has been pushing for new legislation on the matter for the past

> eight years. Currently, there is no penalty for lying and a DNA test is not required before a person is contacted about the paternity of the child.

The fact that there are no consequences for doing this means that women are going to keep doing it again and again.

Does masculinity mean that a man should give a woman whatever she wants?

I sent this story to a conservative pro-marriage friend, and she said "So what? How many times does something like this happen?" Her only concern was that this story made women look bad. She had previously told me that "masculinity is when a man uses his strength to protect and provide for women". So, then it is just "masculine" for this innocent man to pay for a child who isn't his own. Why would he object to paying? Does he not like children?

Most people today like the changes that feminism has made for women. They like public schools run by women that discriminate against boys. They like women taking out huge student loans for useless non-STEM degrees, then demanding bailouts from taxpayers. They like women taking part in hook-up culture. They like women using no-commitment bad boys for validation. They like no-fault divorce laws. They like false accusations during divorce trials. They like biased domestic violence laws. They like paternity fraud. They like massive welfare spending designed to reward women who make reckless decisions. And they like feminist judges stripping fathers of parental rights for refusing to agree with the transing of their kids.

Men are expendable when it comes to creating greater happiness for women. So what's wrong with sending a man a bill for a woman who needs some money for a child that isn't his? It's horrible to tell a woman that she can't do what she feels like doing. It's horrible to tell a woman that she has to pay the costs of her own actions. Just make a man pay for it. Men are big and strong, they can handle it. And besides, women never tell lies. We have to believe all women. We have to force men to make women happy. That's "masculinity".

Society pressures men to get married

This "believe all women" attitude that is shared by many Christians and conservatives becomes a problem for men when men are pressured to get married. This society makes marriage a risky enterprise for men. And men have to understand that this pressure to get married is often coming from people who see men as expendable in the cause of increasing women's happiness. The person telling you to get married is often the same person who thinks that a DNA test shouldn't be performed in a paternity case.

Men have to understand that the command to "get married" is coming from pro-marriage activists who think that men exist solely to make women happy. Who cares about the risks and costs of marriage for men? Who cares about men's needs and desires? Who cares what reasons a man has for marrying? Who cares about a man's standards for his wife? Who cares about a man's plan for his marriage? He should just be pressured to get married. Just like the falsely accused paternity fraud victim should have to pay.

It's not the purpose of men's lives to get married and have kids

Always remember that according to the Bible, serving God is *more honorable* than getting married and having children. (Read 1 Cor 7:8-9 and 2 Tim 2:4) Many social conservatives try to guilt men into getting married and having children by denying the risks and costs of marriage for men. They think that Christianity's main purpose is to force men to make women happy, regardless of what women offer to men in exchange. That's the actual view of several of my social conservative Christian friends.

Men are designed to serve God first and foremost. And it's much easier to serve God if you are not encumbered by alimony, child support, false accusations, denial of due process, paternity fraud, feminist judges, etc. Only women who honor that obligation, and want to help a man to meet that obligation, should be taken seriously for marriage and child-rearing.

Evangelical Christian college fires professor for taking Biblical position on homosexuality

November 25, 2023 | by Wintery Knight | Link | Original Link

When I was a pretty new Christian in college, I joined Intervarsity Christian Fellowship. While getting to know the other young Christian students, and the progressive feminist IVCF student leader, I suddenly realized that not everyone who called themselves a Christian really believed the Bible. In my case, problems arose over the doctrine of Hell, sexual morality and evidential apologetics.

This was my first exposure to a Christian organization that was not rigorous about the Bible. I would try to get them to bring in apologetics professors to talk about science and history, but they kept insisting on prayer walks and testimonies. This was one of the experiences that let me to do my Christian work using an alias. I began to think "what if these progressive Christians get into power, and they get offended by my conservative views?"

And that's what happened to this professor, who tweeted out Biblical views under his own name. He must have thought he was safe working for an evangelical Christian college. But he was not.

Premier Christianity UK reports:

> I was recently dismissed for misconduct by Cliff College, an evangelical Methodist Bible college where I had worked as a lecturer and programme lead for seven years. The misconduct referred to my now-infamous tweet…
>
> […]A Twitterstorm quickly ensued. Aggressively pro-LGBT advocates attacked me as homophobic and hateful, pressurising the college to sack me. The college swiftly and publically denounced my tweet as "inappropriate" and "unacceptable". They later asked me to remove it. When I said I couldn't do that in good conscience, I was suspended and later dismissed for "bringing the college into disrepute".

He wrote this, which I found very interesting:

> One woman, a Soviet-born émigré now teaching at a US university, said: "You have no idea what completely normal things you do today, or say today, will be used against you to destroy you. This is what people in the Soviet Union saw. We know how this works."

I came from another country to the United States, and I saw Christians being persecuted by the secular left government for the things they had said and done. That's why I left.

Cliff College describes their organization this way:

> Cliff College provides theological education and training with a particular focus on

> mission and evangelism.
>
> Cliff College has a long and rich heritage of providing Bible training to people from diverse backgrounds, for mission and evangelism.
>
> Since the beginning, we have sought to provide biblical, evangelical training that is both relevant and forward-thinking, with an emphasis on scriptural holiness.

"Scriptural holiness". It makes you laugh to read it.

And:

> Cliff College is an evangelical learning community which is rooted in God's Word and Spirit, for the purpose of equipping God's people for practical ministry and cutting-edge missional engagement.
>
> The education we offer at Cliff is theology for the real world – rooted in practice, forged in community, grounded in the authority of Scripture and consistently prompting us to face outwards. We proclaim the Gospel and invite everyone to experience the life-changing transformation of a relationship with Jesus Christ.

When the authority of Scripture comes up against the secular left culture, Cliff College sides with the culture.

Calvin Robinson

There was another story out of the UK that you might now have heard about – the story of Calvin Robinson.

Here's the story from Church Times UK:

> A CONSERVATIVE media commentator, Calvin Robinson, has said that his ordination in the Church of England was blocked, owing to his political views.
>
> Mr Robinson was due to be ordained deacon in the autumn. Without a title post, ordination cannot take place, and, in an article for the Mail on Sunday, he alleges

> that the offer of a part-time post as assistant curate of St Alban the Martyr, Holborn, in London, was withdrawn, after several bishops had expressed concerns about his outspoken views.

I thought this was interesting – a progressive white woman told the conservative black man what he should think about racism:

> In February 2020, the Archbishop of Canterbury told the General Synod that the Church was still "deeply institutionally racist" (News, 11 February 2020).
>
> […]Mr Robinson, who is black, wrote on Sunday that he "fundamentally disagreed with this approach", and described it as "divisive and offensive".
>
> "I do not think the claim that either the Church, or wider society, is institutionally racist has ever been supported by robust evidence," he wrote.
>
> Mr Robinson says that, in a meeting with [the Bishop of London, the Right Reverend Sarah] Mullally, she said to him: "Calvin, as a white woman, I can tell you that the Church is institutionally racist."

What I'd like to see from Christians is seriousness about the need to find a career where your views can be kept secret from nosy progressives like the Bishop of London, the Right Reverend Sarah Mullally. My goal in life is to never have my Christian activities be subject to the authority of the Bishop of London, the Right Reverend Sarah Mullally. Or an employer like her. Or a judge like her. Or a pastor like her. One of the reasons why Christians don't stand up to the secular left is because we make too many friends, and then we conform our speech to these friends, in order to be popular.

Alistair Begg preaches on practicality and initiative in the story of Ruth

November 26, 2023 | by Wintery Knight | Link | Original Link

I finished listening to Alistair Begg's series on Esther, and I'm now on to his series on Ruth. Sermon #3 stood out to me, because it touches on the important issues of free will vs determinism as well as the two methods of seeking God's will: mysticism vs wisdom.

The discussion centers around Ruth's decision to go to the barley fields to work, in order to get something to eat.

Here is the description:

> When we're facing a future devoid of prospects or possibilities, it's easy to become overwhelmed and discouraged. Ruth could relate. She was a penniless widow in a foreign land seeking a way to provide for herself and her widowed mother-in-law. Her future was totally dependent upon someone showing her unmerited grace and favor. Instead of giving up, she gives us an example of humility, initiative and faith as she seeks work and sustenance.

As things in the world spin out of control, it's important to remember that you must always have a plan and be working on that plan. Even when things look very bleak, you have to do something reasonable and practical, and then pray to God for "favor". That God will do something unexpected that will make your reasonable action bear unexpected fruit.

If you want to listen to sermons #1 and sermon #2 in the series on Ruth, you can find the whole series here. So far, I have listened to 5. The first two were also very good, so if you listen to the first 3, you will definitely benefit. Each one is 35 to 40 minutes.

Reason #736 why men are opting out of dating and marriage: paternity fraud

November 27, 2023 | by Wintery Knight | Link | Original Link

Statistics show that men are choosing to disengage from dating and marriage. There are many reasons for this. I can name a dozen. One of the reasons is "paternity fraud". Paternity claims occur when a woman has a child, and then tries to collect child support from a man by claiming that he is the father. Sometimes, the man she identifies as the father is not the actual father. This is "paternity fraud".

Before I get started on paternity fraud, let me explain how child support works today, from this article in USA Today:

> The most well-known case was of a Kansas boy who, at age 13, impregnated his 17-year-old baby-sitter. Under Kansas law, a child under the age of 15 is legally unable to consent to sex. The Kansas Supreme Court in 1993 ruled that he was liable for child support.
>
> California issued a similar state court ruling a few years later in the case of a 15-year-old boy who had sex with a 34-year-old neighbor. In that case, the woman had been convicted of statutory rape.
>
> In both cases, it was the state social-services agency that pursued the case after the mother sought public assistance.
>
> […]In Arizona, the Department of Economic Security oversees child–support enforcement. Its written policy is not to exempt situations like Olivas' from child-support responsibilities, unless the parent seeking child support has been found guilty of sexual assault with a minor or sexual assault.
>
> […]The state has more routes than the courts to acquire money from a parent. It can garnishee wages up to 50 percent of disposable income. It can take a tax refund. It can put a lien on a home or a vehicle. It can suspend driver's licenses or revoke passports. And it can seize money out of bank accounts.

And another one from Fox 2 Detroit:

> A Metro Detroit man cleared his name after Friend of the Court sent him a letter saying he had a baby with a woman he never met.
>
> […]Late last year, DeAngelo received a letter from Friend of the Court in Berrien County saying that he was the father of a baby girl.
>
> "Said she's a stripper from Detroit, we had a one-night stand at some hotel, and this is the story that was told to me," DeAngelo said.
>
> His wife first spotted the letter in the mail from Friend of the Court.
>
> "Let's just set the record, I trust my husband," Tyahvia Smith said. "I know his

> character, man of integrity."
>
> While waiting for the child's mother to take the baby for a DNA test, DeAngelo said the school where he teaches received an inquiry for possible garnishment in case the child was his.
>
> "It made it something that is not being alleged, but now it's something that's being taken into action and no paternity has been established," he said.
>
> Finally, the woman had the DNA test done, and DeAngelo has since gotten a letter confirming he was not the father.

The request for money comes to the man's employer first, the DNA test comes later, and only if the man fights the system to get it.

I show these cases, so that people will understand what men are facing from social services agencies and courts. Basically, in cases where a woman statutory rapes a man, she is still entitled to child support from the victim of the rape. One can imagine the uproar if the sexes were reversed. The laws are anti-male in many ways, this is just one example. Anti-male laws deter men from dating and marrying women.

Now let's look at paternity fraud, another example of anti-male bias in the legal system.

Here's a story about it from CBS News Detroit:

> A Detroit man has been ordered to pay $30,000 in back child support for his ex-girlfriend's child — even though he's not the father.
>
> Carnell Alexander brought his case to Wayne County Circuit Court with hopes for a fix. Instead, Judge Kathleen McCarthy told him Tuesday he waited too long to challenge the situation and "failed to take this matter seriously."
>
> Alexander said the paternity case started in the 1980s when the woman gave his name to a case worker so she could get assistance for her baby, who was born in 1987.
>
> The woman agrees that Alexander wasn't the father and a DNA test taken in 2013 backs that up. But that wasn't enough to sway McCarthy, who ruled that despite the case being decades old, Alexander still has to pay.

Here's another story of paternity fraud from NBC News Miami:

> A man in North Florida is fighting the state after he was told to pay child support despite DNA tests proving that he was not the father.
>
> Joseph Sinawa told NBC affiliate WTLV-TV that he signed the birth certificate because he did truly believe he was the father – adding that the mother of the child doesn't want him to have to pay, but the state is forcing the issue.
>
> "She told the judge she just wants this to be done and over with, and so do I," he said from his home in St. Augustine.
>
> Sinawa found out he was not the father after the DNA test was administered by a St. Johns County court following a custody question – but the state's Department

> of Revenue appealed the decision because they say Sinawa has not properly attempted to disestablish paternity.
>
> “At the time it had been taking $83 out of my paycheck, more than 1/3 of my pay,” he says. “When I thought I was the father I didn’t have a problem with it.”
>
> Sinawa is currently representing himself in court cases due to financial issues and has filed the necessary paperwork, but no time table has been set and it is unknown if he will be refunded any of the money spent.

According to this study in the peer-reviewed journal Epidemiology & Community Health, the median rate of paternity fraud across various studies is 3.7%:

> Paternal discrepancy (PD) occurs when a child is identified as being biologically fathered by someone other than the man who believes he is the father. This paper examines published evidence on levels of PD and its public health consequences. Rates vary between studies from 0.8% to 30% (median 3.7%, n = 17).

Even men who are not at risk for paternity fraud understand the lesson of paternity fraud. The courts are anti-male, and men need to stay well clear of those courts. And that means minimizing exposure to those courts. And that means keeping to themselves, and tending to their own problems and pursuing their own goals.

Men are getting smarter now. Men understand that society does not have their interests at heart. Now men want to be left alone.

Study: sentences are 63% more severe for men than for women

November 28, 2023 | by Wintery Knight | Link | Original Link

So, in response to yesterday's post, I have been asked what are some of the other reasons that cause men to become disinterested in dating and marriage. I have a list as long as my arm. But here's another one for today. Today's reason is that the legal is system is biased against men. There many examples of the bias, but I'll focus on sentencing.

The study I want to talk about today is called "Estimating Gender Disparities in Federal Criminal Cases", and it's published in the peer-reviewed journal "*American Law and Economics Review".*

The abstract says this:

> This paper assesses and decomposes gender disparities in federal criminal cases. It finds large unexplained gaps favoring women throughout the sentence length distribution, conditional on arrest offense, criminal history, and other pre-charge observables. Decompositions show that most of the unexplained disparity appears to emerge during charging, plea-bargaining, and sentencing fact-finding. The approach provides an important complement to prior disparity studies, which have focused on sentencing and have not incorporated disparities arising from those earlier stages. I also consider various plausible causal theories that could explain the estimated gender gap, using the rich dataset to test their implications.

The key sentence there is "It finds large unexplained gaps favoring women throughout the sentence length distribution, conditional on arrest offense, criminal history, and other pre-charge observables."

I also found this paragraph interesting:

> The estimated gender disparities are strikingly large, conditional on observables. Most notably, treatment as male is associated with a 63% average increase in sentence length, with substantial unexplained gaps throughout the sentence distribution.

This anti-male discrimination becomes apparent to men when they are going through the divorce process.

About 70% of divorces are initiated by women, and most of them for frivolous reasons (reasons that were not recognized as valid in the law prior to "no-fault-divorce" being enacted). The reasons are also not recognized in the Bible. Throughout the divorce process, men encounter anti-male bias. This begins with the common use of false accusations against the man, in order to get sole custody, which provides the woman

with greater child support payments from the man. These false accusations are usually not based on any evidence, such as police reports. They just emerge during the divorce proceedings and are used to eject the man from the home, and get the woman sole custody of the kids. In 90% of cases, the woman gets sole custody of the kids. And this is despite the fact that single-father homes have similar outcomes for children as married two-parents homes. The results of single-mother homes are disastrous for children in many areas, including poverty, crime, mental health, sexual activity, etc. But the court system insists on doing what is worse for children by separating the father from the child. Even the meager visitation rights that fathers get are not enforced.

Failure to pay alimony and child support can land men in prison. And the laws are enforced very unfairly there, as well. Consider this case from Canada:

> A wealthy businessman will have to pay more than $50,000 a month in spousal support for 10 years to a woman with whom he had a long-term romantic relationship even though they kept separate homes and had no children together, Ontario's top court has ruled.

Seeing this, many men today have declined to participate in dating and marriage. And I could come up with *dozens* more reasons like this one. Based in peer-reviewed studies. It's not one reason deterring men from marrying, it's dozens of reasons. In every case, society has decided that men are expendable. And sadly, the church has largely ignored the root causes of men's retreat from dating and marriage. The church simply has nothing at all to say to men who are faced with these risks, costs and disincentives.

When I explain these problems to pro-marriage conservatives, they confess to never having heard about any of these issues. They say "I just like the idea of people falling in love and having lots of cute babies". They haven't really bothered to think about the calculations that men run before deciding what to do with women. Maybe it's time for Christian leaders to do a little more homework about these issues. Maybe there is something Christian churches can do to make marriage a bit more appealing to men.

We are already seeing this happening in conservative states like Florida and Tennessee. In Florida, there are new laws requiring that child custody be 50-50 in most circumstances. This acts as a deterrent against women who want to file frivolous divorces just to get child support from wealthy men. Florida also banned permanent alimony, which is another positive step to make marriage more fair for men. (Although many women in Florida were furious about it). In Tennessee, it is now a misdemeanor to claim child support payments from a man who is not the biological father of the child.

These are the kinds of policy solutions that will bring marriage back. But I've never heard Christians talking about these issues. All I ever hear from pious Christian leaders is that men need to "man up", as if manning up makes the threats from feminist laws and courts disappear. It doesn't work, but it does signal virtue, which seems to be the goal of many pious Christian leaders. We're going to have to do better than virtue-signaling if we want to reverse the decline of marriage. It's not going to be solved by shaming and blaming

men.

Good news: Tennessee's governor to push for universal school choice

November 29, 2023 | by Wintery Knight | Link | Original Link

If I had to pick one of the biggest sources of evil today, I would pick the public school system, especially the administrative staff and the teacher unions. Unfortunately, even in red states, it can be hard to fight back. One of the red states that seemed to be very committed to the status quo is Tennessee. But that's all about to change, and their moderate conservative governor Bill Lee is on board.

Here's the story from Fox News:

> Republican Tennessee Gov. Bill Lee is launching an ambitious effort to take school choice statewide on Tuesday, and he'll have some company for the announcement in Nashville.
>
> With Arkansas Gov. Sarah Huckabee Sanders in tow, along with supportive legislators and families, Lee is announcing the Education Freedom Scholarship Act, which his office says will "extend school choice to every family across rural and urban Tennessee communities, putting parents at the forefront of their child's education" and giving them all access to the best school for them. Sanders signed an expansive school choice voucher bill into law for Arkansas in March, calling it a "transformational education plan."
>
> "When I ran for Governor, I said every Tennessean deserves access to a good job, a great school, and a safe neighborhood," Lee told Fox News Digital in a statement. "We've made great strides in education, but there is more work to do. To ensure Tennessee continues to lead the nation, it's time for a statewide school choice plan that empowers parents, equips students for success, and allows Tennessee taxpayers to decide how their own dollars are invested."

Usually, when conservatives want to get rid of welfare or trim down a government monopoly, they try to put the money and the responsibility to decide back in the hands of taxpayers. Leftists don't trust taxpayers to know how to choose – they want the government to decide. Conservatives trust taxpayers to know what to choose.

And that's the approach Tennessee is taking:

> "The Education Freedom Scholarship Act will empower Tennessee parents with the freedom to pick the right school for their child, while giving families a choice where their taxpayer dollars are spent," according to a memo obtained by Fox News Digital.

"Universal eligibility" means everyone is going to be included:

> The proposal could change during the legislative process, but Lee's plan calls for 20,000 scholarships to be made available to Tennessee students, including

> “10,000 scholarships for students who are at or below 300% of the federal poverty level, have a disability, or are eligible for the existing pilot program,” and an additional 10,000 scholarships “available to a universal pool of students entitled to attend a public school,” according to the governor’s office.
>
> They would get a little more than $7,000 in vouchers for the 2024-25 school year, with eligible expenses including private school tuition, fees, and uniforms required by the private school, textbooks, curricula, and instructional materials required by the private school, tutoring services, and computer hardware. By the following school year, the proposal would have “universal eligibility for all Tennessee students entitled to attend a public school, prioritizing currently enrolled students, low-income and public school students if demand exceeds available funding.”

In my opinion, Tennessee is the best state in the union, maybe tied with Florida for first place. If you are a Republican living in some other state, then what’s holding you up from moving to Tennessee or Florida? You don’t have to live in a big city. You just need to make sure that your tax money goes to people who trust you to decide. You just need to make sure that the police and judges are there to serve you. Why would you be content to live in a state that takes the money you earn and spends it, because they don’t trust you?

Florida Gov. Ron DeSantis to debate California Gov. Gavin Newsom tonight

November 30, 2023 | by Wintery Knight | Link | Original Link

The debate between DeSantis and Newsom will take place on Fox News at 9 p.m. Eastern on Thursday, Nov. 30.

I'll be watching using this link. (I don't have cable)

Washington Examiner explains why this will be a better debate than the other presidential debates:

> One man has made cutting carbon emissions his state's top policy priority. The other has prioritized energy production.
>
> One made his state the most welcoming sanctuary jurisdiction for migrants from all over the world. The other signed one of the nation's strictest anti-illegal immigration laws ever.
>
> One oversees a state higher education system that has abandoned standardized tests and embraced mandatory diversity, equity, and inclusion loyalty oaths. The other is fighting the higher education cartel and returning academic standards to classrooms.
>
> The substantive policy contrasts between California Gov. Gavin Newsom and Florida Gov. Ron DeSantis couldn't be starker. Both men not only represent the future of their respective parties, but both also have track records guiding their states in new directions.
>
> Newsom versus DeSantis is a debate our country needs right now. Do we keep mandating more expensive cars, homes, and appliances while also prohibiting energy production from record amounts of public land? Or do we let people drive the cars they want, build the homes they want, and produce the energy they need to make a good life affordable for all?
>
> Do we keep our southern border open, releasing every migrant who claims asylum into the country — most of the claims are without merit — bankrupting cities from Denver to New York? Or do we return illegal immigrants to Mexico, eliminating the incentive that is causing a historic wave of mass migration across the hemisphere?
>
> These are big questions that our political debates should be focusing on.

Basically, when you watch Nikki Haley and Vivek Pharmaswampy, you're looking at people who haven't got the achievements that allow us to know what they would really do. DeSantis has conservative achievements by the dozen. Newsom is the same on the leftist side. Lots of actions, lots of leftist results. Elections should be about results vs results. Not about zingers, insults, clothing, make-up, etc. After all, we have to live with

results.

Who won the Governor debate? Florida's Ron DeSantis vs California's Gavin Newsom

December 1, 2023 | by Wintery Knight | Link | Original Link

I watched the entire debate, and I thought it was FAR better than debates put on by the corporate news media. The strength of the debate was that they focused on evidence related to a number of interesting topics. The moderator would show a slide comparing the two states on some data: unemployment, crime, etc. And then they would discuss it. In this post, I link to a review and some clips.

First the review, from Daily Signal.

Here is the section on COVID:

> DeSantis and Newsom had a lenghty exchange on COVID-19 lockdowns while discussing the economy in their respective states.
>
> When DeSantis was discussing how businesses were doing better in Florida, Newsom interjected by asking if that was the opinion of Disney.
>
> "That's an interesting point with Disney because I had Disney open during COVID and we made them a fortune and we saved a lot of jobs," DeSantis said. "You had Disney closed inexplicably for over a year, you were not following science, you were a lockdown governor, you did a lot of damage to your people."

At one point, Newsom tried to deny the evidence that the moderator presented for discussion. Newsom just assert that Florida was worse than California. DeSantis replied to his assertion with a peer-reviewed study from the medical journal The Lancet that showed that Florida had a lower standardized death rate than California. This sort of exchange happened throughout the debate, with Newsom denying the evidence, making assertions with no support, and then DeSantis refuting him with evidence.

Here's a clip:

Here's another section of the article, about border security:

> The two governors had sharply contrasting views on the border. Newsom accused DeSantis of being heartless toward illegal immigrants and DeSantis said that the policies of Newsom and fellow Democrats were creating dangerous lawlessness in America.
>
> Newsom defended the Biden administration's record on the border, which has seen record numbers of illegal immigrants cross in every year of Joe Biden's presidency.
>
> […]He then criticized DeSantis for sending a group of illegal immigrants to Martha's Vineyard, a wealthy area and popular vacation spot in Massachusetts.
>
> DeSantis said that Newsom was spreading a "flurry of lies." He pointed to the

> Biden administration's reassurance that the border is "secure" and said "they are lying to you, we know that's not true."
>
> The Florida governor pointed out that "California is a sanctuary state" and said that "they thumb their nose at federal immigration law."
>
> DeSantis explained that this status has consequences. He brought up a story of Los Angeles refusing to cooperate with Immigration and Customs Enforcement in the case of an illegal immigrant with multiple arrests.
>
> "He ends up murdering the mother of a three-year-old little girl," he said. "Those policies are deadly, they do not work."
>
> He also said that Matha's Vineyard is a sanctuary jurisdiction.
>
> "These liberal elites, they like to impose those burdens on you, they don't want to have to face the consequences," DeSantis said.

Here's a clip:

The article also has a section on teachers sexualizing children with LGBT pornography in the schools:

> First, he asked DeSantis if schools should be focusing on reading, writing, and math instead of getting into issues around social values.
>
> DeSantis said that it wasn't appropriate for schools to indoctrinate children, but it's also important to respect parental rights and eliminate inappropriate material from classrooms.
>
> He held up a page from a book called "Gender Queer" that depicted sex acts.
>
> "Some of it's blacked out, you would probably not be able to put this on air, this is pornography, it's cartoons that's aimed at children, and it's wrong," he said.
>
> Hannity asked Newsom if he was comfortable with books like "Gender Queer," which depict sex acts, in school districts.
>
> […]The California governor called the removal of books from classrooms a "cultural purge."
>
> […]DeSantis responded by saying that California's schools are being used to "impose a liberal agenda."
>
> "He says California respects parents' rights, this is rich," DeSantis said. "He's been telling a lot of whoppers tonight, this may be the biggest."
>
> He then spoke about California's education policies.
>
> "In California, if you're a parent in Iowa and New Hampshire, your child can go to California without your knowledge and without your consent and get hormone therapy, puberty blockers, and a sex change operation all without you knowing or consenting," DeSantis said.
>
> He called the policy fundamentally "radical" and "extreme."
>
> "It's not for you to decide, it's for parents to decide," the Florida governor said

> while pointing to Newsom.

Here's a clip: (more evidence)

And another clip:

Finally, the article had a section on homelessness.

> Newsom said that the issues has been "decades" in the making in California since the sate started shutting down mental health institutions. He said he was the first governor in the country to tackle the issue "head on."
>
> […]DeSantis then held up a map of San Francisco that showed incidents of feces and human waste being reported on the street.
>
> "This is an app where they plot the human feces that are found on the streets of San Francisco, and you see how almost the whole thing is covered, because that is what has happened in one of the previous greatest cities this country has ever had," he said.
>
> DeSantis said that feces on the street has become a fact of life in San Francisco, except "when a dictator comes to town."
>
> He was referring to a recent visit by China's leader Xi Jinping.
>
> "Then they cleaned up the streets, they lined the streets with Chinese flags, they didn't put American flags there, they cleaned everything up," DeSantis said. "So they're willing to do it for a communist dictator, but they're not willing to do it for their own people."

And the clip: (more evidence)

And here is DeSantis' concluding speech:

If you missed the debate, it was well worth watching. At least the people debating had to stick to policy and evidence.

Gavin Newsom's wife gets on stage to stop the fight

I thought that this report from NBC News that Gavin Newsom's WIFE ended the debate, even after both debaters wanted to stay on and extend the debate, was interesting:

> What the audience didn't see — and what at least five sources shared with NBC News — is that off-screen, there were significant disagreements happening. The DeSantis and Newsom teams were both arguing that the other side was breaking the rules that were agreed upon in advance — particularly keeping distance between the candidates and their guests.
>
> According to four sources in the DeSantis camp — one who witnessed the moment in the room and three others who were standing backstage (where there was no press or live studio audience) — Newsom's wife, Jennifer Siebel Newsom, came into the debate room on at least two occasions to raise some objections.

> She also made her way to the stage during the break after the candidates agreed to extend the debate and put an end to it.
>
> A fifth source on the ground, unaffiliated with either campaign, confirmed that Siebel Newsom ended the debate on her husband's behalf, saying, "We're done."
>
> "Gavin Newsom got beat so badly last night his wife literally had to throw in the towel for him. It was embarrassing," DeSantis spokesman Andrew Romeo said.

To me, it looks like her husband was getting beaten like a rented mule, and she wanted to stop the bleeding.

NBC News report: Newsom’s wife ended his debate with Ron DeSantis prematurely

December 1, 2023 | by Wintery Knight | Link | Original Link

I thought that this report from NBC News (archived) that Gavin Newsom’s WIFE ended the debate, even after both debaters wanted to stay on and extend the debate, was interesting:

> What the audience didn’t see — and what at least five sources shared with NBC News — is that off-screen, there were significant disagreements happening. The DeSantis and Newsom teams were both arguing that the other side was breaking the rules that were agreed upon in advance — particularly keeping distance between the candidates and their guests.
>
> According to four sources in the DeSantis camp — one who witnessed the moment in the room and three others who were standing backstage (where there was no press or live studio audience) — Newsom’s wife, Jennifer Siebel Newsom, came into the debate room on at least two occasions to raise some objections.
>
> She also made her way to the stage during the break after the candidates agreed to extend the debate and put an end to it.
>
> A fifth source on the ground, unaffiliated with either campaign, confirmed that Siebel Newsom ended the debate on her husband’s behalf, saying, “We’re done.”
>
> “Gavin Newsom got beat so badly last night his wife literally had to throw in the towel for him. It was embarrassing,” DeSantis spokesman Andrew Romeo said.

To me, it looks like her husband was getting beaten like a rented mule, and she wanted to stop the bleeding.

Gavin Newsom Wife Ends His Debate With DeSantis Early

Let’s see some clips from the debate. If you only have time for 1, then watch the bottom two clips, the poop map and California “freedoms”.

How many Nobel-prize winning scientists support intelligent design?

December 2, 2023 | by Wintery Knight | Link | Original Link

I think a lot of young people give up on design in the universe because they 1) don't know the evidence for design and 2) don't want to be considered to be stupid when confronted with intelligent atheists. For those people, it can be useful to point them to smart people who have worked through the evidence for design, and concluded that the universe (and life) is the product of design.

Here's the story from Evolution News:

> Earlier this week, John West reported on a major new exhibition on faith and science in Washington, DC, tackling the question of whether the Bible impeded or inspired the rise of modern science. (Judging from the historical record, "inspired" is clearly the correct answer.) In the article, he mentioned another Nobel Prize-winning scientist who endorsed the idea of an intelligent design behind the universe, using that phrase explicitly. This was news to me. He is physicist Arthur Holly Compton — see the slide above, which Dr. West shared from the exhibition.
>
> Compton's remark was, "The chance of a world such as ours occurring without intelligent design becomes more and more remote as we learn of its wonders." Interesting. He said that in 1940.
>
> […]Compton joins fellow Nobel Prize-winning physicists Charles Townes (UC Berkeley) and Brian Josephson (Cambridge University) who have likewise come out for ID as a legitimate interpretation of the scientific evidence. (Townes passed away in 2015.) To those names you could add two more, Sir John B. Gurdon (Nobel Prize in Physiology or Medicine) and Gerhard Ertl (Nobel Prize in Chemistry) who, along with Dr. Josephson, endorsed the Discovery Institute Press book by chemist and ID proponent Marcos Eberlin, Foresight: How the Chemistry of Life Reveals Planning and Purpose (2019).

In case you're wondering what intelligent design is, this simple article is pretty good:

> Intelligent design — often called "ID" — is a scientific theory which holds that some features of the universe and living things are best explained by an intelligent cause rather than an undirected process such as natural selection. ID theorists argue that intelligent design can be inferred by finding in nature the type of information and complexity which in our experience arises from an intelligent cause.
>
> Proponents of neo-Darwinian evolution contend that the information in life arose via blind, mechanistic processes that show no scientific evidence of guidance by intelligent design. ID proponents contend that the information in life does not

> appear to have an unguided origin, but arose via purposeful, intelligently guided processes. Both claims are scientifically testable using the standard methods of science. But ID theorists say that when we use the scientific method to explore nature, the evidence points away from blind material causes, and reveals intelligent design.
>
> The cell confirms our expectations from design. Our DNA contains incredible amounts of encoded information. Living cells transform this encoded chemical message into machines which are engineered to perform necessary biochemical functions. The conversion of DNA into protein relies upon a software-like system of commands and biochemical codes. This is an information processing system which Bill Gates has described as “like a computer program, but far, far more advanced than any software we’ve ever created.”

This short video is a good introduction for those who prefer to watch rather than read:

By the way, about that conversation with Josephson. I was walking in the hall with him, and discussing intelligent design. He said “it’s easy to explain complexes sequences that conform to a pattern. I could write a program that would generate the first 100 prime numbers in 3 lines of code.” I told him that I was a software engineer, and that I was familiar with what it takes to “write a simple program”. I said that he would need computer hardware, firmware, an operating system, a compiler, and something to run the program. “And that’s where you’re smuggling in your specified complexity”, I said. I don’t remember what he said, but I’m delighted that he came around eventually.

Study: children of naturally married couples outperform children of same-sex couples

December 3, 2023 | by Wintery Knight | Link | Original Link

Whenever I debate a controversial issue, I like to go straight to the studies in order to let the evidence speak for itself. Although it's difficult to convince someone on the opposite side to change their mind, usually people in the middle will side with the person who has evidence, instead of the person who is crying the loudest and telling anecdotal stories that may or may even not be true.

The Public Discourse reports on a study out of Canada.

Excerpt:

> A new academic study based on the Canadian census suggests that a married mom and dad matter for children. Children of same-sex coupled households do not fare as well.
>
> There is a new and significant piece of evidence in the social science debate about gay parenting and the unique contributions that mothers and fathers make to their children's flourishing. A study published last week in the journal *Review of the Economics of the Household*—analyzing data from a very large, population-based sample—reveals that the children of gay and lesbian couples are only about 65 percent as likely to have graduated from high school as the children of married, opposite-sex couples. And gender matters, too: girls are more apt to struggle than boys, with daughters of gay parents displaying dramatically low graduation rates.
>
> Unlike US-based studies, this one evaluates a 20 percent sample of the Canadian census, where same-sex couples have had access to all taxation and government benefits since 1997 and to marriage since 2005.
>
> While in the US Census same-sex households have to be guessed at based on the gender and number of self-reported heads-of-household, young adults in the Canadian census were asked, "Are you the child of a male or female same-sex married or common law couple?" While study author and economist Douglas Allen noted that very many children in Canada who live with a gay or lesbian parent are actually living with a single mother—a finding consonant with that detected in the 2012 New Family Structures Study—he was able to isolate and analyze hundreds of children living with a gay or lesbian *couple* (either married or in a "common law" relationship akin to cohabitation).
>
> So the study is able to compare—side by side—the young-adult children of same-sex couples and opposite-sex couples, as well as children growing up in single-parent homes and other types of households. Three key findings stood out to Allen:

> children of married opposite-sex families have a high graduation rate compared to the others; children of lesbian families have a very low graduation rate compared to the others; and the other four types [common law, gay, single mother, single father] are similar to each other and lie in between the married/lesbian extremes.
>
> Employing regression models and series of control variables, Allen concludes that the substandard performance *cannot* be attributed to lower school attendance or the more modest education of gay or lesbian parents. Indeed, same-sex parents were characterized by higher levels of education, and their children were more likely to be enrolled in school than even those of married, opposite-sex couples. And yet their children are notably more likely to lag in finishing their own schooling.
>
> […]The truly unique aspect of Allen's study, however, may be its ability to distinguish gender-specific effects of same-sex households on children. He writes:
>
> the particular gender mix of a same-sex household has a dramatic difference in the association with child graduation. Consider the case of girls. . . . Regardless of the controls and whether or not girls are currently living in a gay or lesbian household, the odds of graduating from high school are considerably lower than any other household type. Indeed, girls living in gay households are only 15 percent as likely to graduate compared to girls from opposite sex married homes.
>
> Thus although the children of same-sex couples fare worse overall, the disparity is unequally shared, but is instead based on the combination of the gender of child and gender of parents. Boys fare better—that is, they're more likely to have finished high school—in gay households than in lesbian households. For girls, the opposite is true. Thus the study undermines not only claims about "no differences" but also assertions that moms and dads are interchangeable. *They're not*.

With a little digging, I found the abstract of the study:

> Almost all studies of same-sex parenting have concluded there is "no difference" in a range of outcome measures for children who live in a household with same-sex parents compared to children living with married opposite-sex parents. Recently, some work based on the US census has suggested otherwise, but those studies have considerable drawbacks. Here, a 20% sample of the 2006 Canada census is used to identify self-reported children living with same-sex parents, and to examine the association of household type with children's high school graduation rates. This large random sample allows for control of parental marital status, distinguishes between gay and lesbian families, and is large enough to evaluate differences in gender between parents and children. Children living with gay and lesbian families in 2006 were about 65 % as likely to graduate compared to children living in opposite sex marriage families. Daughters of same-sex

> parents do considerably worse than sons.

The author of the study is a professor of economics at Simon Fraser University in British Columbia. His PhD in economics is from the University of Washington. A previous study had shown that gay relationships typically have far more instability (they last for more shorter times). That's not good for children either. Another study featured in the Atlantic talked about how gay relationships have much higher rates of domestic violence. That's not good for children either. So we have three reasons to think that normalizing gay relationships as "marriage" would not be good for children.

The reason I am posting this is because I want people to understand why social conservatives like me propose these laws defining and promoting marriage. We do favor natural marriage for the same reason that we oppose no-fault divorce, and for the same reason why we oppose welfare for single mothers (it encourages single motherhood). We don't want to encourage people to deprive children of their mother or their father. We look at the research, and we decide that children need their mother and father. Given the choice between the needs of the child and restraining the freedom of the adults, we prefer the child's need for her mother and father. It's not just arbitrary rules, there is a reason behind the rules.

But children are not commodities. They have certain needs right out of the box. Adults should NOT be thinking about how to duct-tape a child onto any old relationship that doesn't offer the same safety and stability that opposite sex marriage offers. We should be passing laws to strengthen marriage in order to protect children, not to weaken it. Libertarians don't want to do that, because they want adults to be free to do as they please, at the expense of children. Libertarians think that the adults should be able to negotiate private contracts and have no obligations to any children who are present, or who may be present later.

New study: children of same-sex parents have more emotional problems

December 4, 2023 | by Wintery Knight | Link | Original Link

I like to have all the research papers I need on hand to "show my work" to people who want to know why I have certain views on moral issues. This study entitled "Emotional Problems among Children with Same-Sex Parents: Difference by Definition" was published in the peer-reviewed journal "British Journal of Education, Society and Behavioural Science" is good research.

Here's what it says:

> Aims: To test whether small non-random sample findings that children with same-sex parents suffer no disadvantage in emotional well-being can be replicated in a large population sample; and examine the correlates of any differences discovered.

A big sample size makes the study more reliable:

> Methodology: Using a representative sample of 207,007 children, including 512 with same-sex parents, from the U.S. National Health Interview Survey, prevalence in the two groups was compared for twelve measures of emotional problems, developmental problems, and affiliated service and treatment usage, with controls for age, sex, and race of child and parent education and income. Instruments included the Strengths and Difficulties Questionnaire (SDQ) and the Kessler Scale of Psychological Distress (SPD). Bivariate logistic regression models tested the effect of parent psychological distress, family instability, child peer stigmatization and biological parentage, both overall and by opposite-sex family structure.

This is the key part. "Emotional problems were over twice as prevalent… for children with same-sex parents than for children with opposite-sex parents." That's not what you'll see on TV or in the corporate news media, but that's what you find if you're looking for peer-reviewed studies with good methodology and large sample sizes.

> Results: Emotional problems were over twice as prevalent (minimum risk ratio (RR) 2.4, 95% confidence interval (CI) 1.7-3.0) for children with same-sex parents than for children with opposite-sex parents. Risk was elevated in the presence of parent psychological distress (RR 2.7, CI 1.8-4.3, p (t) < .001), moderated by family instability (RR 1.3, CI 1.2-1.4) and unaffected by stigmatization (RR 2.4, CI 1.4-4.2), though these all had significant direct effects on emotional problems. However, biological parentage nullified risk alone and in combination with any iteration of factors. Joint biological parents are associated with the lowest rate of child emotional problems by a factor of 4 relative to same-sex parents,

> accounting for the bulk of the overall same-sex/opposite-sex difference.

And here's the conclusion:

> Conclusion: Joint biological parentage, the modal condition for opposite-sex parents but not possible for same-sex parents, sharply differentiates between the two groups on child emotional problem outcomes. The two groups are different by definition. Intact opposite-sex marriage ensures children of the persistent presence of their joint biological parents; same-sex marriage ensures the opposite. However, further work is needed to determine the mechanisms involved.

I blogged recently about another study that found other differences between the children of same-sex couples and the children of heterosexual couples.

From a public policy point of view, there are always going to be times where there is a conflict between the needs of small children, and the wants of selfish adults. In that case, I think we should side with the small children, since they are more vulnerable. It's alarming to me to see many "conservatives" put the desires of adults over the needs of children. That doesn't seem like a good position to take, morally speaking. Children do better when they are raised by a Mom and a Dad. We should pass laws to encourage grown-ups to live their lives in a way that they don't harm children.

Secular left woman mad because progressive men won't protect and provide

December 5, 2023 | by Wintery Knight | Link | Original Link

There is so much that I would like to say about the video below. For me, it really captures what feminism has taught women about men and relationships. Traditional male roles are: protect, provide, lead on moral issues, lead on spiritual issues. Well, young college-educated single women are certainly interested in protection and provision, but they have zero interest in male leadership.

First, here is the video:

So, this is a young, college-educated, progressive woman. She looks to be about 29 years old. She's probably been having a lot of fun in bars and night clubs, hooking up with hot guys and running up student loans for worthless non-STEM degrees. But 29 is the age when many young feminist women start to notice that their friends are getting married, and so they feel that it's time for them to "keep up" with their friends by also getting married.

The woman in the video doesn't want a man in order to help him with any of his problems. She doesn't want a man because she likes the way he leads her or makes decisions. She wants to get married because she wants to *help herself* to what a husband offers. Specifically, she wants to *help herself* to money, ability to repair a car, ability to renovate a house, vacations, travel, social respectability, social status, etc. That's what she wants. She doesn't want obligations to a man or obligations to children. She wants what a man and children to *benefit her.*

So, what this woman in the video is really asking for is two of the four traditional male roles. She wants a man to do protecting and providing. But she has no interest in a man who has firm views on morality or religion. She wants a sperm-donor, an ATM, and a handyman. But she doesn't want a man who is going to tell her to do anything for God, or for him, or for the kids. No interest at all in a man who will want to lead the family in a Bible study, or protest sex-selection abortions. Religion and morality are disgusting to her – they're brakes on her selfish pursuit of happiness. She likes men who let her make decisions, and who blame others when she is at fault. If babies get in the way of her career, he should approve of her killing them. If two men want to raise a motherless child bought from a surrogate, he should approve of that, too. She wants a man who will put his own kids in daycare and public schools so she can buy a Coach handbag and go on vacation in Barbados. Too bad for the kids. That's what she wants in a man – "don't judge".

But the real key point in this story for me is how this woman expects a secular left man to respect moral obligations. A secular left man thinks that the universe is an accident, that human beings evolved from slime, and that humans have no free will. Atheists don't believe that God holds people accountable for their moral decisions. They think that

morality is just a set of conventions that vary by time and place. On atheism, there are no moral absolutes, just conventions that vary by time and place. And atheists only follow those conventions if following them makes them feel good or look good to others *during their lifetimes*. They support transing kids because they want their college professor or their boss to like them. Who cares about what happens to those kids?

On atheism, morality is just agreeing with the people you want to like you. It's not about taking self-sacrificial stands to protect the weak. Survival of the fittest. That's what atheists believe in. And this woman thinks that she is going to find a man who will have moral obligations towards her when those obligations go against his self-interest. She doesn't want any obligations to him, but she wants him to have lots of moral obligations to her. Absolutely insane.

She also thinks that a man who agrees with her on adult-first, kids-last policies is going to sign up for a lifelong, faithful, marriage commitment. These days, it's hard to get even a good man to agree to take risks with feminist false accusations on college campuses, feminist divorce courts and feminist "me too" workplaces. But why would a man who has a secular leftist worldview want to sacrifice his own interests for such a risky enterprise? Today, only men have obligations. Women are always the victims of someone else. In any disagreement between a man and a woman, the man is always guilty, and the woman is always the victim. The whole society is set up to relieve her of any accountability for her actions. All the costs must be paid by men. Why would a secular leftist man – who has ZERO rational foundation for morality – get legally obligated to a woman who holds that much power over him?

The woman in the video probably thinks that when it comes to marriage, men will just marry when they are impressed with a woman's appearance, and go crazy from being "in love". That's why secular left women spend so much money on their appearance – not just for make-up or clothes, but on manicures, pedicures, and cosmetic surgery, too. Only stupid men marry secular left women because they are "in love" with her fake appearance.

If the woman in the video is expecting a man to commit to her for life, and be faithful, and be a good father, then she's going to have to 1) resign herself to male leadership – because that's what good men want, and 2) upgrade her religious and moral views to match those of a good man. Otherwise, her situation is hopeless. Good men don't get married to secular left feminists. As more young women adopt feminism, you can expect to see the marriage rate decline.

William Lane Craig on the unexpected applicability of mathematics to nature

December 6, 2023 | by Wintery Knight | Link | Original Link

You might remember that Dr. Craig used a new argument in his debate with Lawrence Krauss in Melbourne, Australia.

My notes on the debate record it thus:

> The unreasonable effectiveness of mathematics:
>
> - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
> - Mathematical objects can either be abstract objects or useful fiction
> - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
> - But a divine mind that wants humans to understand nature is a better explanation for what we see

And now Dr. Craig has expanded on it in the Q&A section of his Reasonable Faith web site.

The question:

> Dear Dr Craig
>
> Firstly can I thank you for all your work. My faith in Christ has been enormously strengthened through studying your work in apologetics in particular and I have grown in confidence in my Christian witness.
>
> My question relates to numbers and mathematics as a whole. On the Defenders podcast you state that as God is the only self-existent, necessary being, numbers and mathematical objects, whilst being useful, don't actually exist as these too would exist necessarily and independently of God. If this is the case, how can it be that mathematics is so easily applied to the natural world? Surely if mathematics only existed in our minds, we would expect to see no correlation between it and how the physical world actually is?
>
> Michael
>
> United Kingdom

Excerpt from the answer:

> As philosopher of mathematics Mary Leng points out, for the non-theistic realist, the fact that physical reality behaves in line with the dictates of acausal mathematical entities existing beyond space and time is "a happy coincidence"

> (*Mathematics and Reality* [Oxford: Oxford University Press, 2010], p. 239). Think about it: If, *per impossibile*, all the abstract objects in the mathematical realm were to disappear overnight, there would be no effect on the physical world. This is simply to reiterate that abstract objects are causally inert. The idea that realism somehow accounts for the applicability of mathematics "is actually very counterintuitive," muses Mark Balaguer, a philosopher of mathematics. "The idea here is that in order to believe that the physical world has the nature that empirical science assigns to it, I have to believe that there are causally inert mathematical objects, existing outside of spacetime," an idea which is inherently implausible (*Platonism and Anti-Platonism in Mathematics* [New York: Oxford University Press, 1998], p. 136).
>
> By contrast, the theistic realist can argue that God has fashioned the world on the structure of the mathematical objects. This is essentially what Plato believed. The world has mathematical structure as a result.

This argument was also made by mechanical engineering professor Walter Bradley in a lecture he gave on scientific evidence for an intelligent designer. You can read an essay that covers some of the material in that lecture at Leadership University.

Excerpt:

> The physical universe is surprising in the simple mathematical form it assumes. All the basic laws of physics and fundamental relationships can be described on one side of one sheet of paper because they are so few in number and so simple in form (see table 1.1).
>
> […]It has been widely recognized for some time that nature assumes a form that is elegantly described by a relatively small number of simple, mathematical relationships, as previously noted in table 1.1. None of the various proposals presented later in this chapter to explain the complexity of the universe address this issue. Albert Einstein in a letter to a friend expressed his amazement that the universe takes such a form (Einstein 1956), saying:
>
> You find it strange that I consider the comprehensibility of the world to the degree that we may speak of such comprehensibility as a miracle or an eternal mystery. Well, a priori one should expect a chaotic world which cannot be in any way grasped through thought. . . . The kind of order created, for example, by Newton's theory of gravity is of quite a different kind. Even if the axioms of the theory are posited by a human being, the success of such an enterprise presupposes an order in the objective world of a high degree which one has no a priori right to expect. That is the "miracle" which grows increasingly persuasive with the increasing development of knowledge.
>
> Alexander Polykov (1986), one of the top physicists in Russia, commenting on the mathematical character of the universe, said: "We know that nature is described by the best of all possible mathematics because God created it." Paul Davies, an

> astrophysicist from England, says, “The equations of physics have in them incredible simplicity, elegance and beauty. That in itself is sufficient to prove to me that there must be a God who is responsible for these laws and responsible for the universe” (Davies 1984). Successful development of a unified field theory in the future would only add to this remarkable situation, further reducing the number of equations required to describe nature, indicating even further unity and integration in the natural phenomena than have been observed to date.

The whole paper that started this off is called “The Unreasonable Effectiveness of Mathematics”, and it is a must read for advanced Christian defenders. You can read the whole thing here.

Who won the Wednesday night GOP debate on News Nation?

December 7, 2023 | by Wintery Knight | Link | Original Link

This time, it's unanimous. Commentators on the far-left and the far-right agree that Ron DeSantis won the debate on Wednesday night. Below, I have video clips of the best parts of the debate.

If you can only watch one, then watch DeSantis vs Haley talking about bathroom bills. I also loved DeSantis vs Haley debating their actions related to China. And DeSantis' plan to prevent taxpayer bailouts of student loans. He wants people to do trades and STEM degrees.

Europe Committing SUICIDE With Mass Migration, Says DeSantis

DeSantis on How He'd Promote Election Integrity

Haley, DeSantis Spar Over Bathroom Bills

'New Sheriff in Town': DeSantis Outlines Border Policy

DeSantis, Haley Spar Over China

DeSantis: Truck Drivers Shouldn't Pay for Gender Studies Student Loans

Nikki Haley also denied that she wanted to dox Americans who use an alias on social media (like me!). But here is the video of her saying exactly that. CNN fact-checked her and agreed that she was lying.

And there was a long and fun exchange where Ron DeSantis and Vivek Ramaswamy both went after Nikki Haley on her connections to woke corporations and support for ESG.

New study: Mental health issues persist after receiving “gender-affirming” treatment

December 7, 2023 | by Wintery Knight | Link | Original Link

This brand new study is authored by one of the pioneers in “gender-affirming” treatment. It was published in the peer-reviewed “European Psychiatry”. The title of the article is “Have the psychiatric needs of people seeking gender reassignment changed as their numbers increase? A register study in Finland”. Let’s take a look at the findings.

The researchers looked at 3,665 people who received gender identity services between 1996 to 2019. This is a huge study. And we’ll see in a minute that the author used to be in favor of gender-affirming treatment – so she’s not biased against it.

Here’s the results section:

> The GD [gender dysphoria] group had received many times more specialist-level psychiatric treatment both before and after contacting specialized GIS [gender identity services] than had their matched controls. A marked increase over time in psychiatric needs was observed. Among the GD group, relative risk for psychiatric needs after contacting GIS increased from 3.3 among those with the first appointment in GIS during 1996–2000 to 4.6 when the first appointment in GIS was in 2016–2019. When index period and psychiatric treatment before contacting GIS were accounted for, GR [gender reassignment] patients who had and who had not proceeded to medical GR had an equal risk compared to controls of needing subsequent psychiatric treatment.

Receiving “many times more specialist-level psychiatric treatments” resulted in “A marked increase over time in psychiatric needs”.

And the conclusion reaffirms that:

> Contacting specialized GIS [gender identity services] is on the increase and occurs at ever younger ages and with more psychiatric needs. Manifold psychiatric needs persist regardless of medical GR [gender reassignment].

Psychiatric needs persist REGARDLESS of medical gender reassignment. That means gender reassignment – so-called “gender-affirming care” – makes no difference to the patient’s mental health.

This study got picked up in the news, as you might expect, since it contradicts the narrative of the secular left. What’s the narrative of the secular left? “Right and wrong don’t exist. My feelings are very important. You need to not judge me. You need to affirm me.”

Here’s an article from the UK Daily Mail that talks about the author of the study:

> A woman who led European efforts to give puberty blockers to trans children has bared all about U-turning on gender-affirming care, as it is known, and debunks

> treatments she now calls ‘dangerous.’
>
> Dr Riittakerttu Kaltiala, chief psychiatrist at the Tampere University Hospital Department of Adolescent Psychiatry in Finland, has revealed why she changed her mind about helping minors medically transition.
>
> Writing in The Free Press, Dr Kaltiala says the Western medical establishment has been cowed by trans activists into a ‘dangerous groupthink’ of pushing risky sex-altering drugs on children.
>
> ‘Gender transition has gotten out of hand,’ says Dr Kaltiala.

What I’d like to see now is for conservatives to pass laws that allow people who were victimized by the secular leftist butchers to sue those butchers for compensation. It’s very important that the “don’t judge” crowd is punished for the harm caused by their not judging. That’s the only way that they will understand that the people they think are evil (the moral people, the boundary setters) are actually good. And the people they think are good (the feelings people, the don’t judge people) are evil.

Let’s see some money change hands over this controversy, so everyone can be clear about the value of moral leadership and spiritual leadership.

Are modern women building their resumes to attract to marriage-minded men?

December 8, 2023 | by Wintery Knight | Link | Original Link

I've been watching a bunch of episodes of the @whatever podcast, and really enjoying the fact that the Christians are allowed to say what they think about dating and relationships, and that the non-Christians are explaining in their own words what their view of relationships is. And it's very interesting to see how modern women have a disconnect between "in the moment" and "some day".

So, I have a couple of clips from a show to show you what I mean. In this clip, the men on the left of the room – Brian Atlas, the host, and Chase, the evangelical Christian – challenge the two non-Christian women on the right side of the room. They ask whether a boyfriend can expect his girlfriend to stop going to bars and night clubs. These are places where alcohol is served, women wear sexy clothes, and men flirt with drunk women and try to take them home for sex. All the non-Christian women on the panel call this demand that they not go to bars and clubs "controlling". They don't see why being in a relationship should cause them to have to give up any aspect of their pursuit of pleasure. If they want validation from hot guys, and maybe some extra sex, then they should be able to look for it in bars and night clubs.

Remember, this video has a lot of bad language. It's not for kids.

So, watch this clip from 1:05:21 to 1:28:45: (23 min and 24 seconds)

So, these young women want to focus on having fun in their early 20s, because that's what they want to do. And then later on, when they get much older, then they might be ready for a man to marry them and give them children.

A marriage-minded man is looking for a woman who is willing to control her behavior so that she becomes safe to marry. So that she can focus on her husband. So that she can spend time nurturing and raising her children. She can't spend money on frivolous things. She can't spend money on vacations and entertainment and alcohol. She can't smoke while she's pregnant. She can't buy expensive hand bags and get cosmetic surgery. But these young women aren't willing to give up any of these things. They want to have fun. And marriage is seen as "boring", until they decide in their late 30s that they finally want it. Men who want to focus on marriage early are "controlling". Men who want women to focus on preparing to build a home and a family are "controlling" men.

The problem with this, as one of the men points out, is that those bar and night club experiences do not make the woman attractive or stable for marriage. Marriage is an enormous financial and legal risk for men. They can be thrown into jail for inability to pay alimony and child support. They can lose custody of their kids in family courts. They can have their parental rights nullified by feminist judges. Women are actually more likely to commit non-reciprocal domestic violence than men, according to this recent study:

> Almost 24% of all relationships had some violence, and half (49.7%) of those were reciprocally violent. In nonreciprocally violent relationships, women were the perpetrators in more than 70% of the cases.

Men have to be extremely careful about marriage. And when young women are taught to be self-centered from 18-35, this is not good preparation for being a wife and mother. "Hoe phases" and "party stages" doesn't look good on a resume. I would not hire a college grad to write software, if their entire resume was playing video games and memorizing movie scripts. If you want the job, you have to be able to show that you can do the job. Jobs are not meant to entertain you. There is work to do, and results are expected. The same thing is true of marriage. Men are making the hiring decisions, there, and we do look at women's resumes.

Men are the keepers of commitment. If a woman wants commitment, she has to apply for commitment, and prove she is worth being committed to. Men are looking for marriage-related behaviors and capabilities. Chastity. Sobriety. Conservative political views. Accurate theology. Apologetics. Experience building others up to be useful for God. Spending restraint. Saving and investing. STEM degrees. Cooking ability. The ability to be content at home. Willingness to learn what husbands like, and to play with husbands. Fitness. Nutrition. Respect for male leadership. Etc.

Consider this clip from 2:32:54 to 2:43:24: (10 min, 30 seconds)

Here the Christian co-host Chase explains to the women that if they pick a Christian man, he will be able to lead them to focus on the most important things in life early on. The single mother is excited that some men would want to help to avoid mistakes with bad boys. But again, the two blondes who insisted on hedonism rebel against the leadership of good men. They want to be free to pursue pleasure, and not listen to the leadership of Christian men. They don't want to focus on marriage. They don't want to prepare their character for marriage. They don't want to control their desires, so they can get a long-term result. They want to SAY that they want marriage and children "some day", but they want to choose what feels good "in the moment". And they definitely prefer hot bad boys who are permissive. They don't want good men who want to lead them to get into shape for marriage.

I think the older generation of Christian women has NO IDEA that this is what younger women are like. 70 years ago, women would jump into the arms of men who wanted to step in and lead on moral and spiritual issues. They were not interested in "tingles" caused by physical attraction. They were interested in men who could step in and make marriage and parenting easy for them. Men who were serious about earning. Men who were serious about fighting evil. Men who were involved in the home, and effective at leading the children to have accurate beliefs and good moral character. But those days are *long gone.*

Today, young women are choosing men based on the feelings they get from being validated by those men. They like men who "don't judge". They like men with attractive appearances who are having a lot of sex with other women. They like men who spend

their money on displayed wealth, rather than save for a downpayment on a home. Good men are ignored until these women realize that their plan isn't working, and suddenly they want to "settle down". But good men know that a woman who makes a good man her "last resort" in her late 30s will never respect him as a leader in the home.

Men don't HAVE to get married and have kids in order to be happy. We can just work hard, stack our cash high, retire early, and work on our ministry goals. Working for God on evangelism and apologetics is enormously fulfilling for a man. Just ask Paul.

William Lane Craig explains the doctrine of penal substitutionary atonement

December 9, 2023 | by Wintery Knight | Link | Original Link

Probably one of the most common questions that you hear from people who don't fully understand Christianity is this question: "why did Jesus have to die?". The answer that most Christians seem to hold to is that 1) humans are rebelling against God, 2) Humans deserve punishment for their rebellion, 3) Humans cannot escape the punishment for their rebellion on their own, 4) Jesus was punished in the place of the rebellious humans, 5) Those who accept this sacrifice are forgiven for their rebelling.

Are humans rebellious?

Some people think that humans are not really rebellious at all, but it's actually easy to see. You can see it just by looking at how people spend their time. Some of us have no time for God at all, and instead try to fill our lives with material possessions and experiences in order to have happy feelings. Some of us embrace just the parts of God that make us feel happy, like church and singing and feelings of comfort, while avoiding the hard parts of that vertical relationship; reading, thinking and disagreeing with people who don't believe the truth about God. And so on.

This condition of being in rebellion is universal, and all of us are guilty of breaking the law at some point. All of us deserve to be separated from God's goodness and love. Even if we wanted to stop rebelling, we would not be able to make up for the times where we do rebel by being good at other times, any more than we could get out of a speeding ticket by appealing to the times when we drove at the speed limit, (something that I never do, in any case).

This is not to say that all sinners are punished equally – the degree of punishment is proportional to the sins a person commits. However, the standard is perfection. And worse than that, the most important moral obligation is a *vertical* moral obligation. You can't satisfy the demands of the moral law just by making your neighbor happy, while treating God like a pariah. The first commandment is to love God, the second is to love your neighbor. Even loving your neighbor requires you to tell your neighbor the truth – not just to make them feel good. The *vertical* relationship is more important than the *horizontal* one, and we've all screwed up the vertical relationship. We all don't want God to be there, telling us what's best for us, interfering with our fun. We don't want to relate to a loving God if it means having to care what he thinks about anything that we are doing.

Who is going to pay for our rebellion?

The Christian answer to the problem of our rebellion is that Jesus takes the punishment we deserve in our place.

However, I've noticed that on some atheist blogs, they don't like the idea that someone else can take our punishment for us to exonerate us for crimes that we've committed. So

I'll quote from this post by the great William Lane Craig, to respond to that objection. Excerpt:

> The central problem of the Penal Theory is, as you point out, understanding how punishing a person other than the perpetrator of the wrong can meet the demands of justice. Indeed, we might even say that it would be wrong to punish some innocent person for the crimes I commit!
>
> It seems to me, however, that in other aspects of human life we do recognize this practice. I remember once sharing the Gospel with a businessman. When I explained that Christ had died to pay the penalty for our sins, he responded, "Oh, yes, that's imputation." I was stunned, as I never expected this theological concept to be familiar to this non-Christian businessman. When I asked him how he came to be familiar with this idea, he replied, "Oh, we use imputation all the time in the insurance business." He explained to me that certain sorts of insurance policy are written so that, for example, if someone else drives my car and gets in an accident, the responsibility is imputed to me rather than to the driver. Even though the driver behaved recklessly, I am the one held liable; it is just as if I had done it.
>
> Now this is parallel to substitutionary atonement. Normally I would be liable for the misdeeds I have done. But through my faith in Christ, I am, as it were, covered by his divine insurance policy, whereby he assumes the liability for my actions. My sin is imputed to him, and he pays its penalty. The demands of justice are fulfilled, just as they are in mundane affairs in which someone pays the penalty for something imputed to him. This is as literal a transaction as those that transpire regularly in the insurance industry.

So, it turns out that the doctrine of substitutionary atonement is not as mysterious or as objectionable as everyone seems to think it is.

Democrat billionaire linked to Jeffrey Epstein donates $250,000 to Nikki Haley PAC

December 10, 2023 | by Wintery Knight | Link | Original Link

Nikki Haley is definitely the candidate of choice for Democrats in the Republican primary. If you know anything about Democrat billionaires, then you know the name Reid Hoffmann. He's the CEO of a huge corporation called LinkedIn. But did you know that that Hoffmann is linked to another wealthy Democrat donor, Jeffrey Epstein? What does Nikki Haley offer people like that?

Daily Caller reports:

> Reid Hoffman, one of the Democratic Party's biggest donors, contributed $250,000 to a pro-Nikki Haley super PAC, The New York Times reported.
>
> Hoffman, who co-founded LinkedIn, has donated tens of millions of dollars to Democrats and liberal-aligned groups in recent years. Hoffman's quarter-million dollar donation went to the SFA Fund Inc., a pro-Haley committee that has emerged as one of the biggest spenders in the 2024 Republican primary, shelling out more than $33 million to boost Haley, according to the NYT.
>
> Other billionaires have encouraged Democrats to throw their support behind Nikki Haley, citing their opposition to former President Donald Trump. JPMorgan Chase CEO Jamie Dimon said on Nov. 29 that "even if you're [a] very liberal Democrat, I urge you, you know, help Nikki Haley too … on the Republican side, that might be better than Trump."
>
> […]Hoffman also financed a group that spread anti-Republican misinformation during a 2017 Senate election in Alabama, creating fake Facebook pages intended to split conservative voters and using automated social media accounts to give the illusion that the Republican nominee was being boosted by Russian bots, according to the NYT.
>
> The election was ultimately decided by less than 22,000 votes. Hoffman later apologized for his involvement in the scheme.

Like many wealthy Democrat donors, he's linked to Jeffrey Epstein:

> Hoffman has come under criticism for his past dealings with notorious pedophile Jeffery Epstein.; Hoffman planned to visit Epstein's private island, Little St. James, twice in 2014, according to documents reviewed by the Wall Street Journal. Epstein also arranged for Hoffman to stay at his Manhattan property overnight in December 2014, with a breakfast party being scheduled for the next morning.
>
> Hoffman confirmed to WSJ that he visited the island one time for a fundraising trip.

In the most recent GOP primary debate, we saw that Nikki Haley opposes banning child

sex-change procedures, and banning men from women's spaces.

And Ron DeSantis is trying to educate voters on Nikki Haley's past actions on social issues, with ads like this one:

Christian Post reports on the ad:

> One clip shows Haley's appearance on Fox News to discuss how "when I was governor, [the Legislature] wanted to bring in a bathroom bill, a transgender bathroom bill," which she opposed.
>
> "I strong-armed and said, 'We are not going to have that in South Carolina,'" she asserted. State laws barring students from entering opposite-sex bathrooms, locker rooms and showers in K-12 schools have become law in Alabama, Arkansas, Florida, Idaho, Iowa, Kentucky, North Dakota, Oklahoma and Tennessee.
>
> Supporters of such measures point to safety and privacy concerns for female students who'd be forced to share intimate spaces with male students under policies that allow trans-identified individuals to use bathrooms and locker rooms that correspond with their self-declared gender identity rather than their biological sex as the reason for enacting "bathroom bills."
>
> The issue received particular attention when news broke of the sexual assault of a female student in a girls' bathroom at a Loudoun County, Virginia, high school at the hands of a biologically male student who identified as "gender-fluid."
>
> The political ad shows additional footage of Haley telling CBS News, "I think the law should stay out of it" when asked, "What care should be on the table when a 12-year-old child in this country assigned female at birth says, 'Actually, I feel more comfortable living as a boy.' And "what should the law allow the response to be?"
>
> The use of the word "care" refers to puberty blockers and opposite-sex hormones and body-mutilating surgeries, including castration and unnecessary mastectomies.

I don't know who is supporting Nikki Haley in the GOP primary, but I would expect that they are either Democrats, leftists on social issues, or just ignorant about the past positions of the candidates. The first two categories make sense to me. Democrats and leftists like Nikki Haley. What I don't understand is how people who claim to be conservatives would think that you pick a candidate without knowing their past record of actions and achievements. Surely, in the most powerful nation in the world, we can expect people to decide elections based on facts, not feelings.

New study: parent's political ideology significantly affects adolescent mental health

December 11, 2023 | by Wintery Knight | Link | Original Link

If you like to get into debates with secular leftists in the office, like I do, then you need a lot of STUDIES. Secular leftists are taught that conservatives and Christians have not done any work to form their views, whereas all the smartest people are secular leftists, because they are data-based. So, let's take a look at a new study on political ideology, and see who produces better results?

This research seems to be some sort of collaboration between the moderate Institute for Family Studies, and the far-left Gallup polling company.

Here is the PDF of the publication.

And Fox News has an article about it:

> Parenting styles and political beliefs can play a major role influencing teenagers' mental health, new research from Gallup says.
>
> A June 2023 study surveying 6,643 parents and 1,580 adolescents found that conservative and very conservative parents were the "most likely to adopt the parenting practices associated with adolescent mental health," the research reported in the Institute for Family Studies found.
>
> "Adolescents with very conservative parents are 16 to 17 percentage points more likely to be in good or excellent mental health compared to their peers with very liberal parents," the report said. "Only 55% of adolescents of liberal parents reported good or excellent mental health compared to 77% of those with conservative or very conservative parents."

Why would conservative parents produce such a huge beneficial result for their children? Well, I would guess it's because conservative parents are more firm about having a vision for how their children are raised. They want their kids to do well in school, follow the law, and serve others. All things that will help them in the real free market world of serving customers. But conservative parents also reject "don't judge" compassion and moral relativism. Whereas secular leftist parents take an "anything goes" approach to raising their kids, conservatives are more strict about truth, and moral values. Secular leftist parents hate the idea of punishment. They just want their kids to like them.

More:

> Conservative parents were more likely to adopt an "authoritative parenting style, characterized by both warmth and a high level of discipline," Gallup economist and study author Jonathan Rothwell explained to Fox News Digital.
>
> "Parents who set boundaries, establish routines, convey warmth and affection, and enforce rules effectively report a less contentious relationship with their

> adolescent child than parents who do not do these things, and this relationship is recognized by that child to be stronger and more loving. Each of the two factors related to parenting practices has a similar effect on the relationship as an index of adverse experiences, related to parental drug abuse, death, or abandonment," he described in the report.
>
> Liberal parents, however, scored lowest in the survey, primarily because they were least likely to report successfully disciplining their child.

Homes with conservative parents will typically be homes where there is a "Constitution" of the relationship. And I mean a recognized authority that governs how the relationship will proceed. And that authority compels each adult to deny themselves, and sacrifice their own interests, in order to serve others, and keep the relationship amicable and stable. Secular leftists don't have that, because they are trying to claw happiness out of everyone and everything around them. Secular leftists have no rules, and no reason to sacrifice your own interests for anyone or anything else. It's basically the Wild West. And in the Wild West, no one has an *obligation* to love anyone else when it doesn't *feel good* to them to do the work.

More:

> Teens' mental health outcomes were 8 percentage points lower when parents reported having difficulty disciplining their child.
>
> "By contrast, conservative parents enjoy higher quality relationships with their children, characterized by fewer arguments, more warmth, and a stronger bond, according to both parent and child reporting," the report said.
>
> While 80% of very conservative parents said their child did not get their way in an argument, only 53% of liberal parents could say the same. The most conservative parents were also more likely to report showing affection to their children every day.

I would think that a lot of these secular left parents are really just secular left single moms. Either by premarital sex with the hot bad boys, or by frivolous divorce. Even secular leftist women with men in the home will prevent those men from "judging" and "punishing" the children. Women are just not as good as men (generally speaking) at disciplining children. Secular leftist women might think that they are strong, independent boss babes who don't need no man, but the results show very different outcomes.

David French wants Christians who accept Jesus' definition of marriage to be persecuted

December 12, 2023 | by Wintery Knight | Link | Original Link

If you've been following David French's writing closely, you'll know that he no longer supports public policies that are consistent with the Christian worldview. In this post, we'll take a look at Jesus' definition of marriage, then we'll see whether David French thinks that Jesus knows more about the definition of marriage than the Democrat party.

First, what does Jesus think about marriage?

Here's what Jesus says about marriage.

Matthew 19:1-11:

> 1 Now when Jesus had finished these sayings, he went away from Galilee and entered the region of Judea beyond the Jordan.
>
> 2 And large crowds followed him, and he healed them there.
>
> 3 And Pharisees came up to him and tested him by asking, "Is it lawful to divorce one's wife for any cause?"
>
> 4 He answered, "Have you not read that he who created them from the beginning made them male and female,
>
> 5 and said, 'Therefore a man shall leave his father and his mother and hold fast to his wife, and the two shall become one flesh'?
>
> 6 So they are no longer two but one flesh. What therefore God has joined together, let not man separate."
>
> 7 They said to him, "Why then did Moses command one to give a certificate of divorce and to send her away?"
>
> 8 He said to them, "Because of your hardness of heart Moses allowed you to divorce your wives, but from the beginning it was not so.
>
> 9 And I say to you: whoever divorces his wife, except for sexual immorality, and marries another, commits adultery."
>
> 10 The disciples said to him, "If such is the case of a man with his wife, it is better not to marry."
>
> 11 But he said to them, "Not everyone can receive this saying, but only those to whom it is given.

To be a Christian, minimally, is to be a follower of Jesus Christ. That means that we accept what Jesus teaches, on whatever he teaches about. We don't overturn the teachings of Jesus in order to make people who are rebelling against God feel better about their rebellion. It is central to the Christian worldview that Christians care more about what God thinks of them than what non-Christians think of them. In fact, Christians are

supposed to be willing to endure suffering rather than side with non-Christians against God's authority.

Here's an article from The Federalist by conservative Christian lioness Megan Basham.

She writes:

> [P]erhaps no one has done more to further the idea that Christians should not let the God they worship influence their policy views than one-time defender of traditional marriage, David French.
>
> […]As a political pundit, French has been singularly influential in evangelical establishment circles, referenced regularly not only in Christianity Today's pages and podcasts but also giving speeches at Southern Baptist seminaries and winning praise from outlets such as The Gospel Coalition as "one of the few Christians who is able to bring gospel-centered arguments into the public square."
>
> In all three of his essays on RMA in the last week, French reveals that he, too, has evolved on marriage and… discourages Christians from resisting the enshrinement of gay marriage into U.S. law.
>
> French… adds, "Religious belief is not the same thing as declaring civil law … I don't want the law to discriminate against those Americans who sincerely hold different views of sexual morality, sexuality, and marriage and organize their lives and their institutions accordingly."

What does David French think about same-sex marriage as public policy?

> French reveals that… believes [the Obergefell ruling's] argument for ushering in an entirely new form of marriage, unknown to previous ages, was well-founded. He writes that as far back as 2004, he believed, "In a diverse, pluralistic republic, granting the same rights to others that we'd like to exercise ourselves should be the default posture of public advocacy and public policy."
>
> Now that the fundamental transformation of marriage has taken place, French argues it should be permanent: "It would be profoundly disruptive and unjust to rip out the legal superstructure around which they've ordered their lives," he writes.

When it comes to policy, David French thinks that the Democrat party's definition of marriage is better than Jesus' definition of marriage.

Previously, I noted how the Alliance Defending Freedom thinks that the "Respect for Marriage Act" will threaten the religious liberty of Christian organizations:

> The so-called Respect for Marriage Act is a misnamed bill that expands not only what marriage means, but also who can be sued for disagreeing with the new meaning of marriage.
>
> While proponents of the bill claim that it simply codifies the

> 2015 Obergefell decision, in reality it is an intentional attack on the religious freedom of millions of Americans with sincerely held beliefs about marriage.
>
> The Respect for Marriage Act threatens religious freedom and the institution of marriage in multiple ways:
>
> - It further embeds a false definition of marriage in the American legal fabric.
> - It opens the door to federal recognition of polygamous relationships.
> - It jeopardizes the tax-exempt status of nonprofits that exercise their belief that marriage is the union of one man and one woman.
> - It endangers faith-based social-service organizations by threatening litigation and liability risk if they follow their views on marriage when working with the government.
>
> The truth is the Respect for Marriage Act does nothing to change the status of same-sex marriage or the benefits afforded to same-sex couples following Obergefell. It does much, however, to endanger religious freedom.

David French wants Christians who agree with Jesus about the definition of marriage to be persecuted by the secular left state. That's why he supports this Democrat party legislation.

Now, if you listened to the episode of the Knight and Rose show that Rose and I did defending the definition of marriage then you will know that there are good science-based secular reasons for preferring Jesus' definition of marriage. But David French ignores that evidence in his published work.

Back to Megan Basham in The Federalist:

> Leaving aside how this same argument could have been applied to Dred Scott, it's interesting that French repeatedly references "LGBT families" in his essays (a phrase that naturally brings up sympathetic associations) without specifically treating the question of how children come to be a part of these sterile couplings or how they fare once they are present. In fact, the only passing allusion he makes to children in these households is positive, as when he says, "Millions of Americans are living stable, joyful lives in LGBT families."
>
> It has been said many times (but it cannot be said enough apparently) that the law's compelling interest in acknowledging marriage at all is not to sanction romantic attachment between various individuals. It is to recognize the sexually reproductive union of men and women in order to foster the arrangement that best cultivates individual flourishing, which, in turn, creates a flourishing society.

Right, and that's why Rose and I talked about that evidence in our podcast. But if you are expecting David French to understand what marriage is, and how to interact with scientific evidence on the effects of non-traditional unions on children, you're expecting too much. In Christian apologetics, we know how to make a case for what the Bible teaches about God's existence from scientific evidence, such as the Big Bang cosmology

and the cosmic fine-tuning. Mainstream scientific data. We do the same thing when it comes to the abortion question. Serious Christians know how to be persuasive to non-Christians. That's why we are able to defend the Bible's teachings without capitulating to peer pressure from the secular left.

Basham concludes:

> There is no need to rehearse the litany of evidence that children raised apart from their married, biological mothers and fathers fare worse on all manner of social, educational, and developmental outcomes. But it might be necessary to start speaking forthrightly about the more specific emerging evidence that children conceived via donorship suffer from "profound struggles with their origins and identities" and that those raised in same-sex households are more likely to experience depression, anxiety, and sexual abuse.
>
> French never mentions these children. Nor does Dalrymple. Nor does the Christianity Today essay. Nor has Sen. Blunt. Yet this is the dystopian, domino effect of redefining marriage so that Christians may assure themselves they are pluralists in good standing, on the right side of rapidly devolving modern history.

If you want to hear a decent case for the traditional definition of marriage based on evidence, check out the podcast that Rose and I did about it here.

If you only have 15 minutes, this short video from Katy Faust makes the case:

And she has an excellent article about it in the Daily Signal. It's too bad that Christians look to David French for leadership. I would rather rely on Megan Basham and Katy Faust. And it's not David French who will be defending religious liberty at the Supreme Court. It's Kristen Waggoner of the ADF.

How is single-payer government-run healthcare working for Canada in 2023?

December 13, 2023 | by Wintery Knight | Link | Original Link

I always get excited when the annual report on Canadian healthcare comes out. A lot of people in my office love single payer healthcare. Except they don't know how it works in countries that have tried it. They imagine that it works well. They love the idea that healthcare will be free for them. But when I get my hands on a good study, it means a lot of fools are about to get a beat down.

Here's the latest from the Fraser Institute, reported by True North:

> Canadians are waiting longer than ever to see a healthcare specialist and receive treatment in 2023, according to a recent Fraser Institute report.
>
> The Fraser Institute polled physicians from 12 specialties and ten provinces for almost three decades.
>
> This year, the data collected from January to June consisted of 1,269 physicians responses. The report, titled Waiting Your Turn: Wait Times for Health Care in Canada, 2023 Report, showed the results of this year's survey.
>
> A median wait time of 27.7 weeks between referral from a general practitioner and receipt of treatment was reported in 2023. This is longer than the 27.4 weeks reported in 2022. This year's wait time is the longest recorded in the survey's history and is 198% longer than the 9.3-week wait time documented in 1993.

The 27.7 week number is the total of two different delays. The delays to get referred to a specialist, and the delay to get actual treatment:

> The 27.7-week total was broken down into two segments – a referral by a general practitioner to consultation with a specialist takes 14.6 weeks, followed by consultation with a specialist and receiving treatment, which takes 13.1 weeks.

Well, there's a saying in business. You can have a product or a service fast, or you can have it good, or you can have it cheap. Pick two out of 3. So, Maybe Canadian healthcare is not fast, but maybe it's good, and maybe it's cheap.

Cost of Single Payer Health Care in Canada per Household

Let's turn to the Fraser Institute again:

> Canadians often misunderstand the true cost of our public health care system. This occurs partly because Canadians do not incur direct expenses for their use of health care, and partly because Canadians cannot readily determine the value of their contribution to public health care insurance.

> In 2023, preliminary estimates suggest the average payment for public health care insurance ranges from $5,373 to $17,039 for six common Canadian family types, depending on the type of family.

> Between 1997 and 2023, the cost of public health care insurance for the average Canadian family increased 4.2 times as fast as the cost of clothing, 2.1 times as fast as the cost of food, 1.8 times as fast as the cost of shelter, and 1.7 times as fast as the average income.

> The 10 percent of Canadian families with the lowest incomes will pay an average of about $644 for public health care insurance in 2023. The 10 percent of Canadian families who earn an average income of $80,946 will pay an average of $7,715 for public health care insurance, and the families among the top 10 percent of income earners in Canada will pay $44,314.

OK, so Canadians aren't getting healthcare fast, and they're not getting healthcare cheap. Maybe they're getting really really good healthcare, though.

Here are the numbers from a new study from the non-profit Angus Reid Institute, in partnership with the Canadian Medical Association:

> - Most Canadians believe health care has worsened in the country over the last decade. Currently, 68 per cent of Canadians believe this, an increase from the 42 per cent who said the same in 2015.
> - The Angus Reid Institute's Health Care Access Index, first created one year ago, finds three-in-ten (29%) facing Chronic Difficulty accessing the health care they say they need. One-in-three (34%) are facing fewer, but still some, barriers, while just one-in-six (16%) have little trouble with finding and receiving care from Canada's health system.
> - Half of Canadians either don't have a family doctor (19%) or struggle to see the one they have (29%).
> - Persistent problems in the health care system have left seven-in-ten (68%) pessimistic there will be improvements to the system in the next two years and more than half (56%) doubtful things will change for the better even five years down the line.
> - Those who believe their province does a poor or terrible job measuring health care performance (68%) significantly outnumber those who instead believe their provincial government is doing great or good on this front (24%). Two-thirds (67%) believe health care performance would be improved by their province making key health care performance indicators publicly available.

I know that a some Americans like to pick political leaders and policies based on their feelings. They want to feel good. They want to be liked. People who like single payer tend to be people with enormous student loan balances for worthless non-STEM degrees. They work in easy jobs in the public sector. They join labor unions because they're scared of competition and accountability. Many of them work in daycare or they teach little children, because they don't want to be challenged by adults. When you look at the numbers on healthcare in different countries, it's very clear what works and what doesn't work. Americans need to be smarter than Canadians. We have to vote based on reason and evidence.

Evidence for design in living systems is changing the way scientists work

December 14, 2023 | by Wintery Knight | Link | Original Link

If you look over in the right column of the blog, you'll see that I am reading "The Comprehensive Guide to Science and Faith". It's a collection of short essays intended for laymen to explain all aspects of the design debate. I'm actually listening to the audio book version, and just looking in the book for diagrams. I wanted to talk about a few resources that are similar to what I'm seeing in the book.

First, there's this excellent post from Evolution News, where Dr. Casey Luskin (who recently appeared on the Apologetics 315 podcast) lists out all the areas where intelligent design is fruitful for studying living systems.

Here is his list:

- Protein science
- Physics and cosmology
- Information theory
- Pharmacology
- Evolutionary computation
- Anatomy and physiology
- Bioinformatics
- Molecular machines
- Cell biology
- Systematics
- Paleontology
- Genetics

These are all good, but I'm going to focus on some of them that are interesting to me coming from a software engineering background.

> Information theory: ID leads scientists to understand intelligence as a cause of biological complexity, capable of being scientifically studied, and to understand the types of information it generates.

I looked into this one when naturalists were trying to argue that specified complexity was just the same as Shannon information. Shannon information is just concerned with the complexity, or information carrying capacity, of strings. But specified complexity is a step further, where certain strings have meaning or purpose, because they conform to a pattern. A random set of characters the same length as this blog post is complex (like Shannon information), but it's not specified. What makes my letter sequences specified is that it conforms to the English language, and conveys meaning.

Here's another:

> Evolutionary computation: ID produces theoretical research into the information-generative powers of Darwinian searches, leading to the discovery that the search abilities of Darwinian processes are limited, which has practical implications for the viability of using genetic algorithms to solve problems.

When I was in grad school, there were courses on using "genetic algorithms" to solve problems. But thanks to the work of ID proponents like William Dembski, we now know that these algorithms only work if constraints are put on the search algorithm up front. As such, they don't support undirected evolution at all.

> Bioinformatics: ID has helped scientists develop proper measures of biological information, leading to concepts like complex and specified information or functional sequence complexity. This allows us to better quantify complexity and understand what features are, or are not, within the reach of Darwinian evolution.

Before ID came along, people weren't really interested in calculating the probability of sequencing amino acids into a protein by chance. They just wanted to assume that it happened, because what else could have happened? Sometimes, you make better decisions when you listen to both sides of a debate. Now we have two sides to the debate on origins, and it helps both sides to defend their views.

> Molecular machines: ID encourages scientists to reverse-engineer molecular machines — like the bacterial flagellum — to understand their function like machines, and to understand how the machine-like properties of life allow biological systems to function.

I've blogged before about how human inventors are regularly reverse-engineering natural designs in order to come up with designs for man-made machines.

> Genetics: ID has inspired scientists to investigate the computer-like properties of DNA and the genome in the hopes of better understanding genetics and the origin of biological systems.15 ID has also inspired scientists to seek function for noncoding junk-DNA, allowing us to understand development and cellular biology.

By now, everybody has heard about the predictions by Darwinists about the "uselessness" of junk DNA. That all went out the window with the data from the ENCODE project, that found that the so-called junk DNA was almost all useful. Another Darwinian prediction falsified by the progress of science.

A 40-minute lecture

I saw a nice lecture from the recent Science & Faith conference that was held in Dallas this year. The speaker was Dr. Brian Miller:

> Dr. Miller is Research Coordinator at Discovery Institute's Center for Science and Culture. He holds a Ph.D. in Physics from Duke University.

> More about him and the articles he has written can be found here: https://www.discovery.org/p/miller/

The video talks about all the areas where evidence for design is changing the way that scientists look at living systems.

The talk was very cutting edge, with a lot of new stuff I had not seen before. It's worth the time to watch it. There were also a couple of prior lectures from the conference. One from Eric Hedin, where he talked about being "canceled" by Darwinists for teaching both sides of origins issues at Ball State University. Another from Stephen C. Meyer talks about the Judeo-Christian origins of modern science. I've only watched the Miller lecture so far, but that's what Saturdays are for! Watching lectures and debates.

William Lane Craig answers: how can the four gospels be independent sources?

December 15, 2023 | by Wintery Knight | Link | Original Link

Previously, I blogged about the historical criteria that historians use to evaluate documents. One of the criteria is "multiple independent sources". If a story is reported in multiple independent sources, then historians are more likely to evaluate it as historically accurate. But how about the four gospels? Are they independent sources? The answer might not be what you expect.

Here's how the question was put to Dr. Craig:

> The latest video, "Did Jesus Rise From the Dead," is especially compelling, but I had a question about it. In the part one video, you cite as evidence, the Gospels plus Acts and First Corinthians and you refer to them as "independent" and "unconnected" sources. But this isn't exactly true, is it? After all, two of these books were written by the same author, Luke, and so Luke and Acts are connected by authorship. Furthermore, isn't it true that much information relayed in Matthew and Luke were taken from Mark? This two facts would make it untrue to call the Gospels "independent" and "unconnected" would they not?

Here's the video he's talking about:

Dr. Craig answers the question in his latest question of the week. I think this answer is important for those who aren't aware of how the gospels are organized.

He writes:

> The objection is based on a simple misunderstanding. It assumes that the sources I'm referring to are the books of the New Testament. But that's not what I'm talking about.
>
> New Testament critics have identified a number of sources behind the New Testament, sources on which the New Testament authors drew. For example, Matthew and Luke drew not only upon Mark as a source but also upon a source which scholars designate "Q," which appears to have been a source containing Jesus' sayings or teachings. Thus, if you could show that a saying in Matthew or Luke appears in both Mark and Q, that would count as multiple, independent attestation.

What does this mean? It means that although there is overlap between Matthew and Luke, called "Q", there are actually three independent sources there: Matthew's source, called M. Luke's source, called L. And the material common to Matthew and Luke, which therefore PRE-DATES Matthew and Luke, called Q.

Dr. Craig lists out several independent sources in his full reply:

1. the pre-Markan Passion story used by Mark
2. the rest of the gospel of Mark has a source
3. Matthew's source (M)
4. Luke's source (L)
5. John's gospel which is very different from Mark, Luke and Matthew
6. the sermons in Acts have a source
7. the early creed found in Paul's 1 Corinthians 15

So if you are trying to lay out something from the New Testament, and you can find it in two of these sources, and at least one of them is very early, you're in pretty good shape.

You can watch more of Dr. Craig's videos in his playlist, here. These are especially useful for people who want to get the overall scope of the battlefield before deciding where to focus in study. Everybody should know about all of these arguments regardless of where you choose to specialize.

Robert Gagnon debates gay activist Jayne Ozanne on Bible vs homosexuality

December 16, 2023 | by Wintery Knight | Link | Original Link

I am tempted to say that this is the best podcast I have ever heard on the Unbelievable show. Do anything you have to do in order to listen to this podcast.

Details:

> Prof Robert Gagnon has become a well-known voice advocating the traditional biblical view on sexuality. In a highly charged show he debates the scriptural issues on sexuality with Jayne Ozanne, the director of Accepting Evangelicals who came out as gay earlier this year.

You can listen to the debate here.

If you can only listen for 15 minutes, then start at 49 minutes in and listen from there.

The following summary is rated MUP for made-up paraphrase. Reader discretion is advised.

Summary:
Intro:

- Speaker introductions
- Gagnon: scholars who support gay marriage agree that the Bible doesn't support it
- Gagnon: scholars who support gay marriage agree Jesus taught male-female marriage
- Ozanne: I went to the hospital because I was sick from trying to suppress my gay desires
- Ozanne: Doctors told me that I would die if I didn't act on my gay desires
- Ozanne: I decided to reinterpret the Bible to fit with my gay desires
- Ozanne: According to my new interpretation, Jesus actually supports my gay desires

Segment 1: Genesis

- Ozanne: In Genesis the Bible says that Adam needs a woman to complete him
- Ozanne: I reinterpret this to mean that Adam needed a "complementarian human being"
- Ozanne: Genesis doesn't say whether Eve was complemented by Adam in that chapter
- Ozanne: It's not critical that men are complemented by women, a man could complement a man
- Ozanne: Genesis 2 doesn't talk about children, it's all about adult needs from a relationship
- Gagnon: Genesis 2 has never been interpreted that way in all of history

- Gagnon: Genesis 2 language specifically implies a human being who is opposite/different
- Gagnon: Genesis 2 language translates to complement or counterpart
- Gagnon: Genesis as a whole teaches that the sexuality is for male and female natures
- Gagnon: The extraction of something from the man that is given to the woman is complementarian
- Ozanne: I think that people can be complementary outside of male-female Genesis language
- Ozanne: I don't want to discuss specific words and texts and Greek meanings
- Gagnon: the text has always been read and interpreted to support male/female complementarity
- Gagnon: the male-female nature argument is made because the two natures are complementary
- Ozanne: the text was interpreted by patriarchal males who treated women like property, it's biased
- Ozanne: what is important to me is how Christ interprets Genesis (?? how does she know that?)
- Ozanne: I am passionate about my interpretation of Scripture which supports my gay desires
- Gagnon: just because a person is passionate about their interpretation it doesn't make it right
- Gagnon: I am not arguing for the male-female view based on passion, but on scholarship, evidence and history
- Ozanne: both sides are equally passionate about their interpretations (?? so both are equally warranted?)
- Ozanne: the real question is why God "allowed" two different interpretations of Scripture

Segment 2: Is homosexuality a sin?

- Gagnon: Jesus affirmed traditional sexual morality, which forbids homosexuality
- Gagnon: Jesus teaches that marriage is male-female, and limited to two people
- Gagnon: No one in history has interpreted the Bible to say that homosexuality was not immoral
- Ozanne: Jesus came to bring life, and that means he supports homosexuality
- Ozanne: I was dying, and embracing my gay desires allowed me to live, so Jesus approves of me
- Ozanne: God says "I am who I am" and that means he approves of me doing whatever I want
- Ozanne: There is an imperative to be who I am, and that means embracing my gay desires
- Gagnon: Jesus argued that the twoness of the sexual bond is based on the twoness

of the sexes
- Gagnon: Jesus did not come to gratify people's innate desires, he called people to repent of sin
- Gagnon: Jesus did reach out to sinners but he never condoned the sins they committed
- Gagnon: Jesus' outreach to tax collectors collecting too much and sexual sinners is the same: STOP SINNING
- Ozanne: I don't think that Romans 1 is talking about homosexuality
- Ozanne: I think it's talking about sexual addiction, not loving, committed gay relationships
- Ozanne: Paul was condemning pederasty in Romans 1, not loving, long-term, consensual sexual relationships between gay adults
- Gagnon: nothing in the passage limits the condemnation to pederasty
- Gagnon: the passage was never interpreted to be limited to pederasty in history
- Gagnon: rabbis and church fathers knew about committed two-adult same-sex relationships, and said they were wrong
- Gagnon: the argument for marriage is based on the broad two-nature argument, with no exceptions
- Gagnon: the condemnation is not limited to exploitative / coercive / lustful / uncommitted relationships
- Gagnon: even pro-gay scholars agree the passage cannot be interpreted Ozanne's way (he names two)

Segment 3: The showdown (49:00)

- Ozanne: I don't care how many pages people have written on this
- Ozanne: God says that "the wisdom of the wise I will frustrate" so you can't use scholars, even pro-gay scholars, to argue against my passionate interpretation
- Ozanne: I am not interested in the text or history or scholarship or even pro-gay scholars who agree with you
- Ozanne: what decides the issue for me is my mystical feelings about God's love which makes my sexual desires moral
- Ozanne: you are certain that this is wrong, but your view does not "give life" to people
- Ozanne: your scholarship and historical analysis is "a message of death" that causes teenagers to commit suicide (= you are evil and a meany, Robert)
- Ozanne: "I pray for you and your soul" (= opposing me will land you in Hell) and "I hope that listeners will listen with their hearts" (?? instead of their minds?)
- Ozanne: you can prove anything you want with research, even two mutually exclusive conclusions, so you shouldn't rely on scholarship and research since it could be used to prove my view as well
- Ozanne: instead of relying on research, you should rely on your heart and your feelings about God's love to decide what the Bible teaches about sexual morality

- Gagnon: you are distorting the gospel in order to make your case
- Gagnon: attacking my “certainty” is an ad hominem attack to cover your dismissmal of the scholarship and history
- Gagnon: you distort the gospel to make it seem like Christ just wants us to get what we want, when we want it, with who we want it with
- Gagnon: Christ calls us to take up our cross, to lose our lives and to deny ourselves
- Gagnon: you have a notion of what “fullness of life” is, but it’s not reflective of the gospel
- Gagnon: Paul’s life was much more troubling than yours, mine or anyone else around here
- Gagnon: Paul was beaten, whipped, stoned, poorly sheltered, poorly clothed, poorly fed, shipwrecked, and anxious for his churches
- Gagnon: on your view, he should have been miserable and angry with God all the time
- Gagnon: but instead Paul was constantly thankful and rejoicing to be able to suffer with Jesus and look forward to the resurrection
- Gagnon: I have suffered too, but the suffering we go through never provides us with a license to violate the commandments of God
- Ozanne: “the ultimate thing is what people feel God has called them to”
- Ozanne: My goal right now is to tell young people that homosexuality is fine so they don’t commit suicide
- Ozanne: the view that homosexuality is wrong is “evil and misguided”
- Gagnon: the greater rates of harm in the gay community are intrinsic to homosexual unions, not caused by external disapproval of homosexuality

Segment 4: Concluding statements

- Gagnon: gay male relationships on average have more sex partners and more STDs
- Gagnon: female relationships on average have shorter-length relationships and more mental issues
- Gagnon: the greater rates of harm are because there is no complementarity / balance in the relationships
- Gagnon: everyone has some disappointment or suffering in their lives that hurts them, and that they are tempted to break the rules to fix, but we should not break the rules in order to be happy
- Ozanne: both sides are passionate, so no one can be right, and evidence proves nothing
- Ozanne: only feelings about “what God is doing” can allow us to decide what counts as sin or not
- Ozanne: the main thing that is at stake here is to make people like us, not to decide what the Bible says about sin
- Ozanne: my message to people is to do whatever you want, and ignore mean people who don’t affirm you

- Ozanne: we should be more opposed to mean people who make non-Christians feel unloved than about doing what the Bible says

Conservative Party leader tries to teach economics to voters – and they like it!

December 17, 2023 | by Wintery Knight | Link | Original Link

The leader of the Conservative Party of Canada is leading in the polls. He's leading by so much that he would form a majority government if a national election were held today. You might have seen him on American TV news channels, fighting with far-left journalists while munching on an apple in a field. But his new plan is to teach Canadian voters economics. How is that working?

Answer: they love it, and they want more.

Here's the latest, reported by National Post – one of Canada's two national newspapers.

> Conservative Leader Pierre Poilievre released a 15-minute video Saturday morning that more closely resembles a PBS Frontline documentary than the short, slogan-heavy ads Canadians are used to.
>
> […]The video, released in both French and English, is a slick, graphics-heavy adaptation of the stump speeches that Poilievre has been delivering as he tours the country. Poilievre announced on Friday via X (formerly Twitter) that he'd be releasing "a groundbreaking documentary on Canada's housing hell."
>
> It spells out, using dozens of graphics and charts, a step-by-step case for why the Conservatives believe government spending and borrowing under the Trudeau Liberals has fuelled inflation along with the unprecedented rise in housing costs, pricing hundreds of thousands of families and millions of younger Canadians out of the housing market.
>
> […]In an almost-academic breakdown of housing prices, Poilievre's documentary uses a series of economic explanations — from relative population density to quantitative easing — to make the case that soaring housing prices are largely the fault of Prime Minister Justin Trudeau's policies. Poilievre traces most problems back to 2015, the year the Liberals were elected.
>
> He also highlights an inability to build houses for the problem. He blames municipal governments for blocking development, but associates that with economic incentives created by the federal government. By adding up all the inputs in a house, like labour, lumber and land, and then subtracting it from the final sale price, Poilievre calculates what he calls the "gatekeeper gap," or the premium that government red tape and other bureaucracy adds to the cost of homes.
>
> "Consider this: In 1972, Canada's population was 22 million, and we built about 230,000 homes. In 2022, Canada's population was 39 million, and we built about 220,000 homes," he says. "In other words, far more people and far less home-building."

I found the video on YouTube. It's over 417,000 views in TWO WEEKS since it was released:

Canadians are experiencing two major problems right now. First, their government-run healthcare system is failing catastrophically. I blogged about that with the latest think tank numbers earlier in the week. But the second big problem is inflation. Higher prices on everything from electricity, gas, groceries and especially housing. The Liberal Party has been causing these problems with massive government spending, regulations on energy production and home construction, and mass importation of unskilled people.

The video directly addresses the housing problem:

> That is substantiated by nationwide polling. A survey conducted by Ipsos last month found that 73 per cent of Canadians think owning a home in Canada is now only for the rich. Sixty-six percent of Canadians who don't own a house said they have given up on ever being able to afford a home. Perhaps unsurprisingly, these trends have coincided with polls showing the Conservatives thoroughly dominating in support among young voters, with the governing Liberals a distant third behind the NDP.
>
> And more recently, Canadians have started telling pollsters they think the country's high levels of immigration are worsening the housing crisis.

Under Liberal Prime Minister Trudeau, Canada has been mass-importing millions and millions of unskilled immigrants and refugees. They can't speak the languages and they have no marketable skills. They can't get jobs. They can't pay their own way. But they need places to live. Hence the shortage of housing.

If you watch the video, he explains how government spending causes inflation. He explains clearly how prices are set in a market economy (supply and demand). He links higher population (caused by the Liberal Party's open borders immigration policy) to higher demand of housing and lower supply. He explains how housing regulations cut off the supply of new homes.

Watching this video reminded me a lot of reading Thomas Sowell's "The Housing Boom and Bust". I hope you guys are keeping up with your Thomas Sowell reading, because if you don't then Pierre will have to come down here and teach Americans, too! Canadian readers, if you want to know why Americans are so conservative, you have to understand that most Republicans learn economics from Thomas Sowell, a black economist with a long list of prestigious publications. You cannot read just one of his books. You read one, and then you keep reading them. He's pure gold.

It's nice to see Canadians taking time to learn economics. They want to learn more about economics. They've tried voting based on feelings. They've tried voting for nice hair. They've tried voting for follow your heart. They've tried voting for being generous with other people's money. They've tried everything that their teachers and government told them to try. None of it worked. And now they are going to try to understand economics. And they have a very good teacher.

Study: belief in free will linked to ability to behave morally and to help others

December 18, 2023 | by Wintery Knight | Link | Original Link

A while back I finished reading “God’s Crime Scene”, the new book by J. Warner Wallace. I wanted to post something about some studies he mentioned in Chapter 6, on free will. This is one of the places where he found evidence in a surprising area.

Wallace says that free will makes more sense if theism is true, because we have non-material souls that interact with our bodies, but are not causally determined by them. On atheism, only matter exists, and you can’t get free will (or consciousness) from matter. So atheists like Sam Harris and Alex Rosenberg, for example, deny free will, because they are materialists and atheists.

Anyway, here’s what he writes on p. 256:

> In 2008, researchers from the University of Minnesota and the University of British Columbia conducted experiments highlighting the relationship between a belief in determinism and immoral behavior. They found students who were exposed to deterministic literature prior to taking a test were more likely to cheat on the test than students who were not exposed to literature advocating determinism. The researchers concluded those who deny free will are more inclined to believe their efforts to act morally are futile and are, therefore, less likely to do so.
>
> In addition, a study conducted by researchers from Florida State University and the University of Kentucky found participants who were exposed to deterministic literature were more likely to act aggressively and less likely to be helpful toward others.” Even determinist Michael Gazzaniga conceded: “It seems that not only do we believe we control our actions, but it is good for everyone to believe it.”” The existence of free will is a common characteristic of our experience, and when we deny we have this sort of free agency, there are detrimental consequences.

I decided to look up these studies.

Here’s the abstract for first study: (2008)

> Does moral behavior draw on a belief in free will? Two experiments examined whether inducing participants to believe that human behavior is predetermined would encourage cheating. In Experiment 1, participants read either text that encouraged a belief in determinism (i.e., that portrayed behavior as the consequence of environmental and genetic factors) or neutral text. Exposure to the deterministic message increased cheating on a task in which participants could passively allow a flawed computer program to reveal answers to mathematical problems that they had been instructed to solve themselves. Moreover, increased cheating behavior was mediated by decreased belief in free

> will. In Experiment 2, participants who read deterministic statements cheated by overpaying themselves for performance on a cognitive task; participants who read statements endorsing free will did not. These findings suggest that the debate over free will has societal, as well as scientific and theoretical, implications.

And the abstract for the second study: (2009)

> Laypersons' belief in free will may foster a sense of thoughtful reflection and willingness to exert energy, thereby promoting helpfulness and reducing aggression, and so disbelief in free will may make behavior more reliant on selfish, automatic impulses and therefore less socially desirable. Three studies tested the hypothesis that disbelief in free will would be linked with decreased helping and increased aggression. In Experiment 1, induced disbelief in free will reduced willingness to help others. Experiment 2 showed that chronic disbelief in free will was associated with reduced helping behavior. In Experiment 3, participants induced disbelief in free will caused participants to act more aggressively than others. Although the findings do not speak to the existence of free will, the current results suggest that disbelief in free will reduces helping and increases aggression.

So what to make of this?

If you're an atheist, then you are a physical object. And like every other physical object in the universe, your behavior is determined by genetic programming (if you're alive) and external inputs. Material objects do not have the ability to make free choices, including moral choices.

Here's prominent atheist Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will.

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

Atheist William Provine says atheists have no free will, no moral accountability and no

moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

(Source)

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible. No free will means no morality. Can you imagine trying to get into any sort of enterprise with someone who has this view of moral choices? A marriage, or a business arrangement, etc? It would be crazy to expect them to behave morally, when they don't even think that moral choices is possible. It just excuses all sorts of bad behavior, because no one is responsible for choosing to do the right thing.

Believers in materialism are going to struggle with prescriptive morality, including self-sacrificial care and concern for others. Their worldview undermines the *rationality* of the moral point of view. You might find atheists acting morally for their own purposes, but their worldview doesn't rationally ground it. This is a big problem for people who can see objective morality woven into the universe – and themselves – because they have the awareness of objective right and wrong.

Choosing to do the right thing

I think what atheists like to say is "I can be moral, too". That's not interesting. What is interesting is whether it is rational for you to be moral when doing the right thing sets you back. When I look at the adultery of Dawkins, the polyamory of Carrier, the divorces of Shermer and Atkins, etc. I am not seeing anything that really wows me about their ability to do the right thing when it was hard for them to do it. They all deny free will of course, and think that trying to resist temptation is a waste of time.

Wallace explains how the awareness of free will and moral choices caused him to turn away from atheism, in this blog post.

He writes:

> As an atheist, I chose to cling to naturalism, in spite of the fact that I lived each day as though I was capable of using my *mind* to make *moral choices* based on more than my own opinion. In addition, I sought *meaning and purpose* beyond my own hedonistic preferences, as though meaning was to be discovered, rather than created. I called myself a naturalist while embracing three characteristics of reality that simply cannot be explained by naturalism. As a Christian, I'm now able to acknowledge the "grounding" for these features of reality. My *philosophical* worldview is consistent with my *practical* experience of the world.

I think atheists who want to be honest about their own experience of first-person consciousness, free will, moral realism, etc. will do well to just accept that theism rationally grounds all of these things, and so you should accept theism. Theism is real. If you like morality, and want to be a virtuous person, then you should accept theism.

I went on a date with a Christian woman who couldn’t defend the pro-life view

December 19, 2023 | by Wintery Knight | Link | Original Link

I’ve been thinking lately about how to measure how committed and capable a person is on issues of interest to conservatives. For example, on abortion, most conservatives will say, “I vote pro-life”. But I think a higher level of conviction and commitment is shown when a person can show WHY they are pro-life. And I’m not looking for feelings, here. I’m looking for handling scientific evidence.

So, when it comes to the abortion issue, the first step is to answer the question “what is the unborn?” And again, I’m not looking for an opinion here. I’m not looking for feelings. I’m not looking for what your parents, or your pastor, or your church choir says. I’m interested in whether a person can cite some scientific evidence.

Fortunately, we have first class scientists who have collected the relevant information for us, like Dr. Maureen Condic, She’s an Associate Professor of Neurobiology and Adjunct Associate Professor of Pediatrics at the University of Utah School of Medicine, and recently served on the National Science Board. She earned her Ph.D. from University of California, Berkeley, and has published papers in peer-reviewed journals.

One of her publications (PDF) explains what science tells us about the unborn. The title is “When Does Human Life Begin? The Scientific Evidence and Terminology Revisited”. A good paper to have available, especially if your opponent has nothing but purple hair, tattoos and nose piercings. But if you want something easy, you can just use quotations from a variety of embryology textbooks (PDF).

Like this one:

> “Human development begins at fertilization, when a sperm fuses with an oocyte to form a single cell, the zygote. This highly specialized, totipotent cell (capable of giving rise to any cell type) marks the beginning of each of us as a unique individual.”

Source: Keith L. Moore, The Developing Human: Clinically Oriented Embryology, 10th edition. Philadelphia, PA: Saunders, 2016. p. 11

Don’t just use one quotation, use lots.

Also useful to know is what the unborn baby can do during the process of developing.

Here’s an article from the famous Cleveland Clinic that explains:

> At the moment of fertilization, your baby’s genetic make-up is complete, including its sex. The gender of your baby depends on what sperm fertilizes the egg at the moment of conception.

And a bit further along:

> **Month 1 (weeks 1 through 4)**
>
> In these first few weeks, a primitive face will take form with large dark circles for eyes. The mouth, lower jaw and throat are developing. Blood cells are taking shape, and circulation will begin. The tiny "heart" tube will beat 65 times a minute by the end of the fourth week.

And a bit further along:

> **Month 2 (weeks 5 through 8)**
>
> Facial features continue to develop. Each ear begins as a little fold of skin at the side of the head. Tiny buds that eventually grow into arms and legs are forming. Fingers, toes and eyes are also forming.
>
> The neural tube (brain, spinal cord and other neural tissue of the central nervous system) is well formed now. The digestive tract and sensory organs begin to develop too. Bone starts to replace cartilage.
>
> The head is large in proportion to the rest of the body at this point. At about 6 weeks, a heartbeat can usually be detected.

Most abortions happen in the first trimester, and that's why pro-lifers say "abortion stops a beating heart". It's definitely human, and it's definitely killed in an abortion.

So, what's the point of this post? I'm saying that if you are a conservative, then you have to be familiar with enough evidence to be persuasive to others who do not share your views. Not just on the issue you like, but on EVERY issue – social issues, foreign policy issues, fiscal issues.

It's not enough for you to be happy that you have the right opinion about one issue. It's not enough that the people around you like you because they agree with your "right answer". You have to be able to make a case that crushes your opponent with evidence. Being a conservative isn't about you or your feelings. It's about the world out there – can you make a difference by being convincing to other people?

Of course if doesn't feel good to have to learn how to talk about issues using scientific evidence. It's work. And of course it doesn't feel good to disagree with people about controversial issues. But you have to get used to not being ignorant and not being liked. I know a lot of feelings-based Christians who know a lot about sports, fiction, music, essential oils, and other nonsense. They want me to be satisfied that they have the right answer to questions like "Does God exist?", "does military preparedness deter aggression?" and "does the free market system make people more prosperous than socialism?" But if I am out on a date with you, and I ask you these questions, I'm looking for more than the right answer. I want you to show your work. I want to see you demonstrate your ability to persuade people on the other side, either in your writings or in your discussions.

Don't cry to me about how you can't find a husband when you can't do anything that a husband needs you to do. There is no path to impressing a conservative man that allows

you to be lazy, ignorant and cowardly. I expect performance. If you are smart enough to get a college education and a job in the competitive private sector providing value to paying customers, (not a public school teacher or anything disconnected from reality, like that), then you are smart enough to be able to explain your views on moral issues and public policy.

The authors of the gospels of Mark and Luke knew eyewitnesses to the life of Jesus

December 20, 2023 | by Wintery Knight | Link | Original Link

Were the authors of the gospels of Mark and Luke connected to eyewitnesses to the life of Jesus? Well, it turns out that there are good reasons to think that Mark was linked to the eyewitness Peter, and Luke was linked to Paul, who had a post-mortem appearance of Jesus in 1 Cor 15:8, and who met with Peter and James in Galatians 1 and again in Galatians 2.

There is a list of evidence for Peter's influence on Mark on the Cold Case Christianity blog.

Here's my favorite one from the list:

> **Peter's Embarrassments Have Been Omitted**
>
> There are many details in the Gospel of Mark consistent with Peter's special input and influence,including omissions related to events involving Peter. How can Mark be a memoir of Peter if, in fact, the book contains so many omissions of events involving Peter specifically? It's important to evaluate the entire catalogue of omissions pertaining to Peter to understand the answer here. The vast majority of these omissions involve incidents in which Peter did or said something rash or embarrassing. It's not surprising these details were omitted by the author who wanted to protect Peter's standing in the Christian community. Mark was quite discreet in his retelling of the narrative (other Gospel writers who were present at the time do, however, provide details of Peters 'indiscretions' in their own accounts. See *Cold-Case Christianity* for a more detailed explanation).

It makes me laugh to imagine Peter looking over Mark's shoulder and saying "no, don't put that in it" and "no, don't tell them I did that". Funny! But also very good evidence. The rest of Wallace's list makes it even more clear.

And what about the gospel of Luke? Well, did you know that the author of Luke's gospel knew Paul? If you read it carefully, you'll see that Luke switches from describing history from an "I" perspective to describing things from a "we" perspective in the book of Acts (which he also wrote). Who is the "we" he is talking about?

Here's famous Christian scholar William Lane Craig to explain:

> Now who was this author we call Luke? He was clearly not an eyewitness to Jesus's life. But we discover an important fact about him from the book of Acts. Beginning in the sixteenth chapter of Acts, when Paul reaches Troas in modern-day Turkey, the author suddenly starts using the first-person plural: "we set sail from Troas to Samothrace," "we remained in Philippi some days," "as we were going to the place of prayer," *etc.* The most obvious explanation is that the author had joined Paul on his evangelistic tour of the Mediterranean cities. In chapter 21 he accompanies Paul back to Palestine and finally to Jerusalem. What

> this means is that the author of Luke-Acts was in fact in first hand contact with the eyewitnesses of Jesus's life and ministry in Jerusalem.
>
> […]There is no avoiding the conclusion that Luke-Acts was written by a traveling companion of Paul who had the opportunity to interview eyewitnesses to Jesus's life while in Jerusalem. Who were some of these eyewitnesses? Perhaps we can get some clue by subtracting from the Gospel of Luke everything found in the other gospels and seeing what is peculiar to Luke. What you discover is that many of Luke's peculiar narratives are connected to women who followed Jesus: people like Joanna and Susanna, and significantly, Mary, Jesus's mother.
>
> Was the author reliable in getting the facts straight? The book of Acts enables us to answer that question decisively. The book of Acts overlaps significantly with secular history of the ancient world, and the historical accuracy of Acts is indisputable.
>
> This has recently been demonstrated anew by Colin Hemer, a classical scholar who turned to New Testament studies, in his book *The Book of Acts in the Setting of Hellenistic History.* [5] Hemer goes through the book of Acts with a fine-toothed comb, pulling out a wealth of historical knowledge, ranging from what would have been common knowledge down to details which only a local person would know. Again and again Luke's accuracy is demonstrated: from the sailings of the Alexandrian corn fleet to the coastal terrain of the Mediterranean islands to the peculiar titles of local officials, Luke gets it right.

I know a lot of people (like my Dad) read the Bible devotionally, looking for feelings or trying to "get right with God" so they get blessings. But I think it's helpful to look at things from an evidential point of view – how am I going to make a case for this? When you look at things from that perspective, the Bible gets a whole lot more interesting. And you can talk about it with non-Christians when you know about these interesting details.

Trump wants the most conservative Congressman to lose in 2024

December 20, 2023 | by Wintery Knight | Link | Original Link

If you asked me why I opposed Trump in during the 2016 Republican primary, I would have pointed at his extensive record of siding with Democrats on nearly every issue. He surprised me during his first term, by being American's most conservative president. But something seems to have gone wrong. He is no longer the conservative that he was during his first term.

Here's the latest story from Daily Wire:

> Late on Monday, former President Donald Trump called for someone to take up a primary challenge against Rep. Chip Roy (R-TX), who has endorsed Trump's primary rival, Florida Governor Ron DeSantis, for president.
>
> "Has any smart and energetic Republican in the Great State of Texas decided to run in the Primary against RINO Congressman Chip Roy," Trump said, using the acronym for "Republican in name only," in a post to his Truth Social platform. "For the right person, he is very beatable. If interested, let me know!!!"

Is Chip Roy a "RINO"? Let's take a look at the data.

> Voters first elected Roy to the House in 2018 after he established himself in politics working for other prominent Texas Republicans, including former Governor Rick Perry and Sen. Ted Cruz (R-TX). Now in his third term, Roy represents the 21st Congressional District in Texas, which includes South Austin, North San Antonio, and the Texas Hill Country.
>
> As a congressman, Roy has pressed for reining in government spending, grilled and blasted Democrats over the border and immigration crisis, advocated for the development and better access to lifesaving medicines, and challenged leadership over COVID-19 vaccine and mask mandates during the pandemic.
>
> Roy became a member of the House Freedom Caucus and boasts a "Liberty Score" of 100% as well as a 98% on the Heritage Action's Scorecard, which looks at how conservative members are in their voting records and co-sponsorships. A few weeks ago, Roy shot back at keyboard warriors who call GOP legislators like him a "RINO," saying, "You can kiss my a**," adding, "I've spent a lifetime fighting for limited government conservatism."

Whenever I want to know whether a legislator is conservative, I always go straight for the Heritage Foundation scorecard. Chip Roy's score is 98%, and his lifetime rating is 97%. That makes him tied for FIRST PLACE for most conservative member of the House of Representatives. Why would Trump oppose such a conservative legislator? Maybe it's because Trump isn't a conservative at all, and doesn't care about conservatives winning

the House and the Senate. He just cares about himself. He’s a narcissist.

How do so many left-wing fake Republicans get into the House and Senate? Could it because of people like Trump demanding that they get primary challengers, so that the most conservative candidates don’t get elected? Can we really trust someone who only cares about himself to be the leader of the conservative movement? This would be like picking a quarterback who refuses to throw the ball to the star receiver, because the star receiver doesn’t like the quarterback’s hairstyle. It’s that level of childish and stupid. And we can’t afford to pick a stupid child to run as the Republican nominee. Especially if that stupid child is in prison in Spring of 2024.

One of the of reasons why Republican voters might want to choose DeSantis over Trump in 2024 is that Trump is *almost certain* to be convicted and imprisoned in early 2024. Even if he were to run and win, he would be a lame duck president. We would only get one term out of him. But most of all, some of his comments lately clearly show that he’s returning to his Democrat roots. Especially his opposition to pro-life legislation at the state level. We can do better than Trump in 2024. A lot better.

Church of England and Catholic Church offer blessings to same-sex couples

December 21, 2023 | by Wintery Knight | Link | Original Link

In this post, I wanted to first review Jesus' position on marriage, and then we'll look at a couple major churches that have decided to bless same-sex relationships. And not minor churches, either. The Church of England and the Roman Catholic church. Let's take a look at what Jesus says, and then what these two major churches say.

We find Jesus' teaching on marriage in Matthew 19.

Matthew 19:1-6:

> 1 Now when Jesus had finished these sayings, he went away from Galilee and entered the region of Judea beyond the Jordan.
>
> 2 And large crowds followed him, and he healed them there.
>
> 3 And Pharisees came up to him and tested him by asking, "Is it lawful to divorce one's wife for any cause?"
>
> 4 He answered, "Have you not read that he who created them from the beginning made them male and female,
>
> 5 and said, 'Therefore a man shall leave his father and his mother and hold fast to his wife, and the two shall become one flesh'?
>
> 6 So they are no longer two but one flesh. What therefore God has joined together, let not man separate."

To be a Christian, minimally, is to be a follower of Jesus Christ. That means that we accept what Jesus teaches, on whatever he teaches about. We don't overturn the teachings of Jesus in order to make people who are rebelling against God feel better about their rebellion. It is central to the Christian worldview that Christians care more about what God thinks of them than what non-Christians think of them. In fact, Christians are supposed to be willing to endure suffering rather than side with non-Christians against God's authority.

So, with that said, let's take a look at what the Church of England is doing about marriage.

Look at this article from the UK Telegraph:

> For the first time in history, same-sex partners can receive a blessing to celebrate their unions…
>
> […]With the rainbow LGBTQIA+ flag waving outside, Jane Pearse and Catherine Bond became one of the first couples in England to receive a prayer that would publicly affirm and celebrate their union. A move made legal at the turn of midnight Saturday – instead of the usual clink of teacups, the pop of champagne

> corks punctured the post-service chatter, with congregants and the women, both vicars, well aware of the magnitude of the morning's celebration.

I thought this part was interesting:

> Bond and Pearse got together six years ago, when working in the same benefice (an ecclesiastical office), and now live in Felixstowe and are both associate priests… Both have adult children from their prior marriages, to men.

So both of these women were married to men, and left those marriages. That's how they got their children. And they inflicted divorce on those children.

The Church of England was not the only organization trying to gain the respect of the secular left by compromising on the plain meaning of Jesus' words about marriage. They are event investigating a vicar who called the the institution's first transgender archdeacon a "bloke".

The UK Telegraph reported on that, too:

> The Church of England (CofE) is investigating a vicar after he called the institution's first transgender archdeacon a "bloke".
>
> The Rev Brett Murphy faces an official rebuke from the CofE over "intentionally derogatory and disrespectful" remarks he made about the Rev Canon Dr Rachel Mann shortly after her appointment in June.
>
> LGBT+ campaigners had hailed her appointment as a "beacon of light and hope".

For Protestant Christians, it's easy to switch from Bible-denying denominations to Bible-believing denominations. But it's not so easy for Roman Catholics to do the same.

Here's another story reported by Crux, a Catholic news source:

> In the hours that followed release of a Vatican note outlining the pastoral grounds for same-sex blessings, reactions among American Catholics seemed to run the gamut from styling it as a major step forward to insisting on hitting the brakes, on the grounds that not much has really changed.
>
> […]The declaration outlines situations in which blessings are appropriate for same-sex couples or those in irregular unions. It states that these blessings should never be given "in concurrence with the ceremonies of a civil union, and not even in connection with them."
>
> The declaration continues that the blessing cannot be performed with any clothing, gestures, or words that are proper to a wedding. Conversely, the declaration states that the blessings can be provided in informal situations such as a visit to a shrine, a meeting with a priest, a prayer group, or during a pilgrimage.
>
> Still, despite its narrow scope, LGBTQ Catholics view the declaration as a significant step forward.

> Francis DeBernardo, executive director of the Catholic advocacy organization New Ways Ministry, said in a statement that “it cannot be overstated how significant the Vatican’s new declaration is,” for the fact that it “expands the ways that LGTBQ+ Catholics can know God’s love.”
>
> Father James Martin, a leading minister to and advocate for LGTBQ Catholics, in a series of statements called the declaration “a major step forward in the church’s ministry to LGBTQ people and recognizes the deep desire in many Catholic same-sex couples for God’s presence in their loving relationships.”
>
> “Along with many priests, I will now be delighted to bless my friends’ same-sex unions,” Martin said.

So, that’s where we are now. Major denominations have abandoned Jesus’ teaching on marriage. And why? Who are these church leaders trying to impress with their faithlessness? Wouldn’t it be much better if they dug into some studies and make a defenseof the teachings of Jesus using evidence? It’s not that hard. I’ve been doing it for nearly 15 years on this blog. But you just have to accept that it may not win you respect from the secular leftists who run the corporate news. I accept that. Why can’t they?

What are undesigned coincidences, and how are they used in apologetics?

December 22, 2023 | by Wintery Knight | Link | Original Link

When you're reading the Bible, you may find passages in one book that are mysterious on their own, but then they make sense if you add missing details from a parallel account from a different source inside or even outside the Bible. I think these "undesigned coincidences" are helpful for answering the question of that skeptics often ask: "is the Bible history or myth?" Let's see some examples.

So, there are two kinds of undersigned coincidences. In the "internal" kind, the clearing up is done by another source in the same book. In the external kind, the clearing up is done by a source outside the same book.

Here's an article from Apologetics UK with some internal examples:

> In John 6:1-7, we are told:
>
> Some time after this, Jesus crossed to the far shore of the Sea of Galilee (that is, the Sea of Tiberias), and a great crowd of people followed him because they saw the signs he had performed by healing the sick. Then Jesus went up on a mountainside and sat down with his disciples. The Jewish Passover Festival was near.When Jesus looked up and saw a great crowd coming toward him, he said to Philip, "Where shall we buy bread for these people to eat?" He asked this only to test him, for he already had in mind what he was going to do.Philip answered him, "It would take more than half a year's wages to buy enough bread for each one to have a bite!"
>
> Now, Philip is a fairly minor character in the New Testament. And one might, naturally, be inclined to wonder why Jesus hasn't turned to someone a little higher in the pecking order (such as Peter or John). A partial clue is provided in John 1:44: "Philip, like Andrew and Peter, was from the town of Bethsaida." Likewise, John 12:21 refers to "Philip, who was from Bethsaida in Galilee"
>
> And what is so significant about Philip being from the town of Bethsaida? We don't learn this until we read the parallel account in Luke's gospel (9:10-17). At the opening of the account (verses 10-11) we are told, "When the apostles returned, they reported to Jesus what they had done. Then he took them with him and they withdrew by themselves to a town called Bethsaida, but the crowds learned about it and followed him. He welcomed them and spoke to them about the kingdom of God, and healed those who needed healing."
>
> And so, we are informed by Luke that the event was actually taking place in Bethsaida — the town from which Philip was from! Jesus thus turns to Philip, whom, he believed, would be familiar with the area. Notice too that Luke does

> not tell us that Jesus turned to Philip.
>
> But it gets even more interesting still. In Matthew 11, Jesus denounces the unrepentant cities, saying, “Woe to you, Chorazin! Woe to you, Bethsaida! For if the miracles that were performed in you had been performed in Tyre and Sidon, they would have repented long ago in sackcloth and ashes.” The reader is left wondering what miracles were performed in these cities. We are not told in Matthew’s gospel. It is only in light of Luke’s account of the feeding of the five thousand (chapter 9), in which we are told of the event’s occurrence in Bethsaida, that this statement begins to make sense!

This one is pretty clever:

> In Matthew 2 6:67-68, we read, “Then they spat in His face and beat Him; and others struck Him with the palms of their hands, saying, “Prophesy to us, Christ! Who is the one who struck You?”” This raises the natural question, why are they asking “Who hit you?” It is not until we read the parallel account in Luke’s gospel (22:64) that we learn that they had blindfolded him, thereby making sense of their taunts “Who hit you?”

Another one:

> In Luke 23:1-4, w e read,
> Then the whole assembly rose and led him off to Pilate. And they began to accuse him, saying, “We have found this man subverting our nation. He opposes payment of taxes to Caesar and claims to be Messiah, a king.”
>
> So Pilate asked Jesus, “Are you the king of the Jews?”
>
> “You have said so,” Jesus replied.
>
> Then Pilate announced to the chief priests and the crowd, “I find no basis for a charge against this man.”
> On the surface, this seems to be a rather strange declaration to make. Jesus has just declared Himself to be a King, and has been charged with subverting the nation and opposing paying taxes to Caesar. Why has Pilate found no basis for a charge against him?
>
> The answer lies in the parallel account in John’s gospel (18:33-38):
>
> Pilate then went back inside the palace, summoned Jesus and asked him, “Are you the king of the Jews?”
>
> “Is that your own idea,” Jesus asked, “or did others talk to you about me?”
> “Am I a Jew?” Pilate replied. “Your own people and chief priests handed you over to me. What is it you have done?”
>
> Jesus said, “My kingdom is not of this world. If it were, my servants would fight to prevent my arrest by the Jewish leaders. But now my kingdom is from another place.”

> “You are a king, then!” said Pilate.
>
> Jesus answered, “You say that I am a king. In fact, the reason I was born and came into the world is to testify to the truth. Everyone on the side of truth listens to me.”
>
> “What is truth?” retorted Pilate. With this he went out again to the Jews gathered there and said, “I find no basis for a charge against him.
>
> It is only when you read John’s account that you learn that Jesus had told Pilate that “My kingdom is not of this world. If it were, my servants would fight to prevent my arrest by the Jewish leaders. But now my kingdom is from another place.”

And the same article has some external undesigned coincidences:

> In Matthew 2:22, we are told:
>
> But when [Joseph] heard that Archelaus was reigning in Judea in place of his father Herod, he was afraid to go there. Then after being waned by God in an dream, he left for the regions of Galilee…
>
> Josephus’ Antiquities 17.3.1 tells us that the domain of Herod the Great was divided among his sons, with Archelaus having authority in Judea but not in Galilee, which was governed by his younger brother, Herod Antipas.
>
> We also know that Archelaus had acquired quite a bloody reputation (e.g. Antiquities 17.13.1-2 and 17.9.3). The latter of these references describes how Archelaus slaughtered 3,000 Jews at Passover. Thus, Joseph decides not to return to Judea and, instead, goes further north to the regions of Galilee, governed by Herod Antipas.

And another one:

> In Matthew 2:22, Archeleaus is reigning as king in Judea; in Matthew 27:2, Pilate is governor of Judea; in Acts 12:1, Herod is king of Judea; and in Acts 23:33, Felix is governor of Judea. This becomes extremely confusing.
>
> But here’s the thing: Josephus attests to the accuracy of every one of these titles. Herod the Great was made King of Judea by Mark Anthony. Archelaus was deposed in the year 6 A.D., after only a ten-year reign, and a series of procurators ruled over Judea (of whom Pilate was fifth). The Herod of Acts 12 is Agrippa I. He was made king by Claudius Caesar. After his death, Judea was, once again, placed under the government of procurators (one of them being Felix).

And another one:

> When Luke tells us of the riot in Ephesus, he reports that the city clerk tells the crowd that “There are proconsuls”. A proconsul is a Roman authority to whom a complaint may be taken. Normally, there was only one proconsul. Just at that particular time, however, there seems to have been two as a result of the

> assassination of Silanus (the previous proconsul) by poisoning in the Fall of AD 54, by the two imperial stewards at the urging of Nero's mother. This event is independently documented by Tacitus in his Annals (13.1). Indeed, Luke's accuracy has allowed historians to date the event which Luke narrates with incredible precision since we know when Silanus was poisoned.

If you think that these are clever, then share this post, and encourage your non-Christian friends and family to consider one of the many reasons why so many scholars have considered the New Testament books to be so reliable.

I wish that Christian parents and pastors were more thoughtful about how they present the Bible to young people. Instead of just saying "the Bible says" and praising blind faith acceptance of the Bible, why don't we think a little harder, and look for some confirmation of the Bible from historical methods like undesigned coincidences, and from non-Biblical authors, and from archaeology, etc.? Surely adding more evidence for taking the Bible seriously is the right approach, if the goal is to be persuasive? It's not like we're see good results from the current "blind faith" approach to raising Christian children, right?

Famous cancer researcher cannot find work after being fired for consensual office romance

December 23, 2023 | by Wintery Knight | Link | Original Link

I sometimes get into discussions with social conservatives about why I am not at least *trying* to get married. I have a lot of reasons for not trying to get married. For one, I don't want to fall under the authority of hierarchies (school, work or church) who don't think that women should ever be held responsible for their own choices. Let's take a look at a news story that illustrates the problem.

Once upon a time, men would meet their wives in school, workplaces or churches. As long as the man was not in the reporting hierarchy of the woman, (i.e. – as long as he was not her manager or her director, etc.), then it was fine for people to meet up, date, get engaged, and get married. But that's all changed now.

Consider this story from the New York Post:

> A renowned Massachusetts Institute of Technology biologist who was axed after having what he said was a consensual fling with a much younger colleague, said the mushrooming scandal forced him on the unemployment line.
>
> David Sabatini, 54, whose research involved unraveling how tumors develop, resigned from MIT last month and has been surviving on employment after fellow scientist Kristin Knouse claimed he "groomed" and "coerced" her into a sexual relationship, according to a report and court papers.
>
> A longtime friend and dean at the NYU Grossman School of Medicine tried to offer him a job, but after an uproar, the school announced on May 3 that it would not hire him despite the fact that colleagues described him in a recent article as one of the world's greatest scientists — a "genius" in line for the Nobel Prize.
>
> "What wormhole did my life take, to … protests and being called a sexual predator? What quirk in the universe allowed this to happen?" said Sabatini, who has denied wrongdoing and noted Knouse did not work in his lab or report to him.
>
> In an October lawsuit against MIT, Sabatini said that his relationship with Knouse, who is 21 years his junior, was consensual — and told a reporter he was shocked to find himself the subject of protests at NYU when the school explored the possibility of hiring him.
>
> Sabatini has contended he and Knouse began their fling during a 2018 conference, while he was in the midst of a divorce. By 2020, he thought the affair had cooled, though he claims Knouse wanted to continue. By October 2020, she complained she'd been harassed, and in a later lawsuit alleged Sabitini oversaw a "sexualized" environment in his lab.

What's interesting about this story to me is that it's been reported that this woman entered into this relationship with this man after he clearly communicated to her that he

was only looking for something casual. I.e. – he was not trying to hide that he did not want to be tied down. He was telling her that up front.

There are more details about the story in Common Sense.

After their initial hook-up…

> …they met up at Knouse's condo near Boston Common where they discussed a few ground rules for their tryst. They agreed they could see other people. Knouse, Sabatini remembers, had ongoing flings with men who she referred to with nicknames like "anesthesiologist f*** buddy," "finance bro," and "physics professor," **and she wanted to keep it that way.** Also, they wouldn't tell anyone. Why complicate things at work? It was all supposed to be fun.

Why did this woman get the man fired? Well, there is an old saying about women that goes like this: "Hell hath no fury like a woman scorned". Apparently, Sabatini was getting interested in another woman, and less interested in Knouse:

> Things were fizzling… he was getting involved with another woman, a microbiologist in Germany.
>
> Knouse didn't want to let go. In January 2020 she texted, in part: "I get anxious when I don't hear back from you and then I see you post stuff on Twitter and it provides an admittedly small and silly but still another bit of evidence to this growing feeling that you don't care about me in the way that I care about you." He wrote back: "I am sorry but you are being crazy." In another text, Knouse admitted feeling "stung." She added: "I think it's worth thinking about whether you want someone who matches your passion, intellect, and ambition."

Feminists think that people are faithful and committed because of self-interest, e.g. – "passion, intellect, and ambition", i.e. – self-interest. They think that a woman can just like fun, and choose a man who likes fun, and have a permanent, exclusive relationship based on continuous fun. No need to care about religion. No need to care about the rationality of moral behavior. No need to care about traditional gender roles. Things will just work out, if each person acts selfishly all the time.

So what happened to Sabatini next?

This:

> In October 2020, Knouse texted her friends that she was "unpack[ing] a ton of suppressed abuse and trauma from an obvious local source"—an apparent reference to Sabatini. Knouse's fellowship at the Whitehead was ending, and she didn't apply for any faculty jobs there. When the new director, Ruth Lehmann, called Knouse to ask why, Knouse complained for the first time of being "harassed."
>
> In November, Knouse warned her friend—an incoming Whitehead fellow—to "squeeze out as much advice as possible before your mentor is Weinstein'ed out

> of science."
>
> In December, at Lehmann's behest, the consulting firm Jones Diversity sent the Whitehead employees a survey "based in part on Dr. Knouse's false complaint about Dr. Sabatini," according to a complaint later brought by Sabatini. All participants were anonymous. Five or so of the nearly 40 employees in Sabatini's lab took part.
>
> The next month, two former Sabatini lab members lodged complaints to H.R.—the first complaints against him in his 24-year tenure—about "bro culture" in the lab.
>
> This prompted the Whitehead to hire the law firm Hinckley, Allen & Snyder to conduct an investigation on "gender bias and/or inequities and a retaliatory leadership in the Sabatini lab." The Whitehead never told Sabatini what he was accused of. Former lab members told me their co-workers were sobbing when they came out of meetings with the lawyers, saying that the lawyers had put words in their mouths. "They had a very strong agenda," one of them told me.

Knouse was 29 years old. She was not a child. Sabatini never worked with her. He never supervised her. He never threatened her or pressured her. This was a relationship between two consenting adults. But that doesn't matter, because in every school and workplace, women cannot be held responsible for their own bad choices. Women are always victims of men. It is always the man who must be punished. And men have to go to school and work in these environments for their entire lives – walking on thin ice, never knowing when the axe will fall.

Sabatini is ruined:

> In the 24 hours after the report came out, Sabatini's life fell apart. MIT put him on administrative leave. The Howard Hughes Medical Institute, another prestigious non-profit that funds biomedical research and was paying Sabatini's salary, fired him. He resigned from the Whitehead, and eventually MIT, at the advice of his lawyers who thought it would help him secure his next job. ("I one hundred percent regret that," Sabatini told me).
>
> Soon, the biotech startups he'd helped found— Navitor Pharmaceuticals, KSQ and Raze Therapeutics—started severing their relationships with him. Sabatini was axed from professorships, fellowships, and professional societies. Awards and grants were pulled. His income disappeared.

Knouse is still working. They decided that she didn't violate the policy – only he violated it. She has no problem at all with this outcome – she really believes she is a victim, and shouldn't have to take responsibility for her own choices. Can you imagine being married to a woman who does whatever she wants, then blames you when things go wrong? And worse – goes to the authorities to have them punish you, when she is the one who chose poorly?

This was a consensual relationship. Expectations were set at the beginning – this was

casual, no commitment. She agreed to the casual nature, she was sleeping with several other men. Suddenly, she reached age 29, and decided it was time to get serious. He reminded her about their arrangement – nothing serious.

They were BOTH EQUALLY in violation of the company rule. Abuse was alleged by her, but there was no police involvement to verify it. He was punished, but there was no criminal trial where he could defend himself. He was not given due process. No lawyer. No self-defense. This lack of due process is common on college campuses, workplaces, and even in religious organizations. Women who are jilted by men are able to make these allegations and get these men fired without any due process.

Some people might say "well, he was treating her badly, so he deserved it". The issue is not whether he is to blame, or whether she is to blame. The issue is what message it sends to men about the safety of having relationships with women. Women aren't punished for breaking the same rules as men break. And men are learning from that not to engage in relationships with women, because the authorities always side with the women even if their own decisions have gotten them into trouble.

Some people might say, "well as long as you act morally, then this won't happen to you". But these accusations can also be made against innocent men who are just "guilty" of offending women in the school or workplace with their conservative or Christian views. This was already happening to people in companies like Mozilla and Google. Men sometimes get accused of false rape and sexual harassment for rejecting a woman's advances.

I know that a lot of pro-marriage social conservatives love to load men up with duties, and blame them when things go wrong. But those social conservatives cannot expect men to continue to marry in an environment where men are always to blame, men must always be punished, men must always pay alimony and child support, men must always go to jail, men must always lose their jobs or custody of their kids. Men are learning NOT to talk to women, date them, mentor them, or marry them.

It's lots of fun for pro-marriage social conservatives to treat women like children, and embrace chivalry in public. It's a form of virtue-signaling. But if you ignore the incentives facing men, then you are causing the very decline of marriage that you claim to oppose.

Should we expect to know what God’s reason is for allowing evil and suffering?

December 24, 2023 | by Wintery Knight | Link | Original Link

Here is an article by Steven Cowan about the problems of evil and suffering.

Intro:

> The problem of evil is no doubt the most serious challenge to belief in God. Even religious believers find it troubling that evil exists in the world—and so much evil! It is puzzling, to say the least, that an all-powerful, absolutely good being would allow evil to exist in his creation. And yet it does. Evil and suffering exist and they are often overwhelming in their magnitude.

Now let’s find out what a noseeum is, and how it relates to the existence of evil and suffering:

> However, perhaps God’s existence is incompatible with a certain kind of evil that exists. For example, the atheist William Rowe has argued that God’s existence is inconsistent with pointless or gratuitous evil. By “pointless evil,” Rowe means evil that does not and cannot serve a greater good. And Rowe believes that there is such pointless evil in the world. He thus concludes that God does not exist. Rowe’s argument may be simply stated as follows:
>
> 1. If God exists, there would be no pointless evil.
> 2. There is pointless evil.
> 3. Therefore, God does not exist.
>
> […]But, is there pointless evil in the world? Rowe thinks there is. To show that there is pointless evil, Rowe introduces what he calls the “noseeum inference.” Like the pesty little bugs that some readers may be familiar with, a “noseeum” is something that you cannot see—it is a “no-see-um.” And a noseeum inference is a conclusion drawn on the basis of what one does not see. The basic structure of all noseeum inferences looks like this:
>
> 1. I cannot see an x.
> 2. Therefore, there probably is no x.
>
> We all make noseeum inferences everyday of our lives. Every time I go to cross a street, I look both ways and I step out into the street only after I “no-see-um” a car coming.
>
> […]Rowe applies this kind of noseeum reasoning to God and evil. Rowe suggests that if we cannot see a reason for a particular instance of evil, then there is probably not a reason. Suppose we hear about a very young child who is tortured

> to death to amuse some psychotic person. We think about this event and we examine all the circumstances surrounding it. No matter how hard we try, we cannot see any good reason why this child had to suffer the way she did. Since we cannot see a reason why God would allow this child to suffer, there probably is not a good reason—the child's suffering was pointless. Of course, Rowe would be quick to point out that he is not speaking merely hypothetically. There are cases like this in the news every day—real-life cases in which we shake our heads in frustration, wondering why God would allow such a thing.
>
> Is Rowe correct in his conclusion? Do such examples prove that there is pointless evil in the world? I don't think so. To see why, we must recognize that noseeum inferences are not all created equal. Some noseeum inferences, as we have seen, are reasonable and appropriate. But, many are not. Suppose I look up at the night sky at the star Deneb and I do not see a planet orbiting that star. Would it be reasonable for me to conclude that there is no planet orbiting Deneb? Of course not. Suppose that using the best telescopes and other imaging equipment presently available, I still cannot see a planet around Deneb. I would still be unjustified in concluding that there was no such planet.

In that example, the planet is the noseeum. Just because you look really hard, you can't be confident that the planet is not there. And similarly with the problem of evil and suffering, looking really hard and finding no reason does not mean that there is no reason. It just means that you are not in a good position to see the reason. You don't know enough to to be sure that there is no reason, because of your limitations as a human being.

To *know* that any given instance of evil or suffering is *gratuitous/pointless* requires a high level of knowledge. How much knowledge? Well, consider this paper by the late William Alston of Syracuse University, who lists six problems with the idea that humans can *know* that any particular instance of evil and suffering is gratuitous.

According to the paper, human beings just do not have the capability to know for certain that God has NO morally sufficient reason for allowing any particular instance of evil and/or suffering. God's morally sufficient reason is a noseeum. To know for sure that there is no reason, we would need to have more knowledge than we do.

Also, remember that on the Christian view, the good aim that God has is NOT to make humans have happy feelings in this life, regardless of their knowledge, wisdom and character. That's what atheists think, though. They think that God, if he exists, is obligated to make them feel happy all the time. They don't think that God's goal is being actively involved in forming their knowledge, wisdom and character. God has a purpose – to work in the world so that everyone who can freely respond to him will respond to him. The Bible says that allowing pain and suffering is one of the ways that he gets that group of people who are willing to respond to respond to him – FREELY. To be able to claim that evil is gratuitous, the atheist has to show that God can achieve his goal of saving all the people he wants to save *while permitting less suffering in the world.* And that is a very

difficult thing for an atheist to show, given our human cognitive limitations.

Did the early church invent the divinity of Jesus over a long period of time?

December 25, 2023 | by Wintery Knight | Link | Original Link

How early is the doctrine of the divinity of Jesus? When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography. The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

1 Corinthians

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

4 Hear, O Israel: The LORD our God, the LORD is one.

5 Love the LORD your God with all your heart and with all your soul and with all your strength.

6 These commandments that I give you today are to be upon your hearts.

7 Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

8 Tie them as symbols on your hands and bind them on your foreheads.

9 Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

4So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

5For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

6yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

Philippians

Check out Philippians 2:5-11.

5Your attitude should be the same as that of Christ Jesus:

6Who, being in very nature God, did not consider equality with God something to be grasped,

7but made himself nothing, taking the very nature of a servant, being made in human likeness.

8And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

9Therefore God exalted him to the highest place and gave him the name that is above

every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

Mark's gospel

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

The “Q” source for Matthew and Luke

Here’s Matthew 11:27, which is echoed in Luke 10:22:

[27]“All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]“All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him.”

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier “Q” source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

For Christmas Day, let’s remember George Washington and the Battle of Trenton

December 25, 2023 | by Wintery Knight | Link | Original Link

My favorite book about the American Revolutionary war by far is called “1776”. It’s written by famous historian David McCullough. The part of the book that really stuck out to me was the Battle of Trenton. I think that this battle really defines the essential character of America, as seen in the decision-making of its great general and first President, George Washington.

In the book, I learned about how George Washington and his revolutionary army had suffered a string of defeats at the hands of the powerful Commonwealth army, and their mercenary allies. It was the middle of a freezing cold winter, and the many of the sickly and ill-equipped American troops were just days from having their enlistment contracts run out. Some of the troops were not waiting for their enlistments to expire, they were just deserting. In droves.

Washington was losing, and was just days from losing his Continental Army. If the Americans lost the revolutionary war, then it would mean that every man who signed the Declaration of Independence would be hanged as a traitor. The American revolutionaries had risked everything for liberty, and they were about to lose everything – their money, their property and even their lives.

I found a page that summarizes the battles leading up to the Battle of Trenton.

First battle, a defeat for Washington:

> **The Battle of White Plains**
>
> *October 28, 1776*
>
> RESULT: BRITISH VICTORY
>
> With the British army maneuvering to make his Harlem Heights position untenable, George Washington withdrew from the island of Manhattan, and established a new encampment further north near White Plains, New York.
>
> On October 28, 1776, a flank attack by the British on this new position resulted in the collapse of Washington’s line. Thankfully, he was able to orchestrate an orderly withdrawal that preserved the army. Unfortunately, Washington’s retreat further exposed Fort Washington, which remained garrisoned on Manhattan.

Next, another defeat for Washington:

> **The Battle of Fort Washington**
>
> *November 16, 1776*
>
> RESULT: BRITISH VICTORY
>
> Following the defeat of George Washington’s army at White Plains, New York,

> British General William Howe focused his army's attention on Fort Washington, the last post defended by the Continental army on Manhattan. Although Washington hoped to abandon the fort, his officers convinced him that it needed to be held in order to keep British ships from ascending the Hudson River.
>
> During a carefully-orchestrated, all-out attack on November 16, 1776, British and Hessian forces overwhelmed the fort's garrison after vicious fighting. When he heard the attack begin, Washington, who had stationed himself across the Hudson River in New Jersey, travelled across the river to the enter the fort and personally inspect its defenses. Several officers accompanied Washington, including Generals Israel Putnam, Hugh Mercer, and Nathanael Greene. They convinced Washington to leave the fort just 30 minutes before it was surrounded.

And then, another defeat for Washington:

> **Evacuation of Fort Lee**
>
> *November 20, 1776*
>
> RESULT: BRITISH VICTORY
>
> After the fall of Fort Washington, George Washington made plans for the evacuation of Fort Lee, which stood across the Hudson River in New Jersey. In a letter written to John Hancock on November 19, 1776, the general wrote that "…Fort Lee was always considered as only necessary in conjunction with [Fort Washington]…," and that it would be abandoned as soon as provisions and other supplies were removed.
>
> Unfortunately, a large British force succeeded in scaling the heights close to the fort on November 20, 1776. Faced with superior numbers, Washington called for the immediate evacuation of the fort, which resulted in the loss of dozens of cannon, 2-300 tents, and 1,000 barrels of flour.

That brings us to the Battle of Trenton. Across the Delaware river from Washington's army was an encampment of Hessian mercenaries, fighting for the British. The Hessians believed that Washington's Continental army was in full retreat. The British generals had already written home to the King to tell him that the war was nearly over, and that they had won. But had they?

Washington crosses the Delaware

Here is what Washington decided to do on December 25th, 1776:

> General George Washington's commitment to cross the Delaware River on Christmas 1776 foreshadowed the many hardships faced as well as the eventual victory of the Continental Army during the American Revolution. At first glance, the decision to transport 2,400 Continental soldiers across an icy river in one night, directly into a severe winter storm of sleet and snow seems irrational.
>
> Washington's decision, however, was based on strategic motivation, understanding that the Continental Army desperately needed a victory after

> months of intense fighting with several significant defeats and no major victories. Washington also understood that the element of surprise was the only way that he and his army stood a chance of defeating the highly trained Hessian mercenaries.
>
> On the morning of December 25, 1776, Continental soldiers woke up in their camps along the Delaware River to a frozen, snowy covered ground. Weather conditions worsened and temperatures continued to drop throughout the day. Late in the afternoon, the Continentals left their tents and began to form along the river in anticipation of the night's events. Washington kept almost all of the details of the crossing a secret; as a result, none of the soldiers knew anything about their upcoming mission.
>
> Washington's crossing of the Delaware River on December 25, 1776 allowed his army to strike the Hessians at Trenton the next morning.
>
> Washington's plan was to cross the river at night, march to the nearby town of Trenton, New Jersey, and attack the Hessian garrison right before dawn. Time was Washington's greatest enemy; to combat it his orders called for the various regiments to assemble at their designated crossing points no later than sunset. The close proximity to the crossing points allowed the soldiers to begin the journey immediately after nightfall struck and complete the crossing no later than midnight. Once across, Washington intended for the armies to reassemble and march approximately ten miles to Trenton, arriving there no later than five o'clock in the morning to achieve surprise. Despite his meticulous planning, the schedule failed almost before it even began.
>
> Many of the regiments did not arrive at the river until well after dark. Additionally, a severe winter storm that included wind, rain, snow, hail, and sleet met the soldiers at the banks of the river significantly slowing their crossing. Many of the boats had to combat ice jams and unfavorable currents. To make matters even worse, the extreme darkness caused by the storm made it hard for the boatmen to see the opposite shore.
>
> The necessity of using larger ferries to carry pieces of artillery across the river caused even more delays. Washington crossed the river with John Glover's Marblehead mariners and upon arrival debated whether or not to cancel the entire operation because it was more than three hours behind schedule. Washington decided it was too costly to retreat and he painfully watched as his army continued to trickle across the river.

If you were standing by the river along with Washington watching his sick, frozen, ill-equipped army struggle across the Delaware, then you would probably think that Washington had lost the element of surprise. This attack was just taking too long to happen. Maybe Washington would give up his plan, because things hadn't gone his way. But Washington didn't quit – he persisted.

The Battle of Trenton, December 25, 1776 (click for larger image)

The Battle of Trenton

This is how the battle went down in Trenton, New Jersey:

> Immediately following his famous crossing of the Delaware River, General George Washington marched the Continental Army to Trenton, New Jersey. The army's forces included horses, guns, wagons, and soldiers, stretching for nearly one mile. The weather was worse than it had been crossing the river, but the army continued to proceed as Washington rode up and down the column pressing his men to carry on.
>
> Shortly after eight o'clock on the morning of December 26, 1776, the Continental Army started its charge on the city. Three columns marched through thick snow with Washington personally leading the middle charge. As the soldiers pushed forward, artillery began to fire. At the same time, German drums urgently called the Hessians to arms. To his astonishment, Washington had maintained the element of surprise.
>
> Immediately after the firing began, three Hessian regiments ran from their quarters ready to fight, quickly forming ranks. As the Hessians grouped, the Continental Army entered the city at two points: John Stark marched into the city on River Road from the west, while Nathanael Greene and Washington arrived from the north.
>
> Andreas von Wiederholdt, a Hessian lieutenant, incorrectly reported to Colonel Johann Rall that the Continental Army had surrounded Trenton and there was no available route for retreat. As a result, Rall decided to counterattack Washington within the city and not retreat across Assunpink Creek. This proved to be costly as Washington's forces occupied the highest ground in the city and had clear views of all of Rall's movements.

> Time after time, Washington countered Rall's efforts to outflank the Continentals. Eventually, Washington's forces overpowered the Hessians. Rall was mortally wounded and many of his soldiers broke ranks, fleeing from the fighting. Normally very disciplined, Rall's regiment was confused and disoriented without their commander. They retreated to an orchard east of Trenton where they were forced to surrender.
>
> Despite the large number of Hessians that escaped Trenton, Washington still won a crucial strategic and material victory. In only one hour of fighting, the Continental Army captured nearly nine hundred Hessian officers and soldiers as well as a large supply of muskets, bayonets, swords, and cannons. Washington ordered his soldiers to treat the Hessian prisoners in a humane manner, and the general quickly focused his attention on what to do next. Washington assembled all of his officers in Trenton to discuss whether they should attack another post, hold their position in Trenton, or retreat back across the Delaware. Washington decided that because of the condition of his army, the best move was to return to their camps across the River.
>
> When the Continental Army returned to camp on the Pennsylvania side of the Delaware River, soldiers were exhausted. They had marched and fought for two straight days through rain, snow, sleet, and hail. Washington knew that his army had far exceeded expectations at Trenton and that they faced many more challenges going forward.

Washington won two more battles in rapid succession. Many of his troops re-enlisted because of these victories. There were many battles remaining to fight, and many hardships such as the winter at Valley Forge. But the Battle of Trenton was the turning point of the revolution. George Washington would not let a string of defeats stop him.

New study: #MeToo caused men to reject collaborations with women

December 26, 2023 | by Wintery Knight | Link | Original Link

People in our society who are driven by their desires and emotions tend to struggle to answer the question: what are the consequences for all the people who are affected by my actions? The feelings-oriented people tend to follow their hearts. Thinking too much about the consequences of their actions would slow them down. In today's post, we'll look at some of these unintended consequences.

Here's the study, up at SSRN.

Abstract:

> How did #MeToo alter the cost of collaboration between women and men? I study research collaborations involving junior female academic economists and show they start fewer new research projects after #MeToo. The decline is driven largely by fewer collaborations with new male co-authors at the same institution. I show that the drop in collaborations is concentrated in universities where the perceived risk of sexual harassment accusations for men is high – that is, when both sexual harassment policies are more ambiguous exposing men to a larger variety of claims and the number of public sexual harassment incidents is high. The results suggest that the social movement is associated with increased cost of collaboration that disadvantaged the career opportunities of women.

Honestly, to me it doesn't matter whether the policies are more or less ambiguous. The risk of facing serious consequences – loss of job, loss of reputation, loss of income, loss of future job offers, exposure to anti-male courts – outweigh any benefits. What does a man have to gain by helping women, when there is a chance that she could destroy his whole life, up to and including imprisonment? The reward is not worth the risk.

The author of the study is very much a feminist, and enthusiastic about feminism. She tweeted about her paper in a long thread.

This tweet was interesting:

> Women don't make up for the loss in projects with men by collaborating more with other women or solo work. Junior men do make up for lost collaborations with women by collaborating more with men. So, men don't have a loss in projects overall.

I keep seeing feminists insist that they can do everything that men can do, and they don't need men. It sounds like when men decline to participate in the task of helping women, then the women themselves don't step in and make up for the loss. Even though there is much less risk of false accusations between women.

The feminist movement can be described as a non-stop chain of demands by women,

which were granted to women. And when got what they wanted, they complained that it wasn’t what they expected. Then they turn to the men who are now paying the costs of their behavior, and demand that those men fix it.

I think men need to take a step back and decline to participate. Men have enough trouble in this world taking care of ourselves. In the pre-feminist world, we were not discriminated against in school and at work. We had enough job security and money to look out for others. We knew that our protection, provision and leadership was seen as an asset. Well, that world is now gone. We have to decline to produce the same outputs in this new post-feminist world that we did in the world before feminism. We cannot take on unnecessary risks to help people who do not respect us.

Christian woman finds a way to discuss her faith with non-Christians

December 27, 2023 | by Wintery Knight | Link | Original Link

I found an interesting article where a Christian woman explains how she used to share her testimony with non-Christians. But that wasn't working. So she decided to try something different.

She writes:

> I'll never forget the first time I shared my personal testimony with a non-Christian.
>
> When the opportunity arose and I shared my story with an unbelieving friend, she replied, "That's so cool. I'm so happy you found something that works for you."
>
> *For me?*
>
> "It's not about what works *for me*," I said, trying to hide my discouragement. "It's about what's true for everyone."
>
> "That doesn't make sense," she responded. "That's *your experience*, not mine. I had a similar revelation when I realized I could leave the church, and I've become a better person for *my* decision. Just as you were freed from your heaviest burdens by finding God, I was freed from mine by leaving God behind."
>
> I was devastated but I chalked it up to my friend's hardheartedness. I decided to shake the dust off my feet and look forward to the next opportunity.
>
> But time after time of sharing my testimony resulted in similar responses. People expressed enthusiasm that I was happy, that Christianity worked for me, and that I had "found my niche." Yet no one considered my experience as anything more than just that—my own personal experience.
>
> […]I had been taught that sharing what God had done in my life was the ideal way to witness to non-Christians. A personal testimony was interesting yet non-confrontational, compelling but inoffensive. And yet, despite having shared my testimony with dozens of unbelievers, not a single person felt challenged to consider the truth claims of Christianity.

She noticed that her approach wasn't actually in the Bible. There was a different approach being demonstrated by Jesus, and later by his disciples.

She writes:

> When Jesus called his first disciples, he taught truth and provided evidence (miracles) to support his claims, then he asked people to follow him (Luke 5:1–11). In fact, this was his method whenever he went into new regions (see Luke 4:14–44; John 4:7–26). People decided to follow Jesus not on blind faith or a

> subjective feeling, but based on the evidence they had seen and heard.[i]
>
> Jesus also used evidence to assuage the doubts of even those who had been with him a long time. John the Baptist was Jesus' cousin, who leapt in the womb during Mary's visit (Luke 1:39–45), baptized Jesus in the Jordan River, heard God's voice from heaven, and saw the Holy Spirit descend on Jesus in bodily form like a dove (Luke 3:21–22). Yet when John experienced unexpected suffering, he began to doubt.
>
> Jesus didn't respond as many do today, by insisting that John "just believe" or "have faith" or "prayer harder." Rather, he responded with more evidence, saying, "Go and tell John what you hear and see: the blind receive their sight and the lame walk, lepers are cleansed and the deaf hear, and the dead are raised up, and the poor have good news preached to them. And blessed is the one who is not offended by me." (Matt. 11:2–6).
>
> […]At Pentecost, the apostle Peter offered signs and wonders, fulfilled prophecy, and relayed eyewitness testimony to persuade people from all over the Roman Empire that the most reasonable explanation for what they were seeing was not morning drunkenness, but a risen Messiah (Acts 2:1–41).
>
> On his missionary journeys, the apostle Paul reasoned with the Jews from the Scriptures, explaining and proving that Jesus was the Messiah who needed to suffer and rise from the dead (Acts 17:1–3, 17). And he reasoned with the Gentiles from outside the Scriptures, making a case with their own accepted beliefs to convince them (Acts 17:17–34).
>
> In fact, in describing his mission, Paul told the Philippians, "I am put here for the defense of the gospel" (1:7, 16). This word translated defense is the same word from which we get our English word "apologetics," meaning to make reasoned arguments or to provide evidence as justification. Using this same word, Peter commanded believers to "always [be] prepared to make a defense to anyone who asks you for a reason for the hope that is in you"(1 Pet. 3:15).

So, she decided to dump the testimony approach, and try the Biblical approach. But she had to change it a little bit, since she couldn't perform miracles herself:

> We are not eyewitnesses to Jesus's life and resurrection, but we have the accounts of those who were. We don't typically see miracles, but we have millennia of biblical scholarship and archaeology that provide reasons to believe the accounts are trustworthy. We don't often hear God speaking audibly or see him parting seas, but we have significant scientific evidence that shows the universe had a beginning, and millennia of observation to confirm the scientific principle that everything that begins to exist has a cause.

I think a lot of Christians never move on from approach she described that wasn't getting results. And there's a reason for that – studying evidence is hard work. But I can tell you from my experience as a software engineer, there is no better way to convince other

people to adopt your view than to show them working code that produces results. If they have a prototype, they will adopt your design. Similarly with Christianity. If you have evidence, then you will be persuasive.

When talking about spiritual things with non-Christians, always remember the joke about the two men walking in the woods who meet a bear. One man starts to put on his running shoes. The other man says “what are you doing? you can’t outrun a bear!” And the first man says “I don’t have to. I only have to outrun you”. It’s the same with apologetics. You don’t have to be William Lane Craig to talk about your faith to non-Christians. You just have to know more than your non-Christian opponent knows about evidence.

The way things are going these days with the public schools and the mainstream news media, this is actually pretty easy to do. One or two introductory books on the origin of the universe, the fine-tuning for intelligent life, the origin of biological information, the origin of body plans, the historical reliability of the New Testament, the minimal facts case for the resurrection, etc. will do the job. You might need another one on philosophical challenges like evil, suffering, divine hiddenness, etc. But we’re talking no more than 5 books, and you’ll be effective in the vast majority of your conversations. If you can only get one book, I like Sean McDowell and Jonathan Morrow’s “Is God Just a Human Invention?” best.

Survey: young, unmarried women explain why they avoid having children

December 28, 2023 | by Wintery Knight | Link | Original Link

Why do so many women end up involuntarily childless? Is it because men are ruining their lives, with sexism and discrimination and refusal to commit? OR is it because women are deliberately making choices that lead them to involuntary childlessness? This interesting article answers that question. It comes from the far leftist Huffington Post.

They write:

> The Huffington Post and YouGov asked 124 women why they choose to be childfree. Their motivations ranged from preferring their current lifestyles (64 percent) to prioritizing their careers (9 percent) — a.k.a. fairly universal things that have motivated men not to have children for centuries. To give insight into the complex, layered decisions women make, HuffPost asked childfree readers to discuss the reasons they have chosen not to have kids and gathered 270 responses here.

They grouped the responses into 5 categories:

1. I want to prioritize my career
2. I don't like children
3. I had a bad relationship with my parents
4. I don't want the financial responsibility
5. I like my life as it is

And here are some interesting quotations:

Category 1:

> I am a first-generation college graduate in my family. My mother was a single mom my entire childhood, and I was there to see that struggle. Being a parent, for a woman, means for life. Being a parent, for men, seems to be something very different. I understand raising children is a big life change and I don't want to sell myself short on my potential to become something more and maybe even create change. **I am childfree because I want to travel, move, pursue my career wholly** and be able to push myself to be an inspiration to other women. If a child comes into my life, it won't be until I am happy and successful in my work life, and not until I am secure with my finances and a marriage. I don't want to one day wake up as an old woman wishing I had waited to have children so I could live my own life first, make mistakes, learn new things and find myself. Today kids are not for me.

Category 2:

> I'm nearly 47; my boyfriend (domestic partner) of 17 years is nearly 50. I've never been pregnant and have taken every precaution to remain childfree. I tolerate other people's children when I have to. I'm happiest when there are NO children around. I definitely don't want them in my home. I like my life as it is. My boyfriend and I are both scientists. We also raise snakes and spiders! **We like to travel. We travel to ride roller coasters (members of ACE — American Coaster Enthusiasts) and to attend rock concerts.** I am also a performer in a senior winter guard. My plate overfloweth! I see no reason to procreate. I would be unhappy. Why be unhappy?

Category 3:

> I have a great relationship with my husband. **We have the time and money to travel, and that gives us precious memories.** I had a bad relationship with my dad, and maybe I'm scared to treat my children like that. I'm very happy with my decision. I have a great relationship with myself too.

Category 4:

> My spouse and I have talked in depth about having children. However, **we both decided that our desire to travel the world is a financial burden in itself. If we have kids, we will never have the means to travel**, and at the end of our life, we would rather be 100 percent committed to fulfilling our own realistic dreams rather than only able to provide a subpar life for a child. Comes down to the fact we are selfish, but at least we recognize this and made the choice early enough to avoid damaging a kid

Category 5:

> The thought of having to do kiddie crap every weekend makes me want to shoot myself. I like having the extra money to save for retirement and not worry about braces, summer camp or college tuition. **I can travel on a moment's notice.** I can give my all to my job and not have to worry about daycare, sick days, or having to leave my co workers to pick up my slack. I'm the "cool aunt" to all my nieces and nephews. I have more time to do the things that make me happy and productive. My relationship with my guy is not strained due to the constant neediness of children. I don't want to put my body through pregnancy and childbirth. I can give my dog all the attention he needs and deserves.

If I had to choose one comment to represent the entire survey, it would be this one:

> The moment you have children, you're life ceases to be about yourself. Kids always take priority and I feel like I can do more for this world than just generate offspring.

These quotations are very troubling to me. I've been serious about obtaining STEM degrees, saving money by *not traveling*, and making a plan to have a marriage and

family that will serve God. I haven't used my freedom to buy alcohol or to play the field sexually. I don't see women being serious about choosing men who are serious about marriage – especially men who are financially prepared to pay for things like houses and children. A lot of women are even interested in men who are younger than they are, despite the fact that these men have not proven themselves in their careers and finances. But younger men are easier to manipulate, and are less concerned about leading a woman to choose wife and mother roles.

Many women try to communicate maturity to others by saying that they want to get married "some day". But all the actions *right now* show that they really see marriage as "boring" and "demanding". Marriage and children "some day" is like planning for your retirement by winning the lottery. The every day actions of spending money aren't preparing you in any way to win the lottery. Talking about marriage "some day" is just a way for the woman to signal to her family and friends that she will *eventually* want the responsibility of a husband and kids, but not right now. The problem with that is that making selfish decisions over and over and over is not the way to prepare your character to be content with caring for the needs of a husband and children. Being unselfish is a skill that you have to build by repetition and practice. Just like any other virtue. And men know that. Men don't marry women who won't care for them or care for their children.

Should Christians respect Francis Collins as an authority on science?

December 29, 2023 | by Wintery Knight | Link | Original Link

Dr. Francis Collins is apparently in the news again. He claims to be an evangelical Christian, and pushed Christians to wear cloth masks and get vaccinated. Should Christians trust Collins as a scientific authority? Or is he just a willing pawn of the secular left? Let's take a look at an article from Megan Basham, and find out.

This article from February 2022 is originally from Daily Wire, but full text here. The title is "How The Federal Government Used Evangelical Leaders To Spread Covid Propaganda To Churches".

Excerpt:

> In September, Wheaton College dean Ed Stetzer interviewed National Institutes of Health Director Francis Collins on his podcast, "Church Leadership" about why Christians who want to obey Christ's command to love their neighbors should get the Covid vaccine and avoid indulging in misinformation.
>
> […]Their conversation also turned to the subject of masking children at school, with Collins noting that Christians, in particular, have been resistant to it. His view was firm—kids should be masked if they want to be in the classroom. To do anything else is to turn schools into super spreaders. Stetzer offered no pushback or follow-up questions based on views from other medical experts. He simply agreed.
>
> […]Collins participated in a livestream event, co-hosted by Christianity Today… During the panel interview, Collins continued to insist that the lab leak theory wasn't just unlikely but qualified for the dreaded misinformation label. "If you were trying to design a more dangerous coronavirus," he said, "you would never have designed this one … So I think one can say with great confidence that in this case the bioterrorist was nature … Humans did not make this one. Nature did."

I blogged previously about how several federal government departments now think that this is the most plausible theory, and how the CIA bribed experts to change their testimony about the lab leak theory. So Collins was actually the one spreading misinformation.

Collins takes secular left positions on abortion and transgenderism:

> He has not only defended experimentation on fetuses obtained by abortion, he has also directed record-level spending toward it. Among the priorities the NIH has funded under Collins — a University of Pittsburgh experiment that involved grafting infant scalps onto lab rats, as well as projects that relied on the harvested organs of aborted, full-term babies. Some doctors have

> even charged Collins with giving money to research that required extracting kidneys, ureters, and bladders from living infants.
>
> He further has endorsed unrestricted funding of embryonic stem cell research, personally attending President Obama's signing of an Executive Order to reverse a previous ban on such expenditures.
>
> […]When it comes to pushing an agenda of racial quotas and partiality based on skin color, Collins is a member of the Left in good standing, speaking fluently of "structural racism" and "equity" rather than equality. He's put his money (or, rather, taxpayer money) where his mouth is, implementing new policies that require scientists seeking NIH grants to pass diversity, equity, and inclusion tests in order to qualify.
>
> […]Having declared himself an "ally" of the gay and trans movements, he went on to say he "[applauds] the courage and resilience it takes for [LGBTQ] individuals to live openly and authentically" and is "committed to listening, respecting, and supporting [them]" as an "advocate."
>
> […]Under his watch, the NIH launched a new initiative to specifically direct funding to "sexual and gender minorities." On the ground, this has translated to awarding millions in grants to experimental transgender research on minors, like giving opposite-sex hormones to children as young as eight and mastectomies to girls as young as 13. Another project, awarded $8 million in grants, included recruiting teen boys to track their homosexual activities like "condomless anal sex" on an app without their parents' consent.

Megan's got the names of the people who promoted him in her article: Tim Keller, Rick Warren, N. T. Wright, Ed Stetzer, Russell Moore, and David French:

> Keller, Warren, Wright, and Stetzer all publicly lauded him as a godly brother. When presenting Collins to Southern Baptists, Moore gushed over him as the smartest man in a book club he attends…
>
> [I]nfluential evangelical pundit David French deemed Collins a "national treasure" and his service in the NIH "faithful."

Dr. Collins is a Darwinian evolutionist, so you can guess how evidence-based his views are about the origin of life and the Cambrian explosion. I think Christians need to be skeptical of believers in naturalistic religion: Darwinism, man-made catastrophic global warming, abortion, transgenderism, etc. It's pretty clear that these naturalistic views are not the result of study and debate. People who jump on the speculations of the secular left, and pronounce them as infallible, are not doing it to promote truth. They do it because they want the respect of powerful secular leftists. Dr. Collins is not an independent thinker. He is someone who adopts the views of secular leftist elites automatically and without thinking. He wants to get ahead in the world. That's it.

Dr. Walter Bradley lectures on scientific evidence the creation and design of the universe

December 30, 2023 | by Wintery Knight | Link | Original Link

This lecture is special to me, because I bought a VHS tape of it just after I started working full-time, and watched it a million times. A lot of people come to their convictions about God's existence because of parents or church or intuitions, but for me it's all about the scientific evidence. This lecture changed my life. I wish more people taught their children about this evidence! This lecture was delivered at the University of California, Santa Barbara.

About the speaker:

> Dr. Bradley received his B.S. in Engineering Science and his Ph.D. in Materials Science from the University of Texas in Austin.
>
> Dr. Bradley taught for eight years at the Colorado School of Mines before assuming a position as Professor of Mechanical Engineering at Texas A&M University (TAMU) in 1976.
>
> During his 24 years at Texas A&M, Dr. Bradley served as Head of the Department of Mechanical Engineering at Texas A&M University and as Director of the Polymer Technology Center, and received five College of Engineering Research Awards. He has received over $4,500,000 in research grants and has published over 140 technical articles and book chapters. He has also co-authored "The Mystery Of Life's Origin: Reassessing Current Theories. He is a Fellow of the American Society for Materials and of the American Scientific Affiliation and serves as a consultant for many Fortune 500 companies.
>
> He currently serves as Distinguished Professor of Engineering at Baylor University.

The lecture: (63 minutes lecture, 25 minutes audience Q&A)

Summary slide:

This slide summarizes the content of the lecture
Introduction:

- At the beginning of the 20th century, people believed that the progress of science was pointing away from an intelligent Creator and Designer, and towards naturalism
- A stream of new discoveries has shifted the support of science towards theism, and away from naturalism
- Richard Dawkins, an atheist, says that nature only has the appearance of design, but that if you look closer, naturalistic mechanisms can account for the appearance of design
- When deciding between design and apparent design ("designoid"), it matters whether you think there is an intelligence there to do the designing

Evidence #1: The Big Bang:

- an eternal "steady state" universe is more compatible with naturalism, but a created universe is more compatible with a Creator
- In 1929, Hubble used telescopes to observe that the light from distant galaxies was *redshifted.* The further away galaxies were, the faster they were moving away. Therefore, space is expanding in all directions, suggesting an explosive origin of the universe
- In 1965, the discovery of the cosmic microwave background radiation matched a prediction of the Big Bang cosmology, and of the creation event
- In 1992, the COBE space telescope allowed us to test four specific predictions of the Big Bang model, especially the predictions for light element abundances (hydrogen and helium), which matched the predictions of the creation model

Evidence #2: Simple mathematical structure of the physical laws

- the simple mathematical structure of natural laws allows us to understand these laws, make discoveries, and engineer solutions to problems
- early scientists saw the mathematical structure of the universe to mean that nature was designed by an intelligent to be understood
- the fundamental equations of the laws of the universe can be easily written on one side of one sheet of paper
- Eugene Wigner's famous paper, "The Unreasonable Effectiveness of Mathematics in the Physical Sciences" makes the point that this simple structure is an unexpected gift that allows is to do science

Evidence #3: fine-tuning of the physical constants and quantities

- in order for any kind of complex life to survive, we need stars that provide energy within specific ranges for long periods of time
- in order for any kind of complex life to survive, we need planets with stable orbits that will not suffer from extreme temperature swings as it varies in distance from its star
- in order for any kind of complex life to survive, we need stable atomic structure
- in order for any kind of complex life to survive, we need to have chemical diversity and correct relative abundances of each element
- organic life has minimum requirements: process energy, store information, replicate, and you can't fulfill those functions if there is only one element, e.g. – hydrogen
- the energy level from the photons from the sun have to match the energy levels of the different elements in order to drive the chemical bonding needed for life
- These requirements for life of any imaginable type depend on the values of the constants and quantities. The constants and quantities cannot vary much from what they are, or the universe will lose the characteristics (above) that allow it to support complex life of any imaginable time
- For example, ratio of strong force to electromagnetic force:
  – if 2% larger, then no stable hydrogen, no long-lived stars, no compounds containing hydrogen, e.g. – water
  – if 5% smaller, no stable stars, heavy hydrogen would be unstable, few elements other than hydrogen

Evidence #4: initial conditions for habitability

- Universe: expansion rate of the universe must be fast enough to avoid a re-collapse, but slow enough to allow matter to clump together and form stars and planets for complex life to live on
- Planet: right distance from the star to get the right climate
- Planet: right mass to retain the right atmosphere

Evidence #5: origin of life and information theory

- It’s possible to explain every process in an automobile engine using plain old naturalistic mechanisms – no supernatural explanation is necessary to understand the processes
- But the existence of engine itself: engineering all the parts has to be explained by the work of an intelligence
- Similarly, we can understand how living systems work, but the existence of the living systems requires an intelligence
- Even the simplest living system has to perform minimal function: capture energy, store information and replicate
- Living systems are composed of objects like proteins that are composed of sequences of components complex such that the order of the components gives the overall structure function
- Developing the components for a simple living cell is very improbable – even given the large number of galaxies, stars and planets in the universe, it is unlikely that complex, embodied life would exist *anywhere* in the universe

Evidence #6: more initial conditions for habitability

- Location within the galaxy: you need to be away from the center of the galaxy, because the explosions from dying stars, and excessive radiation will kill life
- Location within the galaxy: you need to be close enough to the center in order catch the heavy elements you need for life from the explosions of other stars
- Location within the galaxy: the best location is between two arms of a spiral galaxy, where you can get the heavy elements you need from dying stars, but without being hit with explosions and harmful radiation
- Star mass: determines rate at which the sun burns, determines the energy level of photons that are used to drive chemical bonding reactions, determines the length of time the star will be stable
- Star mass: star mass must be the correct value in order to allow liquid water on the planet’s surface, while still preserving stable orbit

I wish there was more curiosity about science in churches, and young Christians understood *how critical science is* for grounding the rationality of the Christian worldview. We need to be training up more scientists who think about the big questions, like Dr. Walter Bradley.

Should conservatives trust the FBI to be impartial and unbiased?

December 31, 2023 | by Wintery Knight | Link | Original Link

It's the end of the year, and I thought it would be a good time to review five FBI scandals. Then you can decide for yourself whether you think that the FBI is doing a good job of enforcing the law. And remember, you're paying their salaries with your tax dollars, so you have to decide whether you are getting good value for your money. Let's take a look at some of the scandals.

Here is an article about the scandals from Fox News.

Attack Republicans:

> Former counterintelligence FBI special agent Charles McGonigal — who led New York's counterintelligence division and played a critical role in the alleged Trump-Russia collusion investigation — was earlier this month sentenced to four years in prison for charges related to colluding with a Russian oligarch.
>
> […]In May, Special Counsel John Durham released a long-awaited final report to the Justice Department, which spans more than 300 pages of his years-long investigation into the origins of "Crossfire Hurricane." Durham found that both the DOJ and FBI "failed to uphold their mission of strict fidelity to the law" when it launched the Trump-Russia investigation.
>
> Durham said his investigation also revealed that "senior FBI personnel displayed a serious lack of analytical rigor towards the information that they received, especially information received from politically-affiliated persons and entities."

Protect Democrats:

> While Trump and members of his inner circle remain at the center of several investigations, the bureau faced backlash for declining requests from House Republicans to release an unclassified FBI document that contained claims from an informant that President Biden was allegedly involved in foreign business dealings with his family.
>
> But after the bureau balked for months to turn over the document to lawmakers, Sen. Chuck Grassley, R-Iowa, obtained the internal material — known as an FD-1023 — and released it to the public. The document accused the FBI of improperly delaying or completely shutting down a full investigation into the Biden family.

Pre-dawn raiding the homes of peaceful pro-lifers:

> When the FBI wasn't focused on — or allegedly turning a blind eye to — the White House, the bureau was slapped with a $1.1 million lawsuit in November brought by Catholic father and pro-life activist Mark Houck, who was arrested in

> his home in 2022 by FBI agents over a previous altercation outside a Planned Parenthood. A 12-person jury later unanimously acquitted Houck on all charges of violating the Freedom of Access to Clinic Entrances Act.
>
> Houck filed a lawsuit against the Justice Department seeking restitution for what it called “a faulty investigation” and “excessive force” after a SWAT team of around 25 people arrested him in front of his children. The lawsuit alleges government agents deprived Houck of his Fourth Amendment rights by using excessive force to arrest him on non-violent charges.

Persecute taxpayers for their religious views:

> Perhaps the bureau’s most shocking moment in 2023 came in February when former FBI agent Seraphin exposed an unclassified intelligence document from the FBI’s Richmond field office in Virginia that appeared to target traditional Catholics as so-called potential domestic terrorists, which immediately forced the bureau’s headquarters in Washington, D.C., to purge the anti-Catholic memo from its system.
>
> After the bureau said it would “never conduct investigative activities or open an investigation based solely on First Amendment protected activity,” lawmakers in the House Judiciary Committee and the Select Subcommittee on the Weaponization of the Federal Government launched an investigation into the FBI and discovered that the bureau interviewed a priest and a choir director affiliated with a Catholic church in Richmond, Virginia.

You have to decide for yourself whether the FBI uses it’s power to break laws for the benefit of the Democrat party. You have to decide for yourself whether they’ve abandoned their duty to protect the Americans who pay their salaries. You have to decide for yourself whether the FBI persecutes American taxpayers solely on the basis of their first amendment activities. You have to decide whether the FBI is in violation of the Constitution – or maybe even at war with the Constitution. Vote accordingly in 2024.

The DeSantis plan: pay teachers well, and put teacher unions out of business

January 1, 2024 | by Wintery Knight | Link | Original Link

The GOP primary is about to begin in Iowa, and it's a contest between a man who talks about himself, and a man who solves problems. One BIG problem in this country is teacher unions. Teacher unions collect mandatory dues from teachers, and they use those to advocate for far-left policies. But in Florida, DeSantis made a plan, and he executed that plan. And now the results are here.

Here's the latest from Florida Voice:

> As much as 60% of Miami-Dade public school educators could be withheld from representation after the state's largest teachers union failed to meet membership requirements under state law.
>
> United Teachers of Dade, the largest union in the country, reportedly did not meet the required threshold after some teachers opted out of paying membership dues.
>
> […]Signed by Gov. Ron DeSantis, SB 256 mandates a union must apply for recertification if its membership dues fail to reach 60%. According to a report, UTD's membership dues reached 58.4%.
>
> […]Under the law, unions are barred from directly withdrawing funds from public employee paychecks. An employee, such as a teacher, also must opt into a union to send payments.

SB 256 is a DeSantis bill. Passed by the legislators he helped to elect. And so when it got to his desk, he signed it.

> "If United Teachers of Dade spent half as much time paying attention to their members' interests as they have been pushing a political agenda with Randi Weingarten and running for office with Charlie Crist, they probably wouldn't even be in this position," Freedom Foundation Director or Labor Relations Allison Beattie said.
>
> […]"We were approached this summer by a number of teachers in Miami-Dade County who were unhappy seeing their hard-earned paychecks going into the pockets of union officers while those same officers have consistently negotiated away pay and benefits," Beattie said.
>
> […]"We're not surprised UTD couldn't make the 60 percent threshold, because they've lost focus of their mission – representing rank and file teachers," Beattie continued. "The union sends 46 percent of its budget to unions like the AFL-CIO, National Education Association, and Randi Weingarten."

This is a historic win for conservatives:

> According to the Freedom Foundation, United Teachers of Dade's fracture is the largest decertified vote in American history.

How did DeSantis get the teachers to want to opt out of paying union dues? Well, Florida is a right-to-work state, so workers don't have to join a union in order to work. They have the freedom to work without having to join a union. If they think that the union provides value worth their dues, then they can join and pay the dues. Traditionally, labor unions have pressured employers for higher pay. And that's where the genius of Ron DeSantis can be seen. He has been taking away the need for teacher unions by paying teachers very well. That's why the enrollment in unions has come down in Florida. This is wonderful for conservatives, because teacher unions are *major* proponents of every secular left policy you can imagine. Not just on fiscal issues, but on social issues, and foreign policy.

This article from Fox News explains why teacher unions are bad:

> Universal school choice made significant gains in 2023 when a wave of red states passed legislation. Now, more states are looking to join the fold next year, a phenomenon called a "school choice revolution."
>
> American Federation For Children Senior Fellow Corey DeAngelis told Fox News Digital recently to look out for more states passing universal school choice legislation because a sea change is underway.
>
> […]DeAngelis added that school choice is difficult to pass in traditionally blue states like California, Illinois, and New York because the Democratic Party is "owned by the teachers union."
>
> "You look at Randi Weingarten, the American Federation of Teachers, in 2022, according to Open Secrets, 99.97% of the contributions from Randi's AFT went to Democrats as opposed to independents or Republicans," DeAngelis said.
>
> He explained further, "It's basically an elaborate money laundering scheme where the Democrats funnel the money to the government schools and then the teachers unions take that money and they give it back to the Democratic Party. It's a nonstop wash, rinse, repeat money laundering scheme where the teachers unions are basically an arm of the Democratic Party at this point."

When Donald Trump was president for four years, he did absolutely nothing to take on teacher unions. Ron DeSantis is doing it now. If he loses the GOP primary, he'll keep on fighting teacher unions. But if he wins, he'll be fighting teacher unions at the federal level, in all 50 states. We can have that, if we vote wisely.

Which country is the most dangerous for Christians?

January 2, 2024 | by Wintery Knight | Link | Original Link

I saw an interesting article over at Daily Wire that talks about the most dangerous country in the world for Christians: Nigeria. I thought Nigeria has Boko Haram running around kidnapping people, but the article says that "roughly 90% of all martyrs in 2022 — over 5,000 Christians murdered for their faith — were from Nigeria." The author of the article is from ADF, so it's reliable.

The article is paywalled, but here's an archived copy.

Excerpt:

> Northern Nigeria is a place where the Church faces some of the worst persecution on earth. According to Open Doors, roughly 90% of all martyrs in 2022 — over 5,000 Christians murdered for their faith — were from Nigeria.
>
> One of those martyrs was Deborah Emmanuel Yakubu, a Christian student at a university in Sokoto State, who in May 2022 was stoned to death and burnt by her Muslim classmates because of her faith in Jesus. Another Christian woman, Rhoda Jatau, faced a mob and was arrested for blasphemy after the mob accused her of sharing a video that insulted Islam because it condemned the lynching of Deborah.
> Rhoda sat in a jail in Bauchi State, Nigeria, for over 18 months because of the accusations. She only saw her family and lawyers at court hearings.
>
> But through her witness to the injustice of the treatment of Christians in Northern Nigeria, both by extremist Islamist mobs and baseless prosecutions, her case caused national outrage.
> Earlier this month, after enormous national outcry, Rhoda was finally released on bail, able to spend Christmas this year with her family in safety. While the charges against her are still pending, many within Nigeria and internationally are pushing for them to be dropped fully.

There are a couple of signs that things are improving in the article, here's one:

> As with many places where Christians are a religious minority, converts to Christianity, particularly from Islam, often find it extremely dangerous to practice their faith. Daniel Kefee* was an evangelist in Northern Nigeria who brought a young Muslim woman, Hafsatu*, to Christ. But when her family found out, members of her family threatened to kill her. She sought out help from Daniel, who found a Christian residential school that could care for her.
>
> For helping Hafsatu, Daniel was charged by Nigerian authorities with kidnapping. Yet Daniel and his lawyers bravely presented to the court the reality of what had happened. In an astonishing result given the region, the judge not only acquitted Daniel, but prodded the prosecutors, asking them, "should the defendant have

> left the girl, what would have happened with her?”

And another one:
