

The female buzz cut

Alpha Game | 26 July, 2017 | by VD

As Heartiste and others have observed, women getting buzz cuts is a reliable indicator of severe emotional stress. I'm sure this:

Her blonde tresses have become her trademark over the years. But Kate Hudson revealed she has bid her long locks goodbye on Tuesday as the actress was pictured with a bold new buzz cut while on the set of her new movie, Sister. The 38-year-old star proved her beauty knows no boundaries as she defiantly sat in hair and make up with her striking new hairdo.

Is totally unrelated to this:

When a woman is replaced by a younger, prettier woman, it is a savage blow to her psyche. In past times, shaving a woman's head was a sign of grief. It still is, it simply isn't usually recognized as such.
