

# How do you classify your male friends?

August 20, 2016 | 2 upvotes | by [yellowmonkeyzx93](#)

---

I was curious as I was reading this post..

[https://www.reddit.com/r/asktrp/comments/4yiy7o/i\\_have\\_problems\\_making\\_male\\_friends/](https://www.reddit.com/r/asktrp/comments/4yiy7o/i_have_problems_making_male_friends/)

So I have two questions:

## **1. Do you classify male friends in this way? Is it something like this?**

- 1) Acquaintances
- 2) Workplace colleagues
- 3) Interest / hobby buddies
- 4) Family (Uncles, brothers, cousins, nephews etc.)
- 5) Friends
- 6) Close friends

## **2. Second, what criteria do you use to select male friends (or how do you promote them?)**

Edit: Format editing.

I classify all of my male friends by penis length measured from pelvic bone to urethra opening. It's helpful to have a binder to keep names and measurements in. It definitely makes it easier to stay organized.

Your six section format would work very well for the binder. acquaintances are probably the most difficult category but you will get better with time.

I hope that helps.

Hahaha, that's pretty funny.

Thanks for the advice. Ever since I started reading about the Red Pill, I realized I need to start talking and making real friendships with men since friendships with women are unreliable at best.

Cheers.

Exactly women don't have penises to measure so its impossible to put them in the friendship binder.

You could classify your female friends based on tightness or depth. Just make sure to make a spread sheet. Just sayin

Hell.....

Patrice is the Eternal Chairman of the TRP, and you are the First Chairman of the TRP.

1. Yes
2. I don't have a system for that, it just happens.
