Chlamydia

Young females are more 2/3 times more likely to catch Chlamydia than young males are.

The male diagnosis rate among **15 to 19-year old was 824.4 per 100,000 population** and 1,693.8 among 20-24-year-old.

The female diagnosis rate among **15 to 19-year-old females was 2,436.8 per 100,000** and **2,557 among females aged 20-24.**

- Women between 15-19 are 3 times more likely to be diagnosed with Chlamydia than Males the same age.

In 2015 there were 1,534 new diagnoses of chlamydia, an 18% decrease on 1,868 in 2014. 56% of diagnoses were among males. <<<(ALWAYS WRAP UP- I suspect a lot of these boys didn't know about her "past")

The rate of diagnoses for Chlamydia among 16-19-year-olds was more than twice as high among females as males.

HERPES (non curable remember boys)

The highest rate of diagnoses [for genital Herpes] was among females aged 20-24 (343.4 per 100,000 population) and females accounted for 63% of all cases. **Almost twice as many heterosexual females as males were diagnosed with genital herpes.**

Rates of first episode infection were higher in females in most age groups; the rate among 16-19-year-old females was over seven times higher than in males of the same age.

Herpes is non curable, don't let her "past" destroy your future.

ALWAYS USE PROTECTION, NOT WORTH THE RISK.

Any other statistics from other countries?

UK statistics see more below.

" Rates of first episode infection were higher in females in most age groups; the rate among 16-19-year-old females was over seven times higher than in males of the same age. "

That lines up exactly with 80% of males considered undateable by females..

I work in a pharmacy, and sell tons of Valtrex (herpes medication) to young women. Not only that, but I've noticed they seem to get sick way more frequently and have lots of prescriptions for antibiotics as well. I'm talking like 5-6 times per year or more. If I dig through their profile, more often than not I'll find Valtrex prescriptions floating around somewhere.

If you are still in the dating game, you should absolutely wear a condom every single time. I had a vasectomy, and even I would never bang a girl without a condom.

DisgruntledReddit007 • 2 points • 24 June, 2020 12:37 AM

Well women are far more susceptible to genital herpes than men are so that might explain the high prevalence among women

[deleted] • 13 points • 23 June, 2020 01:48 PM

Almost as if nature doesn't like female humans being slutty. I wonder why.

Cultural_Area • 11 points • 23 June, 2020 03:45 PM

Of course, they all sleep with the same small group of Alphas, obviously they are gonna spread these things among themselves.

edgysecularist • 2 points • 24 June, 2020 01:11 AM

AWALT all whores

boltjamison • 2 points • 24 June, 2020 04:37 AM

Its because they all fuck the same guys. Only the top 10% of men get the real action. So these women are all banging the same 10% of men.

Funny thing is, they know this and still don't care. They rather share and alpha than have one beta all to herself.

Surprise! In other news water is still wet.

droidrookie • 1 point • 24 June, 2020 02:11 AM

Women can't stop being whores.
